On the other hand, the Trinity Gods such as Brahma the creator, Vishnu the sustainer, nourisher and protector of the creation, and Shiva the concluder of creation, are merely a fraction or aspect of the (invisible) Bindu and Naad.

[In other words, the Mana is the most striking and forceful visible depiction of the astoundingly magnificent potentials of the supreme Brahm even as the sun and the moon in the sky and the fire on the earth showcase Brahm's glorious, overriding and unmatched cosmic authority and powers having amazing potentials and far-reaching effects. On the other hand, the Trinity Gods are not visible in their presence like the sun, the moon and the fire. They are invisible and more abstract than the sun, moon and fire which every living being is able to see for himself first hand. So, the latter (the sun, moon and fire) are a visible and comparatively grosser manifestations of the grand powers, potentials and authority of Brahm as compared to the former (the Trinity Gods which are more subtle and sublime manifestations of Brahm). Since this visible gross world is a creation of the mind, the latter is compared to the other visible manifestations of Brahm such as the sun, the moon and the fire.] (70).

71. Constant paying of attention to and focusing of the mind on the essential element behind the concept of Bindu (i.e. by meditating upon the supreme transcendental cosmic Consciousness known as Brahm) helps in the decimation of all sorts of Vasanas (worldly passions, lust, desires and yearnings) that veil the aspirant and act as impediments in his spiritual pursuit and progress in it. [When the aspirant concentrates his attention on the power center called Bindu or dot in order to facilitate his meditation process, it is natural that he has to withdraw his mind and all the senses from all external influences of the world and every sort of diversions, and instead focus it on that Bindu. Otherwise he would not be able to meditate in the first place. This practice helps the mind to be trained enough to become independent and stand on its own feet; it helps the mind to learn to make itself free from all external influences and acquire sufficient strength and will power to withdraw from the outside world and remain focused on its chosen spiritual path once it decides to do so. When the mind takes this decision that it has got nothing to do with the external world of artificiality and delusions, and rather it should focus its attention on the primary spiritual goal of life which is to obtain self-realisation that leads to final liberation and deliverance of the soul from the cycle of birth and death and its attending delusions and horrors in this world, it would remain steady and unwavering in this endeavour by eliminating everything else that causes any kind of nuisance and hindrance in it by becoming immune to all sorts of influences exerted by the natural tendency of the body to swerve towards the material comforts and pleasures offered by the charming world in order to satisfy the desire of its organs for self gratification. It ought to be noted here that this is the reason why in early stages of the practice of meditation, the practitioner is advised to focus his eyesight on any object in front of him, such as a picture of his chosen deity or even a simple dot on the wall. This is to train the mind to remain focused on a 'Bindu' or dot or any specific object for prolonged periods of time, instead of constantly jumping from object to object quickly which is its natural habit.]

When this is brought about, the Pran Vayu (the vital winds in the body that keep it alive) also merges and becomes one with the Mana, because the mind (Mana) which is not influenced by any worldly desires and passions (called Vasanas) that the body naturally has becomes free from any kind of morally and spiritually degrading

and tainting effects caused by the latter. Being superior to the vital winds, the mind can then exert its controlling effect on them, thereby effectively controlling the body itself through these vital winds. [The winds have a natural tendency to remain restless and be on constant move much like the mind. This is evident from the fact that the body continues to carry out its different functions internally even when the man is apparently sleeping and not appearing to do anything externally. While awake, the organs continue to perceive, voluntarily or involuntarily—such as the case when the skin continues to feel the bite of an insect or the touch of anything warm or cold even though the man might have closed his eyes, shut his ears, clamped his mouth tight and pinched his nose shut. Since all the functions of the body are controlled by the vital winds, when the body is brought under control by the practice of meditation, it is deemed that all these vital winds have also been controlled. Again, since it is the mind that is the ultimate controlling center of the body, when it is self regulated and under control of the spiritual aspirant it becomes very easy for the latter to control everything else by the medium of the mind. So, when the vital winds have been brought under control as a result of practice of meditation, it is said that they have been subjugated by the mind. The vital winds and the body which is driven by these vital winds would then obey the command of the mind—and therefore remain under the control of the practitioner of Yoga. A wise ascetic has already become enlightened about the futility of pursuing this artificial world, the artificiality and the transient nature of its charms and pleasures, and has learnt that if he has to obtain final freedom from the prison of his body and being enslaved to this world and its sense objects, then he must avoid them completely by diverting his mind (Mana) and vital winds (Prans) away from it, and instead focus their combined energy to help him in progressing ahead in his spiritual path.] (71).

72. What is called Naad (the cosmic sound represented by the Mantra OM) is also known as Bindu (the metaphoric ‘dot or point-source’ from where this sound emanates) as well as Chitta (the invisible and subtle sub-conscious mind which works behind the scene). In other words, they are basically the same and are simply different manifestations in Nature (called Prakriti) of the same non-dual entity (known as Brahm). [In other words, the invisible, un-manifested and attributeless non-dual entity known as Brahm—which is at the core of this entire creation known as Prakriti, and which is represented symbolically by a ‘dot’ or a ‘point source which is vested with all divine authority, cosmic energy, stupendous strength and powers of creation’—has revealed itself in different subtle components of this creation known as Prakriti or Nature at the macro level, and the various subtle components of an individual’s nature at the micro level. Therefore, though each component appears to be distinct from the other, they are basically the same divine entity revealed in that form.]

When the spiritual aspirant is able to realise the oneness and non-dual nature of all these units of creation (Prakriti), he obtains immense contentedness of spiritual realisation and enlightenment which gives him great bliss and happiness, a great sense of joy of knowing the esoteric and sublime Truth and Reality of creation (72).

[Note—The concept of Naad and Bindu has been elaborately explained earlier Cantos of this Upanishad. It is only when the Chitta (the subtler aspect of the mind; the sub-conscious) is totally focused on meditation and contemplation that one is able to hear the Naad reverberating in his Naadis and the head where the brain is located. The Bindu in this context would refer to the area of the brain which perceives the sound and interprets it as an intelligent signal—i.e. the so-called ‘point source’ where the sound waves of the cosmic Naad are monitored and deciphered in the brain as meaningful signals. This location is the tri-junction of the two eyebrows and the root

of the nose, the approximate area of the brain called the cerebrum. This area is also the site responsible for wisdom, erudition, enlightenment and knowledge. The entire process of focusing the Chitta on a Bindu to hear the Naad requires intense concentration and practice. That is why when we concentrate our attention on some subject requiring intense concentration of the mind, when we are pensive and submerged in some deep thoughts, our forehead creases and furrows involuntarily in order to focus on the subject at hand.]

73. In fact, it is the Mana (mind) that is the Bindu or point source of the entire creation—its origin, its sustenance and its development. This Bindu originates from the Mana just like the milk has its origin in the cow. [In other words, this world exists because the mind has wanted it to come into existence and then it is the mind that keeps it there because it wants it to be there. The center in the brain that control its power to imagine is the metaphoric ‘Bindu’ or point from where the entire world is unfolded in the way of an imagination. Once this chain is set in motion, it is difficult to control or role it back much like the milk produced in the body of the cow. Once this milk is generated and begins to ooze out from the cow’s udder, it has to be taken out and cannot be stopped midway. Any action to the contrary would cause unnecessary inconvenience to the animal and might be very injurious to the latter’s health. That is why great emphasis is laid in the Upanishads on the point that if one wishes to get rid of the world and its associated problems, the only way to do so is to control the mind.] (73).

74. When the ascetic is fully acquainted with the secret of the six symbolic energy centers in the body, called the ‘Chakras’¹, and has unfolded their energy, he is then empowered by this energy to enter the seventh Chakra². This seventh Chakra is marked by extreme happiness and bliss; it is the fount of ecstasy, felicity and beatitude. During this process, the Pran Vayus, the vital winds of the body, are all controlled and made to move in a harmonious manner. [The Yoga Upanishads describe in detail how the practitioner of Yoga can collect all his vital winds and channel their flow through the various Chakras after passing through the Kundalini and then rising up through the Sushumna Naadi to go straight up to the top of the head. Once the vital winds reach the head, they create vibrations that have a massaging effect on the nerves of the brain that calms down the nerves and give the practitioner an unmatched and indescribable sensation of bliss, contentedness and spiritual ecstasy.] (74).

[Note—¹The *six Chakras* are the following—(1) The ‘Mooladhar Chakra’, (2) The ‘Swadhisthan Chakra’, (3) The ‘Manipur Chakra’, (4) The ‘Anahat Chakra’, (5) The ‘Vishuddha Chakra/Kanth Chakra’ and (6) The ‘Agya Chakra or Bhru Chakra’.

²The *seventh Chakra* is called the ‘Brahm Rahandra Chakra or Sahasrar Chakra’ which is located in the forehead and has the form of a grey cloud or smoke. It is the hair-like spilt in the top of the skull from where the vital wind called ‘Pran’ makes its exit from the body of a Yogi (ascetic) at the time of his death. Sometimes it is used as a synonym for the ‘Vyom Chakra’ which is symbolic of the sky and it is shaped like a 10-petal lotus located at the top of the head.]

75. Wise and expert ascetics establish uniformity between the different Vayus (vital winds of the body), the Bindu Chakra (i.e. the Agya Chakra located in the forehead as well as the Sahasrar Chakra located in the top of the head because it is here that the vital winds start swirling like a whirlwind and it is here that the ascetic hears the Naad) and the Chitta (the mind and its subtle faculties of concentration and paying

attention)—this helps them to coordinate their individual energy and vitality to obtain the sublime state of ecstasy and bliss which is tantamount to obtaining the elixir of life called Amrit. This is achieved during the state of Samadhi (which is stage in the practice of Yoga when the practitioner is completely lost in meditation and totally oblivious to any kind of external disturbances arising out of the world and the body)¹ (75).

[Note—¹It is during Samadhi that one is able to create favourable circumstances for the unification of all the vital winds present in the body, concentrate them in one place in the head, and then make them whirl around in circles to generate the vibration that lead to ecstasy and bliss, or the hearing of the Naad. Naturally, the mind and its ability to focus attention on any task at hand are very important components in this process—thereby bringing into focus the role and importance of the Chitta. Thus in Samadhi, the practitioner obtains the exalted state of consciousness when he is virtually submerged in an ocean of beatitude and ecstasy from which he derives immense sense of happiness and joy so much so that he would not like to move away from it and continue to drink this divine and eclectic nectar on a perpetual basis. He hears the Naad and its cosmic vibrations completely drown his other senses so much that he loses awareness of the external world as well as the body itself because their presence is felt or known only as long as the nerves carry relevant information to the brain and the latter is free to interpret this incoming information. With these two units numbed by the cosmic vibrations, the entire circuitry sort of short-circuits and the senses become practically numbed out of existence. The only thing that is heard and felt is the Naad and its attendant sensation of blissful feeling.]

76. The fire is always present inherently in the firewood, but it is kindled or made to make its physical presence visible only when this wood is vigorously rubbed as done in the case of fire sacrifices when an Arani¹ is used to light the fire.

Similarly, the light of Gyan, i.e. the illumination provided by enlightenment and wisdom is only brought to the fore by constant and diligent practice. It needs steadiness of purpose and unwavering commitment on the part of the spiritual aspirant to kindle this light of wisdom and enlightenment (that would help him to see who he really is—i.e. to become ‘self-realised’ and then progress further to realise that this ‘self’ is the non-dual and conscious Atma which is the microcosmic image of the supreme transcendental cosmic Atma of the entire creation at the macrocosmic level).

In other words, though each individual possesses the light of wisdom and intelligence that is inherently and naturally present in him for the simple reason that all have a brain and all have the same consciousness flowing in their bodies, but if this divine faculty is not properly polished, trained and harnessed then it would remain dormant and untapped like the fire in the firewood (76).

[Note—¹The fire of the sacrificial pit is to be self produced. This is done by vigorously rubbing two pieces of wood called the Arani. The Arani consists of two pieces of wood used to self-produce the fire during fire sacrifices by vigorously rubbing them against one another. The lower piece is rectangular in shape with a hole or indentation in the middle; it is made of a softer form of wood, usually of the Ashvattha tree (*Ficus religiosa*). It is called the lower Arani or the ‘Adharaa-rani’ and is likened to the female uterus. The upper piece of wood is in the form of a churning or rubbing rod made of hard wood, usually Shami tree (*Acacia suma*), and it is called ‘Uttaraa-rani’. It is equivalent to the male phallus. The upper piece is inserted in the hole of the lower piece and vigorously turned with the help of a long string or cord. This rubbing generates heat and results in the creation of fire at the point of friction. This fire is the offspring of this union of the cosmic male and female.]

77. The oil lamp lighted inside a pitcher cannot spread its light outside of it (because it is enclosed by the body of the pitcher). When the pitcher is broken it is only then that this light can spread and cover the wider realm (77).

78. The body of the spiritual aspirant is like this metaphoric pitcher, and the Jiva (the living being) himself is like the oil lamp. [Or, in other words, the pure consciousness called the Atma which is the true identity of the Jiva, cannot show its light of wisdom, erudition and enlightenment under ordinary circumstances because of the fact that it is covered by the veil represented by the gross body in which it has to live much like the oil lamp put inside the pitcher].

Under the expert guidance of a Guru (moral preceptor and spiritual guide and teacher) when the outer covering of the body is removed, i.e. when one is able to do away with one's attachments with the gross body and be enamoured by its various charms and attractions on the wise advice of his Guru, he would then be able to see the light hidden inside his own bosom in the form of 'consciousness'. This awareness and understanding is like achieving the most exalted state of self-realisation which is synonymous with the state of Brahm-realisation (because the conscious Atma and Brahm are one and the same entity, albeit their planes of existence are different, for the former is at the micro level of existence while the latter is at the macro level of existence) (78).

[Note—The creature has been using the body as the medium through which he has been enjoying the sensual pleasures and various comforts of this material world. So when he is able to symbolically get rid of the body by becoming indifferent to it and its enticements of offering various charms and comforts, it would be symbolically like the breaking of the pitcher.

That is, when the aspirant is able to understand, under the wise advice given by his Guru, that it was the body which had been misleading him to believe that the world outside was the real thing for him—because of the simple reason that it was through the medium of the body that he could interact with the external world and become aware of its attractions and enticements—though he had been told by the scriptures that this world is false and an imagination of the mind, he had found it very difficult to be convinced by this proposition of the falsehood of the world because the body had made him believe otherwise. Now when the body has been removed from the scene by diligent practice and wisdom ignited by the expert advice of the Guru, it is natural that all illusions and delusions pertaining to the world that arise out of the awareness of the body are eliminated for good. When this happens, the aspirant is able to witness another world of the self-illuminated and radiant Atma which radiates an eternal light of enlightenment and wisdom. This world of the lighted consciousness is eternal and blissful as compared to the world to which the gross body related to earlier, i.e. the world of sense organs and their objects which are perishable and transient as well as the cause of all sorts of grief and sorrows which can never give peace and happiness to anyone.

Once this state of eclectic understanding is achieved, the light of Brahm realisation and self realisation that accompany such wisdom comes to the fore. This 'light' had been hitherto lying hidden from view. When the creature loses all interest in the attractions of the body, he would no longer be attached to and attracted by the outside material world because the latter is felt and enjoyed by the medium of the body.

When this happens, the mind would be free to concentrate its attention on more sublime and subtler things other than the gross physical world, i.e. it would be free from being distracted by the numerous inputs of the external world received through the organs of the body. The spiritual aspirant can now become free from the numerous encumbrances of the gross body such as having various Vasanas and

Vrittis (inherent worldly passions and desires as well as habits and temperaments), and instead use all his strength and stamina to unfold the light of the pure conscious Atma present inside his own self. This wisdom and enlightenment leads him on the eclectic path of Brahm realisation which in turn would provide him with a sense of eternal peace and beatitude.]

79. The Guru is like the helmsman who holds the oar of a boat (i.e. he is like the expert boatman who steers the boat and knows how to go about his job with accurate precision), while the wise words or the advice that he gives are like the strong boat itself. The desire to cross this mundane and material world of delusions and artificiality, and find eternal liberation and deliverance from its trap for all times to come, is the ‘Vasana Shakti’, or the ‘power of desire’ that drives one to embark upon this great journey to cross this ocean-like world and reach its other shore (i.e. to obtain emancipation and salvation for the soul) by using this boat and following the instructions of the Guru (who is an expert in this field) (79).

This is what this Yogshikha Upanishad preaches. This is its truthful teaching. Amen!

Thus ends Canto 6

-----Shanti Paath-----

-----*****-----*****-----

Chapter 22

Ekakchar Upanishad/Ekakcharo-panishad

This Upanishad has been revealed in the form of an eclectic and sublime prayer coming out of the heart of a truly realised and enlightened sage/seer who sees the same Divinity known as the supreme transcendental Brahm, the Supreme Being having the unique virtues of being ‘Ek’ or one and non-dual, and ‘Akchar’ or imperishable and eternal, as being universally present in the entire creation in a uniform and non-dual manner. In fact, this Upanishad derives its name ‘Ekakchar’ from these two principal sublime qualities of Brahm—i.e. Ek and Akchar.

This divine Being is present everywhere, from the macrocosmic level of the cosmos right up to the minutest atom at the micro level because it is all-pervading, all-encompassing and all-inclusive.

This supreme Lord is worshipped, honoured and revered in his various manifestations—as the cosmic ether, representing the sacred liquid called Soma, that flows throughout the length and breadth of the cosmos, as the Pran, the vital life-forces and vital winds, that move and pulsate in the body of the individual creature, specially in the Sushumna Naadi representing the creature’s central nervous system which keeps him conscious, active and alive, and as the consciousness itself which radiates and pulsates throughout the creation as its vital life.

This eclectic and enigmatic cosmic Consciousness has also revealed itself in the form of the almighty Lord who protects his devotees from all troubles and is therefore known as ‘Arishtanemi’—one who can eliminate or destroy or overcome misfortunes, calamities, disaster, death and other portentous phenomenon. The term is

also applied to 'Kartikeya'—who is also known as Shadaanan, the son of Lord Shiva or of Agni (the Fire God). His other name is 'Skand'—meaning someone who attacks swiftly one's enemy and therefore is the God of War as a leader of Shiva's ghosts against the enemies of the Gods.

Not only this, the supreme Brahm's magnificently glorious virtues and universal overriding authority are manifested in the form of the stupendous powers and virtues that are displayed by such Gods as Indra who is the king of Gods and the controller of all the organs of the creature's body, thereby symbolically ruling over the entire creation, as Rudra who is one of the most potent, ruthless and uncompromising forms of Lord Shiva who can annihilate the entire world when it annoys the Lord by its waywardness and random recklessness, and as Surya, the Sun God (represented by the celestial sun), personifying the most glorious, radiantly divine and the splendorous visible form of Brahm.

The same eclectic cosmic Divinity is revealed as the four Vedas which are the eternal repositories of knowledge, as the three Gunas (Sata, Raja and Tama) which determine all the characteristic temperaments, natures, virtues and qualities shown by all known species of creatures thereby determining the character and personality traits of each single individual in creation, and as the visible world itself at large, both movable as well as immovable.

The wise and enlightened spiritual aspirant is advised to concentrate upon worshipping this one non-dual Divinity instead of frittering away precious time and life in pursuing innumerable paths and Gods. This would surely lead him to his final liberation and deliverance from the cycle of delusions arising out of ignorance of the reality and truth, along with its accompanying horrendous consequences.

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of this Shanti Paath.

1. Oh Lord! It is you who is the one and non-dual imperishable divine entity who is represented by the monosyllable word (i.e. the Mantra 'OM'), who is the essence of the elixir of eternity known as Soma (the holy liquid offered to Gods and used during fire sacrifices), and who is the vitality and life-forces moving up and down or radiating in the Sushumna Naadi (representing the central nervous system which not only keeps the man alive but is also responsible to make him conscious and enabling all his senses to work in a coordinated manner). [In other words, all these glorious principals of creation are nothing but the Lord's own glories on display; the Lord has revealed himself in a sublime and imperceptible form in each and every of these magnificent entities of creation.]

You are the cause and creator of this entire creation or universe. You are the unquestioned Lord of all living beings. You are the Puran Purush, i.e. the most ancient Being who has been lauded and honoured by the ancient mythological scriptures. It is you who is present in all the known forms of creation. It is you who takes the form of rain to inject life in this world (earth), and then protect this life created by you (1).

2. Oh the almighty Lord! It is you who is present as the vital life-giving forces and consciousness in each single unit of this living creation. You are the support and succour for all the well-lettered and learned sages and seers, literally the 'poets' or

mystics, bards and minstrels who sing your divine glories using sacred hymns and holy Mantras of the Vedas. You are the divinity known as Jatveda, i.e. you have revealed yourself in all your splendourous glories and magnificence as the Sun God and the Fire God. You are the Lord of all the realms of the whole creation.

You have revealed yourself as the universal fire element called ‘Ajaat Agni’ because it is unconquerable itself but can conquer the rest of the world. [Obviously the ‘fire element’ has this potentials—no one can ever vanquish the fire in the true sense because if the fire is eliminated, the very existence of life would be jeopardized. On the contrary, the fire would burn anything that is put in it; it can even melt iron and other hard metals without any compromise.]

This astounding potential of yours that is revealed in the form of the fire element or cosmic energy had injected the first signs of life into this cosmos in the form of Hiranyagarbha, the macrocosmic subtle body of creation. [That is, when Brahm, the cosmic Consciousness and the ‘cause’ of this creation, decided to initiate the process of creation, it activated its vital energy in the form of the ‘fire’ element which metamorphosed as the golden cosmic embryo called the Hiranyagarbha. This word comes from the words ‘Hiranya’ which means golden or yellowish in colour, and ‘Garbha’ meaning a womb. Since the fire has a golden or yellowish hue, the cosmic embryo formed as a result of this desire of Brahm to create also had this colour. Brahm in his manifestation as the cosmic bearer of this embryo was Mother Nature which nurtured this Hiranyagarbha till it hatched in the form of the Viraat Purush, the invisible but all-encompassing macrocosmic gross body of Brahm from which the rest of the creation evolved.]

The fire sacrifices and all other auspicious and religious activities are your manifestations. In other words, the sacred fire of the sacrifice symbolise this stupendous power and energy of yours as described above.

You are the one who has revealed himself as the most ancient Lord honoured by the Purans (ancient mythological scriptures) with the epithet of ‘Vibhu’, i.e. one who is almighty, omniscient, omnipotent and omnipresent (2).

3. Even as the beads of a rosary or the flowers of a garland are kept together, held in place and given a definitive shape by the cord/string running through them invisibly, this entire world is held together and given its shape by you who hold it in place and give life to it in the form of the vital Pran that flows invisibly through this living world and injects life into it. [This Pran refers to the life-giving forces of Nature represented by the vital winds that permeate through each pore of the creature’s individual body and keep it alive. This Pran is present in all living beings, and is the common thread that binds all life forms together in the sense that had there been no Pran the world as we know it would have disintegrated and fallen off in pieces like a dead body which cannot support itself. This wind is also present in the vast bowl of the cosmos as the universal ether, and as the various gases in the atmosphere of the earth and other planets. It is this Pran that is the common denominator in all forms that life has taken in this creation.]

You have, in other words, not only created life but also sustain and nourish it in the form of this Pran. This creation, i.e. the living world, has been conceptualised in your womb (and therefore you are its creator and mother).

This visible world is like one foot of yours; it is one aspect of you¹.

This endless, fathomless and infinite world has been conceived by you and you pervade and permeate in it uniformly like the wind element that pervades uniformly in the space of the sky.

You are not only the creator but also the protector of this creation of yours as symbolised by your manifestation in the form of Lord Kumar (i.e. Lord Kartikeya)² who holds a bow to give protection and fearlessness to all the creatures against the evil forces of creation. [That is, the Lord protects all those who are righteous and noble in his manifestation as Kartikeya. It ought to be noted that the same Lord has manifested as Rudra, the angry manifestation of Shiva, to annihilate those who are wicked and sinful.] (3).

[Note—¹It is said that Brahm has four 'Paads' or legs which symbolise the four corners of creation. That is, Brahm surrounds this entire creation from all sides. Out of these four legs, the visible world represents one. The rest of the creation stands for the remaining three legs. According to another theory, Brahm is said to have sixty four Kalaas or aspects or levels of existence. Out of these, the known world represents Brahm's sixteen Kalaas, i.e. this world is only one fourth aspect of the entire Brahm—a fact metaphorically depicted by saying that Brahm can measure this world in one step. The rest is the invisible macrocosmic aspect of Brahm which is beyond imagination and comprehension. This is obvious because if one fourth is so difficult to understand, one can easily visualise the astounding vastness and intractable nature as well as the stupendity of the remaining three fourths. If Brahm is a complete cycle of sixty four Kalaas, then the known physical world has $64/4 = 16$ Kalaas. It is a quadrant of Brahm. (Rig Veda, 10/90/4).

²*Kartikeya* is also called Shadaan, the son of Lord Shiva or of Agni (the Fire God). He is called the 'God of War' as a leader of Shiva's ghosts against the enemies of the Gods. Refer verse no. 4. He is also known as 'Skand' which refers to someone who attacks; one who jumps, leaps or hops swiftly and with agility as an active soldier in the heat of battle.]

4. Oh Lord! The midday splendorous Sun dazzling in the sky with the glint and glare of a newly made and sharpened arrow made of gold is a visible manifestation of you as Hiranyagarbha. [The Hiranyagarbha is the macrocosmic subtle body of Brahm in the form of the golden embryo of creation present in the womb of Mother Nature. Refer verse no. 2. Here the vast fathomless and dark depth of the sky is like that cosmic womb of Mother Nature, while the golden Sun is like the embryo called Hiranyagarbha.]

It is your light that illuminates the Bhaskar (Sun) in the sky and gives it its shine and glitter.

You are established and honoured as the Arishtanemi¹ Lord known as Kumar (Lord Kartikeya) who is the commander of the army of the Gods (to give them protection from the evil forces of creation). You overcome and remove all difficulties and hurdles, and in this virtue you resemble Garud (the heron or eagle who is the legendary mount of Lord Vishnu, and who is famous for devouring serpents representing all sorts of torments and sufferings faced by the devotees of the Lord). [That is, you not only protect the good forces of creation represented by the Gods by symbolically leading the army of goodness as its commander known as Kartikeya, but also devour or annihilate those forces that are like poisonous snakes in your manifestation as Garud.] (4).

[Note—¹The word *Arishtanemi* means one who can eliminate or destroy or overcome misfortunes, calamities, disaster, death and other portentous phenomenon.]

5. Oh Lord! You are the great Lord of all the creatures who are the subjects of this vast kingdom represented by this creation in your manifestations as Indra (the king of Gods) who holds the weapon known as Vajra (which is the invincible and the strongest weapon in existence), as well as Lord Rudra (the angry form of Shiva).

[That is, you are the supreme Emperor of this kingdom known as the ‘creation’ in the form of the great God called Indra (who is the King of all Gods). Vajra is the invincible weapon that you hold so that you can control the realm with a strong hand. It also stands for the unchallenged authority that you possess, and in this instance it represents the emperor’s scepter. If the things come to a head and the subjects of your kingdom go out of hand in spite of your strict orders to maintain ethical behaviour, decorum, law and order, and you think that it has become imperative to give out exemplary judgment in the form of capital punishment, you assume the role of Rudra and annihilate the creation.]

It is you who is subtly present as the hidden virtue of ‘Kaam’ (worldly desires, passions, lust and longings) in the heart of all the creatures in order to perpetuate this creation. [It is this quality of Kaam that makes the individual get involved in the activities of the gross material world of sense objects, remain perpetually engrossed in it, and even expand his involvement by procreating. This has been used as a necessary evil by Brahm in order to keep the cycle of creation moving ahead unhindered once he had set it rolling in the beginning.]

It is you who is present as the Moon as its Soma content. [The moon is said to be a pitcher of Amrit, the eternal elixir of happiness, joy, contentedness and bliss drunk by the Gods. The Soma is a metaphor for this Amrit and is the liquid offered to Gods during fire sacrifices.]

When the words ‘Swaha’, ‘Swadha’ and ‘Vashat’¹ are pronounced, it is actually you who is being invoked and worshipped. [This is because these words are pronounced when offerings are made to Gods and the spirits of dead ancestors. They derive their sustenance from these offerings, and it is an indirect way of saying that they are sustained and nourished by Brahm. After all, it is Brahm that has come down on earth as rain (see verse no. 1) that transforms itself as food which is offered to the Gods and Spirits. In other words, the Gods and Spirits derive their sustenance and nourishment from Brahm and nothing else. It is Brahm that gives them their life, sustain them, nourish them and give them their great mystical powers and authority.]

(5).

[Note--¹*Swaha*, *Swadha* and *Vashat*—the word ‘Swaha’ means to offer anything, to dispense, to distribute. The offerings made to the fire sacrifice meant for the Gods is done by saying *Swaha*, while those meant for the dead ancestors is done by saying ‘*Swadha*’. According to the Purans, these two are the divine wives of the Fire God. *Swaha* takes the offerings made for the Gods in the fire sacrifice to them, while *Swadha* is responsible for taking the offerings made for the dead ancestors in the fire sacrifice to them.

The offering made to the sacrificial fire are of four types: (a) *Swaha Kar*, (b) *Vashat Kar*, (c) *Hant Kar*, and (d) *Swadha Kar*. The two offerings called *Swaha Kar* and *Vashat Kar* provide nourishment to the Gods. The third offering named *Hant Kar* sustains the humans. And the fourth offering called *Swadha Kar* provides sustenance to the Pittars (the spirits of dead ancestors).

Swaha and *Vashat* symbolise the offerings made to the fire sacrifice that are meant for the Gods and form which they derive their sustenance. The word *Swaha* is pronounced at the time of actual offering to the fire pit, while *Vashat* refers to the special fire sacrifices meant to honour specific Gods and are done with specific Mantras or mystical formulae and words especially dedicated to that particular deity. Both *Swaha* and *Vashat* are used synonymously because they complement each other (Taittiriya S. 7/5/5/3). These two words are related to the ‘Vaishwanar Agni’ (see Brahmin 9 below) and the Sun God (Maitreyi Brahmin, 4/6/7; Shatpath Brahmin, 1/7/2/11).]

6. Oh Lord! It is you who has manifested himself as Dhata (the creator, preserver, sustainer and bearer of this creation), as Vidhata (the one who has determined the destiny of all the creatures and has set the rules of conduct that they are supposed to obey in this world; the Lord who has created the constitution or the law book of this creation), as Pawan (the all-pervading Wind God), Garud (eagle or heron, the mount of Vishnu—see verse no. 4), as Vishnu (the sustainer and protector of creation), as Varaaha (the third incarnation of Lord Vishnu as a boar in which he had killed the demon Hiranyaaksha and lifted the earth out of the flood waters in which it had been submerged; this is symbolic of the Lord's liberation of the world and preventing it from being drowned in an ocean of sins), and as the night and the day (representing the cycle of death and birth respectively).

You are the past, the present and the future (symbolising the beginning of creation, the current phase of creation, and the final end of creation and beyond it).

You are revealed in the form of all activities and deeds in this world, as well as the movement of destiny and time.

Indeed, you are the eternal and imperishable Supreme Being who transcends these limitations of space, time, era and circumstances that govern the creation otherwise (6).

7. Oh Lord! The three primary Vedas (which are repositories of all knowledge that exist in this creation created by the creator), viz. the Rig, the Sam and the Yajur, are pronounced by your mouth. [According to tradition, it was Brahma, the old patriarch of creation who had created this visible world, who had created this three Vedas. Therefore this verse implies that this Brahma is also one of your forms, and is nobody else. In fact, the word 'Brahma' incorporates the word 'Brahm' in its self, and therefore the former has his existence due to the latter; the latter forms the 'gene' of the former. If 'Brahm' is removed from 'Brahma', the latter means nothing!]

You are the Lord of all assets created in this world for its sustenance in your manifestation of the eight Vasus, the patron Gods who oversee these physical assets of creation¹.

You represent the Antariksha (the space beyond the outer atmosphere of earth). [In other words, you are as vast and fathomless as the space of this universe and harbour all that exists in your bottomless bowl. Nothing exists outside of you.]

You are the Chief of any Yagya (fire sacrifice) both as its patron as well as the chief priest on the one hand, and as the almighty deity to whom worship is offered through the rite and who accepts the offerings and oblations made during the rituals of the Yagya.

It is you who has revealed himself in the form of the eleven Rudras² as well as in the form of the sons of Diti, i.e. as the Daityas (demons), and as the sons of Aditi, i.e. as the Vasus (the Gods led by Vishnu). [This is a remarkable observation—both the demons as well as the Gods are the same Brahm personified. They represent opposite characters in creation, and to say that they are the same principle revealed in two different forms is the ideal example of the virtue of Advaitya or non-duality so much extolled by the Upanishads. And there is no wonder in its truth—because if everything is Brahm revealed in that form, it follows that the demons and the Gods are no exception to this rule. Everything means 'everything', with no exceptions!] (7).

[Note—¹There are *eight Vasus* who are the various patron Gods who preside over the essentials of life. They are—Vishnu as the sustainer, Shiva who is the annihilator, Kuber who is the treasurer of the wealth of the Gods, the Sun, Water, Fire, Wealth represented by gems and gold, and 'Ray' representing glory and fame. The element

‘Fire’ is the most potent, prominent and essential force in creation, because without fire the world would freeze to death. Hence, the Fire-God is said to be the chief amongst the Vasus. The ‘fire’ element is the active force in creation and is primarily responsible for kindling the cosmic cauldron that set in motion the process, and once having set it in motion it then sustained it and would finally annihilate it by burning it to cinders. On the other hand, Lord Vishnu is the passive force of creation represented by his other form of Viraat Purush which is the primary male aspect of creation. Lord Vishnu, who is the sustainer of the creation, is the Lord of Laxmi who is the Goddess of wealth, and is the supreme creator because Brahma, the old patriarch of creation who created the visible world and its creatures, was himself born atop the divine lotus that emerged from the navel of Lord Vishnu. Lord Vishnu utilizes the services of Laxmi who is the personification of the active forces of creation to create, sustain and annihilate the world. The Vasus are symbolic Gods who represent those essentials aspects of creation without which life would be difficult to conceive and sustain and finally conclude.

The eight Vasus are the patron Gods who provide succour and a dwelling place for the whole creation. They symbolise those primary necessities of life without which existence is not possible. They are— (i) Kuber (the God of wealth and prosperity), (ii) the Sun God (who provides energy and food) and his rays and radiance (i.e. sunlight and the energy that it provides), (iii) Shiva (the concluser or annihilator of the creation), (iv) Vishnu (the sustainer), (v) the Water God (called Varun), (vi) the Fire God (called Agni), (vii) any body of water such as a pond, a river etc., and (viii) holy and pious people (who give advice and guidance to the creatures of the creation). According to Brihad Aranyak Upanishad 3/9/3, the Vasus are the following—Fire, Earth, Air, Antariksha (the space of the solar system), Aditya (Sun), Duloka (heavens), the Moon, and the Nakshatras (the stars and the planets).

According to Purans, the eight Vasus are the following—Dhruv, Dhar, Som/Soma the sap of an elixir-providing plant called Som/Soma which is used during religious ceremonies as sanctified liquid offered to the Gods), Aapha (water), Anil (wind), Anal (fire), Pratush and Prabhaas.

These eight Vasus are the semi-Gods who symbolise the various types of assets needed to sustain this world. They therefore represent such assets as jewels, precious stones and gems, gold and other forms of wealth and property. Vasus also refers to the fire and water elements as well as their grosser forms as the terrestrial fire and water bodies such as ponds and lakes; to the virtue of radiance, splendour and glory; to the ray of light; to Kuber (the treasurer of Gods), Shiva, Sun, Vishnu, and a simple and pious gentleman.

Lord Vishnu has one of his names as ‘Vasudeo’ because he is the sustainer and protector of creation, signifying his undisputed lordship over all the essential elements in Nature, called the Vasus of which there are eight in number, which were created at the beginning of creation to help sustain the upcoming creation.

It ought to be noted here that Vishnu is also called Viraat Purush, the macrocosmic gross body of Brahm, and it is from this form of Brahm that the creator of the visible creation, i.e. Brahma the old patriarch of creation, had emerged atop a divine lotus that sprouted from the navel of Vishnu. In other words, everything has its origin in the supreme Brahm.

²Lord Shiva has eleven forms called *Rudras*. The eleven Rudras are the various manifestations of Lord Shiva. According to the Srimad Bhagvat, 3/12/12, they are the following:--(i) Mannu, (ii) Manu, (iii) Mahinas, (iv) Mahaan, (v) Shiva, (vi) Ritdwaj, (vii) Ugrareta, (viii) Bhav, (ix) Kaal, (x) Vamdeo, and (xi) Dhritvrat. The eleven Rudras appear in Rig Veda 1/43/1, and Taittiriya Brahmin 3/4/9/7. They are regarded as the father of the Wind God or the Maruts (Rig Veda, 2/33/1). The word Rudra means one who is angry, terrible and wrathful. Amongst the Rudras, Lord Shiva is regarded as the most senior and enlightened.

According to Vishnu Puran, Ansha (Part) 1, Canto 8, verse nos. 1-11, when the creator Brahma wished to create a son in his own likeness, a child with a blue (purple) tone of the skin (resembling the colour of the sky) was born. The infant began crying aloud and running here and there. At his behaviour, Brahma named the child 'Rudra'—one who cries aloud and causes a nuisance. The child cried again and again seven times, and to calm him down Brahma gave him newer names.

This is how the word 'Rudra' originated. The other names are Bhava, Sharva, Ishaan, Pashupati, Bhim, Ugra and Mahaadev. The other names are Lohitaanga, Manojavaa and Skanda.

According to Shiva Puran, Rudra Sanhita, 18/20-27, Lord Shiva assumed the form of eleven sons of sage Kashyap and his wife Surabhi to fulfill their wish. The names of these eleven manifestations of Shiva are the following—Kapaali, Pingal Bhim, Virupaaksha, Vilohit, Shaastaa, Ajapad, Ahir-burdhanya, Shambhu, Chanda and Bhava.]

8. Oh Lord! Your forms are uncountable and unimaginable. The disc of astounding splendour and brilliance that shines in the sky (a reference to the sun) or as the illuminating disc that shines elsewhere in the subtle sky (i.e. in the heart of the creature symbolising the rounded disc of the full moon) are some of your divine forms. These forms remove the gloomy darkness (representing delusions and ignorance) from this world¹.

The golden sun symbolises both the golden cosmic embryo called Hiranyagarbha present in the womb of the creator (as the macrocosmic subtle body of the un-manifested Brahm) as well as the incandescent illumination emanating from this divine embryo which seeped out of the womb to illuminate the realm around it as represented by the illuminated sky around the sun. Further, since the embryo extracts its nutrition through the placenta attached to its navel, this sun also symbolised the cosmic navel because of the fact that it's light, heat and energy injects life on this earth and sustains all the creatures that live on it.

The rays of light that emanate from all the heavenly bodies that shine in the sky are actually manifestations of your glittering glories that radiate out from you to all the directions in this creation² (8).

[Note—¹In other words, your presence is sufficient to remove the darkness of ignorance and delusions from this world. Or, by being present in the heart of the creature as his Atma or soul, you provide the illumination of life and wisdom to him if he just realises that the sun and the moon in the sky are symbolic reminders for him to see the same brilliant illumination emanating from these heavenly bodies in his own self. This is the essence of the concept of 'Brahm-realisation, self-realisation and enlightenment'. According to Yoga Upanishads, the Sun is said to be the patron God of the Pingla Naadi or the right nostril, while the Moon is that of the Ida Naadi or the left nostril. In this way these two Gods control the life in a man because breathing is central to life. The Sun God has his symbolic abode in the navel, in the Nabhi Chakra, from where the embryo derives its nourishment while in the mother's womb—symbolising the ability of Brahm to not only create life but also to take care of it by providing it with nourishment. The use of the word 'navel' in verse no. 9 below assumes significance in this context. The navel is the 'focal point' of the body from where all the Naadis (nerves; veins) radiate out and spread to the farthest corners of the body in order to sustain it and keep it alive. If the body is regarded as a microcosm, then the celestial sun would be the navel of the world as is evident from the fact that the entire solar system revolves around this 'navel' called the sun. The Moon God on the other hand controls the Mana or the mind, and has his abode in the Kantha Chakra located in the throat from where he controls what he speaks and even his breath. The Mana is the progenitor of everything in this material world of sense

objects as is repeatedly stressed in the Upanishads, for should the Mana decide that the world is inconsequential, so it would become for the creature.

²This alludes to the celestial sun as well as the numerous other suns in the vast bowls of the universe, called the 'stars', which are all the most vivid and splendid manifestation of the stupendous glories of Brahm on display. If the sun represents Brahm then the rays of sunlight represents the glories of Brahm emanating out from it and spreading to each corner of the vast realm of creation. Even as the sun is central to life on earth, Brahm is the focal point of life in this creation. The word 'light' is synonymous with 'life', and its opposite 'dark' with 'death'. Since Brahm is 'life' and not death, it is apt to use the word 'light' as an aphorism to describe Brahm.]

9. Oh Lord! It is you who is all-knowing and omniscient. You are the protector and sustainer of all the existent worlds (refer verse no. 13), and the inhabitants of those worlds. In metaphoric terms, you are like the navel which helps the embryo to draw its nourishment from the mother; or you are the focal point around which the entire edifice of creation is built. [Or you like the sun which is the symbolic 'navel' or focal point around which the entire solar system revolves or depends.]

Being all-pervading, immanent and all-incorporating, you permeate the entire creation which revolves around you (i.e. it is dependent upon you).

You are the final resting place of all deeds and actions. [That is, you are the final objective of all the noble things that are done in this world; you are the final aim of all auspicious and religious endeavours undertaken by a person, and you are the ultimate destination where the soul wishes to go and find its final rest by so many doing good things in life and diligently observing all the tenets of the scriptures.]

It is you who is present in the womb (navel) of the Viraat Purush (Vishnu) as Prajapati (Brahma). [This has reference to the fact that Brahma the creator of the visible creation had emerged atop a divine lotus that sprouted from the navel of Vishnu. Obviously Brahma was present there and was lifted atop the lotus as it emerged from this navel.]

It is you who has revealed himself in the form of the Chandas, i.e. as the poetical hymns of the Vedas as well as of all the other scriptures (9).

10. The glories, majesty and magnificence of the Viraat Purush (i.e. the macrocosmic, all-encompassing, infinite and invisible form of the Supreme Being known as Brahm) are of such stupendous and infinite proportions that they can neither be measured (known, ascertained, described, enumerated, defined and explained) nor their dimensions found and end known or seen or determined by even the most wise, learned, erudite and sagacious persons such as great sages or seers who delve in the great Vedas and employ them in an attempt to do so for the simple reason that these Vedas, such as the Sam Veda, which have been singing and lauding the Lord's divine eclectic glories from time immemorial have not themselves been able to do so inspite of their best of efforts, their ceaseless attempts and their highly evolved level of knowledge because they are in fact created by the creator Brahm himself as embodiments of knowledge and are the greatest repositories of knowledge and had been ever been created by him. [Having failed to do so, they surrendered by saying 'Neti-Neti'—literally meaning 'not this not this' or 'neither this nor that'. That is to say that first they made an attempt to define something that is essentially indefinable and beyond comprehension, and then feared that it was not the correct definition. They then endlessly searched for words and epithets, listed them in reams of words, and still could not fine the beginning or the middle or the end of Brahm. So they

threw in the towel saying that what they have just said is not Brahm, and neither is he something that they had said in the past or some time back.]

Oh Lord! The Supreme Being who is adored and worshipped by means of the hymns of the Sam Veda as well as the Yajur Veda during fire sacrifices by experts of these Vedas is none else but you (10).

11. Oh Lord! You are revealed in all forms the creation has taken, such as a female or a male, as a girl or as a boy. You are mother earth (which supports the entire living world as known to us—see verse no. 12).

You are Dhata (creator and protector—see verse no. 6), Varun (the Water God), Samraat (emperor), Samvatsar (the full year symbolising one complete cycle of seasons and life of a creature), Agni (the fire element and the Fire God), and Arayama (the Sun God).

Indeed, whatever that exists that has ‘life’ is nothing but you in that form (11).

12. Oh Lord! You are revealed in multifarious forms as Surya (Sun), Garud (the mount of Vishnu), Chandra (Moon), Varun (the Water God), Prajapati (the creator Brahma), Vishnu (the sustainer and protector of creation), Savita (the splendid sun; the element of light, heat and energy represented by the sun), and Gopati (literally the lord of cows but more broadly meaning someone who is the lord of all non-human creatures as well as is the lord of the various organs of the body; also referring to Lord Krishna because he was born in the cowherd clan).

In your manifestation as Vishnu, you provide solace and succour by giving protection to the entire creation against the torments inflicted by the wicked forces of creation represented by the various demons.

You are the creator and sustainer of the whole world in the form of mother earth. The entire creation is enveloped by you or encircled by you, and you form its outer boundary. [In other words, nothing exists beyond you; you encompass everything in existence.] (12).

13. Oh Lord! You are revealed in the form of the three worlds represented by the words ‘Bhu’ which refers to the terrestrial world where the mortal creatures live, ‘Bhuvaha’ which refers to the world above the surface of the earth such as the world of the sky borne creatures, and ‘Swaha’ or the world of the heavens where the stars and other celestial bodies live (refer verse no. 9).

You are ‘Swayambhu’—i.e. one who is self born; one who has no parents and any cause for coming into being.

You are ‘Vishwatomukh’—i.e. one whose face is turned everywhere; one who faces on all the sides; one who is present everywhere; one who is omnipresent and ubiquitous; and by extension one who is all-knowing because he is present everywhere and therefore nothing is hidden from him; one who is therefore the visible face of the multifaceted creation.

Any person who is wise enough to realise that the supreme Brahm who is the Lord of the entire creation, who is most radiant and glorious like the sun, and who is reverentially honoured and highly lauded by the ancient scriptures, lives secretly in his (i.e. the enlightened person’s) own cave-like heart in the form of the pure consciousness known as the Atma, as well as in the form of the life-sustaining vital wind forces known as Pran that are ubiquitously present in the body—such a wise, erudite and enlightened person is able to attain the supreme stature that is the exclusive domain reserved for those who are self-realised and Brahm-realised. He

overcomes the delusions created by the mind and attains this exalted and exclusive state of realised and enlightened existence.

This is the esoteric and eclectic knowledge pertaining to the Divinity known as Brahm as preached by this Upanishad. Amen! (13).

-----Shanti Paath-----

-----*****-----*****-----

Chapter 23

Akchi Upanishad/Akchyu-panishad

This Upanishad is dedicated to the Sun God and has two parts. In the first part, sage Sankriti has prayed to the Sun God and asks him to show the world true light. The Sun is a visible manifestation of the glorious divinity, the radiant splendour and stupendous magnificence of the supreme transcendental Brahm. By praising the Sun God one is actually paying his obeisance to the Supreme Being who has revealed himself as this God. There is an Upanishad especially dedicated to the Sun God, called the Surya Upanishad, and it appears as the 17th Upanishad of the fifth volume in this series dealing with the Upanishads of the Atharva Veda.

In the second part, the Sun God describes to the sage the metaphysical knowledge of this Brahm, called the Brahm Vidya, and emphasises that Yoga is the true and effective means to realise this Brahm. The path that leads to Brahm-realisation has seven distinct signs or stages, called the 'Seven Bhumikas of Brahm Yoga'. Refer also to Varaaha Upanishad which is Chapter 30 of this volume. Each Bhumika marks a distinct stage or step of enlightenment, and they have been elaborately described in part two of this Upanishad. These seven stages are listed in the way of ordinal numbers, with the first indicating the preliminary or the preparatory stage, and the seventh number marking the ultimate and highest spiritual order which is equivalent to Brahm-realisation. The distinctive characteristics of each stage have been clearly brought out in a beautiful way in this Upanishad.

Being revealed by the Sun God himself, it is one of the 'revealed Upanishads'. Other Upanishads of the Krishna Yajur Veda that very closely resemble this Upanishad are Kaivalya Upanishad which is Chapter 4, Brahm Upanishad, Chapter 3, and Brahm Vidya Upanishad which is Chapter 16 of this volume.

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of this Shanti Paath.

Canto 1

1. Once upon a time, the wise and enlightened sage named Sankriti went to the divine abode of the Sun God¹ called the 'Aditya Loka'. There, the sage bowed most

reverentially before the Sun God and offered prayers and his obeisance to him by what is known as 'Chakshyushmati Vidya'².

The sage prayed thus—'Oh Lord! I most reverentially bow to the Sun God who is the one who lights up the organ of the body which gives the creature his ability to see, i.e. he blesses the creature with the magnificent faculty of sight and gives consciousness to the organ known as the eye so that it can carry out the function of seeing on behalf of the creature who is a microcosmic revelation of the macrocosmic, all-encompassing Supreme Being.

I bow to Lord Surya (the Sun God) who moves across the path of the sky. I bow to him who is the great commander of the brilliant army (having glinting armour) represented by the thousands of rays (of the sunlight) emanating and radiating out from him (in all the directions of the realm under his dominion and helps to exercise control over the entire visible creation). [This alludes to the fact that the world and its existential life depends on the sunlight more than anything else. If the sun were to be blocked out, life as we know it would be extinguished. Life can be sustained without the moon, but it is unimaginable without the sun. The Sun moves across the sky with his army of light rays to protect the world from the evil of darkness.]

I bow most reverentially to Lord Surya who personifies all the three qualities of Sata, Raja and Tama that exist in creation³.

Oh Lord Surya! Take us from the path of falsehood towards the path of truth. Take us from darkness (representing delusions and ignorance and their attending horrible consequences for the soul) towards light and illumination (symbolised by the eclectic virtue of wisdom, erudition, sagacity and enlightenment which would make our lives worth living and worthy, which would us distinguished and differentiated from being an animal, which would make us put this opportunity of having got a human body to become spiritually elevated and become self-realised and Brahm-realised, which would open the floodgates of eternal peace and contentedness for us, which would light up the 'eternal existential truth' for us by removing the veil of darkness signifying delusions and ignorance, and which would light up our lives with glory and magnificence).

Oh Lord! Take us away from death and mortality towards eternity and immortality; take us away from darkness towards light.

The Bhagwan (Lord God Sun) is like the pure Swan (representing the pure consciousness that lives as the Atma of all living beings). He is the one who forms an image or reflection⁴ (of the supreme Brahm or Truth).

He (i.e. the Sun God) is the bearer of the entire living creation (because life would be unimaginable and impracticable without sunlight). He is adorned by a glittering gown consisting of dazzling rays of light glinting out from it in all directions. He wears an equally marvelous crown from which streaks of dazzling light radiate out to all corners of this world. [That is, his divine Being is so holy and auspicious that it glows with a magnificent halo that effuses out of his divine Self and surrounds him from all the sides besides illuminating the vast stretches of the realm around him as well to mark his august presence in the sky as its Lord. This is a metaphoric representation of the Supreme Being's august presence in our midst; even as the entire life on earth revolves around the presence of the sun in the sky, the very existence of all living beings depend upon the presence of the conscious Atma, the counterpart of this Supreme Being residing in each individual as his 'true self', to remain alive and active.]

He is 'Jatveda', i.e. one having whatever is born or created as his property; the all-possessor; one who knows everything and is known by all creation. [This word is

usually applied as an epithet for the eternal fire element of which the sun is a visible manifestation and container.]

He glows like molten gold (signifying his purity and immense intrinsic value for creation). He is an embodiment of all the divine and glorious virtues represented by 'light' (which provides this creation with illumination, energy and heat—the essential factors of necessary for life; the word is also used as a metaphor for the grand virtues of wisdom, erudition, sagacity and enlightenment as compared to darkness which symbolises a life of falsehoods, illusions, ignorance and delusions).

He is endowed with the eclectic virtues of Tapa (i.e. he glows with his natural brilliant light because he has done severe Tapa, or has observed sincere austerity, done penance and has generally endured sufferance for a noble cause of sustenance and well being of this creation created by him, and is therefore rewarded by its divine fruit in the form of unmatched brilliance representing his divine glory and spiritual accomplishment that effuses out of him as his brilliant light and splendour which makes him burn fiercely like a cauldron of eternal fire because the word 'Tapa' itself is used as a synonym for 'fire' with its great powers, potentials and virtues).

That divine Surya (the sun; the Sun God) is revealing himself before all the living beings with all his splendourous radiance emanating out of his self as thousands of glinting rays of glittering brilliance and dazzling light. [The present tense used in this statement indicates that when this prayer is offered, the sun is gradually rising from the deep bowls of darkness in the horizon at dawn and gradually begins to light up the vast realm with its light as a token of the Sun God's acceptance of the prayers of the worshipper and blessing him with his largesse.]

This same Surya has revealed himself in the form of hundreds of forms and manifestations in which this living world exists. [Here, the Sun God is likened to the consciousness present in all living beings in this world because it is this consciousness that makes the creature alive and active. The day time marked by the presence of the sun is like the waking state of consciousness when the creature wakes up to the realities of existential life and goes about his daily life, while the darkness of night is like his sleeping state when nothing of the world is known to him as the world is plunged in darkness in the absence of the sun's light. The revelation of the sun in the form of all living things alludes to the fact that all the living creatures who live in this world have the same consciousness called the Atma living inside their bodies though their external features show a wide variation in colour, form and shape much like the same sun appearing differently when seen at different times of the day, during different seasons of the year, and from different locations on earth.]

I bow most reverentially to Lord Surya, the son of Aditi (the mother of Gods), who symbolises the light in our eyes. [According to the Upanishads, the Sun God had taken up his residence in the eye of the man's body at the time of creation.]

We offer everything that we have to the Surya God who is the one who makes the day move by his own movement. [This refers to the fact that had there been no sun, there would have been constant night, and neither would there be any progress in the day-and-night cycle representing the cycle of birth and death, or creation and destruction. It also alludes to the fact that Brahm whom the sun personifies has revealed himself in all forms of life in which the vast creation exists. Life is characterised by movement; anything that has no life shows no movement as proved by the fact that when the man is dead, no matter what is done to provoke him he would just not respond. Since life is a visible form of the magnificence of Brahm, since life reveals Brahm's astounding virtues, potentials, powers, authority and glories in vivid form which would otherwise have remained unknown and secret because

Brahm is such an esoteric and mysterious entity that nothing is definitely known of its attributes and qualities, and since the Sun God is a vivid manifestation of this Brahm's glories and divinity, it follows that the movement of the sun across the sky and its setting at a predetermined time only to re-emerge the next day is symbolic of the rhythmic movement of life in this world. It also implies that after every phase of darkness and depressing hopelessness, there is always a day of hope and light. So a wise man should utilise this day to the best of his ability.

You (the Sun God) are the bearer of the entire life in this world. [This is obvious from the basic fact that life without sunlight and its accompanying light, energy and heat is simply unthinkable and impracticable.]

When the sage had prayed to the Sun God with this prayer called the 'Chakshyushmati Vidya', the Lord was very pleased with him. He felt exhilarated and blessed him with this boon—'A Brahmin (any learned person) who offers his prayer and worships me with this hymn everyday does not have to suffer from any diseases pertaining to the eyes, and no one suffers from the curse of blindness in his family. When eight learned Brahmins are taught this Vidya (i.e. when eight men are educated with this profound divine knowledge about the real meaning, the metaphysical significance and spiritual truth behind the worship of the Sun God), the teacher becomes an expert in it; he accomplishes 'Siddhi' or acquires great mystical powers that come with successful acquisition and practice of such eclectic knowledge. A person who is well-versed with this esoteric knowledge acquires great name and fame; he becomes revered, honoured, exalted and great' (1).

[Note—¹The Sun God—(a) The Sanskrit word for the Sun God or Aditya is *Surya*. This word has three connotations—viz. (i) *Sarteha*—one how moves. This refers to the Sun because it moves constantly across the sky. It also refers to the supreme cosmic Consciousness that makes all movement possible. (ii) *Sviriyate*—this means one who receives and accepts. This virtue refers to the fact that all offerings offered to the fire sacrifice are done in the presence of the Sun, and since the latter is the celestial cauldron of fire all the offerings are deemed to be offered to it. In another plane, it refers to the Jiva, the living being, who receives stimuli from the world and then accepts them and deduces that the world from where they originate is real and true. (iii) *Suvateha*—meaning one who shines. This is very obvious in the case of the Sun. This virtue refers to the supreme Self or supreme Consciousness that is self-illuminated and self-effulgent.

Sun God or *Surya* appears first in the Rig Veda, 1/50. He is one of the chief Gods that sustain life. He is closely related to the Fire God; the Sun is a visible manifestation of the fire element. The sun is regarded as the 'eye' of the Viraat Purush, and at the time of creation when this Viraat Purush revealed himself as the individual creature such as for example a cow, a horse and a man, the Sun God took up residence in the eye (refer Aitereyo-panishad of Rig Veda, Canto 1, verse no. 4, and Canto 2, verse nos. 3-4). He is also regarded as visible manifestation of the supreme transcendental Brahm (refer Brihad Aranyaka Upanishad, 2/1/2; 2/5/5; 3/7/9. The Sun God watched the deeds done by all the creatures (Rig Veda, 1/50/2). The Sun is like the Atma of all the creatures (Akchu Upanishad, Canto 1, verse no. 1; Rig Veda, 1/115/1; Shatpath Brahman, 14/3/2/9).

The Sun is regarded as a fount of light, energy and heat from a physical perspective, and as a great treasury of knowledge and wisdom symbolised by its magnificent light and brilliant splendour. As an embodiment of this virtue of knowledge, wisdom, erudition and sagacity he has been held in high esteem and as the great teacher and preacher of eclectic knowledge pertaining to the philosophy expounded by the Upanishads. He had assumed the form of a horse and revealed the Shukla Yajur Veda to the great sage Yagyavalkya. He was also the teacher of

Hanuman, said to be incarnate Wind God and Lord Shiva, and who was the great, most ardent and the wisest devotee of Lord Ram.

According to mythological accounts, the Sun God was the son of sage Kashyap and his wife Aditi from whom all the Gods were born. He is said to be a revelation from the eye of the Viraat Purush also known as Vishnu who is the macrocosmic all-pervading and all-encompassing vast and invisible form of the Supreme Being known as the transcendental Brahm. The physical Sun in the sky is the Viraat Purush's visible form. He was married to Sangya, the daughter of Vishwakarma who is regarded as the architect, builder and planner of the Gods. Sangya had two sons and one daughter from the Sun God—viz. the sons named Shraadhdev also called Vaivaswat Manu and Yam the god of death, and the daughter named Yamuna which is also the name of a famous river in India. Sangya could not bear the intensity of the Sun's heat and light, so she left her 'shadow' or image and herself went away disguised as a mare to do severe penance. From this 'shadow' were produced two sons and a daughter. The two sons were Shani God who is believed to be full of malice and evil forebodings reflecting the genes of his mother as a dark shadow, and Saarvarni Manu, and the daughter was Tapti literally meaning one who is fierce and hot. In due course of time, the Sun God found out that his real wife Sangya was involved in doing severe Tapa, so he was extremely pleased with her and brought her back. It was from her form as a mare that the Ashwini Kumars were born. They derived their name from the root 'Ashwa' meaning a horse. These twin sons of the Sun God are regarded as the medicine men of the Gods.

The Sun God revealed himself as Sugriv, the king of the monkey race, during Treta-Yug when Lord Ram incarnated, and as Karna during Dwapar when Lord Krishna came as an incarnation of Vishnu. Sun God rides a chariot driven by Arun who is the son of Vintaa (his mother) and the elder brother of Garuda, the legendary heron or eagle who is the mount of Lord Vishnu. The seven horses of the chariot represent the seven colours of the Sun's light. He is constantly on the move and controls and regulates the seasons, months, solstice and year.

According to Yoga Upanishads, the Sun God has his symbolic presence in the naval of the body in the Nabhi Chakra or the Manipur Chakra, and as the fire element in the Mooladhar Chakra, the Swadhisthan Chakra and the Kundalini. The dynamic energy of the sun represented by its life-giving powers is revealed in the form of consciousness that flows in the Pingla Naadi, the nerve passing through the right nostril.

The *Akchu Upanishad* lists some of the virtues of the Sun God in its Canto 1, verse no. 1 which is exclusively dedicated to his grand virtues as follows—he provides the creature with the ability to see; he lights up the world for him; he provides the creation with its life and sustains it; he moves across the sky with his army of light rays to protect the world from darkness; he personifies the three basic Gunas of Sata, Raja and Tama much like Brahm; he takes the creature away from darkness representing delusions and ignorance towards light symbolising wisdom, knowledge, erudition and enlightenment; he is like the Swan—pure and immaculate; he is the bearer of life; he is the Jatveda (one having whatever is born or created as his property; the all-possessor; one who knows everything and is known by all creation; the word is usually applied as an epithet for the eternal fire element of which the sun is a visible manifestation and container); he is as intrinsically valuable as molten and purified gold; he is Tapa (austerity, penance, sufferance for a noble cause) personified; he is the emperor of creation and is crowned with a glittering crown and wears an equally glittering robe consisting of rays of the sunlight; he is the son of Aditi, the mother of Gods, and he lives as 'sight' in our eyes.

Aditya or the Sun God has been repeatedly regarded by the Upanishads as a manifestation of the Viraat Purush who himself is the macrocosmic gross body of Brahm. For example, Chandogya Upanishad of Sam Veda—1/6/3, 5, 6; 1/10/7; 2/9; 2/14; 2/24/12-14; 3/1-11; 3/18; 5/13; 6/4/2 etc.; and Brihad Aranyak Upanishad of

Shukla Yajur Veda—2/1/2; 2/5/5; 3/7/9; 3/9/5; 5/15; Brahmo-panishad of Krishna Yajur Veda—verse no. 1, etc.

The *Akchu Upanishad* of the Krishna Yajur Veda tradition is fully dedicated to the Sun God. It has two parts—in its Canto 1 sage Sankriti offers prayers to the Sun God, and Canto 2 contains the metaphysical and spiritual teachings of the Sun God for the benefit of the sage.

The *Taittiriya Upanishad* of the Krishna Yajur Veda tradition, in its Valli 1, Anuvaak 1, verse no. 1, says that the Sun God is known as 'Mitra', literally meaning a friend. This is because the Sun God's benevolence and life-sustaining abilities make him a fast friend of every single living being in creation. He fosters life and is a friend of life rather than being its enemy by annihilating it. He helps the world to develop and grow as well as to acquire its stupendous magnificence and glory—refer *Taittiriya Upanishad*, Valli 1, Anuvaak 5, verse no. 2.

He is also known as 'Savita'—refer *Savitru-panishad* of Sam Veda tradition, and *Shwetashwatar Upanishad*, Canto 2 of Krishna Yajur Veda tradition. The name 'Aditya' is endorsed by a number of Upanishads—e.g.

He is a visible manifestation of the 'Viraat Purush'—refer *Taittiriya Upanishad*, Valli 1, Anuvaak 5, verse no. 2. He is the 'eye' of the Supreme Being—refer *Aiteriyo-panishad* of Rig Veda, Canto 1, verse no. 4, and finds his abode in the creature's eye—refer *Aiteriyo-panishad*, Canto 2, verse no. 4.

The *Naryan Upanishad* of Krishna Yajur Veda, in its verse no. 1 says that he was born from Lord Narayan, i.e. Lord Vishnu. The same thing is asserted in *Brahmo-panishad* of Krishna Yajur Veda, verse no. 1 which states that Aditya, the Sun God, is a manifestation of Lord Vishnu. But this is understandable because Vishnu and the Viraat Purush is the same Lord having different names according to the degree of subtlety and the scriptural text one is referring to; both are synonymously used. Whereas the Viraat Purush was the macrocosmic gross body of the supreme transcendental Brahm that appeared in the first stage of creation when Brahm decided to initiate it, he was called Vishnu at a little later stage when the visible creation was just about to be initiated, because it is from Vishnu that Brahma the creator was born who later gave shape to the creation itself.

'Aditya' or the Sun God appears in the Vedas as follows—Rig Veda-- 1/41/4-6; 2/27; 8/47/14-18; 10/185; Sam Veda—395; 397; Yajur Veda—23/5; 34/54; Atharva Veda—5/3/9-10; 16/3.

The *twelve Adityas*—(a) According to mythology, there are said to be *twelve Adityas* which are simply as many forms of the Sun God. These are the revelations of Brahm in the form of the Sun to carry out the following functions of creation—(a) take care of the world (Rig Veda, 2/27/4); (b) are like the heads (Taittiriya Brahman, 1/2/3/3) and eyes (Jaimini, Uttar. 2/1/2/3) of all the creatures.

These twelve Adityas appear first in the Rig Veda 1/41/4-6 and 2/27. They are the sons of Aditi, the mother of Gods (Atharva Veda, 8/9/21). They are the following—the eight Vasus + Indra + Sun + Vishnu + Shiva = twelve in number.

(b) According to Brihad Aranyak Upanishad 3/9/5, the twelve months of the year represent these twelve Adityas, one month for one Aditya. In this Upanishad, sage Yagyavalkya draws a parallel between the twelve months of a year and the twelve Adityas for the following reasons—First, with the passage of one complete year, a corresponding number of years are subtracted from the total number of years that a person is supposed to live in this world. That is, death comes so much the nearer to him. The passage of the sun across the sky from dawn to dusk is used as a symbolic way of depicting the passage of the life of a man from his birth till his death. Since there are twelve mythological suns and twelve months in a year, a parallel is drawn between them and the life of a man.

Second, the whole life of an individual creature as well as the entire creation as a whole depends upon the various seasons that appear in a year. If even one of the

seasons is disturbed, the entire cycle of life is disturbed correspondingly. For the smooth functioning of life, all the seasons must appear in a rhythmic and systematic manner, and it is a scientific fact that the seasons, upon which the life on earth is so dependent, also themselves depend upon the sun. That is why the Adityas are termed as being synonymous with the twelve months of the year as well as with the life cycle of creation.

(c) According to Vishnu Puran, the twelve Adityas are the following—Dhata, Aryamaan, Mitra, Varun, Anshu, Bhug, Indra, Vivaswan, Pusha, Parjanya, Twashta and Vishnu.

The Sun God is worshipped by twelve names during the twelve months of a year. These names and the months are as follows—(1) as Dhata during the first Hindu month of Chaitra also known as Madhu (roughly corresponding to mid-March and mid-April); (2) as Aryama during the second Hindu month of Vaishakha also known as Madhav (roughly corresponding to mid-April to mid-May); (3) as Mitra during the third Hindu month of Jyestha also known as Shukra (roughly corresponding to mid-May and mid-June); (4) as Varun during the fourth Hindu month of Ashad also known as Shuchi (roughly corresponding to mid-June and mid-July); (5) as Indra during the fifth Hindu month of Sravan also known as Nabha (roughly corresponding to mid-July and mid-August); (6) as Vivaswan during the sixth Hindu month of Bhadrapad also known as Nabhasya (roughly corresponding to mid-August and mid-September); (7) as Pusha during the seventh Hindu month of Aashwani also known as Tapa (roughly corresponding to mid-September and mid-October); (8) as Kratu during the eighth Hindu month of Kartik also known as Tapasya (roughly corresponding to mid-October and mid-November); (9) as Anshu during the ninth Hindu month of Marga Shirsha also known as Saha (roughly corresponding to mid-November and mid-December); (10) as Bhag during the tenth Hindu month of Paush also known as Pushya (roughly corresponding to mid-December and mid-January); (11) as Twasta during the eleventh Hindu month of Magh also known as Esh or Ish (roughly corresponding to mid-January and mid-February); and (12) as Vishnu during the twelfth Hindu month of Phalgun also known as Urj (roughly corresponding to mid-February and mid-March).

Since the Sun God is a manifestation of the Supreme Being known as Viraat Purush, he is like an Emperor who, during his sojourn across the sky which is like his vast realm, is accompanied by many sages called Rishis, celestial courtesans called Apsaras, celestial musicians called Gandharvas, servants called Raak-chhas or demons, guards known as Bhalls, and serpents called Naags. The Rishis walk in the front singing the Lord's glories in sacred hymns; the Apsaras dance to the music scores by Gandharvas; the Raak-chhas (demons) push the chariot from rear; the Bhalls take care of the chariot and guide it along, while the Naags pull it forward.

These attendants are also different like the forms in which the Sun God is worshipped in different months as described above. The list is outlined month-wise in the following sequence—Rishi, Apsara, Gandharva, Raak-chhas, Bhalla and Naag.

- (1) The month of Chaitra—Rishi is Pulastya; Apsara is Kritsthal; Gandharva is Tumburu; Raak-chhas is Heti; Bhalla is Rath-krit; and Naag is Vaasuki.
- (2) The month of Vaishaakha—Rishi is Pulaha; Apsara is Punjikasthal; Gandharva is Naarad; Raak-chhas is Praheti; Bhalla is Oja ('Ojaha'); and Naag is Kachaneer.
- (3) The month of Jyestha—Rishi is Atri; Apsara is Menakaa; Gandharva is Hahaa; Raak-chhas is Paurusheya; Bhalla is Rathaswan; and Naag is Takshak.
- (4) The month of Ashadha—Rishi is Vashishta; Apsara is Rambhaa; Gandharva is Huhu; Raak-chhas is Shukra; Bhalla is Chitraswan; and Naag is Saha-janya.
- (5) The month of Sraavan—Rishi is Angira; Apsara is Pramlochaa; Gandharva is Vishwaa-vasu; Raak-chhas is Varya; Bhalla is Srotaa; and Naag is Elaapatra.
- (6) The month of Bhadrapad—Rishi is Bhrigu; Apsara is Anumlochaa; Gandharva is Ugrasen; Raak-chhas is Vyagrha; Bhalla is Aasaaran; and Naag is Shankha-paal.

- (7) The month of Ashwin—Rishi is Gautam; Apsara is Ghritaachi; Gandharva is Dhananjay; Raak-chhas is Vaat; Bhalla is Suruchi; and Naag is Sushen.
- (8) The month of Kaartik—Rishi is Bhardwaj; Apsara is Varchaa; Gandharva is Parjanya; Raak-chhas is Senjit; Bhalla is Vishwa; and Naag is Eieraawat/Earaawat.
- (9) The month of Maargashirsha—Rishi is Kashyap; Apsara is Urvashi; Gandharva is Ritsen; Raak-chhas is Vidy-chhatru; Bhalla is Taakcharya; and Naag is Mahaa-shankha.
- (10) The month of Paush—Rishi is Aayu; Apsara is Purvachitti; Gandharva is Sfurja; Raak-chhas is Arishta-nemi; Bhalla is Uurna/Oorna; and Naag is Karkotak.
- (11) The month of Maagh—Rishi is Jamdagni also known as Richik-tanaya; Apsara is Tilottamaa; Gandharva is Shatjit; Raak-chhas is Brahmapet; Bhalla is Dhrit-raashtra; and Naag is Kambal.
- (12) The month of Phaalgun—Rishi is Vishwaa-mitra/Vishwamitra; Apsara is Rambhaa; Gandharva is Suryavarchaa; Raak-chhas is Makhaapet; Bhalla is Satyajit; and Naag is Aswatar.

(d) The Sun is said to have *twelve Kalaas* (shapes, forms, dimensions or aspects) and the Sun with each Kalaa would therefore be known by that name. They are called ‘Dwaadash Aditya’, meaning the twelve forms in which the Sun God is known. They are the following—Tapini, Taapini, Dhumraa, Jwaalini, Ruchi, Shushumna, Bhogadaa, Vishwaa, Bodhini, Dhaarini and Kshamaa.

That is why lord Ram was said to belong to the Solar race because he had twelve Kalaas possessed by the Sun. There is an obvious parallel here.

(e) The *eight Adityas*—According to the Taiteriy Brahman, 1/1/9/1 gives the name of only eight Adityas—(i) Mitra, (ii) Varun (iii) Aryaman (iv) Ansha (v) Bhag (vi) Dhaata (vii) Indra, (viii) Vivaswan.

²The word ‘Chakshu’ means the eye or that which pertains to the eye, i.e. the faculty of sight and the ability to see the external world, while ‘Vidya’ means knowledge. Hence, the Chakchu Vidya is a special hymn composed in honour of the Sun God who happens to be the patron God of the eyes and lights up the world for the creature. Without the eyes and their ability to see, the world would have been a terrifyingly foreboding and a dark wasteland as well as non-existent and useless as far as the individual is concerned. That is why he thanks the Sun God for lighting up the world for him. The individual’s ability to see this world also depends upon the light that the celestial sun provides as is evident from the fact that no one can see anything in the pitch darkness of the night and so cannot enjoy the beauty of Nature and see the myriad charms of this immensely fascinating world.

There is another interesting spin off to this hymn. Since it is offered to the rising sun, it indirectly gives many health benefits to the person—one, he has to be an early riser with its accompanying many health benefits, two, the early rays of the sun are beneficial for the eyesight which is very crucial for a modern man who spends most of his time in artificial light in his office and other close spaces away from natural light which in turn creates a number of problems for his eyesight, and three, he becomes wise and realises the golden opportunity offered to him as a human being that he is able to ‘see’, and therefore he should strive to ‘see the truth’ and spiritually benefit from this spiritual insight.

This is the prayer which is based on the metaphysical interpretation of the faculty of sight and the organ that exhibits this function of seeing, i.e. the eye. At the macrocosmic level, the Sun is the eye of the cosmic Brahm, while its counterpart at the microcosmic level of the individual creature is the physical organ of the eye. Both perform the same function—i.e. to give light and awareness. The celestial Sun is like the heavenly eye of the Supreme Being through which the latter is able to oversee the functioning of the entire creation, while its counterpart in the individual creature is

the latter's individual eye. This ability of the Sun to light up the world for the Supreme Being is metaphorically represented by the organ of the eye present in the gross body of the man and which enables him to see the world by the inherent light present in the eye.

When extended further, the inherent presence of light in the man's eye implies that every man inherently possesses the virtue of enlightenment, wisdom and erudition, but unfortunately they get darkened and covered in a veil of ignorance and delusions so that he is misled by the illusive charms of the artificial world, falls in its trap and gets diverted from his true goal of life. This digression leads to his spiritual downfall inspite of his having 'eyes' to 'see', and there being abundant 'light of the day' to illuminate the path in front to show him that there is deep pit or horrible trap in front to be guarded against, and that he must walk carefully. But still he falls in this pit or gets trapped in the snare—say, what can be said of such a stupid man?

A man is an image of the Viraat Purush, the macrocosmic gross body of the Supreme Being who is also known as Brahm, and the Sun God who was created from the eyes of the Viraat Purush at the time of creation took up his residence in the man's eyes. [Refer Aitereyo-panishad of Rig Veda, Canto 1, verse no. 4, and Canto 2, verse nos. 3-4.] From this fact it follows that the eye of the man at the micro level of creation is aptly compared to the sun as being the eye of Brahm at the macro level of creation. Even as the world would be plunged in darkness for a man without the eye, the vast realm of creation would be plunged in a similar darkness if there was no sun. Therefore, this prayer basically lauds and honours the Sun as the source of light for the world, not only the physical light that shines upon this world and gives it its illumination, heat and energy that supports life in this creation, but more importantly and metaphorically the metaphysical light of knowledge, wisdom, erudition and enlightenment that removes darkness of falsehoods, ignorance and delusions that have shrouded the creatures from all sides, thereby illuminating and showing the correct spiritual path of liberation and deliverance of the soul to all the creatures of this creation.

³The character of all the living beings in the entire creation is dependent upon three primary qualities called Sata, Raja and Tama. Sata is the best of the three and marked by a propensity for auspiciousness, probity, propriety, piety, holiness and righteousness. The second quality is Raja and it makes a man more attracted to this material world and its charms and less spiritually inclined. The third quality is the meanest of the three and leads to the inclinations for committing sins and all sorts of demeanours. The varying quantity and intensity of these three in any given individual would decide his specific character and how he is inclined to deal with the world and a given circumstance.

⁴The Sun is an image of the glorious and astounding divinity of the Supreme Being; the supreme Brahm has revealed his glorious powers in the form of the Sun. According to numerous Upanishads, the Sun is a visible manifestation of Brahm. Anything that has a truthful existence and reality would form an image and reflection in a mirror. Since the sun can not only be seen in the mirror but this image formed in the mirror would also appear to produce its own light which appear to emanate from the image of the mirror and form a patch of light on the wall of a room when the mirror is held at the correct angle against it. This patch of light is actually formed by the sunrays bouncing off from the surface of the mirror and falling on the wall directly, but for all practical purposes they appear to come from the image of the sun formed inside the mirror. The metaphysical significance here is that the glory of the Atma, the pure consciousness residing in the bosom of all living beings, is actually the glory of the supreme Brahm. The visible world seen around is actually the reflection of the stupendous magnificence and brilliance of Brahm as it is lighted by the latter's own light emanating from his own image in the Sun. The Sun stands for the truthful aspect of Brahm, and anything other than this truth is falsehood—this fact is symbolised by the shadow formed by anything in the light of the Sun. This shadow

is always formed in the opposite direction of the Sun, indicating that when one turns towards the truth one would see light, while if one turns one's back to this truth one would see the long shadow of darkness of delusions and falsehoods.

The importance of the eye and the Sun God vis-à-vis this organ has been elaborately discussed in a number of places in the Brihad Aranyaka Upanishad—for instance, Canto 4, Brahman 1, verse no. 4; Canto 4, Brahman 2, verse nos. 2-3; Canto 4, Brahman 3, verse no. 2; Canto 5, Brahman 5, verse nos. 2-4.]

Canto 2

1. Next, sage Sankriti said to the Sun God—‘Oh Lord! Please preach me on ‘Brahm Vidya’, or the knowledge pertaining to the supreme transcendental Brahman.’

The Sun God replied—‘Oh Sankriti! I shall now narrate to you the ‘Tattva Gyan’, i.e. the rarest and most eclectic of knowledge related to the essential philosophy pertaining to Brahman and the Atma, and described as the basic tenets of metaphysics and spiritualism. Listen carefully, because by becoming enlightened about this knowledge you shall become ‘Jivan Mukta’, i.e. obtain liberation and deliverance for your soul even while you are still alive and retain your gross body with which you can go about your normal work in this world (1).

[Note—The concept of *Brahm Vidya* has been the chief subject of discussion of a number of Upanishads, especially the Kaivalya Upanishad which is Chapter 4, Brahman Upanishad, Chapter 3, and Brahman Vidya Upanishad which is Chapter 16 of this volume dealing with the Upanishads of the Krishna Yajur Veda.

The concept of *Jivan Mukti* or spiritual liberation and deliverance, or emancipation and salvation of the soul while the aspirant is still alive has been elaborately described elsewhere in the Upanishads, notably the Mandal Brahmin Upanishad, 1/4/3-4; 2/3/6-7; 2/4/5-6; Paingalo-panishad, 3/5; Adhyatma Upanishad, verse nos. 12, 43-47; and Muktiko-panishad, Canto 2 of Shukla Yajur Veda tradition; Annapurna Upanishad, Canto 2 of Atharva Veda tradition; Tejobindu Upanishad, Canto 4, verse nos. 1-32 of Krishna Yajur Veda tradition.]

2. You should cultivate the greatest of serenity, dispassion and equanimity by treating all living beings as ‘one’, and you should have no sense of duality between them and your own self (because essentially all are one single non-dual Atma that has revealed itself in all the myriad forms that are seen in this visible creation). [In other words, you should forget about the notion of ‘he’ and ‘me’, or of ‘his’ and ‘mine’.]

You should be convinced that all are, in their essential and basic form, an entity that has no birth (because it is imperishable and infinite), is peaceful and calm, is without an end (because it is infinite), is unwavering, constant and steady, is imperishable, unchanging and eternal, and is pure consciousness personified.

When you develop the level of wisdom and erudition that would enlighten you about this basic knowledge behind existence and the form that this creation has taken, the knowledge which is called ‘Tattva Gyan’ (i.e. the knowledge of the essentials, the knowledge of the fundamental principles of metaphysics and spiritualism, the knowledge of the basic tenets that the Upanishads preach), you would become peaceful and calm. You should live a contented and tranquil life of joy and happiness with this enlightenment (2).

3. The ‘Avedan Yoga’ or the higher form of true Yoga¹ is the eclectic state of existence when one is not even aware of anything else except the existence of the pure

consciousness in the world around him (i.e. as the Atma, whether in the form of the individual creature or as the cosmic power known as Brahm). It is the enlightened state of awareness when nothing else exists or matters for the spiritual aspirant except the Atma at his individual level and the supreme all-pervading cosmic Atma called the Parmatma at the grander state of existence. It is the exalted state of spiritual existence when the mind is calmed down and its natural tendencies overcome to the extent that it is virtually rendered ineffective and unable to influence the aspirant any longer, being as good as eliminated or destroyed for all practical purposes. It is the state when there is an effortless and seamless blending of the individual soul with the cosmic Soul so as to establish an entity that is non-dual and uniform in every possible way.

So, when you have thus become spiritually enlightened and achieved the exalted state of self-awareness of the infinite divinity of your soul, you could continue to live in this world and perform your duties and carry on with your routine life without getting unduly perturbed and restless about anything, or getting involved in anything related to the delusions of the material world. You must be careful not to become careless in anything you do, and always be on the alert so that you do not fall in any kind of delusions that act as spiritual traps for the ordinary man who is careless and less diligent. You must be careful that neither are you mentally, emotionally and sentimentally involved in anything or deed that you do, nor are you too indifferent and careless about what you do so as to ruin the work done by you². [In other words, be careful and vigilant. Do anything in a dispassionate manner, thinking that it is your destined and designated duty to do certain things, but do not get mentally, emotionally or sentimentally attached with either the deeds or their results. This way you would be doing them diligently but with a sense of un-involvement, thereby doing them with the best of your abilities but remaining free from their attendant headaches such as the anxiety related to their results which might cause you fear of suffering from their bad effects or getting unnecessary excited about their expected good results.] (3).

[Note--¹*Avedan Yoga* may be defined as a sincere effort made by a spiritual aspirant to do everything possible to bring about a seamless union between his individual soul with the supreme cosmic Soul of creation. Due to misconceptions and delusions, his soul appears to have obtained a separate identity from the cosmic universal Soul, and the main thrust of Yoga is to remove this false and illusionary distinction and dichotomy between them and instead restore the original uniformity and universality of the soul. The ultimate aim of such spiritual aspirants is to merge their individual self with the universal Self known as the supreme transcendental Brahm in the language of the Upanishads. Since the type of Yoga described in this Upanishad does not entail any hardships for the practitioner as is usually the case with other forms of Yoga involving arduous and most difficult exercises involving various stern Aasans, Mudras and Bandhas, it becomes a relatively easier option to achieve the same goal as the latter. It basically involves the training of the mind to gradually remove itself from its involvement with the material and artificial world and instead turn inwards to see the reality of the pure consciousness hidden in one's own bosom. It inspires the mind and intellect to become concentrated and devote its energy and potentials in acquiring the truthful knowledge about one's self and the reality of existence as propounded and enunciated in the scriptures by studying them deeply under proper guidance of a wise and experienced teacher. This learning should then be implemented in one's daily life and become a part of one's routine personality instead of just remaining a perfunctory knowledge acquired to gain popularity, money and fame.

The first stage described in verse nos. 4-9 is the preliminary stage when one is acquainted with the necessary eligibility requirements of this Yoga. Once the aspirant

is ready, he is initiated into the second stage when he is expected to take the shelter of a learned teacher and guide who would kind of hold his hand and become his mentor. It also narrates the benefits that the aspirant gets, such as his ability to distinguish between the right and the wrong.

It is the mind that is at the center of all thought processes. It is the mind that creates this world because first it becomes 'aware' of it, then gets 'attracted' by its charms, and finally gets 'hooked' to it so much so that it starts hallucinating and imagining things that actually do not exist. But when the aspirant has been successful in training his mind by doing meditation, thereby stopping it from paying any attention to this world, the efforts of the mind can then be diverted to nobler pursuits. Since the mind has a natural tendency to remain in a perpetual state of flux, without resting for a moment, it is imperative for any spiritual aspirant to divert it to some constructive work because if it is left to its own device and remains unattended, it would automatically swerve towards the world and its artificial but most alluring charms. Meditation and contemplation techniques are meant for focusing the mind towards the inner self instead of the outside world. Once the mind turns inwards, the outside world ceases to exist as far as the individual is concerned, and all the disturbances that arise from the latter would naturally be eliminated. The result would be a sense of profound serenity and calmness that would surround the aspirant like an all-enveloping veil of peace and contentedness, because all his worldly desires and wants, all his passions and yearnings, all the causes for his getting attracted towards the world and getting hooked to its charms would lose their meaning, importance and essence.

The purpose of Yoga is to bring about a harmony between apparently separate units of creation which often work at odds with each other though they are fundamentally different aspects of the same thing. When the aspirant is able to understand the basic principle that the same Atma prevails uniformly in this creation in all the living beings, when he understands that all forms of deeds are actually done by the gross body and not the Atma, that it is the mind that is the creator of all sorts of attachments and distresses pertaining to this world which is however artificial and delusory like the mirage seen in the hot desert, he would develop a profound sense of indifference and equanimity. He would deem to have controlled his mind, because it is the mind that is at the root of all thinking processes and imaginations, it is the mind that weaves its own cobweb and gets entangled in its own creation.

²Since you have risen to a higher level of wisdom and enlightenment, since you have realised what the 'truth' is and confident of yourself in this matter, it is expected of you that mundane matters and artificial things of this delusory world that normally act like a quagmire for ordinary persons or an entangling cobweb for them would not have the strength to delude you and trap you in their ever-expanding vicious tentacles, pulling you down back in the bog from which you have already extricated yourself after great effort by inculcating spiritual virtues, by acquiring the great knowledge about the Atma, and becoming aware of the ultimate goal of life as preached in the tenets of metaphysics and spiritualism. You should be vigilant from falling or slipping back into the deep and dark pit of ignorance, or getting enticed by the deceptive sweet charms of this falsehood once you have managed to extricate yourself from their tight embrace. You must be wary of the evil design of this cunning monster that would first entice you with tall promises, and once you get close enough he would devour you. You must ensure that whatever progress you have already made is not nullified by any single misstep on your part, whether advertently or inadvertently for you might not get a second chance at rectification.]

4-5. [The first sign or preliminary symptoms of this higher form of Yoga are the following--] As one progresses ahead in the path of true Yoga (which would ultimately bring about the union between his own self and the supreme transcendental

Brahm by making him enlightened and self-realised), his inner self gradually distances itself from all thoughts pertaining to this world and stops having any Vasanas related to it. [That is, when a spiritual aspirant progresses in the path of spiritual enlightenment, all worldly passions, lust, desires, yearnings and longings are shed off in a gradual manner. He develops a sense of total detachment, indifference and dispassion towards them.]

The aspirant does noble, auspicious and righteous deeds as a routine matter, without getting emotionally involved in them and neither hoping to reap any personal rewards from them. He abhors the way ignorant and stupid people get engrossed in worldly deeds, remaining submerged in deriving pleasure and comfort from this material world and gratifying the natural instincts of their sense organs.

He does not allow himself to do cheap talk and gossip about someone's personal secrets to which he is privy. He does not get involved in tattling and back-biting or betraying the trust of others that they have reposed in him.

Shunning all these misdemeanours, he prefers to remain straightforward and upright in his dealings and deeds done by him in the day-to-day life (4-5).

6. He does those merciful, compassionate, kind and gracious deeds and takes such actions that do not harm anyone in the least, or make them unnecessarily excited, agitated or perturbed by any one of his deeds or actions.

He is always wary of doing sinful acts and remains careful to avoid doing anything that is considered unworthy, unholy, inauspicious and unrighteous.

He does not have any longings for or wish to acquire any material objects of this world that would satisfy the lust for gratification of the sense organs and their desire for obtaining pleasures and comforts from these objects. [That is, he does not want anything pertaining to this material world of sense objects. He does not seek material comfort and pleasures.] (6).

7. He speaks in a tongue that is naturally sweet and pleasant, which is full of love and compassion. [That is, he never uses harsh words for anyone and neither does he speak anything, directly or indirectly that would cause pain to others.]

His words are not only sweet and pleasant but also tuned in accordance with the proper laws and codes prevalent from time to time and suitable to the present circumstances as well as for the person for whom they are meant. [That is, he speaks carefully words of wisdom after giving due thought to what he is speaking. He does not shoot off his tongue aimlessly, and recklessly speak in an irresponsible manner. He fine tunes his words according to the audience and the circumstances in which they are spoken or would be applied or interpreted. The same group of words would have different effects when spoken under different circumstances and to different groups of people. So he weighs all the pros and cons before speaking. He realises that speech is a manifestation of the great Goddess called Saraswati, and therefore should be used with the greatest care so that nothing is said which demeans or insults the exalted stature and nature of this divine Goddess.] (7).

8. He should very sincerely endeavour to have contact with good people from all walks of life, and inculcate their noble values in his deeds, speech and thoughts. He should also alongside study good books and scriptures on a daily basis and try to access them from wherever they are available. [This would help him to improve himself in a general way. Good company and good books are the best means to improve oneself.] (8).

9. The state of existence as described above is called the first stage or milestone in the path of spiritual enlightenment that is the ultimate aim of Yoga. Only those who are sincerely interested in crossing this huge ocean-like world of entanglements and delusions opt for such path and give priority to giving thought to following the advice given herein. [Others would rather spend their time enjoying the material comforts and pleasures of this deluding and entrapping world of ignorance and artificiality, and remain contented in whirling around in an endless cycle of birth and death with its attendant miseries and sorrows. They would not like to find a way out of this predicament of the soul because, in their utter spiritual ignorance, they think that their 'self' is the gross body instead of the pure consciousness known as the soul, and that this world is the real thing and therefore one should, and is entitled to, enjoy to the hilt its material comforts and the pleasures of its sense objects.] (9).

10. A person who thinks in this noble and auspicious way and shows the above eclectic signs of specially-gifted spiritual inclinations is regarded as more fortunate, enlightened and wise amongst his peers.

He graduates to the next (second) stage of enlightenment as his thoughts become more and more mature and focused, and his intellectual ability to deeply analyse the various aspects of spiritualism gets more robust and effective (10).

11. In this next stage (i.e. second stage), he takes the shelter and refuge of such persons who are acclaimed as experts in this spiritual field and are able to very clearly and articulately explain the intricate meaning of various scriptures such as the Srutis and Smritis (i.e. the Vedas, Upanishads and Purans), who are well-versed in the laws of morality, ethics and propriety, and who can correctly show and guide the aspirant on the path of Dharna and Dhyan (auspicious belief and meditation). [That is, in the second stage of one's spiritual progress, the aspirant should take the shelter of a wise and self-realised Guru who is a teacher, moral preceptor and guide. This would help him to move further ahead on his spiritual path under proper guidance. This would also help him to remove all his misgivings, fears and misunderstandings. Should he face any problems, he would have a mentor to look up to who would not only remove any such unforeseen spiritual hurdles but also keep him encouraged to move ahead in spite of initial hiccoughs. This Guru would act like his guardian and patron angel who would be only too pleased to see his ward shine and acquire success in his spiritual endeavours.] (11).

12. By diligence and focused attention, by sincerity and steadfastness of purpose, by proper application of the mind and intellect, by having firm faith and conviction, and by steadily moving ahead undeterred on his spiritual path the aspirant becomes an expert in understanding the different aspects of all the things in this world, and in distinguishing between the truth and the false.

Becoming well-versed in the principles enunciated by the scriptures which are worthy of hearing and paying attention to, and having inculcated the correct knowledge of what they say and having understood the profound implications of their teachings, he is able to determine what the righteous duty that ought to be done by one is, and what is not to be done and therefore should be avoided (12).

13. His mind and attention are not at all affected or influenced by such worldly negative tendencies as having Mada (arrogance and hypocrisy), Abhimaan (pride, ego

and undue self importance) Maatsarya (envy, jealousy and malice), Lobh (greed, rapacity, yearning and lust) and Moha (delusions, attachments, attractions etc. that pertain to this material world). He is free from them.

If he finds that even inadvertently and involuntarily he is involved in this external world or his natural inclinations are pulling him towards this world of material comforts and sensual pleasures, he should immediately take remedial action by shaking it off like a serpent who abandons his cuticle without any difficulty and qualms (13).

14. A wise aspirant who inculcates these eclectic values is able to acquire the rarest and most secret of spiritual knowledge and achieve success in his spiritual endeavour by the coordinated help that is available to him by way of access to knowledge contained in the scriptures (which act like a constant ready reckoner for him) as well as the expert and judicious guidance provided to him by his Guru (moral preceptor, teacher and guide) and other self-realised and enlightened men who are well-versed and experienced in this path. [That is, he has the scriptures for consultation, and in the event that he needs more clarifications he has the Guru and other acclaimed experts to guide him. All circumstances seem favourable for him and he should make the most out of it.] (14).

15. Then he enters the third stage of this Yoga. This is called 'Asansarg'—meaning to have no contact, relation, proximity, association, interaction and familiarity with anything pertaining to non-truth and non-spiritual. His condition becomes immaculate, clean and holy like a man who has changed into new and clean clothes, and then sits down on a seat of fresh flowers to relax or do something he wishes to do (15).

16. Being wisened and enlightened enough to become totally detached from this material world of sense objects and its deluding charms, such a spiritual aspirant should have firm faith in what the scriptures affirm and remain steadfast in his convictions. He should fix his mind on the wise teachings of the scriptures and follow them in letter and spirit.

He should live in solitude in hermitages of those who engage themselves in doing Tapa (observance of penances and austerities; sufferance for some noble and great cause requiring sacrifices) such as ascetics, sages and seers who live in secluded forests, spending his time in talking and discussing about the scriptures. [That is, he should spend his time constructively by delving deeper into the scriptures and thinking of nothing else except spiritual matters. The hermitages provide him with the right atmosphere conducive for this. This would have the effect of diverting his mind from matters of this world to matters concerning his spiritual welfare. This would also help him to gain peace and tranquility of the mind and heart, besides acquiring more knowledge enshrined in the scriptures from those who are well-versed in them.] (16).

17-19. He sits upon rocks and spends his life in observing strict norms of austerity and sufferance (so as to steer himself clear from all sorts of artificial comforts and pleasures that his sense organs have become accustomed to while he was engrossed in this material world of sense objects by abstaining from all physical comforts and pleasures such as those obtained by using soft mattresses and quilts which would make him lazy and indolent and indulgent in self gratification, because the body has a

natural inclination and urge to avoid sufferings and hardships, and instead prefers comforts and pleasures).

Such an enlightened man who is an ardent follower of the tenets of the scriptures lives in solitude in pleasant forests which give his mind and his inner self the much sought after eternal happiness, peace and tranquility. Having tasted the pleasure and charm of natural surroundings and enjoying their profound calming, exhilarating and spiritually uplifting effect on his self, he would then begin to abhor artificial and transient comforts and pleasures of the material world of sense objects in a natural way, without the use of any force and compulsion. He begins to enjoy the things that Nature provides him in abundance, and progressively begins to find them to be more and more naturally attractive and charming instead of the artificial attractions and charms that are the hallmarks of everything provided by this material world of sense objects. [That is, once he tastes the pristine and exhilarating nectar-like beauty of the forest and a life marked by great solitude and extreme carefree-ness from the worries of this world, he would then see the difference between this life and his earlier life when he was never at peace, was never rested as he was always worried about one thing or the other. The natural surroundings also have a profound positive effect on his all round general health and peace of mind, giving him the real bliss that he had for so long yearned for.]

Study of the scriptures and doing auspicious and righteous deeds helps one to develop a sense of wisdom and the ability to see things with the correct perspective.

By reaching this third stage of Yoga, he becomes wise and erudite in a natural way, and begins to observe the difference between the way he had seen the world earlier and the way he sees it now (17-19).

20. The Yoga described above, i.e. the 'Asansarg Yoga', has two dimensions. I shall narrate them, listen carefully. This Yoga is of two types—viz. 'Samanya' or ordinary, and 'Sreshtha' or special and exclusive (20).

21. [Verse nos. 21-24 describe the first type of Asansarg Yoga, i.e. the ordinary or common form of detachment and non-involvement obtained by a spiritual aspirant.]

'I am not the doer of anything, and naturally therefore neither am I the enjoyer nor the sufferer from the good or bad effects of the deeds done. I am totally free from all fetters, and am not the one who can be subjected to any obstacles or hurdles of any kind. I am under no compulsions as I am a free Spirit, and I am not bound to anything or anybody'—this way of natural thought is called the normal sign of Asansarg Yoga, i.e. a spiritual existence when the aspirant is not attached to and involved in anything or anybody in this world. He is not even concerned with his body and what it does, and therefore there is no question of his expecting any rewards from the deeds done by the latter. Since all relationships are limited to the physical body and not the soul, it naturally follows that such an enlightened person is not related to anybody or anything (21).

22. 'Everything that I face in this life is the result of the past deeds done in my previous life or according to the destiny destined for me by the creator, and therefore the happiness and miseries that I am being subjected to in this life are not of my own creation and so why should I get overly worked-up or perplexed due to them'—this is the way such a man thinks and believes in (22).

23. 'Accumulation of worldly objects of comfort and pleasure, hoarding of worldly assets and treasures that give material satisfaction and help in gratification of the senses portend great troubles for me and my spiritual welfare and are like a horrible disease which is better avoided and taken precaution against.

All attachments, relationships, unions and interactions that pertain to the world in any manner whatsoever result in the sorrow and grief of separation because all things in this material world are perishable and transient, coming to an end one day, voluntarily or involuntarily, which would result in grief and sorrows of separation when one is forced to abandon them either by way of death or by way of their own decay and destruction by passage of time.

All sorts of mental worries and agonies that engulf the creatures in this world are nothing but a sort of disease of the mind that is deluded and ignorant of the truth.' (23).

24. 'Everything that is present in this world is perishable and transient; they are mortal and devoured by the ferocious jaws of Kaal (death personified) in due course of time. Nothing is everlasting'.

The study of the scriptures and proper understanding of them inculcates profound wisdom that makes an aspirant becoming uninterested and detached from the world along with all its material objects and the various relationships that one is inclined to establish in this world. This is defined as common form of 'Asansarg Yoga' (24).

25-26. [Verse nos. 25-26 describe the second type of Asansarg Yoga, i.e. the higher or special form of detachment and non-involvement obtained by a spiritual aspirant.]

The next stage that is obtained by the aspirant after he has been fortunate enough to get close communion with enlightened and experienced peers, and has, as a result of this contact with them, become convinced that he is not the doer of anything in this world, that whatever he suffers from or enjoys is a carry-over from his past life or destined by the creator and not due to his own personal doing, is to become free from all mental agitations, restlessness, perplexities and worries as to what is happening now and what would happen in the future. In brief, he stops worrying at all in all matters. [This is an obvious deduction—because he never worries for anything at all and accepts them as and when they come his way, for he believes that everything is pre-destined for him and his worrying over them and losing sleep would not change anything at all, rather it would only give him more trouble and pain by way of mental agitation and worry for things over which he has no control. So he becomes calmed down and lets the things take care of themselves.]

Becoming free from all worries and not getting perplexed unnecessarily by the web of words (of the scriptures) and their so many interpretations, he develops a sense of profound serenity and detachment towards everything.

As a result, he becomes steady and silent by withdrawing himself from all external relationships and worldly involvements, and instead turns inwards. He sits in a virtual Aasan of regular Yoga in the sense that he has learnt to exercise control over his sense organs and their natural tendency to be extrovert and restless, thereby remaining steady and unwavering in his state of detachment and its attendant bliss. He becomes calm, composed and tranquil, giving all restlessness and agitations a good bye. This posture gives him internal peace and tranquility on a perpetual basis.

This is called 'Sreshtha Asansarg Yoga'—or the best form of non-involvement with the world. It is the high level of detachment from and dispassion towards this

world when one becomes silent and full of equanimity and fortitude. Such a man would remain unruffled and unmoved under any circumstance (25-26).

27. When the inner self of the aspirant is prepared to accept the blessed state bliss, ecstasy and contentedness obtained by turning inwards and away from all external falsehoods and delusions of this world, it acts like a fertile ground on which small sprouts of the plant that drips Amrit, which is the elixir of eternal life and immense happiness, takes a firm root. This stage marks the onset of the first Bhumika or sign that the aspirant is ready and prepared to move ahead on the path of Yoga leading to his ultimate realisation of the Truth and Reality of creation. It is the background on which the other signposts of his spiritual progress rest, because if this ground is not properly prepared, i.e. if he is not sincere to follow the path of self-realisation by observing the tenets of Yoga as described in this Upanishad, then all his other efforts would fall aside and crumble to pieces like a house build on weak foundation (27).

[Note—The concept of Bhumika has also been described in detail in *Varaaha Upanishad*, Canto 4 which is devoted to this concept for the most part of it, and Canto 5, verse no. 71-75 which lays stress on Yoga and draws a parallel with the three steps of Pranayam, such as Purak, Kumbhak and Rechak.]

28. As soon as the ground is prepared, i.e. as soon as the aspirant is mentally and emotionally prepared to follow the exclusive path of Yoga that would pull him away from this world and divert him towards his pure and truthful self, leading to his ultimate communion with the supreme Truth known as Brahm, the aspirant can confidently move ahead on his spiritual path and step on the other rungs of Yoga. That is, now he can achieve success in the second and third steps of the Yoga as described above (in verse nos. 10-26) (28).

29-31. The third Bhumika¹ or state of existence of a spiritual aspirant who follows the path of this special Yoga (as described in verse nos. 15-26) is ranked amongst the best stages of Yoga because now the aspirant has abandoned all his worldly inclinations and tendencies that have their origin in his inherent nature of having numerous passions, desires and yearnings pertaining to this world and its sense objects. This is achieved by him by exercising control not only over his own self by controlling the gross sense organs as well as the subtle mind-intellect complex of his body but also by having firm faith in the teaching of the scriptures and removing all doubts, confusions and perplexities by consulting his wise moral preceptor, the Guru, with whom he has constant contact. Besides this, he lives in a secluded place in a forest where there are no chances of this world being able to entice him with all sorts of charms that might act as a bait to trap him off-guard that would lead to his spiritual downfall.

In brief, during the third state of existence of his consciousness when he loses all attractions for the world and the latter no longer charms him or has any relevance for him, an aspirant becomes oblivious of the existence of the external world and remains contented with his inner world of eternal bliss and peaceful existence. The material world with its myriad variations and ever changing nature ceases to matter for him. This in turn removes all the causes for perplexities and anxieties that normally submerge a person who is engrossed in the mundane affairs of the world. He becomes rooted in a state of constancy and uniformity where there is no sense of duality and dichotomy because nothing exists for him except his own 'self' (in the form of his pure consciousness; his Atma). His vision of existence undergoes a

profound degree of metamorphosis—he begins to see oneness and non-duality in everything around him.

When this stage of total uniformity of existence is achieved, when there is a universal sense of non-duality and oneness all round, he is able to accept this world as a dream. [This is because all the different things that are seen in one's dream are false and imaginary and everyone known it as a matter of fact. When one sees a dream he remains unaffected by it and his body continues to lie motionless in sleep, motionless even though he might be an active participant in the events of the dream. Likewise, a self-realised aspirant who has understood the fact that this world is like a dream continues to live in it and do his duties in it as destined for him, but remains completely detached from them at the physical, mental and emotional levels; his 'true self' is totally unruffled, unmoved or unaffected by anything that the body does in this world. This helps him to remain calm and indifferent not only to the deeds and their results but also to this world in which the deeds are done and in which all the sense objects are located. In spite of all the turmoil and upheavals of mundane life, he remains markedly calm and poised.] (29-31).

[Note—¹The term *Bhumika* means the stages of development of wisdom; the background, characteristics, qualities, traits, attributes or virtues that helps one to become spiritually wise and enlightened. The eclectic concept of what actually are these Bhumikas has been explained in *Varaaha Upanishad* of Krishna Yajur Veda, Canto 4, in great detail. This is Chapter 30 of this volume.]

32-33. The first three Bhumikas or stages or backgrounds of Yoga are like the waking state of consciousness, while the fourth Bhumika is like the dreaming state¹.

When he progresses ahead and enters the fifth state of existence called the 'Pancham Bhumika', his sub-conscious mind ceases to remain active and becomes quiet and dysfunctional—it metaphorically vanishes from sight like the dark clouds of the rainy season that vanish during the winter season. [The dark rain-bearing clouds rumble and thunder and let out streaks of violent lightening during the rainy season. But during the winters, the sky is absolutely clean and quiet. This is used to indicate the calmness obtained by the spiritual aspirant when his mind ceases to exert any influence upon him, and when he has completely withdrawn himself from all involvements with the body and the world. This is a state of extreme neutrality and non-alignment.]

In this state of existence, only the pure consciousness remains, and since the mind has been side-lined and rendered ineffective there is no question arising for any sort of doubts and confusions requiring clarifications by the aspirant (32-33).

[Note—¹The consciousness has five states of existence—the waking, the dreaming, the deep sleep, the Turiya and post-Turiya called Turiyateet.]

34. The fifth Bhumika is likened to the deep sleep state of consciousness called 'Sushupta'. This is natural progression of the earlier state of consciousness (i.e. the dreaming state) and is the state when the sense of non-duality is firmly established. All causes of restlessness and perplexities are laid to rest in this fifth state of Yoga (34).

35. In this fifth stage of Sushupta, the aspirant witnesses the fount of bliss sprouting out from his pure conscious self (because every other sort of distraction has been eliminated), and this experience gives him an extreme sense of blessedness and ecstasy (35).

36. Although he might interact with the external world but for all practical purposes he is submerged in his own self, remaining perpetually in a state of bliss and indifference to all external involvements. This gives rise to the impression that he is careless, indolent or plain inattentive to matters of the external material world. He appears to be weary and tired of this world; he looks as if he is sleepy and acts listlessly because he is not interested in its affairs. [This is because he is perpetually submerged in the bliss obtained in his own self, and the mundane duties of this world appear to be burdensome to him.] (36).

37. Acquiring expertise in this stage, the spiritual aspirant moves to the next higher state of existence, i.e. he enters the sixth Bhumika of Yoga called 'Turiya'. [In this state, the sense of blessedness and bliss becomes more robust and permanent. Though this state has been achieved in the Sushupta stage as well, but now the aspirant has transcended that state and risen higher. The earlier transient and fledgling state of Sushupta has now become permanent and robust in the sixth Bhumika. The degree of enlightenment in the Turiya state is many notches more than the earlier state. Now no cause can bring him back to the lower levels again.]

No Vasanas (worldly passions, lust, desires, yearnings and wants) have any trace in him any longer (37).

38. In this exalted state of transcendental existence, there is no notion of Sat or Asat, or of Ahankar and non-Ahankar. [That is, now the aspirant need not distinguish between what is true and what is not for the simple reason that he lives in a state of non-duality where only one Truth lives, and it is the pure consciousness residing in his own self. That is why also there is no question of having any kind of pride and ego because such negative notions have any relevance only when one is aware of the body and its relationship with other individuals who also have a body. When there are no two entities, when everything is one indivisible non-dual Soul, the question of me being superior to him does not arise, and therefore there is no role of ego and pride.]

In this way, he becomes extremely fearless and brave. [Because now he has no enemies or competitors for him that he needs to have a false sense of self respect or a pride that has to be preserved. All are one in his enlightened eyes. Again, since a wise and enlightened person has realised that it is the body that dies and not the soul, and that the soul is his true 'self' and not the body, he overcomes the perpetual fear of death that stalks all ordinary living beings.] (38).

39. When all the knots of the heart are untied (i.e. when all his spiritual fetters are broken and he is let off to freedom), the spiritual aspirant is said to be liberated and delivered in spite of his having a gross body and having to live in this world and do the duties assigned to him by destiny. These knots of the heart act like shackles that tie a person to this body as well as the world and its material attractions, creating in him a sense of belonging and attachment, a sense of yearning and deep longing for the enjoyment of the material comforts and pleasures of this world along with the insatiable desire for obtaining gratification for the sense organs of the body. The heart impels him to have the tendency to enjoy them and remain engrossed in them, the tendency to cling to them and grieve from their separation. All these have a combined effect of creating an emotional fetter that shackle his Atma and prevent its liberation.

So, when these knots which are like a millstone around someone's neck are done away with, all his spiritual doubts, confusions and perplexities about what is the

truth and what is not are eliminated, which is tantamount to his soul obtaining liberation and deliverance from ignorance and delusions.

Such a person is said to have obtained 'Jivan Mukti', i.e. the state of spiritual liberation and deliverance even while he is still alive in this world and has a physical body (as compared to the Videha Mukti when he sheds his mortal coil and obtains physical freedom from the fetters of the body and the horrible troubles of the world at the time of death). In this state he might remain in this world and go about his duties in a normal way, but at the emotional and sentimental level he is not involved in anything.

Thus, though he has not obtained physical liberation of the soul by the way of shedding the body as done at the time of death, called 'Nirvan' (emancipation and salvation) in the conventional terms, he is deemed to have obtained a state of exalted and divine existence that is equivalent to it and in no way less in its spiritual significance (39).

40. His condition can be compared to a lighted lamp which has a steady flame. After successfully living in this sixth state of existence (which is called Jivan Mukta state), he finally enters the last state, the seventh Bhumika of Yoga. It is called the 'Videha Mukta' state of the consciousness. [The word 'Videha' means without a body. It has two implications—one, it refers to the higher state of Jivan Mukta when the spiritual aspirant is not at all aware even of his own body so much so that if it is beaten or burnt alive he is not aware of this event. Second, it refers to the actual shedding of the physical body as in the case of death. In both the cases, the soul is liberated and its salvation and emancipation obtained.] (40).

[Note—The sixth state of Yoga is called Jivan Mukta, while the seventh state is called Videha Mukta.]

41-42. This most exalted and divine seventh Bhumika of Yoga is the pinnacle of spiritual achievements and it cannot be described by speech or words. This is like the outer periphery of all other Bhumikas of Yoga and marks the culmination of all Yoga efforts.

An aspirant should abandon all involvements with the world, with the body, and even too much entanglement with the scriptures. [This is not to be construed as insulting the scriptures, for the hidden meaning is that once the objective of studying them is achieved, there is no point in reading them endlessly and discussing them forever just like the case when once a man passes out of college he need not read his text book daily except when he wishes to consult them when the need arises to do so and deemed necessary.]

He should instead spend more time and energy in implementing what he has learnt and experiencing the truth of the scriptures in practical terms by constantly practicing the tenets of Yoga on a regular basis.

The entire creation revealed in the form of Vishwa, Taijas and Pragya (corresponding to the three stages of existence, viz. the waking state, the dreaming state and the deep sleeping state that respectively involves the gross body, the subtle body and the causal body in this order as described in earlier verses as the first till the seventh state of Yoga) is nothing but the same non-dual supreme transcendental all-encompassing cosmic entity known as 'Omkar'. [The word Omkar refers to the cosmic Consciousness known as Brahm. The latter has no attributes but the first sign of its existence is available in the form of cosmic vibrations in the ether, known as Naad or Pranav. This Naad represents the energy of Brahm in a most subtle but vast,

diffused and cosmic form. It is this energy that metamorphosed itself into other forms and helped the visible world to assume the structure that it has finally acquired.] (41-42).

43-48. There is no difference between the object of all spiritual pursuits and the pursuant himself because both are the same pure consciousness called the Atma.

The entire creation has been revealed from this one indivisible entity represented by the eclectic word OM. This word OM has three letters—viz. A, U and M. They correspond to the Vishwa (the gross body and its waking state of existence), the Taijas (the subtle body and the dreaming state of existence) [43], and Pragma (the causal body and the deep sleep state of existence) respectively.

As one prepares to enter the state of Samadhi (a transcendental trance-like perpetual state when one is totally engrossed in contemplating upon one's consciousness and remains totally oblivious of the surrounding world), he should deeply ponder on the great implication of this statement [44], and make efforts to merge the gross and the subtle with the pure consciousness.

He should accept the eclectic fact about the divinity of his 'self', that the most exalted and divine consciousness is his true nature and identity. [That is, 'he' is not the body which the world is accustomed to recognise as the identity of an individual, but something very high and pure in the form of consciousness. The body is visible but this consciousness is not, and that is one reason why the world cannot come to terms with it because it needs visible proof of everything to be convinced of its existence. But it forgets in the process that the body is perishable and the consciousness is not, besides the fact that without this consciousness being present in the body the latter would be worthless. This is the great delusion created by this world.]

With this firm conviction, he should contemplate thus—'I am the entity which is Nitya (eternal and imperishable; constant and steady), Shuddha (pure, immaculate and uncorrupt), Buddha (wise, erudite, self-realised and enlightened), Mukta (inherently liberated, delivered and emancipated), Sad (the true authority and Truth personified), Advaya (non-dual and one of its kind) [45], Parmanand Sandoha (a treasure of supreme and transcendental bliss and joy personified), Vasudeo (personified from of Lord Vishnu who is the Lord of creation, who is the supreme Brahm in his cosmic manifestation as the all-encompassing and all-pervading Viraat Purush from whom the rest of creation has emerged), and am an eclectic entity that has no beginning, no middle and no end (because the Atma is eternal, infinite, imperishable and ever present)'.

Since the world of delusions and falsehoods can give nothing but grief and miseries in its wake, right from its beginning thorough its present till its end [46], it is prudent and wise therefore, oh the sinless one, to abandon it and instead establish one's self in the Truth as described herein above.

Instead, think in these terms—'I am not deluded by the darkness of ignorance. I do not imagine anything unreal [47]. I am a personification of Anand—bliss and extreme happiness. I do not have any Mals—I do not have any sort of impurities, faults, taints and blemishes of any kind in this world. I am Shuddha—I am clean, pure and uncorrupt in every way. I am not visible to and comprehensible by the mind and speech—i.e. the mind cannot fathom my true form and nature, and the faculty of speech cannot find the right words to describe me. I am Pragma Ghan—I am a treasury of wisdom, erudition, sagacity and enlightenment. I am indeed that Brahm

who is personified Anand—who is a living embodiment of bliss, ecstasy and spiritual delight, who is beatitude and felicity personified’.

This is the teaching of this great Upanishad. Amen! [48]. (41-48).

-----Shanti Paath-----

-----*****-----*****-----

Chapter 24

Avadhuta Upanishad

The Avadhuta Upanishad deals with the concept of Avadhut Sanyas which is a spiritual way of life of an ascetic marked by exemplary renunciation and total detachment from the world and its material sense objects along with its deluding charms as lived by a most enlightened and self-realised person. Emphasis is laid on describing his enlightened thought processes and mental bearing which is central to a man’s behaviour, personality and temperament. It is marked by an extreme sense of dispassion, detachment, equanimity, fortitude, holiness and piety. This attitude of the mind and intellect would automatically lead to a commendable state of all-round calmness of demeanours and tranquility of the mind.

This mental bearing can only happen when the enlightened ascetic has risen above the mundane and has reached a high level of spiritual evolvement when he can actually experience the eclectic Truth about the great tenets of the scriptures outlining the divine and glorious nature of one’s Atma and its equivalence with the supreme Atma of the creation known as Brahm. The Avadhut leads a life worth emulating by other spiritual aspirants and marks the pinnacle of self-realisation. The great tenets of Sanyas as espoused in this Upanishad are complimented by the Kath Rudra Upanishad which is Chapter 25 of this volume.

This Upanishad was expounded by the great seer and sage Dattatreya who is considered as an incarnation of the Trinity Gods (Brahma the creator, Vishnu the sustainer, and Shiva the concluder) to answer queries on the subject raised by sage Sankriti. Dattatreya is regarded as the patron saint of all Avadhut Sanyasis.

The word *Avadhuta* is an acronym derived from the first letters of the following words—the letter ‘A’ from Akshar meaning imperishable, eternal and infinite; the letter ‘Va’ from Varenya meaning worthy of accepting and honouring; the letter ‘Dhu’ referring to the worldly deceit and conceit known as Dhut; and the letter ‘Ta’ from the word Tyakta meaning to abandon and discard. Hence, the term Avadhut refers to the person who moves straight to his aim of life, which is self-realisation and truth-realisation, as well as liberation and deliverance of the soul from the cycle of transmigration and worldly miseries, and obtaining eternity and peace. This is accomplished by discarding all deceits and conceits associated with life in this materialistic world of delusions and artificiality.

The Avadhuta state is one of the highest categories of the life of Sanyas. This Upanishad details its characteristic features, especially the mental state more than the physical state, and highlights the fact that such people are so engrossed in contemplation that they are free from external pretensions of piety and holiness to

such an extent that their external worldly behaviour is often construed as being unconventional and strange. But this oddity is not out of some defect in their character or due to some evil design on their part but out of a high level of spiritual attainment which is not understandable by ordinary people.

-----Shanti Paath-----

The meaning of this Shanti Paath is given in appendix no. 1 of this volume.

1 Sage Sankriti¹ went to the great seer and sage Dattatreya² and requested him—‘Oh Lord! Please tell me who is an ‘Avadhuta’. What are his characteristic features; what are his unique signs, special qualities and virtues? How does he live, and what characterises his way of life? How does he interact with the world, and what is his way of thinking?’

Hearing his earnest query, the most merciful and compassionate Dattatreya replied—(1).

[Note—¹*Sankriti* was a great devotee of the Sun God and an Avadhut Sanyasi, a renunciate ascetic of the highest order. He was enlightened and a self-realised wise sage. Two Upanishads of the Krishna Yajur Veda tradition are attributed to him—viz. Akchu Upanishad and Avadhut Upanishad. In the Akchu Upanishad, Sankriti has offered his obeisance to the Sun God by praying to him in specially composed hymns in the Lord’s honour, and as a blessing the Sun God revealed this Upanishad to him in which he expounded the eclectic virtues and divine characteristics of those who have attained success in doing Yoga (meditation and contemplation); it describes the seven Bhumikas or signs of such success in simple terms. The Avadhut Upanishad is an exposition on the grand characteristics of Avadhut Sanyas which is the highest spiritual stage of renunciation, and was preached by sage Dattatreya to Sankriti. This fact establishes that Sankriti was a contemporary of Dattatreya.

²Lord Dattatreya is a fractional incarnation of Lord Vishnu, the supreme Lord of creation in his cosmic form as the Viraat Purush from whom the rest of the creation, including the creator Brahma himself, was created. The word ‘Dattatreya’ means ‘one who was given to Atri’. According to mythological accounts, sage Atri and his chaste wife Anusuya were childless, and having a desire to have a son they prayed and did severe penance. All the three gods of the Hindu Trinity, i.e. Brahma the creator, Vishnu the sustainer, and Shiva the concluder appeared before the couple and requested them to ask for a boon. Upon the couple’s request, all the three Gods became their sons. Brahma became the sage known as Chandra representing the Moon God, Vishnu became the wise and enlightened sage Dattatreya, and Shiva became the angry sage Durbasa.

According to another version of this story, the three Gods decided to check the chastity vows of the wife of Atri and came disguised to cheat on her. Anusuya was no ordinary lady, and realising their ill intentions she transformed them into her son with three heads and six arms, each head standing for one of the Gods.

Dattatreya is counted amongst the seven celestial sages called the Sapta Rishis. He is said to have created the Som Plant whose juice, called the ‘Som Rasa’, is used during fire sacrifices as an offering to Gods.

Iconographically, Dattatreya is shown with three heads and six arms holding the emblems of the three Gods, Brahma, Vishnu and Shiva, viz. a water pot, a conch and a discus, and a trident respectively. A bull representing Dharma (righteousness) is

depicted as his mount. Four dogs representing the four Vedas are his constant companion.

The concept of Dattatreya is an attempt by ancient sages and seers to harmonise the three cults of Brahma, Vishnu and Shiva that had created an artificial and unwarranted rift in the edifice of religious unity amongst the Hindus.

An Upanishad titled 'Dattatreya Upanishad' appears in the Atharva Veda tradition. He had also preached Prahalad, the great devotee of Lord Vishnu, about the eclectic state of Avadhut Sanyasi in the form of huge python. He had taught many kings and saints on the essential principles of metaphysics and spiritual truth. The prominent ones are the following—

- (i) During Sata Yuga, he had taught Lord Kaartikeya and Lord Ganesh.
- (ii) During Treta Yuga, he had preached king Alark, king Purukhaa and king Aayu.
- (iii) During Dwapar Yuga, he had sage Parashuraam, and kings Kaartaviryaarjuna and Yadu as his disciples.
- (iv) In the current Kali Yuga, it is believed that great saints such as Shankaracharya, Gorakhaath, Chaitanya Mahaaprabhu, siddha Naagaarjuna, Gyaneshwar, Eknaath, Tukaaraam etc. had benefited by his teachings.

Being a great Sanyasi himself, he was endowed with stupendous mystical powers called Siddhis. One of the sects of Siddhas regard him as their patron sage.

Sage Dattatreya had made *twenty four Gurus* or teachers. The remarkable thing is that none of these twenty four Gurus was a human being—he had learnt even from the elements (earth, water, fire, air, sky), animals (elephant, deer), birds (pigeon, hawk), reptiles (snake, worm), insects (moth, bee, spider), a fish, the moon and the sun, a child, a girl, a prostitute, an arrow-smith etc. This is a very interesting episode, and is being briefly summarized here.

The following are the twenty four teachers and what Dattatreya learnt from them.

- (1) Earth—the earth sustain all sorts of life and nourishes each creature, even those who virtually eat into her bosom by mercilessly and ruthlessly exploit her and dig into the bowels for his vested self interests.
- (2) Air—the wind moves everywhere, visits all kinds of places but never gets attached to any place or thing. It purifies everything and gives life to all without any discrimination on the basis of gender, caste, race, creed etc. It gives life to a friend as much as it gives life to one's enemy.
- (3) Sky or Akash—the space of the sky accommodates everything and everyone. This taught him to accept and accommodate all in life but remain uninvolved in or unattached with them just like the sky which harbours uncountable things in its bosom but remains totally indifferent to them and unaffected by them.
- (4) Water—it is refreshing and cool and nourishing. No life is possible without water, and it is regarded as the only universal elixir of life. This taught him to sustain all and be soothing and refreshing for all the creatures.
- (5) Fire—it gives light, heat and energy. It is upwardly mobile—as is evident from the direction the flame of a raging fire takes. It is all-purifying on the one hand, and burns to ashes whatever impurity is put in it on the other hand. This taught him to welcome everything like the fire but purify them before finally accepting anything, and reduce to ashes all that is impure and tainting for the purity of the Atma.
- (6) Moon—it appears to wax and wane but really it remains the same. This taught him the fact that the world and the body undergo innumerable changes but the true 'self' remains uniform and immutable.
- (7) Sun—it is the 'eye' of the world and gives the latter light, heat and energy in a selfless and unbiased manner. The sun illuminates all but does not need anything to illuminate it and neither does it get tainted by the thing it illuminates. This taught him to illuminate the world and removes its darkness of ignorance by the light of knowledge and wisdom while remaining immune to the darkening effects of this world.
- (8) Pigeon—this is the typical story of a householder's life. The parent pigeons went out in search of food for their young one day when a bird-catcher spread his nets and caught the offspring. When the parents return, the mother pigeon saw the plight of the young one and jumped into the net. Then the male pigeon too jumps into the net

because he cannot live without the family. The bird-catcher was overjoyed. This taught him that worldly attachments lead to ruin and downfall. (9) Python—it stays at one place and swallows any creature that happens to pass that way. He would not forage for food but wait for it to come to him. This taught him to be contented with what comes his way. (10) Ocean—it never overflows when rivers flow into it continuously. It remains contented, calm, un-wanting, fathomless, steady and endless. These are grand virtues that a wise man should inculcate. (11) Moth—it gets attracted to the fire and gets caught and burnt. This taught him not to be caught by the beauty and charm of colour and form of this artificial world. (12) Honey Bee—it collects nectar from numerous flowers and converts them into one homogenous honey. This taught him to imbibe knowledge from whatever source available. A mendicant should also collect a little bit of food from different household instead of relying on one house. (13) Elephant—it is notorious for the sense of touch. During the mating season they rub against each other. This weakness is exploited by hunters to catch them. This weakness taught the sage that he should be wary of the pleasure obtained by touching sensual things in this world. (15) Honey Gatherer—he stealthily takes away all the honey collected by the honey-bee assiduously over a long period of time involving immense labour. This taught him two things—it is useless to hoard things as one day death would snatch everything away, and second it is futile to hoard without sharing things with others because one day they are bound to be snatched from us. (15) Deer—it is by nature attracted to music, a weakness exploited by the hunter to trap it. So, one should be wary of pleasant and sweet sounds emanating from this world because poison is more often than not laced with sugar. (16) Fish—it is attracted to the hook and got caught due to its desire to eat the bait. So, the fish taught him to have control over the taste buds of his tongue. (17) Pingala—she was a prostitute. One day the saint, during his wanderings, came to take rest under the tree on a street where she lived. He watched her eagerly waiting for a customer who never turned up. She finally gave up and went to sleep with the realisation that if she had spent so much time invoking the Lord present in her own bosom, she would not have to wait for him so long. This taught the saint that disappointments come to us when we expect something from this world and hope it to provide us with comfort and joy. The real happiness lies inside. (18) The Kurara Bird (a species of Hawk; an Osprey)—the bird had a small piece of flesh in its beak and other larger and stronger birds pounced on it. Distracted, the Kurara suddenly realised that the cause of its torments is the piece of meat, and so it dropped it from its beak. The other birds swooped on the meat and stopped pursuing the Kurara. This incident taught the saint that if one clings on to material things, no matter how desirable they are, they would never let him live in peace. It is better to drop them at the earliest; it is better to drop all worldly attachments and devote time to the Truth of life. (19) Child—a child becomes so engrossed in his playthings that he forgets hunger and other bodily needs. Children fight with each other during the course of playing, but soon forget everything. This taught him to remain engrossed in contemplation on the ‘self’ and play with it like the child, remaining immune to the world and even to one’s own bodily problems. A wise man must be innocent like a child—he might get angry at others but never takes anything to heart. The child plays with toys, but suddenly throws them away and wants something new. Likewise, the wise man enjoys the world but never gets hooked to it at the emotional and sentimental plane. (20) A Girl—some people had come to see the girl with a proposal for marriage. She went inside the house to prepare food for them. In the course of grinding spices her bangles clashed with each other and made a disturbing noise. She removed them one by one until one remained—then there was no noise. This taught him that when the mind is distracted by so many things, the man never finds peace. So the best way to concentrate the mind is to remove all extraneous distractions in the form of numerous paths and philosophies, and instead focus on one ultimate Truth preached by the Upanishads, the Truth that is absolute, uniform and immutable. (21) An Arrow-smith—he was so

engrossed in his single pointed devotion to his work of preparing the arrows and giving them the right contours, aerodynamic shape and the sharpness to their tip that he was unaware that the king's entourage was passing by. This taught the saint the importance of single-minded pursuit of one's goal. (22) Snake—it never makes its own hole and lives in holes made by nature or other animals. A true saint should realise that the Atma has no body of its own but lives on borrowed bodies during its sojourn in this world. Again, the snake effortlessly leaves its dead cuticle to teach him that the Atma would similarly leave this body without any effort, pain or attachment to find a new abode for itself. (23) Spider—it creates a web from itself, moves around it and then swallows it, the supreme Lord has created this world, sustains it and finally retracts it into himself. Further, the spider creates the web and remains trapped in it much like the creature who creates this artificial world by his mind and then remains trapped in it for life. And finally (24) Worm—a wasp caught hold of a worm and kept it in a hole. The wasp kept humming around this worm that was so terrified of the wasp and continuously subjected to this humming that ultimately it became a wasp itself. Similarly, when a man concentrates upon something continuously, whether willingly or unwillingly, he would become one like the subject on which he contemplates. If he contemplates upon the world, he would become one like other mortal ignorant creatures, and if he contemplates upon the sublime and divine he would become sublime and divine himself.]

2. 'An Avadhuta'¹ is an exalted and realised person who has the following eclectic qualities and divine virtues ingrained in him—he firmly believes in the concept of the imperishability of the soul, the pure conscious Atma, as well as in the divine entity that has this unique characteristic, i.e. on the supreme transcendental Brahman; he is worthy of being accepted and honoured as a realised and enlightened soul (i.e. he is pious, holy and divine by nature and behaviour, and is worth emulating and looking up to); he is free from all the fetters that are represented by the various aspects of this entrapping world of ignorance, artificiality and delusions; and he is one who visibly exemplifies or personifies the great tenets of the scriptures such as 'Tattwamasi'—'that supreme essence and truth is you'¹ (2).

[Note—¹The word *Avadhuta* is an acronym derived from the first letters of the following words—the letter 'A' from Akshar meaning imperishable, eternal and infinite; the letter 'Va' from Varenya meaning worthy of accepting and honouring; the letter 'Dhu' referring to the worldly deceit and conceit known as Dhut; and the letter 'Ta' from the word Lakshaya meaning aim or target—referring to the person who moves straight to his aim of life, which is self-realisation, truth-realisation, liberation and deliverance of the soul from the cycle of transmigration and worldly miseries, and obtaining eternity and peace without getting entangled in the cobweb-like world and without having any of the evil characteristics and negative attributes that veil an ordinary man who is less wise and enlightened in this world.

²The life and thoughts, the behaviour and temperaments of such a realised and enlightened Avadhut Sanyasi showcase in practical terms what is meant by this 'Tattwamasi' and other great sayings of the scriptures that basically teach that each individual creature, including the Avadhuta, is an image of the one and non-dual supreme transcendental Lord known as Brahman, that there is no distinction between two individuals, and that the ubiquitous Atma residing inside all living beings is essentially one and the same; it is a non-dual divine entity that is universal, uniform, immanent, quintessential and personified Consciousness. Hence, there is no cause for any kind of distinction and dichotomy to exist in this world.

There are a number of other Upanishads that describe the great sayings of the Vedas, called the Mahavakyas. (i) Rig Veda—Atmabodha Upanishad. (ii) Shukla Yajur Veda—Paingalo-panishad, Canto 3, verse no. 2-3, 8; Mandal Brahmin Upanishad, Brahman 2, section 2, verse no. 5; Brahman 2, section 4, verse no. 4;

Brahman 3, section 1, verse no. 6; Brahman 3, section 2, verse no. 2; Adhyatma Upanishad of the Shukla Yajur Veda tradition, in its verse nos. 2, 10 describe the great saying 'So-a-Ham', i.e. 'that essence is me', and in verse nos. 30-31 describe the other great saying 'Tattwamasi', i.e. 'that essence is you'. (iii) Krishna Yajur Veda—Shuka Rahasayo-panishad, verse no. 22; Kaivalya Upanishad, verse no. 16; Sarwasaar Upanishad, verse no. 12-14; Varaaha Upanishad, Canto 4, verse nos. 32, 37. (iv) Sam Veda—Chandogya Upanishad of Sam Veda tradition describes the great saying 'Tattwamasi' in great detail in its Canto 6, sections 1-16 with numerous examples when Uddyalak, son of Aruni, taught this great axiomatic maxim of the Vedas to his son Shwetketu. It winds up the exposition with the final declaration of 'Tattwamasi', 'that art thou', in verse no. 3, section 16 of Canto 6. (v) Atharva Veda—Atma Upanishad.

The term *Tattwamasi* has been explained in detail in the Shukla Yajur Veda's Paingal Upanishad, Canto 3, verse nos. 3 and 8, and Adhyatma Upanishad, verse nos. 30-31; Sam Veda's Chandogya Upanishad, Canto 6; and Krishna Yajur Veda's Sarwasaar Upanishad, verse nos. 12-14.]

3. An ascetic and self-realised person who rises above the restrictions imposed by the different Ashrams and Varanas in society¹, and instead lives a life centered around the Atma, the pure Consciousness and the ultimate quintessential Truth of creation which is not only immanent and irrefutable but universally present in a uniform manner in all the creatures as their 'true self', is eligible to be called an 'Avadhuta'. [That is, such a person believes in only one universal truth known as the Atma which is one and the same in all the creatures. He does not distinguish between any two individuals or any two circumstances—because for him all are alike; sufferings and joys are the same for him as are his enemies and friends. He does not recognise anything other than the truthful Atma as being of any consequence and value. For him everything is either the truth in the form of the consciousness known as the Atma which is worthy of being accepted, or false and non-Atma and hence worthy of being abandoned. Obviously, such a person is highly enlightened, wise and erudite; he has understood the essence of the scriptures, and hence he need not adhere or conform to the strict codes of conduct and behaviour as ordained by them for they are basically meant for maintaining orderliness and discipline in the vast society and regulate its functioning, because even without any formal restraint imposed upon him or the guidelines shown to him such a man would himself act in a well regulated and disciplined manner. He would not need someone to tell him what is auspicious, good and righteous, and what is not.] (3).

[Note—¹The Hindu society has been divided into four Ashrams and Varanas by ancient sages and seers for its regularization and smooth functioning by delegation of authority and powers.

Briefly, the four *Ashrams* are the following—(a) Brahmacharya—this is the 1st phase of life in which a person studies the scriptures under the tutelage of a wise teacher. This phase of life is marked by austerities, keeping of vows, observing celibacy, abstinence and continence as well as leading a regimental life style of a boarding school. (b) Grihastha—when a person has studied and prepared himself to face the world, he comes back to his house and enters the 2nd phase called Grihastha Ashram which is a householder's life. He marries, raises a family, produces wealth and helps to carry forward the cycle of creation. This is the most important and enjoyable phase as well as the most tough one because on the one hand there are the comforts and pleasure of the world to be enjoyed, and on the other hand there are the various tribulations and miseries of a family life alongside the dealings with this deceptive world with all its accompanying horrifying problems. (c) Vanprastha—this

is the 3rd phase when a man hands over the responsibilities of the world to his heirs and renounces his attachments to the house as well as the world, and heads for the forest, leaving the home for his next generation. It is now that he goes on pilgrimage and prepares for the final stage of his life, and (d) Sanyas—this is the 4th and last stage of life when there is complete cutting-off of all the ties with the world, spending time in contemplation and meditation, living a life of total renunciation, and begging for food for survival while single mindedly endeavouring for emancipation and salvation. This phase of Sanyas also has many stages depending upon the spiritual elevation and accomplishments of the aspirant, viz. Kutichak, Bahudak, Hansa, Paramhans, Turiyatit and Avadhut.

These four Ashrams, their characteristic features and virtues are described in detail in an Upanishad called 'Ashramo-panishad' belonging to the Atharva Veda tradition.

The four *Varanas* are the following—(a) Brahmins*—the learned and teaching class; a wise one well-versed in the knowledge of the ultimate Truth about the supernatural Being called Brahm. They also presided over religious functions as priests, because these functions were central to life in the Vedic period; (b) Kshatriyas—they were the warrior, fighting, kingly class. They were assigned the job of giving protection to the society, dispensing justice and maintaining general law and order. (c) Vaishyas—they were the trading and farming class responsible for commerce and wealth generation. They provided for the necessities for a comfortable life. And finally (d) the Shudras —the service class of people whose main function was to free the other three classes from the humdrums of daily chores and concentrate their energies to the particular jobs assigned to those classes to which they belonged.

*The salient features of Brahmins are the following—they should possess these noble qualities—(1) 'Riju'-be expert in the Rig and the Yajur Vedas, (2) 'Tapa'-should be involved in doing penances, observing austerities and enduring sufferings for the welfare of the soul and the society, (3) 'Santosh'-be contented and satisfied, (4) 'Kshamaa'-to be forgiving and tolerant, (5) 'Sheel'-to have such virtues as good character, dignity, decorum and virtuousness, (6) 'Jitendriya'-to have self control over the sense organs, (7) 'Data'-to be a giver, one who sacrifices his own interests for the benefit of others, (8) 'Gyani'-one who is well learned, wise, enlightened and erudite, (9) 'Dayaalu'-to be merciful and compassionate. [Shatpath Brahmin.] An entire Upanishad called Vajra-shuchiko-panishad, belonging to the Sam Veda tradition is devoted to the subject. The eclectic virtues of Brahmins have been expounded in Brihad Aranyaka Upanishad, Canto 3, Brahmin 5 as well as in Canto 3, Brahmin 8, verse no. 10

These four classes of the human race were created from the single father, the Viraat or Brahma. Their origins are indicative of the different jobs that they were assigned so as to enable the creator perform the task of governance just like a king assigns separate jobs to his different ministers. But it must be clearly understood here that each class of the human race was like a part of the body of the Supreme Being, and even as a man feels disfigured and handicapped as well as feels the pain equally if his leg is cut off from the rest of his body as he feels when his arm or head is severed, the Lord feels betrayed and hurt when even one of his sons is subjected to humiliation and pain. The four classes had specific jobs cut for them so that the society could function smoothly.

The Brahmins have their origin from the mouth of Brahma the creator. Since the mouth is used to give advice and teach others, the primary job of the Brahmins was to act as moral guide to their brethren. The four Vedas, which are repository of all knowledge that exist, were also created from the mouth of Brahma; hence these Brahmins were considered most wise and learned. The arms are metaphors for strength and powers; they are used to protect and help others. Hence, the Kshatriyas, who were created from the arms of Brahma, were those sons of his who would give

the needed protection and security to their other brethren. In order to feed his creation, Brahma had to toil and labour to provide for the maintenance and financial and material well being of the society for merely teaching and protecting would not suffice without some one to take care of the other necessities of life. So he created the Vaishyas from his thighs, symbolising labour, to pick up the mantle of mundane affairs of life. But there must be someone who would do the daily chores, such as tilling the fields, doing the harvesting, washing and cleaning, and all other such odd jobs. This was assigned to the Shudras created from Brahma's feet symbolising service.

Yajur Veda 31st Chapter, 11th Mantra says that Brahmins are the mouth of society, the Kshatriyas are its arms, Vaishyas are its stomach or abdomen, and Shudras are its legs. The body is regarded as a symbol of the society. As is obvious in this analogy, all these four units of the body must function properly and in close cooperation with each other in order that the body can survive and live comfortably and carry on with its assigned duties in an orderly fashion. The mouth is important because it is the medium by which the body takes food and speaks; the arms procure food and gives protection to the body against enemies; the stomach digests food and supplies the whole body with the energy needed by it; the abdomen holds all the internal organs; and the legs carry the body wherever it wants to go such as the place where food is available. Since food is the basis necessity of life, this instance is cited here. And the logic can be extended to everything else. Each component of the society must work properly in order that the whole society survives; each component is as vital as the other; each has its own importance in the bigger picture.

The Paingalo-panishad of Shukla Yajur Veda tradition, in its Canto 1, verse no. 7 and Canto 2, verse nos. 3 describe how the three basic Gunas of Sata, Raja and Tama were used by the supreme Brahm to create different types of creatures in this creation. Other Upanishads which give a graphic detail of these four Varanas are the Brihad Aranyak Upanishad, 1/4/11-15 and the Aitereyo-panishad, 1/1/4. The Niralambo-panishad of Shukla Yajur Veda, in its verse no. 10, states the reason for the classification of the society in four classes. The Subalo-panishad of Shukla Yajur Veda tradition, in its Canto 1, verse 6, and Canto 2, verse 1 describes the origin of these four classes in society.

The Mantriko-panishad, verse no. 5, the Shewata-shwatar Upanishad, Canto 4, verse 4-5, and the Paingalo-panishad, Canto 1, verse no. 3 narrate how the colour of the skin was used symbolically to indicate the dominance of one or the other of the three basic Gunas, the Sata, the Raja and the Tama, in a particular individual that determines to which class of society he belongs, and which formed the basis of this classification which depend heavily on the quality displayed by an individual to become eligible to belong to one or the other class. The Gunas displayed by him holds a greater importance than his mere birth in a particular section.]

4. For such an exalted ascetic, whatever is very dear to him, i.e. is his 'Priya', is located in the region of the head¹.

Being in a constant state of eternal happiness and joyous abandon, he feels happiness and delight everywhere he sees or goes; there is happiness and joy to the right of him and to the left of him. This fact is symbolically depicted by his right and left arms—the right arm symbolising 'Moda' and the left symbolising 'Pramod'. [The words Moda and Pramod both refer to happiness, joy, delight and pleasures.]

With such an eclectic state of existence overflowing and submerged in eternal sense of 'Anand' (extreme bliss and ecstasy), he is like a cow¹ whose feet supports its holy body. [Here the ascetic is compared to a cow to indicate that he is as revered and holy as the sacred animal.] (4).

[Note—¹The dearest entity for a wisened and enlightened ascetic is the supreme Brahm symbolically located in the exalted point of the body, which is the head.

According to Yoga Upanishads, Brahm resides in the area of the head called the Brahm Randhra (i.e. the area around the cranium), in the Vyom Chakra as the eclectic sky element, as well as in the Agya Chakra located in the tri-junction of the two eyebrows and the root of the nose (i.e. the area of the cerebrum) as the virtues of wisdom, erudition, enlightenment, insight and knowledge. It is here that the 'third eye' of deep insight and ability to think and analyse is located. Brahm is also depicted as being present a little further from the tip of the nose, symbolising the vast and fathomless sky element. That is the reason why a divine halo of diffused glow of light is witnessed around the head of self-realised and Brahm-realised persons.

The mind and intellect (i.e. the brain) also have their location in the head, and since Brahm is an embodiment of wisdom, erudition, enlightenment and knowledge, this mind-intellect apparatus is an apt symbol of Brahm.

Brahm is the Emperor of creation, and emperors have their residences on a raised or elevated ground such as a hill or mound, called the 'capitol' or 'citadel'. The high location is symbolic in nature to indicate that this is the seat of final authority and the central government. In the individual creature's case, the head is clearly such a seat because the mind and the intellect is the controlling authority of everything in this world.

²The cow is regarded as a holy animal, and by alluding to it in this verse it is meant that once the ascetic develops this divine view regarding his own body as not being merely an entity having physical organs that are meant to enjoy the transient sensual pleasures and comforts of the material world and its sense objects but to enjoy the eternal bliss obtained by realisation of the Atma, he becomes as holy as the cow. The four legs cited here represent the four aspects of self-realisation mentioned in this verse—viz. Priya, Moda, Pramoda and Anand. Basically, all the four refer to the divine state of ecstasy and bliss obtained when one becomes self and Brahm realised. This state is perpetual and it constantly accompanies the ascetic wherever he is and in whatever condition he is in. It ensures that he remains in a constant state of bliss and joyous mood of self-realisation, unconcerned by the world and its attendant sorrows and miseries.

A very similar concept occurs in Taittiriyo-panishad, 2/5.]

5. A wise ascetic should not treat this symbolic cow's head, middle part of the body or the legs as symbolising Brahm. [Then what is to be regarded as an emblem of Brahm? The answer is--] The tail of the cow represents the established glory of Brahm¹. A wise person who knows Brahm in this way is able to obtain the most exalted stature which is equivalent to Brahm² (5).

[Note--¹It is believed that the dignity and self-esteem of the cow is in its tail though it is at the rear of its body. The tail hides the cow's private parts, the vagina and the womb in which the embryo is conceived. It alludes to the fact that Brahm hides inside his bosom the entire secrets of creation. Further, it is noticed that the cow uses the tail to wave off flies etc. that keep tormenting it by flapping them with the brush of hair at the end of the long tail. This is symbolic of the effort made by the wise creature to ward off worldly torments that constantly nagging at him by relying upon Brahm. That is, a person who has inculcated wisdom as expounded by the Upanishads realises that the body is not the real thing to be worried about or indulged with, but attention should be diverted to higher targets of life such as contemplating upon the Truth and the proper path to be followed so that liberation and deliverance of the soul, or spiritual emancipation and salvation can be achieved in the least possible time. The wisdom of the Upanishads wizens him about the fact that the organs of the body have a natural tendency to be teased by their respective sense organs because these organs have an inherent affinity for them. This situation is like the flies constantly teasing and causing irritation for the cow which uses its tail to ward them off. Similarly, the wise ascetic should use the wisdom of the Upanishads to ward off

the attractions of the body and the sense objects of the world in the light of their entangling effect on his soul and keeping him restless and agitated.

The tail also represents the fag end of the cow's body, implying that when the creation comes to an end, it ends in Brahm. When cowherds try to tame a calf or control a cow or a bull, they usually catch hold of the tail, indicating that a wise person can tame this world by holding on to Brahm.

It also might mean that by following Brahm, one can reach one's spiritual goal in life just like young cowherds who get lost in the vast stretches of land while accompanying the cattle set loose to graze at will catch hold of their tails and follow them calmly back to their homes without worrying to find out the way back. This is because the animal has an uncanny sense that helps it to trace its path correctly back to its home. The catching of the tail also ensures that the cow does not run and gets lost, or goes beyond the reach of the cowherd and leave him perplexed and lost in the wilderness, not knowing what to do.

²This observation means that one who sees Brahm not only in the physical existence of creation represented by the body of the cow which gives milk but even in its fag end or 'tail end' is really aware of Brahm's all-incorporating nature. A man usually pays scant attention to an animal's tail and judges its worth by examining its body. So this statement means that even the most inconsequential and lowly aspect of creation that is usually sidelined is as important as the prominent aspects. Each aspect and unit of creation is a manifestation of Brahm, and one should not show disrespect or neglect even the lowliest and the humble even as the cow has great respect for its tail.

It is pertinent to note here that a major Upanishad, the *Birhak Aranyak* 1/1/1-2 belonging to the *Shukla Yajur Veda* tradition uses the metaphor of a sacrificial horse to describe Brahm. The *Aieteriya Upanishad* of *Rig Veda* tradition, Canto 1, section 2, verse nos. 2-3 says that Brahm created three bodies in the beginning of creation where his personified forms as various Gods could take up their residences—a cow, a horse and a human.]

6. The state of eternity and attainment of the exalted stature of divinity cannot be obtained by a person either by doing various deeds, or with the help of his subjects (such as sons, kith and kin), and also with the aid of money and power¹.

The only way (and easy one at that) to achieve it is the path of 'Tyag'² [This is the eclectic spiritual path of *Sanyas*.] (6).

[Note--¹That is, if one believes that one can obtain eternity and the exalted stature of being one like the Supreme Being by doing righteous deeds such as doing great religious sacrifices, making charities and giving donations, then it is not possible and he is very mistaken. Had it been so, poor mendicants, hermits, ascetics, sages and friars would have had no chance of ever attaining this auspicious niche for the soul and it would be dominated by the rich and powerful who can spend large sums of money on such deeds.

Similarly, just like the case that the medicine has to be taken by the patient himself and not by his son to cure a disease, attainment of spiritually advanced stature and reaching of the pinnacle of divine spiritual glory is to be achieved by the person concerned himself by his own efforts and not by the aid of anybody else. That is, it is futile to believe that the son or one's kith and kin would do some great religious sacrifice in order to enable the person to go high up in the heaven or obtain liberation and deliverance for his soul. He would have to tread the path himself. A similar idea has been expressed in *Kathrudra Upanishad*, verse no. 13 which is Chapter 25 of this volume.

²Tyag—The concept of Tyag is an important and central to Hindu philosophy of religion and finds a prominent place in the scriptures. Broadly speaking it covers such virtues as to give up something that is very dear to one, voluntarily and willingly for a noble cause; to surrender; to renounce; to relinquish; to make sacrifice; to forsake; to

be dispassionate and detached; to resign and forfeit one's claim and rights. It assumes different connotations under different circumstances, and all these definitions would apply to the eclectic concept of Tyag depending upon the different situations one is dealing with.

Tyag usually involves sincere giving away and renouncing something for an auspicious and noble cause. When one develops natural dispassion towards the charms of the material world, when one does deeds selflessly without expecting any rewards from them, when one sacrifices his own comforts and pleasures for the good and welfare of others, when one remains a neutral observer to this world and forsakes all involvement in its affairs, when one does not yearn for anything and gives up his rights cheerfully and willingly, when one forsakes falsehood, non-truths, delusions and misconceptions, when one assumes a state of total neutrality and develops exemplary equanimity and fortitude—he is said to be observing Tyag in its purest form. Merely physically abstaining from material comforts of the world but mentally very much attached to them or even remembering them, or not doing deeds in the false belief that doing deeds would entangle him in this world or pretending to be a renunciate monk is no Tyag at all. Rather, it is worse than openly remaining involved because it is pretension and deceit which is abhor-able and demeaning for the soul.

The great spiritual and metaphysical importance and significance of Tyag has been succinctly summed up in Kaivalya Upanishad of Krishna Yajur Veda in its verse no. 3 which says that one can access the essential elixir of eternity and bliss, called Amrit, only by observing Tyag and not by doing numerous deeds (including religious sacrifices), or by the help of subjects (such as sons, family members, priests etc.), or by the help of wealth (such as by making huge donations and doing great charities).

The immense importance of non-involvement in deeds as a significant form of Tyag is highlighted in Geeta pronounced by Lord Krishna, in its Canto 5, verse nos. 7-9 which briefly declare that he who has transformed himself as an embodiment of Yoga in its various connotations, who is a living example of Yoga and what it stands for, who has cleansed his self and his soul from all impurities and taints, who has learnt to exercise self-restraint of the sense organs and his inner self (mind), who sees no difference between himself and others—such a man remains un-involved in deeds in spite of doing everything in a normal way. He who has developed exemplary equanimity and dispassion, who treats everything alike should realise that he is not doing anything at all. He must realise that the various deeds done by the body are the normal functioning of its sense organs, such as seeing, hearing, touching and feeling, smelling, eating, walking, sleeping, breathing, speaking, giving, accepting, arising and lying down, getting excited and feeling low etc. The best approach is to offer these deeds as an offering to the Supreme Being, and this would absolve the aspirant of all ill-effects of such deeds. This is called Tyag because one does not expect any rewards from these deeds, thereby remaining indifferent and unconcerned with them as if they do not belong to him at all.

The Bhagvad Geeta, 18/2, gives a general definition of Tyag as giving up the fruits of all actions, i.e. not expecting any rewards of deeds and doing them selflessly and dispassionately. It categorizes Tyag or abandonment of actions into three basic types—viz. Satvic, Rajsic and Tamasic.

Satvic Tyag consists of performing one's duties but doing them selflessly and dispassionately, being detached from them and their fruits, or not expecting anything from them. Rajsic Tyag is not doing anything because it entails a lot of physical exertion or difficult to do. Tamsic Tyag is doing deeds in a confused manner and under delusory effects of ignorance. [Refer Bhagvad Geeta, 18/7-9.]

It ought to be noted that auspicious deeds such as Daan (charity, alms giving, donation), Yagya (any religious exercise) and Tapa (sufferance for some noble cause, observing austerities and doing penances) should not be given up on the pretext of Tyag, but done without expecting any reward.

If one is unable to achieve anything desired, and realising it is inaccessible for him pretends to forgo it by saying that he is renouncing it or surrendering his right over it or giving it up for some noble objective or did not wish to have it, he is only cheating himself as well as others. Similarly, if anything is forcibly taken away by a stronger opponent and cannot be retrieved, giving it up is not Tyag.

Tyag has two vital aspects—Daan and Vairagya. Daan is giving away voluntarily and without coercion to those who are in need, such as making donation, charity and alms. Vairagya is renunciation when one becomes wise and enlightened about the truth and reality of existence, about the falsehood of the material world and anything related with it, about the futility of possessing anything that is perishable and transient and which acts as an obstacle hindering one's pursuit of his spiritual goal.]

7. The ascetics are at liberty to behave as they want. [That is, no restrictions are placed upon them to do this and not to do that. It is left to their own wisdom to decide what is auspicious and righteous, and what is not. This freedom is based on the premise that once a person has become an ascetic or taken the sincere vows of Sanyas, he would exercise the greatest of self-restraint and never do anything inauspicious or unrighteous even though freedom is given to him. This is because he is deemed to be a self-realised, wise, enlightened and exalted man. It is not expected of him to act in a frivolous, irresponsible, deceitful and undisciplined manner.]

For example, so many of them wear clothes, and there are so many who remain naked. For the exalted self-realised and enlightened ascetics there is no such concept as one thing being auspicious and righteous and the other not, or one thing being pure and holy and the other not. [This is because they see nothing but the Atma or the ultimate Truth everywhere, and therefore they do not distinguish between any given two entities. For them all are alike; a child for them is the same as the old man, a woman is likewise the same as the man. They have developed an eclectic sense of neutrality and profound equanimity marked by great equity and total detachment. There is another reason for the development of this temperament—they are so deeply engrossed in contemplation and meditation upon the Truth and the Atma that they are virtually in a perpetual state of Samadhi, a trance-like state when one is not even aware of his own body, what to talk of the external world, and hence such a man cannot distinguish between any two entities because he is not even aware of their presence or importance; he does not see any difference between them and treats them equally.]

From the point of view of a man's natural tendency of collecting and hoarding assets, such enlightened ascetics collect their sense organs and keep them restrained. This is their equivalence of collecting and hoarding assets of the material world as done by ordinary men¹. [The sense organs have a natural tendency to move towards this material world and spread out in every direction much like the wealth that is spread in all the corners of the world and is to be collected with great effort and stored in a treasury by a man. In other words, a wise ascetic reins in his sense organs and prevents them from moving out towards the world and its charms, and instead diverts their efforts towards enabling him to achieve success in his spiritual pursuit. He uses his mind to contemplate and his sense organs to help him to meditate and help to maintain the strict discipline and observe the rigours of a renunciate way of life meant for him.]

The external fire sacrifice done by others, such as the great Ashwa Medh Yagya (the horse sacrifice), is replicated by them internally in a symbolic manner by sacrificing the sense organs and the mind by exercising greatest of self restraint on their natural wayward tendency and their worldly yearnings and desires. They turn

inwards and spend time on contemplation and meditation on the pure 'self', the consciousness known as the Atma. This is their Ashwa Medh Yagya².

For a truly enlightened ascetics, this is the greatest of Yoga (meditation) and the greatest of Yagyas (fire sacrifices) (7).

[Note—¹This paragraph can be explained in a different way. A man works hard and earns money and collects assets which are clearly visible to every person. For example, his salary is known to all, the yield of his field is known to all, and even the stock of his go-down is also there for everyone to see. But he would not let others know about his personal finances, how he keeps his personal wealth and how he hides his gold and cash. The open harvest of a farmer's land is hidden by him in his barn as it becomes his personal property after he has paid the labourers who worked for him their due. He hides the produce for fear of thieves, tax-collectors and even from his enemies who are jealous of his affluence. In other words, he collects known assets openly from the external world but hides them in a secret place known only to him, and he protects these assets from inquisitive and preying eyes. Similarly, the sense organs have a natural tendency to rest on their respective objects in this external world. The wise Avadhut ascetic withdraws them from these external objects and hides them in his own self by restraining them and using their powers and strength to achieve spiritual high. This is a metaphoric way of saying that he collects his sense organs from the external world and fixes them inside.

²Turning inwards and contemplating upon the Atma is a great spiritual activity that is compared to doing the famous Ashwa Medh Yagya or the horse sacrifice because the offering here is made by controlling and sacrificing the freedom of the mind and the sense organs which are no less restless and outwardly mobile than the horse. They are equivalent to a wild horse as all of them have a natural urge to gallop away towards their respective sense objects in this world, allured by the enticing charms and countless attractions proffered by them. It is difficult to tear them away from these objects and teach them self discipline and restraint much like the wild horse clamouring to break away from its shackles and cantor away to freedom, throwing its bridle, breaking its harness and bothering the least about the rider. The severe Tapa, i.e. the observance of austerity, doing of penance and sufferings undertaken by the spiritual aspirant are no less than important and rigorous than the ones observed when doing the elaborate fire sacrifice called Ashwa Medh Yagya.

If the restraint of the mind and the sense organs is equivalent to restraining the sacrificial horse, the actual practice of Yoga, i.e. the contemplation and meditation done to realise the 'true self' or the pure conscious Atma, is like physical rituals during the horse sacrifice when oblations and offerings are made to the deity worshipped, which however in this case is the Atma. Since the Atma is the micro level representative of the supreme transcendental Consciousness known as Brahm, it follows that the ultimate deity worshipped by contemplating upon the inner self and the Atma is Brahm. The sacred fire in this case would be represented by the pure consciousness illuminating the inner self, and the offering are made by doing Yoga involving many exercises and auspicious observances. The various Yoga Upanishads enumerate them in great detail.

Like the Ashwa Medh Yagya which establishes a king's fame and glory not only in his own kingdom but even in distant lands as a person who does noble deeds, undertakes great religious exercises, is pious and god-fearing, gives huge donations and make large charities as a necessary accompaniment of such Yagyas, and generally bestows him with welfare and great auspicious rewards, bestowing him with honour and respect besides granting him lordship over a large area on earth if he is able to successfully accomplish it, this internal Yagya provides the practitioner with equal auspicious rewards, but this reward is much higher, more valuable and spiritually better as it pertains to the Atma which is eternal and imperishable as compared to worldly rewards gained by external Ashwa Medh Yagya. This sacrifice

gives him access to the supreme Truth of this creation, bestows him with great mystical powers called the various Siddhis, and paves the path for his final liberation and deliverance from this world and its endless cycle of ignorance and delusions as well as birth and death along with their endless chain of miseries and torments. A person who has been successful in this internal fire sacrifice gains access to spiritual glories and finds liberation that sets him free from all the fetters that shackle an ordinary man to the body and its sense organs; he is no more bound to this gross world as he has become the ethereal entity known as the Atma. This is because he has now realised that his true 'self' is the pure consciousness known as the Atma, and not the gross body consisting of both the gross sense organs as well as the subtle mind-intellect complex. He gains honour and respect much like a great and noble king who has successfully done the Ashwa Medh Yagya.

Again, as only kings who were strong and fearless could successfully complete the Ashwa Medh Yagya because if the sacrificial horse was caught by an opponent and held captive, it was considered a defilement of the sacrifice and invited wars to liberate the horse which only powerful kings could afford and win, it follows that only strong-willed, really wise and enlightened and sincere spiritual aspirant can successfully do such internal fire sacrifice as envisioned and described in this verse. It may be possible to subdue an enemy with the strength of the arm of a strong and well-trained army, but it is virtually impossible to control one's own self and one's own sense organs; it is very easy to lecture others but most difficult to implement what one preaches.

The concept of doing the great fire sacrifice internally as opposed to doing it externally is also described in detail in Pran Agnihotra Upanishad of the Krishna Yajur Veda tradition. Its verse nos. 21-22 especially are very explicit on this subject.

A brief word on the Ashwa Medh Yagya would be in order. The Ashwa Medh Yagya is called the horse sacrifice because a horse is sacrificed in it. It is most ancient sacrifice and can be successfully done by very powerful kings or emperors. The horse is let free to go anywhere it wants for one year and the land where it sets foot is either annexed by treaties or by force in war. The actual sacrifice is though for only three days. The sacrificial horse is protected by the army and if by chance it is killed by the opposing king then the sacrifice is deemed to be defiled. In practical terms, it was a means to spread a king's area of influence.]

8. In this way, the entire character and behavioural pattern of such ascetics are unique and more often than not unconventional, baffling, mysterious, funny and erratic. One should not make any kind of derogatory remarks against them, insinuate or insult them, call them disgraceful, lowly, vile, possessed of evil spirit etc., or in any way cast any kind of demeaning and wild aspersions on them for their unconventional, strange and odd behaviour which is often inexplicable and inconsistent with the norms set down for civilized, auspicious and righteous conduct in the society.

This is their great sacrifice that they bear with stoic fortitude and calmness sneers and comments of the world; it is their great sacrifice that they have forsaken artificiality and pretensions so much evident in the formalities and niceties observed by ordinary people in this world. They do not adhere to the norms created for the artificial world because they do not subscribe to the principle of creating an artificial and false sense of being civil, cultured, well-behaved and learned by observing codes of conduct and decorum at the cost of freedom of the soul. Besides this, their heightened level of self-realisation and spiritual enlightenment has turned their attention inwards towards their conscious 'self', their Atma, so much so that they remain oblivious of their body and what it does, as well as unconcerned of how the world would treat them and respond to their actions and behaviour. They are so lost in the bliss obtained by contemplation and meditation and the subsequent experiencing

of the presence of the supreme transcendental Divinity inside their own self as the pure conscious Atma that they do not have the time or the inclination to bother about what others think of them and how they treat them.

Such spiritually enlightened and self-realised exalted ascetics do not remain attached to this world and therefore need not bother to observe worldly formalities and niceties that are usually followed by ordinary people who remain busy in appeasing the world and trying to pretend to be civil, well-behaved and cultured in this artificial world so that they are given respect and honour but in the process are actually robbing their Atma of its inherent freedom and liberty to do what it wishes. [The Atma is an ethereal entity, and therefore is as free as the wind and the sky. The Atma cannot be bound by fetters; it cannot be shackled; it can fly to wherever it wants, think what it wants, and do what it wishes to do.]

Hence, wise and renunciate ascetics roam around freely without getting perturbed and being burdened by the necessity of observing useless and perfunctory formalities which act like millstones around the neck of less enlightened men. They roam freely without being encumbered by anything, by being deterred by anything, or getting attached to anything. They are not concerned whether what they do is correct or not because it is deemed that all their deeds and actions would be auspicious and righteous. [This is because it has already been said that they have obtained full control over their senses organs, both those of perception and those of action, so there is no scope of these organs doing anything that is not considered auspicious and righteous by scriptural standards. The ascetic has no time for the external world and neither the inclination of indulging in worldly pursuits or the need to please this world at any cost, so the question of either appeasing the world or getting annoyed and perturbed by it does not arise as far as they are concerned.] (8).

[Note--This is the way of life led by truly self-realised and renunciate ascetics who have not only detached from the external world of sense objects but remain submerged in experiencing the bliss of self-realisation and Brahm-realisation. They are unaware of their bodies and how it acts; their mind is so engrossed in contemplation and meditation that it has no time and inclination to bother how to behave nicely that would be acceptable to the world. So to accuse them of behaving strangely and unconventionally is only showing ignorance of their heightened state of enlightenment and exemplary detachment. They do not come within the purview of codes of conduct that are applied to ordinary persons who appear to be observing imaginary and artificial niceties and formalities of the material world and think that they are cultured and civilized, whereas actually they are only pretending to be so because they have never witnessed the inherent exhilaration obtained when the soul is set free like the bird. The soul of ordinary people is tied in worldly fetters and it has forgotten its inherent free nature, so such worldly people act in an artificial manner and become pretenders of freedom. They may dance the whole night, appear to be merry externally and enjoying the world to the hilt, but internally they are unhappy, disquiet, distressed and most stressed-out. A non-enlightened man lives an artificial life of bondage—bonded to his body and its myriad needs and problems, to the world and its own set of needs and problems, besides the requirement to observe formalities and maintain artificial relationships. The soul actually knows no such things and needs to observe no formalities or codes of conduct because it is eternally free and an ethereal entity that is all-pervading and all-encompassing.

It ought to be noted here that the oddity in the external behaviour of self-realised ascetics is not due to any defect in their mind-intellect or their character but due to the fact that they have tasted the divine elixir of spiritual bliss and ecstasy effusing from their inner self and therefore they are not concerned with external formalities or enjoyments. They are not mentally sick, evil, pervert or reckless, they are not lunatics

or deranged in any manner. Some of the oddities in their behaviour are their not taking regular bath or meals or attending to nature's call. They may not pray regularly and perform religious sacraments daily which seems unrighteous on the face of it. But it should be noted that this is due to the fact that they worship the supreme Lord not somewhere in the external heaven but inside their own Atma, the pure consciousness residing in their own bosom. This highly evolved state of his mental faculty is clearly highlighted in the following verses.]

9. Just like the fact that the Sun accepts all sorts of oblations offered to it and the Fire can devour anything put into it with neither of them affected at all by such offerings, an ascetic remains detached from and indifferent to all the sense objects of this world and their inherent attractions, charms, comforts and pleasures inspite of his having to use them in the course of his routine life in this world. Therefore, he remains untainted and untouched by them and remains as pure and uncorrupted as if he has had no contact with them at all.

Since he is not involved internally (mentally, intellectually and emotionally) with any of the sense objects of pleasures and comforts in this material world, he is not tarnished by their tainting effects, and neither can he be accused of having committed any sins or misdeeds pertaining to their use or contact, nor pretending to be too upright and righteous by not being attached to these objects. In fact, he is completely unaware of their existence at all for all practical purposes (9).

10. Similarly, just like the vast ocean filled with water has no desire whatsoever of acquiring more water to replenish its stock but accepts the water when it is incessantly pours into it by rivers etc., the ascetic too accepts whatever comes his way calmly and with stoic indifference though he has no desire for anything. That is, inspite of being surrounded by the enticing objects of the material world which give comfort and pleasure, he remains unruffled by their illusive and transient charms which are no less than traps to ensnare him in their vice-like grip. He remains unattached to them; he maintains his mental peace, poise and calm demeanours. He is never in dearth of these noble and eclectic virtues, thereby remaining ever contented and fulfilled like the vast ocean cited here¹.

Ordinary men who have desire and yearning for enjoyment of the pleasures and comforts offered by the sense objects of this material world cannot ever hope to achieve this state of calmness and peace (10).

[Note--¹Rivers continue to pour their water in the ocean, but it never boils over and submerges the land due to this continuous pouring. The heat of the sun continuously evaporates its water, there are hot summers and rainless days, there might be drought on the land, the rivers and lakes dry up and there is all round shortage of water so much so that crops dry up and people die due to thirst, but the ocean never dries up, nor its level of water falls short of the normal mark. Rivers may at one time flood the plains and inundate huge tracts of land, or completely dry up to leave a parched bed, but the ocean never breaks its laws and never submerges the earth. Come to think of it—the ocean occupies roughly three-fourths of the surface of the earth as compared to rivers which are not even seen from the outer space, and had the ocean wished it could have easily submerged the entire land by just raising its level by a foot or so. But it has never done so; it is so self-controlled that it has not even devoured an inch of sandy banks on its side. Could not the ocean have gnawed at the sands gradually and imperceptibly over million of years and spread its tentacles—or realm—over large tracts of land by its shore? Global warming has melted the glaciers, but they have not raised the level of the ocean nor reduced its water content. The rivers change course, but the ocean never does so. It roars like a lion, but never devours.

The same thing applies to the Avadhut Sanyasi. He is always the same; he neither boils over with pride when praised or by the great mystical powers that he possesses, nor does he get angry at being chided or insulted. He is personified virtues of calmness and poise, equanimity and fortitude, forgiveness and charity, blessedness, piety, divinity and holiness et al combined into one.]

11. Therefore, the factual position is that there is no such thing as dissolution of the soul and freedom from birth or the fetters and bondages that are deemed to be tying a creature to this world. An aspirant does not have to follow some special path to achieve an exalted stature and find liberation and deliverance of his soul from worldly shackles and the cycle of birth and death, nor is there any special state which can be designated as being free from any bondage.

In other words, everything depends upon how a man thinks and treats his self, his present circumstances and the world around him that determine whether or not he is liberated and emancipated, whether or not the world has been able to tie him in knots, whether or not he has renounced the world and its illusive charms, whether or not he is really peaceful and happy, and such other noble virtues that characterise the life of a wise, erudite, enlightened and self-realised man.

If only he detaches himself from getting emotionally, mentally and intellectually involved in this world and its illusionary charms, if only he remains distanced internally from the objects of the senses in this world, if only he remains neutral and indifferent to everything extraneous to his pure conscious Atma which is the only truth recognised by wise men, if only he treats everything with stoic calmness, if only he remains unruffled, unperturbed and unmoved by the gravest of provocations from this world, neither hating anything nor getting attached to them, if only he can maintain sincere and profound sense of equanimity, neutrality and fortitude—it is only then can he be said to be truly self-realised, wise, erudite and enlightened. He is deemed to be eternally free and emancipated; he is not under any bondage or shackled to anything. He need not run away from this world and find a separate existence of physical distance from this world, because even if he remains in close proximity to this world but maintains mental distance from it then he is better off than a man who stays far away in a forest but remains mentally attached to the world (11).

12-17. 'In order to fulfill my worldly obligations and ensure at the same time that I get Mukti after death (i.e. I get final liberation and deliverance from this world of transmigration so as not to enter this cycle again), it was necessary and ordained for me to do certain auspicious and righteous deeds. I have fulfilled all my obligations and have done whatever I could do to the best of my ability. But that phase is past now, and I am free'. With this sense of satisfaction and feeling absolutely contented with his life and the deeds that he had done, he becomes calm, quiet and peaceful [12 ½].

Then he begins to ponder further—'Ignorant persons remain trapped in this world by hoping for sons and other worldly acquisitions. [That is, ordinary worldly men desire to have a large family and the need to have sons to carry on the family line and maintain and enhance the assets accumulated by them. People desire to have a son to carry forward their achievements and good name, or complete unfinished tasks, or even to accomplish something which the man had strongly yearned for but could not do himself due to so many constraints.] [13]. But I am fulfilled and overwhelmed with the happiness and joys of having led a fruitful and auspicious life. I have no

desires left in me, so why should I allow myself to get unnecessarily trapped in the snares of this world? [13 ½]

Those who desire to go to heaven or aspire to have some auspicious future for themselves after death continue to do auspicious and righteous deeds in the hope that their desires and aspirations for a sound future would be fulfilled [14].

Let them do what they want. But I have realised that I am the Atma which is immanent, imperishable, universal and all-pervading, not only in the present but would also remain the same in the future. I have become universal, uniform and immanent in the sense that my true identity is this Atma, and it is a universal, ubiquitous and quintessential entity in creation. So there is no point in my doing something to ensure a better future for my Atma because it is not affected by any dimension of time and circumstance, and would constantly remain always the same. Therefore obviously, why should I bother about doing any deed (to better my future or enhance my present stature which is already exalted and divine)? [14 ½]

Let those who so wish and have the expertise to read and preach the scriptures do what they are good at—i.e. read and preach the scriptures. But I am not eligible to do so and I remain completely inactive and neutral. [That is, studying and teaching of the scriptures are no longer needed by me as I have already understood their essence and principle teaching by realising the truth about my Atma and the supreme Brahman of which this Atma is an image.] Therefore, I need not study or preach the scriptures [15 ½].

I have no desire or the need for sleep, to beg for food, to bathe or to attend to other daily routine chores of life (because these are needed by the body whereas I am the ethereal Atma or the universal soul, and not the gross body) [16].

Those who think that they are wise and erudite thinkers, let them indulge in ponderings and imagining things. I am not concerned with such artificial imaginations [16 ½].

Ignorant people might imagine the presence of a latent fire in the shrub known as Gunja (*Abrus presotorious*) because of its red colour, but their imagination of fire in it would not burn and harm this shrub at all. Likewise, the inner self is immaculate and pure, unaffected by any of the taints and shortcomings associated with the world, so how can I imagine that I need to worship any divine entity and seek its intercession to either protect myself or clean my inner self? [17]. (12-17).

18. Those who are not able to know and understand the essential Truth themselves, let them hear about it and get it explained by others. But I, being an exalted Avadhuta, am fully conversant with it myself. So why should I hear about it from others?

Those who have doubts and confusions, let them study and ponder to remove their doubts and confusions. But I do not have any sort of doubts and confusions, and that is the reason why I do not study the scriptures or ponder over their tenets. [This statement is not meant to indicate that the Avadhut Sanyasi is boastful and pretentious, but to highlight the level of his enlightenment and self-confidence. After all, one reads and studies the scriptures for self improvement and realisation of one's spiritual goal, and once this aim is achieved it would be a futile exercise in spending time delving in the vast and endless volumes of the scriptures just to find out something that has already become known. It is highly incredulous and unimaginable that an enlightened man would boast of himself and his knowledge, and treat the scriptures with any kind of disrespect.] (18).

19. Those who are inclined to forget or get confused about the Truth, those who develop misconception about the Truth, let them remember it again and again to refresh their memory and reinforce their belief, faith and commitment. But where there is no confusion or forgetting, there is no need for repetitively remembering the Truth.

I am not misled to believe that the body is true and it is my truthful identity, so there is no need for me to constantly remind my self that the body is not my 'true self' (and instead of it, it is the pure conscious Atma residing in this gross body as my 'true self') (19).

20. 'I am a human being'—this conception about the Atma is also due to ignorance and forgetting about its eternally ethereal and divine nature. [This is because the human being is mortal and has a lot of worldly faults and limitations associated with the gross body, whereas the Atma is divine, ethereal and eternal, not at all subjected to any taints and limitations that mire the man's physical existence.]

This misconception about who the truthful 'self' is, is also due to prolonged indulgence in worldly passions and desires. [This is because the world can be enjoyed only through the medium of the gross body, and when one becomes habituated to enjoying the sense objects of the world he forgets who he actually is. That is, he forgets that when asked the question 'who are you?' the man should answer 'I am the universally pure conscious Atma which has no attributes' instead of 'I am the man with this body having certain characteristics'.] (20).

21. It is only when the effects of past deeds wear out that this worldly behaviour comes to an end. But as long as the past deeds and their accumulated results continue to exert influence upon the creature (through his mind-intellect complex that controls his thoughts and the functioning of the gross body), he would continue to remain entangled in worldly behaviour. [That is, as long as any man does not distance himself from the body which is actually the entity that does all the deeds, he cannot get rid of allowing himself to be involved in the deeds done by the body, and as long as this situation prevails he is bound to the chain of rewards, bad or good, that these deeds produce. It is only when he disassociates himself from the body and becomes highly neutral towards the deeds done by it that he absolves himself from their consequences. Anyone is punished or rewarded for things done by him or her, and since the wise man has realised that his 'true self' is the Atma which is ethereal and pure consciousness, and separate from the body, he is not the one who is doing the deeds now under changed circumstances, and therefore cannot be either punished or rewarded for these deeds.] (21).

22. If you (here referring to Sankriti who is hearing this preaching) have a desire to continue doing deeds and thereby remain entangled in their web, then do as it pleases you. But in my considered view, the doing of deeds have no role to play in one's spiritual upliftment and the soul's final liberation and deliverance. So why should I (i.e. the Avadhut Sanyasi) contemplate and ponder on this matter any longer? Why should I think what to do and what not to do? (22).

23. My (the Avadhut Sanyasi's) mind and intellect never become restless and agitated, and therefore I need not engage myself in special sessions of Samadhi to tame them. [Samadhi is a trance-like state obtained during the higher stages of

meditation when the mind is completely annihilated and controlled, making the spiritual aspirant oblivious of the body and the surrounding world.]

It is only when the mind is eclipsed and tainted by the dark shadow cast by various faults and imperfections associated with this mundane material world characterised by uncountable delusions, and is buffeted by various misconceptions that arise out of ignorance that it becomes darkened and corrupted, unstable and agitated. It is only then that one needs to practice Samadhi to cleanse it of his taints and make it regain its original poise and calmness along with its pristine purity and high level of wisdom. [The word 'Samadhi' here would mean training the mind to be consistent and constantly stable, to become calm and poised and remain non-involved with the sense perceptions of the body. This would calm it down and remove the cause of it getting tainted or deluded by the numerous faults originating in the artificial world of material sense objects. Being free from being constantly nagged at by these perceptions and the charms of the world and the desires of the sense organs for gratification, the mind would have the energy and time left to ponder on nobler things of life, delve into the mysteries and secrets of creation, and contemplate about the great import of the spiritual truths as expounded and enunciated by the scriptures.]

I am experiencing this profound calmness, equilibrium, peace and stability of the mind and intellect on a regular basis; so where is there any special need to sit in meditative postures and engage in Samadhi to achieve this end? Is there anything different from what I am experiencing now that can be obtained or experienced during Samadhi? [So why should I do it? In other words, special sessions of meditation and Samadhi are not needed by me as I have already achieved the spiritual high that is the aim of meditation and Samadhi.] (23).

24-25. I (the Avadhut Sanyasi) have done regularly what I was supposed to do according to the mandate of the various scriptures, and I have also got regularly what I was supposed to get (as a result of my deeds and efforts). Therefore, why should I do anything ordained or prescribed by the scriptures, traditions or any other authority? That is why I do not conform to them, and do nothing.

I do not have any aspirations and desires, nor do I expect anything. So I do not lose sleep over anything; I accept whatever comes my way in the normal course of life and respond normally according to the event (24-25).

26. Even if I (the Avadhut Sanyasi) behave and act according to the sanction of the scriptures it is because I wish to set a visible example to be followed by other ordinary people, so what is the harm in my doing so. [In other words, I am not contradicting myself when I act according to the traditional norms of behaviour inspite of my firmly asserting that I am free to do what I wish to do. Though I am at liberty to act strangely and at variance to established norms, but I prefer not to do so because less enlightened people would construe it in the wrong light and cite my example to justify their own pervert and reckless demeanours and conducts; they would act wrongly and then cite my example to justify their misdemeanors though they are no match for the level of spiritual enlightenment and maturity that I have. I do not wish to set a wrong example for this ignorant and deluded world and push it down further in the drain of evil behaviour and pretensions.] (26).

27-28. The body might remain engaged in offering formal worship to Gods, praying to them, performing religious rites, cleaning itself by washing and bathing (performing ablution), or in studying and learning the scriptures or other bodies of

knowledge, the faculty of speech might remain engaged in repeating the ethereal Mantra called OM and reciting the Upanishads [27], the mind might remain constantly engaged in remembering Lord Vishnu or it might even remain submerged in the thoughts of the supreme Brahm and enjoy the extreme bliss obtained by this remembrance—but I must say that none of these bothers me in the least as I am a mere witness and a neutral observer of all that the body does, without getting involved in any of the activities of the body.

I (the Avadhut Sanyasi) do none of these things nor do I instruct or advise others to do anything of any sort [28]. (27-28).

29. I (the Avadhut Sanyasi) am fully contented and fulfilled. I have achieved and acquired whatever there was to be achieved and acquired. My mind is firmly convinced of this fact; it is the irrefutable truth (29).

30. I (the Avadhut Sanyasi) am blessed and most fortunate. Indeed, I am blessed and most fortunate! It is because I have come to know, in a natural way (i.e. without any strenuous study of the scriptures and hard practices of Yoga or Tapa—severe forms of meditation and observance of austerity and penance respectively), my inherently and truly eternal, imperishable and infinite form that is the universally pure consciousness known as the Atma.

I am certainly blessed and most fortunate as this realisation (of my ‘true self’ as being the self-illuminated and pure conscious Atma which is a manifestation of the supreme cosmic Consciousness known as Brahm) provides me with the extreme bliss and ecstasy that comes with Brahm-realisation. It clearly illuminates my inner being with the light of enlightenment and fills me with its accompanying bliss and ecstasy that is nothing but ethereally divine in nature. [In other words, when I have come to know what my true identity is, I feel absolutely exhilarated at this knowledge, and it bestows upon me the blessedness that comes with self-realisation and obtaining the elixir of divinity and eternity. I feel absolutely overjoyed at having the acquaintance of something as astoundingly magnificent, as profoundly grand and as majestically divine as the supreme Brahm. This glorious illumination of realisation removes all traces of darkness arising out of ignorance and delusions that might have lingered on in some corner of my inner being, i.e. in my heart and mind, thereby giving me the much sought-after light of enlightenment. I indeed feel most fortunate and blessed!] (30).

31. I (the Avadhut Sanyasi) am blessed and most fortunate. Indeed, I am blessed and most fortunate! It is because I do not see the miseries and sorrows of this mortal and perishable world in the least. [That is, now I do not see death and decay anywhere, I do not see misery and sorrow anywhere as now I am able to see the eternal and imperishable Brahm everywhere. In other words, my perception of the world had undergone a sea change for the better. Whereas earlier I had seen unhappiness and distress as reigning everywhere and found no happiness and contentedness in anything, now I feel fully contented and blissful with no trace of discomfort and unhappiness of the earlier times. I perceive the world in wonder and awe as a magnificent creation of the supreme craftsman and maverick creator known as Brahm, and marvel at his stupendous abilities, astounding wisdom, expert craftsmanship and creative skills that he has moulded such a vast creation from virtually nothing to start with and in such a way that no two units of it are exactly alike. I look at the positive aspect of the world and see the body as the only chance to break free from the cycle of

birth and death, instead of as bondage and a cumbersome burden on my soul. This is because as a human I can study the scriptures and decide for myself about my destiny as compared to my earlier lives where this option and opportunity was not available to me. I have got a golden opportunity not only to find liberation and deliverance for myself but I can also show others who are less fortunate the way for it. I can serve the supreme Lord in his myriad forms as the numerous creatures of this world, and I need not worship him separately to please him.]

I am blessed and most fortunate. Indeed, I am blessed and most fortunate! It is because my ignorance and delusions had been completely eliminated for good a long time ago. [That is, although my ‘true self’, the pure conscious Atma, was inherently wise, erudite and enlightened, I was not aware of it, and therefore I had been thinking that I need to acquire knowledge and become wise. But now I have discovered the truth about my eternally wise heritage and the fact that the Atma is never unwise and ignorant. It was only out of delusions and the evil effects of Maya or illusions created about the ‘truth’ that I had felt that I was ignorant and unwise. Now, having acquired the divine insight into the reality, I have woken up to the ‘reality and truth’ of the Atma, and therefore all my misconceptions and misgivings about it are dispelled. I have realised who I truly am.] (31).

32. I (the Avadhut Sanyasi) am blessed and most fortunate. Indeed, I am blessed and most fortunate! It is because I have nothing more to do as there is nothing left for me to do. I am fulfilled and contented.

I am blessed and most fortunate. Indeed, I am blessed and most fortunate! It is because whatever I wished to have or acquire or gain access to has already been done. Nothing remains to be had or acquired or accessed now as it is already with me. I am absolutely contented, satisfied, fulfilled and accomplished (32).

33. I (the Avadhut Sanyasi) am blessed and most fortunate. Indeed, I am blessed and most fortunate! It is because there is nothing to compare with the degree of contentedness and fulfillment that I enjoy now.

I am indeed blessed and most fortunate. I repeat and assert that I am indeed blessed and most fortunate! (33).

34. Oh Auspiciousness and Righteousness (collectively called ‘Punya’)! [Here, the good virtues of ‘auspiciousness’ and ‘righteousness’ have been personified.] You have borne ripe fruits for me and have fully rewarded me in a perpetual manner for being faithful to you by pursuing the virtues of auspiciousness and righteousness diligently in my life. How fortunate and blessed are we¹! (34).

[Note—¹Here the use of the plural pronoun ‘we’ instead of the singular ‘I’ indicates that the Avadhut wishes to say that all ascetics who have realised the ‘truth’ as he has done are blessed and fortunate.]

35. Oh Gyan (truthful knowledge of the reality; the virtues of wisdom, erudition, sagacity and enlightenment personified)! Oh Sukha (the divine sense of pleasure and happiness obtained by self and Brahm realisation personified)! Oh Scriptures! [Here, ‘scriptures’ have also been personified.] Oh Guru (moral preceptor, teacher and spiritual guide)! [I thank you all for my eclectic and blessed state of self-realisation and enlightenment. It is because of your grace, blessings and patronage that this has been made possible for me.]’ (35).

36. In this way, a person who studies this Upanishad becomes spiritually accomplished, fulfilled and contented. Even those who are sinful and have committed grave offences like drinking wine and getting intoxicated, stealing gold, killing Brahmins (or for that matter any living being unnecessarily and unprovoked), and generally does things not warranted and not worthy of doing, are forgiven and absolved of their horrendous sins and misdeeds by studying and understanding the tenets and principles of this Upanishad¹.

In fact, a man becomes holy and pure by merely reciting and regularly reading this scripture. [This is because regular and deep study of this Upanishad would automatically mould the character of the man, inculcate auspicious and noble virtues in him, and generally help him to develop deep insight into what is righteous, auspicious, noble and truthful for his soul, and what is not. He would voluntarily inculcate these virtues in a normal way even without any external prodding or inducements of any kind. Then he can choose the path most suited for him and voluntarily pursue it. After all, this is the end result of study of the scriptures, for what is the use of studying anything if one does not implement its teaching in his practical life and gain from this knowledge. It would be a waste of time, energy and effort if this is not achieved.]

‘OM’ representing the supreme transcendental Brahm is the only Truth—verily, this is the essential teaching of this Upanishad. Amen! (36).

[Note—¹This blanket amnesty should not be construed as a license for being pervert and sinful in the hope of first enjoying the vices and then be pardoned for them. Actually, this edict is meant for sincere persons who had been unwittingly trapped in the quagmire of sins and now wish to atone for their misdeeds at any cost. Their regret is sincere and their desire for repentance is equally sincere. Such persons should be given a chance for redemption, for every man can err, and the wise one is he who wakes up at the earliest and reaches his destination in time. Evidently, such pardon is an opportunity for undoing the wrong, and is given once. It is not that one goes on committing sins and each time read this Upanishad or for that matter any other religious text in the false hope that his earlier sins would be forgiven; nothing is more absurd than this. ‘Reading’ means reading with understanding, and not simply perfunctory and obligatory recitation of the verses in a mechanical way like a parrot. So, when one reads anything with understanding and concentration he would be influenced by what he reads, especially when he is in search for a way out for his moral and spiritual ailments. He would eagerly grasp each tenet of the scriptures and faithfully observe their teachings as the last straw caught hold by a desperate man about to drown in the heaving ocean of miseries and sorrows. Who would like to burn his fingers over and over again if he has felt the pain and agony of getting burnt once and has found a remedy that can not only alleviate his sufferings but restore the damaged organ to its original form?

Likewise, this amnesty is given in the scriptures as a merciful benediction and graceful gesture meant for sincere spiritual aspirants who wish to relent and mend their ways. It helps them to redeem their souls and proves that though the scriptures prescribe strict punishment for sins and misdeeds, they are intrinsically gracious and merciful because they are embodiments of the Supreme Being himself.]

-----Shanti Paath-----

-----*****-----*****-----

Chapter 25

Kath-rudra Upanishad/Kathrudro-panishad

This Upanishad is also called 'Kanth-rudra Upanishad'. In this Upanishad, the esoteric and enigmatic but most eclectic and divine knowledge pertaining to the transcendental Supreme Being known as Brahm is being discussed. It is one of the eclectic Upanishads which are revealed ones as they were taught by one or the other of the Trinity Gods; in this particular case it is Prajapati Brahma, the great patriarch of creation, when he was approached by the Gods with a request to preach them the great knowledge pertaining to the supreme Divinity known as Brahm. This knowledge is called 'Brahm Vidya' and it is closely related to the knowledge of the Atma, the pure consciousness.

During the unfolding of the teaching, Prajapati elucidates about the life of Sanyas and how to be initiated into it. Sanyas is the eclectic way of life marked by total renunciation and detachment from this world of sense objects and its illusionary charms which not only trap the creature in their strong snare but are perishable and transient at the same time and therefore cannot give eternity and long-term happiness. Any involvement with them keeps the creature permanently trapped in the cycle of birth and death and their accompanying chain of uncountable and indescribable horrors. So if one were to really benefit from acquiring the truthful knowledge of Brahm and the Atma, and consequentially expect liberation and deliverance from the fetters of ignorance and delusions that tie him down to this world as well as hope to find emancipation and salvation for his soul then it is expected from him that he would follow the correct path in order to reach his spiritual destination. And this path is the path of Sanyas marked by profound renunciation obtained as a result of becoming aware of the reality and truth behind the façade of falsehood and deception.

Verse nos. 1-3 describe the due process of accepting the vows of Sanyas, and verse nos. 4-11 enumerate the various codes that are to be strictly observed once one accepts these vows. The verses following elucidate upon the metaphysical concepts pertaining to Brahm and its related matters such as the origin of the basic ingredients that would eventually unfold this world both at the subtle level as well as at the grosser level. In this context, this Upanishad goes on to describe about the supreme Atma (the pure cosmic Consciousness) known as the Pratyagatma or Brahm, and its various forms called the Panch Atmas in relation to the Panch Koshas (the five sheaths that surround the pure conscious self of the creature). The genesis of creation is described in esoteric metaphysical terms, and in this context the various other concepts are also explained, such as the concept of Maya (delusions leading to misconceptions), Agyan (ignorance), Bhuts (primary elements), and the grand and quintessential nature of Brahm who is non-dual and the overriding supreme Authority in the entire creation and central to its existence as the 'consciousness' known as the Atma. It is this Atma representing Brahm that is revealed in the form of the individual living being called the Jiva. It is the only touchstone against which the truthfulness of everything in existence is to be judged.

-----Shanti Paath-----

Please refer to appendix no. 1 for the meaning of this Shanti Paath.

1. Once upon a time, all the Gods went to Prajapati Brahma (the first creator who had created this visible world and is the oldest and the senior most of the Trinity Gods) and said—‘Oh Lord! Please preach us Brahm Vidya (i.e. the eclectic and enigmatic knowledge of the supreme transcendental Brahm, the divine Being from whom the rest of creation has emerged and in whom it would collapse at the time of its end)’.

Prajapati replied— (1).

2. [This verse is a very abrupt introduction of the subject. The Gods had asked to be taught about Brahm Vidya, and so ordinarily Brahma should have introduced them to the subject by telling them what it is all about. Instead, he tells them how to become a Sanyasi—i.e. how to renounce the attractions and charms of this material world and the urge to satisfy the desire of the sense organs for self gratification. This was a disguised way of chiding them for their ignorance and sternly warning them that if they really and sincerely wish to acquire this divine eclectic knowledge then they should first purify themselves like a Sanyasi who is wise person who has renounced all his worldly attractions and has realised the futility of their pursuit; he has realised that the ‘truth and reality’ is something different than what is visibly seen and taken for granted; and that this path requires exemplary sacrifice and self-control. The Gods unfortunately do not fit the bill inspite of their exalted stature for they have been depicted as being engrossed in enjoying the majesty and grandeur of heaven, of protecting their turf from encroachment from other peers, of deeply involved in carrying out their respective responsibilities of taking care of the world endlessly because they think that they are immortal, as being proud of the mystical powers and authority that they have and the sway that they have in this world, of depending upon humans for their sustenance in the way of offerings made to them during fire sacrifices done by men, of being partisan and favourably biases towards their devotees who worship them and even going to the extent of getting adverse if such worshipping is not done, of expecting praise and honour instead of remaining neutral and humble, and such other negative traits that are not to be expected from someone who is mentally and emotionally ready to acquire the grand knowledge of Brahm. Therefore, Brahma tells them indirectly that if they really wish to know about Brahm, they ought to first inculcate the auspicious virtues possessed by a true Sanyasi by following the correct path led by such men so as to become eligible for this knowledge, and it is only then that they would benefit from it.

It ought to be noted that all the major Gods are regarded as presiding over one or the other sense organs of the body, and therefore they are always engaged in self-gratification as is revealed by these organs. At the macro level they are depicted as powerful Lords who control certain specific aspects or forces of Nature, and hence their grace and benevolence is needed if one were to find peace and happiness. For instance, the Sun God is needed for light, heat and energy as well as for the proper occurrence of seasons and the cycle of day and night. So his benevolence is needed by humans, and therefore people appease the Gods to keep them in good humour.

Besides this, the Gods are deemed to be ‘immortal’ only in a relative manner as compared to humans, for they have their own life cycle measured in celestial terms. So they would also die or end. But the Atma that is the truthful identity of all that ‘lives’ is universal and uniform, non-dual and all-pervading, eternal and everlasting. It is the same in the humans and the Gods, so fundamentally there is no difference between them. That is why a ‘self-realised’ man is regarded as being equivalent to or

even more exalted than the Gods who are indulgent, engrossed in enjoying the comforts of heaven and pride of their exalted stature, expecting worship to be made to them and being partisan towards those who do so.

Primarily the aim of these beginning verses dealing with Sanyas is to tell the Gods that if one is sincerely interested in knowing about Brahm, he should prepare himself for it by following certain codes of conduct, both external and internal, much like one has to wear a formal prescribed uniform to school or college and observe certain codes of discipline even if it is to maintain decorum of the hallowed institution of knowledge. These codes of conduct in the realm of spiritualism are called the vows of Sanyas, a life of strict spiritual vows and total devotion for one's spiritual path. This is possible only when one is careful not to fall prey to worldly temptations and avoid its numerous pitfalls. Theoretical knowledge of Brahm can be available in the scriptures but it is no good unless it is implemented in practical life; if freedom is not achieved and emancipation of the soul not obtained, if eternal peace and beatitude is not acquired then what is the use of spending long hours in fruitless study of the Vedas and other scriptures?]

'The aspirant should shave off the hair on his head along with the Shikha (the tuft of hair on the cranium of Hindus). He should summon his son and say to him—'Oh Son! You are (a personification of) Brahma (the creator), Yagya (fire sacrifice), Vashatkaar (special fire sacrifices meant to honour specific Gods and are done with specific Mantras or mystical formulae and words especially dedicated to that particular deity), OM (the divine Mantra of Brahm and regarded as the subtle sound manifestation of Brahm), Swaha (the word pronounced at the time of making offerings into the sacred fire and meant for the Gods), Swadha (the word pronounced at the time of making offerings to the dead ancestors), Dhata (progenitor, preserver, sustainer, caretaker and nourisher of creation, an epithet usually applied to the Trinity gods consisting of Brahm, Vishnu and Shiva), and Vidhata (one who determines destiny and lays down the laws for the creation)'¹.

When the father is finished saying this, the son should accept the teaching of the father by affirming as follows—'Yes, I am indeed Brahma, Yagya, Vashatkaar, OM, Swaha, Swadha, Dhata, and Vidhata as well as Twasta (Vishnu, Shiva, Prajapati Brahma, Vishwakarma who is the architect of gods, the eleventh Aditya or Sun God) and Pratistha (one who is firmly established in fame and reputation; to stand on one's own strength and have firmness while standing)'².

When the seeker of Brahm finally embarks on his spiritual journey symbolically represented by taking to the path of Sanyas, he should not shed tears, or lament and in anyway get emotional if the family members such as the son and the wife try to follow him from behind. If he weeps, it would be ruinous for his off springs. [This is because it indicates that he is still attached with his family and has worldly ties. This would be tantamount to being forced to accept the vows of Sanyas against his wills, and such a life is equivalent to a life of slavery because he would never find emotional and mental peace. He would always be longing for his son, family and the comforts of home. Such a man is not eligible and authorized to take the vows of Sanyas. Probably he was frustrated with the family and its burden, or was unhappy with the son and wife that he decided to take to Sanyas, and if this is the case then the curse would fall on them for forcing him out of the house, albeit in the guise of acceptance of Sanyas. So it is more under coercion of circumstances than out of natural free will and natural renunciation and detachment for the artificial world and its material comforts that such a man has become a Sanyasi, and any kind of

compulsion is not conducive to spiritual enhancement and achievement of peace. If this is not the case, then the weeping and lamenting indicates that the family members are not allowing him to take to Sanyas and he is going against their wishes. He probably has a young son who is not ready or mature enough to accept the family's burden. In such a case it would be sinful act to fail to carry out one's responsibilities and make others suffer for one's own gain for that would be a selfish action. Such Sanyasis cannot hope to find peace and liberation for which they have taken to the path of Sanyas in the first place. Further, weeping family members and the aspirant show that they are emotionally and sentimentally attached to each other, and therefore the family would make efforts to maintain contact with him and tag him along one way or the other. This would kill the very purpose of taking to Sanyas, for the person would be naturally affected when the family visits him and narrates its own litany of woes and problems. Sanyas envisages complete breaking off all tethers pertaining to this world and earlier life, and assuming a new personality with complete acceptance of a new life of Sanyas where the only entity that matters is Brahm and the Atma. This tenet would be violated if the links with the family are maintained.]

On the contrary, if his kith and kin go around him (i.e. circumambulate him) respectfully and return to their household without any sense or sign of grief or regret, the aspirant becomes eligible to have an access to the abode of Gods in the heaven³ (2).

[Note—¹Refer Kaushitaki Brahmin Upanishad, Canto 2, verse nos. 11, 15 of Rig Veda tradition. The procedure outlined here is followed by a householder who enters the life of Vaanprastha which precedes Sanyas and is closely related to it. Vaanprastha is the initial stage and the first step towards a full-fledged life as a Sanasi. The word literally means 'heading for the forest', but it is not to be taken in its too literal meaning in its practical application as is evident from verse no. 3 below which asserts that if going to the forest is not practically feasible, then he can live in a hermitage. So the idea is to renounce the attachment with the world symbolised by cutting off one's ties with the family.

During this transition, the experienced and wise father wishes to tell his son the fundamental essence and truth of what he has learned from life, and this he does by telling him that he is none but Brahm and its divine various virtues personified. The son is enlightened by the father as a parting gift and blessing before he moves out of the house by means of the eclectic statements narrated above in this verse. It is to inculcate self-confidence in the son and warn him to be careful not to let the family name and the father down by doing anything that is unholy and demeaning to his exalted stature. He must obey his father. Indeed, the best gift that a loving father can give his son is not worldly riches which are nevertheless perishable and transient but a secret code that would unlock the eternal treasury of happiness and auspiciousness for him and his progeny.

²The son accepts his father's advise by accepting to uphold the family's noble tradition and carry it forward to the best of his ability. By accepting that he is Brahma he agrees that he would act like the family's head now onwards and treat everyone compassionately and with great equanimity like the great patriarch of creation. He would also inculcate wisdom and follow the noble path of righteousness and auspiciousness according to his exalted position as the head of the family like Brahma is for the rest of the creation. He would set an example for others in his family to follow.

Similarly, by accepting the word Yagya, Vashatkar and Swaha he assures his father that he would continue to do fire sacrifices and other religious duties along with offering oblations to the Gods as had been done by him. By accepting the words Swadha he assures him that he would continue to offer libations and respects to the spirit of his dead ancestors. By accepting the Mantra OM he indicates that he would

do Japa and perform other religious sacraments and duties in the noblest of family's tradition while using this Mantra as a medium. It also means that he would not be misled by so many doctrines and philosophies offering numerous Mantras, but stick to this divine Mantra which relates directly to the supreme Brahman. By accepting the words Dhata and Vidhata he agrees to willingly take care of his dependants and others in the extended family, and be judicious in his dealings and judgments. By accepting to be Twasta he undertakes to play the role of the Trinity Gods as well as the celestial architect Vishwakarma to create, sustain and develop the family in a well-planned and systematic manner. By accepting the word Pratistha he assures his father that he would do everything to ensure that his and the family's dignity, respect and stature in the society are upheld and enhanced; he would never do anything to undermine what his father had so assiduously and laboriously built and cultivated over a long time.

The utterances of the father and the reply of the son are symbolic of the fact that the wise father is indirectly telling his son that the latter is not an ordinary man but an exalted being like the Trinity Gods, and the mantle of taking care of the world is now falling upon him and so he ought to be exceedingly careful and diligent. He wishes to tell him that now that he, the father, has decided to move out of the house, the son is expected to take up this responsibility not only of the household but of the rich legacy of wisdom and erudition, of righteousness and auspiciousness that his family is so famed for by being careful in all his deeds and actions, in all his thoughts and behaviours, and ensure that they are up to the bench-mark set by the scriptures and other senior members of this own family in the past; he must ensure that they are according to the laws laid down in the scriptures and never violate them under any provocation or temptation. The son is expected to guard against falling prey to temptations and mind his own self, keeping in mind always the promise that he is making to his father at the time of the latter's final departure from the house—that he is indeed an exalted soul as exemplified by the fact that he has accepted being a personification of great Gods, holy sacraments such as offerings made to the sacred fire, divine Mantras etc. It also ordains the son to keep the family tradition of observing religious sacraments and doing religious duties that were earlier being done by his father going on as usual by performing fire sacrifices, offering oblations and libations to Gods and dead ancestors, repeat Mantras and generally lead a holy and pious life conducive to spiritual upliftment of the soul so that when the right time comes the son would also follow the footsteps of his father by passing the baton to the next generation and taking the vows of Sanyas himself.

The father inspires the son to lead an honourable and dignified life marked by righteousness and auspiciousness as well as an exemplary religious life in consonance with the tenets of the scriptures. The son is expected to carry forward the noble tradition established by his forefathers and which is being handed down to him by his own father now. The assertions mentioned in this verse build confidence in him about himself and his noble lineage.

³This is ordained to create an auspicious atmosphere of cheerfulness and happiness, because this is not the time to grieve, weep and lament but to celebrate as the man is attaining some stature which is higher than the mundane, he is progressing to a higher level of life and gaining success in the much sought-after field of spiritual elevation and getting ready for his spiritual liberation and deliverance instead of falling down from a high exalted stature and getting trapped in the endless cycle of miseries and pains, so there is no ground for regrets and causes for lamentations. He is doing the scripturally sanctioned and traditionally most honourable and auspicious deed by taking to the vows of Sanyas towards the fag end of life. In fact, it is time to rejoice and celebrate that at least one soul in the family has stepped on the much-acclaimed correct and auspicious path of enlightenment and Brahman-realisation, and the good effects of this man's actions would bring good fortune on the entire clan and family. Such a man lends his family great respect and privilege in the society and

therefore no untoward events must be allowed to happen that would mar this solemn and august moment. Weeping and lamentations only go to destroy the solemnity and grace of the auspicious moment, and are not at all suitable for it.]

3. A person should follow the sanctified way of leading life which has been divided into four segments by ancient tradition and scriptures.

In the beginning he should lead a life of Brahmacharya as prescribed in the Vedas and Shastras (i.e. a celibate life of self control and discipline as sanctioned by the scriptures when he spends his time in studies and inculcates values and skills that prepare him to face the rough and tumble of life as an adult with confidence, and which enables him to stand on his own two feet and generally not only to fend for himself but also to take care of his dependants).

Then he should enter the next phase of life of a Grihastha when he marries and produces children to carry forward the lineage of the family. It is expected of him that he would inculcate noble values and virtues in his off spring in accordance to the sanction of the scriptures. During this phase, he performs religious duties such as doing fire sacrifices, observing sacraments and doing other auspicious deeds.

Then he can take the vows of Sanyas (i.e. a life of renunciation and withdrawal from active participation in mundane worldly affairs, and instead spending time in meditation and contemplation and generally preparing oneself for the final exit from the world) by seeking voluntary permission from his kith and kin (who are expected not to deny him this privilege).

Having entered this phase of life as a Sanyasi (one who has taken the stern vows of Sanyas), he should proceed to a secluded place such as a forest. There he should do fire sacrifice for twelve nights (i.e. twelve consecutive days) by offering milk to the sacred fire as oblation and survive on milk during this period of twelve nights or days.

After this period, he should offer the sweetened pudding prepared over the fire in three mud pots and kept aside for the Trinity Gods, i.e. Lord Prajapati Brahma, Lord Vishnu and Lord Tirnetra (or the one who holds a trident, i.e. Shiva) to the sacred fire meant to be accepted by the universal Fire God known as Vaishwanar. [That is, now onwards the Sanyasi recognises these three Gods in the form of the eternal and universal fire element that is present everywhere in a latent form and ready to leap into life when required. This fire element is the metaphor for the stupendous energy, dynamism and potentials of the supreme Brahm because without dynamism, activity and heat in the form of warmth no life is ever possible in this world. In fact, the Sanyasi now worships the Trinity Gods in the form of this Fire called Vaishwanar.]

He should now offer to the sacred fire his wooden pots that were earlier being used by him for various functions during the course of doing fire sacrifices in his previous life as householder. [That is, at the time of taking Sanyas, he should put the wooden pots in the pit of the fire finally lit to bear witness to his taking to the life of Sanyas. This is the last time he is lighting this fire as he is no longer required to do the external form of the fire sacrifice as ordained in this verse below. Henceforth, he is expected to perform an internal form of fire sacrifice.]

Similarly, the pots made of earth are offered to (submerged in) any body of water such as a river or a pond, and those made of metals and other elements (such as gold, brass or copper) are donated to his Guru (who is his moral preceptor and teacher).

At the time of making this gift to the Guru, he should say as follows—‘You should not go far from me, while I would also stay close to you’. [This is to ensure that the teacher and disciple stay in close proximity with each other, a necessity for the disciple because he would need the guidance of the teacher every step of the way in his spiritual path in which he is still a novice. There is another interpretation of this statement. The Guru had enlightened the aspirant about the spiritual Truths and the futility of pursuing this artificial world, he had taught him what the scriptures say and what the correct path to be followed is if he wished to find liberation and deliverance from the cycle of birth and death and its attendant problems. The Guru has unraveled to him the great secrets of metaphysics and spiritualism which had inspired the man to take this path of Sanyas in the first place. So he owes his new-found freedom from the fetters that shackle non-initiated persons to this world only due to this Guru. It was the Guru who had wisened him to the facts relating to his ‘true self’, i.e. the Atma, and the fact that this Atma is the same in the teacher as it is in the disciple. So, this statement ‘we shall be close to each other’ is an affirmation of this teaching. The aspirant wishes to tell the Guru that they would always be close to each other because the Atma which is the same in the Guru as well as in the aspirant is an eternally ethereal spirit that is inherently omnipresent and all-pervading. Wherever the aspirant wishes, the Guru would be there to help him and guide him. Physically going away from the house and village would not be a limiting factor if their Atmas wish to have a communion. Besides this factor, he wishes to indicate to the learned Guru that though he has broken off all ties with the family and the rest of the world, he would ever be obliged to him for showing him the correct path and help him overcome his initial reluctance and misgivings about the life of Sanyas; he would never forget the Guru. He also acknowledges the fact that contact with the Guru is not the same as contact with the rest of the family and the world—for the former is prohibited for a Sanyasi in the scriptures as it creates emotional fetters while contact with an enlightened and wise Guru is always welcome as he would only serve to speed up the aspirant’s progress instead of creating obstacles.]

Some scriptures prescribe that the Sanyasi should pick up a fistful of ash that is lying near the Arani, the wooden drill used to light a sacrificial fire, from the three types of holy fires, viz. Garhyapatya, Dakshinaagni and Aahavaniya¹ that he had performed as a householder earlier, and gulp it down (in a symbolic gesture to indicate that all these divine fires would henceforth reside in his inner self, and therefore he no longer need to worship them externally).

Then he should cut off his Shikha (the tuft of hair on his head on the cranium) and hairs, take off his sacred thread and saying the divine Mantra ‘OM Bhu Swaha’, he should offer them to the water body which is near at hand. [The meaning of this Mantra is ‘OM salutations! I am offering these entities to the Earth’.]

After that he should tread fearlessly upon the auspicious and noble path shown by other great men who had braved hunger by fasting, and who had overcome the fear of water by entering water bodies such as rivers and lakes etc. (to take bath, for example) as well as the fear of fire (by desisting from doing the formal fire sacrifices in order to appease the Fire God and keep the latter in good humour as well as symbolically establishing these sacred fires inside his own self as narrated above in this verse). [In other words, a Sanyasi should learn to overcome the temptations induced by hunger; this ensures that he does not eat non-eatable food and indulges in eating. This self-control helps him to maintain optimum health because he cannot afford the luxury of falling sick and becoming fat and lethargic by overeating. This also helps him to maintain his self-respect and the dignity of his exalted stature

because food is the great factor which leads to a man's fall; he would go to any lengths to satisfy his hunger and the urges of his taste buds. Overcoming the fear of water is essential because now he does not have the luxury of a bathroom or ready water to drink; he would have to enter a water-body such as a river or lake to fetch water for his daily needs. Further, he needs to harden himself against the vagaries of nature such as the damp rainy seasons when he might not have any shelter. Overcoming the fear of fire prepares him to bear the heat and scorch of the sun and the hot seasons besides the need to cook food which he might get as alms during his begging sojourns. He might have to light a fire while in the forest to ward off wild animals also. In short, these directions are intended to prepare him for the rough and harsh life ahead. He cannot afford the luxury of a pampered life he was accustomed while he was a householder.]

He should make the great exit as a Sanyasi either by become a wandering mendicant who never stays in one place, or if that is not practicably feasible or advisable then he should proceed to take an abode in the hermitage of an aged Sanyasi. [This option is intended for those whose health or age or other limitations such as physical deformities etc. do not permit wandering. It also proves that the vows of Sanyas are not intended to unduly punish and torment the person, for then they would be against the very reason why a man takes to Sanyas, i.e. to find peace and freedom from the worries of the world so that he can spend quality time to meditate and contemplate upon the great Truths pronounced by the scriptures, and attain the final liberation and deliverance for his soul as propounded by them. If he is subjected to untold miseries and agonies which are beyond his tolerance limits, he might begin to have second thoughts and would be tempted to fall back to his earlier ways of a householder life. Making life too unbearable for him would defeat the very purpose for which a life of sufferance and hardship is intended—which is to make him do Tapa or observe austerity and perform penances so as to atone for his past misdeeds and sins, and purify his soul so that it is ready to enter the life of exemplary purity, piety and holiness. Tapa is like putting gold in fire to remove all the impurities in it and cleanse it. A Sanyasi is expected to be free from all sorts of worldly taints and blemishes, and the hard life is intended for his purpose. But at the same time he should be at peace with himself because only a man who is himself calm and peaceful can effuse these divine for others to benefit from. An unhappy man or one who is tormented by physical discomfort would not be able to concentrate his mind and attention on meditation and contemplation which a Sanyasi is expected to do full time. He would be more pre-occupied with his physical bodily problems and discomfort to find time for nobler pursuits of the spirit. That is why even in Yoga it is prescribed that if one is not able to follow the rigid Aasans (sitting postures) normally prescribed for meditation, he is allowed to sit in the posture which is comfortable for him, and it is called the 'Sukha Aasan', the sitting posture in which he finds comfort.]

Whatever he eats with milk and water is like his evening fire sacrifice. Similarly, whatever he eats as breakfast is like the doing of the morning fire sacrifice as far as he is concerned. The food that he eats on the dark moon night is his Darsha Yagya (the fire sacrifice done in the day following the night when the first moon is sighted; the word 'Darsha' means to 'see'), and the food that he eats on the full moon night is his Purna-masi Yagya (the fire sacrifice done on the full moon day). [This is because he has symbolically established the sacred fires inside his own self as described earlier in this verse. There is a Upanishad called the Pran Agnihotra Upanishad of the Krishna Yajur Veda tradition which elaborately describes this internal fire sacrifice and asserts that this is the best form of doing it. From the

practical view point also this is the best way to do a fire sacrifice for a Sanyasi because once he leaves the house he is ordained to remain alone and carry nothing with him as his possession, so it becomes almost impossible for him to gather the necessary items for performing a fire sacrifice and observing the formal rituals associated with it on a daily basis. His age is catching up with him, he becomes weak physically, and he might not find the right location and environment during his wanderings for such formalities as doing a fire sacrifice.]

The shaving of the hair, beard and mustache as well as trimming of the nails that he gets done in the spring season is like the Agnishtom Yaga (a fire sacrifice when oblations are given to the sacred fire)² (3).

[Note—¹The sacred fires have been described in a number of Upanishads of the Krishna Yajur Veda tradition such as the Pran Agnihotra Upanishad, verse nos. 18-19; the Garbha Upanishad, in its paragraph no. 5, and Kathvalli or Katho-panishad, Canto 1, Valli 1, verse no. 13-18 as Agni Vidya.

The three main sacred fires according to the Chandogya Upanishad, Canto 4, sections 10 to 13 are the following—

The Garhyapatya fire—[Refer Chandogya Upanishad, 2/24/3-6, 4/11/1-2, 4/17/4.] This is the householder's fire. A householder has land and farm representing 'earth' in which he grows food. This food is grown with the help of the light of the Sun, and it is cooked in the fire of the fire-place in the house. Hence, the Garhyapatya fire, or the householder's fire, is intrinsically present and is implied in these 4 entities. It is an integral part of these four. The earth has the 'fire element' because without heat and warmth, no seed would germinate and no life can survive on this earth. The food has fire present inherently in it because it is the energy inherent in food which helps to energise the creature that eats it. The presence of heat in the sun does not need to be explained because it is very evident.

The fire was the central piece of all religious life in early times of the Vedic period when a fire sacrifice was deemed to be the best religious activity that a righteous man can expect to do. In this context, the Garhyapatya fire is the main fire lit during such formal fire sacrifices. The fire pit was either square-shaped or rounded. In the context of the fire sacrifice, it is was used for the purpose of daily rituals, cooking or warming the offerings, heating of the vessels, to perform circumambulation, to act as a main cauldron or reservoir of the sacred fire which was to be kept perpetually burning throughout the life of the householder once it was lit.

The Dakshinagni fire—[Refer Chandogya Upanishad, 2/24/7-10, 4/13/1-2, 4/17/5.] This holy fire is a witness to making of charities when some water is poured as libation to the Gods. It signifies that the Gods are offered water to drink. To give water to the thirsty is the greatest for of charity. Therefore, this fire is symbolically present in water, and when it is poured, it signifies that the heat produced by sins committed by the person has been doused. Charities and donations make a man famous and renowned, hence the allusion to directions of the earth. His glory shines like the bright moon and he is called a star among human beings. He is the most exalted amongst his peers and compatriots even as the moon is most prominent amongst the stars in the sky.

Like in the case of the Garhyapatya fire, the fire that was lit in the main sacrificial shed or site just near the main fire pit but to the south of it and where donations and charities were made was called Dakshinagni fire. The fire pit for this fire was semi-circular or bow-shaped.

The Ahawaniya fire—[Refer Chandogya Upanishad, 2/24/11-16, 4/14/1-2, 4/17/6.] The Ahawaniya fire is lit during the fire sacrifices to respectfully invoke Gods, and invite them to come and participate in the sacrifice and accept offerings made to them. The word 'Aavaahan' in Sanskrit means to invite, invoke, to pray respectfully with the intention of welcoming. Since one uses one's mouth for these purposes, the fire in the form of the strength, energy and vigour of the spoken word

and the power of speech residing in the mouth is called Ahawaniya fire. This fire was lit to invoke the Gods, and the Gods live in the heaven; hence the reference to the sky, heavens and electric. Since Pran is the best form of the vital winds, the allusion means that the Gods are the most exalted forms that exist in creation. The 'electric' is a metaphor for immense strength, potent and power, which of course the fire possesses. This inherent quality of Electric that it possess most stupendous powers and strength is likened to the presence of Brahm in it even as the great power and strength present in a man is due to the Atma or Pran present in him. Even as a man is useless without the presence of Pran in him, the Electric would lose its importance if there was no Brahm present in it which gives it its punch and strength.

The Garbha Upanishad of Krishna Yajur Veda, in its paragraph no. 5 describes the location of the three main fires as follows—the 'Ahavaniya' fire resides in the mouth, the 'Garhyapatya' fire lives in the abdomen, and the 'Dakshinagni' has its abode in the heart.

In ancient times it was an established belief and tradition that the way to attain heaven was through the path of the fire sacrifice. The fire sacrifice was in effect a method to harness the spiritual energy inherent in the all pervading fire element which would sufficiently empower the person performing the fire sacrifice to achieve his goal. The sacrificial pit and the heat generated from it reminds one of the modern day nuclear reactors. Even as the strength and energy and powers of the atom can be harnessed for beneficial or ruinous effects through the nuclear reactor, depending upon the temperament and mental setup of the person who masters the science of atomic energy, the fire sacrifice could be similarly used either for auspicious purposes such as attaining eternal peace and tranquility for the tormented soul, or for attaining worldly glory and conquest. Harnessing of nuclear energy requires expertise, knowledge and skills not easy to master and not accessible to all. Building and operating a nuclear facility also is a daunting and elaborate job. Similarly, the ancient fire sacrifices required special skills and expertise, and it was not simply lighting any odd evening village community bonfire to the merriment of all those who sit around it to gossip about the day's events.

From this perspective of doing a fire sacrifice in order to attain spiritual eternity and liberation, the 'units' of the special knowledge that Yam described to Nachiketa in verse no. 15 of Kathavalli Upanishad of the Krishna Yajur Veda tradition probably pertain to the steps to be followed in the construction of the fire pit—such as the type of bricks used, the number of bricks to be used, the geometrical design of the sacrificial pit, the type of wood to be used in the ceremony, the Mantras to be chanted, and other such finer details which must be diligently and strictly followed if any spiritual benefit is to be derived from the entire exercise. So, the sacrificial fire pit is like an oven in which the fuel of wood is added and the science of Mantras is used to order to generate immense energy that can empower the patron performing the fire sacrifice with stupendous potentials.

On the other hand, from the metaphysical perspective of harnessing the stupendous energy latent in the eternally burning fire element, Yam must have explained to Nachiketa the different forms of 'fire' as a manifestation of the supreme transcendental Brahm's astounding energy, potentials, powers and strength. The visible symbol of the eternal fire is the sun in the sky and the energy inherently present in the body of all living beings. It is a well known fact that no life can ever exist without heat and energy of the fire element. In Chandogya Upanishad of the Sam Veda tradition (Canto 4, Sub-cantos 5 and 7) it has been stated that Brahm is characterised by light and illumination (as opposed to darkness) which are the characteristic virtues of the fire element. The entire Canto 3 is dedicated to the praise of the Sun God as the essence of life, and Sun is the celestial pitcher of fire element which burns eternally inside it.

The 'fire' has immense importance in metaphysics and it is a symbol of life and consciousness. Without 'fire' everything is deemed to be dead and gone.

According to some texts, the fire element has the following three legendary forms—viz. the ‘Agni’, which is the terrestrial fire on earth represented by the word Bhu, the ‘Jatvedas’, which is the fire of the sky represented by the word Bhuvaha, and ‘Vaishwanar’, which is the fire of the heavens represented by the word Swaha (Brihaddevtakaa, 1/67). The term appears in the Rig Veda approx. sixty times and is more often than not synonymous with both life as well as the fire element.

The Jatveda fire has been explained by Yam, the death God, to Nachiketa in Kathvalli or Katho-panishad of Krishna Yajur Veda, in its Canto 2, Valli 1, verse no. 8. It represents the Sun God. The same Upanishad, in its Canto 1, Valli 1, verse no. 7 describes the Vaishwanar Agni, i.e. the universal Fire represented by the Fire God.

The Garbha Upanishad of Krishna Yajur Veda tradition, in its paragraph no. 5 describes the following three types of fires—Gyanagni, Darshanagni and Jatharaagni.

The Brahm Vidya Upanishad of Krishna Yajur Veda, verse no. 69-69 ½ describe that the fire element is inherently present in the three letters of the divine Mantra OM and three locations in the body of the spiritual aspirant. This assumes great significance in the context of Sanyas for now the aspirant is expected to simply repeat the Mantra OM and he is deemed to be doing the fire sacrifice.

²It would be noted that a Sanyasi is expected to get over the rituals of formalities and instead become informal in his approach to a pious life. Remaining bogged down in rituals and formal religious activities would not give him the liberty and time to pursue the things of natural interest to him even in this late phase of life. He is given the freedom to do what he wishes to do in the twilight days of life after having spent a lifetime burdened by so many dos and don'ts. He can now pursue subjects close to his heart. Of course it does not mean that he is given the liberty to become sinful and reckless now or live out his wild fantasies that he just could not afford to indulge in earlier; not at all. Obviously, he will not do this as he has already abandoned all attachments with the material world and death is staring him in his face.]

4. Once a spiritual aspirant takes the vows of Sanyas, he should not establish the sacred fire for the purpose of any religious rite. [Refer verse no. 3 where it is explicitly stated that he establishes these fires inside himself in a symbolic manner by gulping down the ash of the sacrificial pit.]

He should do Japa (repetition) of the eclectic Mantras pertaining to the exalted state of self-realisation, such as the Mantra ‘Mritunjaya-maawaham’ (i.e. ‘I have conquered death’).

‘Let all be blessed with auspiciousness and grace’—thinking in these noble terms he should spend all his time in contemplating upon his Atma, the pure consciousness that is the essence and truth of his existence. [That is, he wishes good of all and has no animosity and ill-will with anyone. Instead of worrying about overcoming his enemies and settling scores with them, he prays for the welfare and good of all living beings. This ensures that he can roam around fearlessly even amongst his earlier opponents, and get due respect in the society. In the fag end of his life when he has embarked on the path of God, it is but natural of him to think and behave in this way.]

He should roam around like a liberated man who exults in his prized and much awaited freedom, and expresses his rejoice by raising his hands skywards¹ as he walks on the auspicious path of spiritual liberation and deliverance, a path free from all worldly delusions, deceits and misconceptions, a path free from all agonies and worries, a path that has no shackles that can ever bind him to this life of birth and death again, and which would finally lead him to emancipation and salvation.

He has no permanent dwelling or address (because now the entire world is his abode as he is now free to live wherever he wants under the vast canopy of the sky as his roof).

He should accept nothing else except food obtained by begging. He should be constantly on the move, not staying at one place for any length of time. But to avoid even inadvertent killing of innocent creatures (such as worm and insects) that mushroom during the rainy season, he should stop his wanderings during this period.

There are certain Shlokas (verses of the scriptures) in the context of the way of life that is expected to be lived by a Sanyasi (and they are cited in the following verses) (4).

[Note—¹The raising of the hands upwards have other connotations as well—it implies that he has nothing secret to hide and is as open as the vast open sky. It also means that now he has surrendered himself to the supreme Lord and the latter is his only sustainer, protector and bearer; he relies upon the Lord. Therefore he has nothing to fear from anything or anyone in this world.]

5-6. A true Sanyasi is expected to discard all possessions and all external signs of his religious leanings such as the Kundika (a small earthen pot usually carried by mendicants), Chamas (a spoon-like long-handled ladle used to make offerings to the fire sacrifice), Shikya (the latticed sling-bag), the tripod (made of sticks tied at one end and used for holding his personal belongings while he attends to nature's call and his daily ablutions besides being of use during formal fire sacrifices and other rites to hold sacrificial material), foot wears, Kantha (a coarse bedding made of old tattered pieces of cloth sewn together), Kopin and its covering cloth (the loin-cloth and the long seamless piece of cloth worn around the waist that covers the lower part of the body) [5], the Pavitri (the brush made of Kush grass and used to sprinkle water as a purification rite), the clothes used to cover the body after a bath while the old clothes are spread out to dry, the clothes used to cover the upper part of the body (such as a shawl or an overcoat or gown or apron or something to wrap the upper part of the body), and the sacred thread called Yagyopavit (worn across the chest by Hindus).

Besides the above, he is also expected to stop spending his time in studying the Vedas. [A bit of precaution is needed here as this dictum is fraught with the danger of misinterpretation. It does not imply any kind of insult to or insinuation of the Vedas but just stresses the point that it is expected of him now that he begins to implement what he has learnt from the scriptures throughout his life. He has reached a mature age with death staring on his face and therefore he does not have much time left to delve into thick books. He should rather utilise this precious little time that he has left before death overtakes him in meditating and witnessing the bliss derived by contemplation upon his Atma, and remain carefree for the remaining part of his life instead of straining his neck and eyes and mind over thick tomes of scriptures. There is a practical aspect also to this—in this old age his eye sight is failing, and since he is expected to be always on the move and carry no possessions it is impossible for him to read and study books and scriptures while adhering to this nomadic lifestyle typical of a wandering friar or a mendicant. Even if he stays at a hermitage as a resident monk, it's prudent and wise for him to spend time in meditation and contemplation peacefully in seclusion. This would not only rejuvenate his worn-out body and soul but would be conducive to his all-round peace and tranquility. Should he wish to spend time on hearing what the scriptures say, he would get ample opportunity in a monastery where regular discourses are held on spiritual matters. So he should spend his spare time peacefully, contemplating and meditating.] [6] (5-6).

7-8. He should perform his daily ablutions and the regular chores of attending to nature's call etc. by using clean fresh water (obtained from any fresh water source such as a well, river, stream, lake or pond). This water is also useful for his drinking purposes. [That is, he should not store water and carry it with him in a flask or other container.]

He should take rest and find a temporary shelter either on the banks of a river or in a temple.

He should lead a moderate life, neither resting too much and becoming lazy nor over-straining himself to the point of getting fatigued and worn out.

He should maintain an exemplary level of indifference, equilibrium and equanimity by neither feeling happy or excited when someone praises him nor feeling annoyed, agitated and angry when someone insults him or speaks ill of him. He never curses or abuses his opponents and detractors (7-8).

9-11. A Sanyasi should be careful not to be indolent and lazy or indulgent in and attached to anything or anybody whatsoever. He should observe the laws of Brahmacharya (a celibate way of life marked by abstinence, continence, self restraint and control over the sense organs accompanied by observance of penance and austerity).

Wise and erudite people have said that 'intercourse' is of eight types—viz. (1) having a desire to watch women, (2) touch them, (3) play with them, (4) talk with them in general terms by being near to them or keeping contact with them to enable conversation, (5) discussing secret matters having sexual overtones, (6) desiring or yearning to have sexual contact with them, (7) the physical attempt to establish conjugal relationships with them, and (8) the actual sexual activity when physical intercourse and the act of making love to them is done. A true and honest Sanyasi should abhor the idea and banish such thoughts from his mind altogether.

Therefore, Brahmacharya is to be understood in its broader ramifications which would include abstaining from any of the above eight types of deemed intercourses¹. A Sanyasi who is desirous of Moksha (i.e. who seeks spiritual liberation and deliverance; who wishes to have emancipation and salvation of the soul and its permanent freedom from all bondages pertaining to this world and its endless cycle of birth and death; who wants freedom from worldly snares and delusory attractions) should be very careful from these temptations while observing the tenets of Brahmacharya (9-11).

[Note—¹There is another way of interpreting the words 'Brahmacharya' and 'intercourse' from the spiritual perspective. In this interpretation we replace the word 'woman' with the phrase 'world and the charms of its sense objects', and the word 'intercourse' with the phrase 'interaction with and attractions for these charms', and the rest of the meaning fall into place automatically. The word 'Brahmacharya' would now include self-restraint of the sense organs so that they are not attracted by their respective objects in this world and become prey of their snares. It would mean exemplary non-indulgence and non-involvement at all levels such as mental, intellectual, sub-conscious, physical, emotional and sentimental. This holistic and all-round Brahmacharya is really what is intended here for a Sanyasi; it is more important for him than merely non-indulgence in sex because for one he might not be inclined to indulge in sexual subjects but very much occupied with worldly matters which he had left behind when he took the vows of Sanyas. What good is it then in taking to Sanyas if his mind is pre-occupied with worldly matters, because it is the mind that is the harbinger of all troubles as well as the one which can become either

the provider of liberation and deliverance to a man or the one which ensnares and makes him bonded to his endless desires, expectations, hopes and aspirations?]

12. [The following verse enumerates some of the divine virtues of the supreme transcendental Brahm.]

The entire living world with all its inhabitants finds its support and succour, its protection and sustenance in the supreme creator and bearer of creation (known as the supreme transcendental Brahm) who illuminates the entire realm of creation with his own light (i.e. who injects his own consciousness into this creation so as to enable the latter to become alive and energized), who is eternally self-illuminated with a brilliant light which is eternal and inherent in him, who is the only witness for the whole world (because he oversees the world in its past, its present and its future shapes and forms; because he knows that aspect of creation which is not known to anyone else; because nothing is hidden from him as he can see even behind curtains for the simple reason that if anything exists it is definitely a manifestation of the same non-dual Brahm in that particular form), who is immaculate and pure consciousness in the form of the Atma or soul of living creatures, and who is a treasure of wisdom, erudition, knowledge and enlightenment characteristic of the Atma present in all creatures as their fundamental and basic truthful identity (12).

13. A man cannot find access to the transcendental Supreme Being by means of doing deeds (such as various religious rites and rituals) himself or by the help of sons doing things on his behalf¹, or by any other means whatsoever. Rather, he can have access to the supreme Brahm by experiencing and witnessing the latter personally by the due diligent process and guidance provided for the purpose in the scriptures (13).

[Note—¹In other words, spiritual emancipation and salvation is not obtainable by merely doing various religious sacrifices and deeds such as making donations and charities alone in this mortal and material world in the hope that they are the only means of obtaining this ultimate goal in life. How they are done is of paramount importance. This verse should not be construed as prohibiting one from doing deeds, or that even auspicious and righteous deeds are useless. The intention is not that at all. One must be careful how the deed is done, and for this he has to consult the scriptures which have repeatedly emphasised that the main problem with deeds is that they compulsorily produce results because of the principle of action and reaction. So the trick lies in escaping the results of the deeds done. This is possible if one is wise and enlightened enough to understand that the Atma which is his 'true self' does not do any deed and they are done by the gross body. Therefore the Atma should remain detached and unattached from both the deed and its reward, both good and bad. If this happens, it is as good as not doing deeds. There is a variation to this philosophy of doing deeds that do not create entanglements—and it is to do them selflessly and as an offering to the supreme Lord, or leaving the results for the Lord. Even as the servant cannot be accused for any doing anything if he diligently carries out the order of his master, the Atma cannot be accused of doing anything if it is a party to the decision making process. For this to happen, a wise man just deals with the day to day happenings as and when they present themselves before him, and once done he forgets about them. This is only possible if his mind is lost in deep meditation and contemplation for then it would not even register the actual physical event in the first place so there would be no scope of after effects on the sub-conscious.

The son sometimes does religious deeds such as making charities, offering oblations to the sacred fire and libations to the spirits of dead ancestors in the hope and belief that the soul of his father would find salvation and emancipation by these auspicious acts. This verse is a clear warning that it is a misconception and would not lead to the good of a person's soul. It is like the case of someone else taking medicine

on behalf of some particular individual or of some other person eating food on his behalf. It is not only absurd and ridiculous but incredulous to the extreme to even imagine that the benefit would be got by the individual on whose behalf the other person is taking medicines or eating or drinking food items. Likewise, in matters of soul too one's own efforts would benefit him, and sons or anybody else cannot do it for him. In other words, this verse declares that each individual should be careful about his own conduct and should not be misled to believe that his misdeeds can be undone any good deed done by others. His welfare is in his own hands. Refer Avadhut Upanishad, verse no. 6 in this context.]

14. [A self-realised person who has witnessed the glory of Brahm begins to understand the stupendous divinity of his Atma, the pure consciousness, along with the underlying secret of how the visible creation has been unfolded from the invisible Atma.]

That Brahm which is an embodiment of Satya (quintessential eternal Truth), Gyan (quintessential eternal knowledge) and Anand (eternal bliss, ecstasy, happiness and contentedness of the spirit) is non-dual, indivisible, one and the only divine entity in this creation. It is, at the same time, all-pervading, immanent and omnipresent in this world which is known and characterised by such qualities as Maya (delusions, illusions, deceits and falsehoods) and Agyan (ignorance and all that is the opposite of Gyan). This world is like a Guha (a dark labyrinthine cave which is secretive and most foreboding; it traps anyone who enters it and it is almost impossible to get out of it)¹ (14).

[Note--¹That is, though Brahm has divine qualities and is an embodiment of truth, knowledge and their attendant happiness and bliss, but the irony and paradox of creation is that when this same Brahm created this visible world and then entered it to take up residence in it and to become a uniform part of its own creation, it assumed or appeared to assume the characteristics of this world which are markedly different from its unique natural qualities that are eclectic, divine, holy and glorious. In the form of this visible world, Brahm began to exhibit qualities of delusions, ignorance and darkness. Brahm appeared to be mired by them and trapped in their natural snare though it (Brahm) is eternally illuminated and free from all fetters. Brahm, which is essentially non-dual, now begins to show duality—there is the visible world in which both the animate and inanimate things live side by side, a world which is good as well as bad, a world which is said to be a personification of Brahm and therefore deemed to be true but is also proclaimed by the scriptures as being false and illusive, a world which is illuminated by the conscious Atma but is called a dark 'cave' as in this present verse. When it is said that the entire creation is a manifestation of the same Brahm, then the existence of this dual nature creates a great degree of perplexity, doubt and confusion about the true nature of Brahm. This is the great paradox about Brahm.

Verse no. 16 below clearly states that Brahm is merely a witness to all Maya and Agyan, implying that Brahm is not itself Maya and Agyan. These two words Maya and Agyan refer to the negative qualities characterised by delusions, ignorance, darkness, doubts and confusions. This world is compared to a cave or a Guha precisely for this reason. It is so dark and confusing that the real thing remains unseen from view. In spite of one being wide awake and having a lighted torch in hand, the dark interiors of a cave create a horrifying panorama of ghosts and phantoms so much so that even one's own shadow magnified on the walls or the floor appear to be a huge awesome phantom lurking in the dark, ready to pounce and kill. Even a lighted candle would not remove this all-enveloping veil of darkness, but create more horrors than removing them as its light highlights the grotesque contours of the cave's interiors which are never very aesthetic in appearance at any time in the first place.

These contours and shapes raise the horrifying specter of ghosts and phantoms. No exit is visible, and the further one goes inside the more he gets lost. In other words, the more one gets engrossed in this world, the more one indulges in it, the more difficult it is to get out of it.

When one begins to analyse this world with a cool head, nothing in it is found to be attractive and real in the true sense; everything is transient and perishable; everything gives agony in the long run. It is like a snare in which it is easy to get in but impossible to get out from just like it is easy to get inside the dark corridors of a labyrinthine cave but impossible to come out of it.]

15. Since the supreme Brahm is so mysterious, enigmatic and esoteric, it can be known only by Vidya (or truthful knowledge laced with high degree of deep insight, wisdom, erudition and enlightenment marked by the skilled ability to analyse available evidence intelligently and interpret things in the correct perspective because what is observed may vary widely from one situation to another, for what is physically and visibly seen may not be the actual truth but just an apparent thing like the appearance of water in a desert mirage which is physically seen but is only an optical illusion).

A wise person who becomes acquainted with this divine and eclectic Brahm as revealed in his vast and fathomless manifestation of the endless Vyom (sky; space element), i.e. one who understands that Brahm has certain magnificent cosmic qualities that are very much similar to the ones depicted by the sky¹, is not only regarded as the most exalted Brahmin (a wise one who knows the esoteric secrets of Brahm) but also acquires the abilities to fulfill all his desires, wishes and aspirations in this world² (15).

[Note—¹The sky possesses such qualities as being vast, endless, infinite, measureless, fathomless, colourless, untainted, untouchable in the sense that it cannot be felt and held, all-incorporating, all-pervading, all-encompassing etc. These are but some of the divine virtues of Brahm. Besides this fact, the sky element is the most subtle manifestation of Brahm because it is in the sky that the next element, the wind, and followed by the fire, water and earth elements took shape in the steps leading to the creation of the visible world. The sky is regarded as the nearest analogue of Brahm, followed by sound which is represented by the ethereal sound OM.

²In other words, when a wise and enlightened person realises the fact that Brahm is not a physical entity as the earth or anything existing on it that can be weighed, felt and measured in known terms, or that is gross and limited by physical parameters of shape and size, but is rather an entity as measureless, fathomless, infinite, eternal, indefinable, incomprehensible and indescribable as the sky—not only the sky as seen from the earth but including even the deepest and remotest space of this universe which is not even known let alone being visible—is deemed to have obtained that high degree of metaphysical wisdom and enlightenment that nothing remains inaccessible to him any longer because nothing can be out of reach of someone who is sufficiently intelligent and wise to know the unknown. Further, such a Brahm-realised man would know the ‘real’ truth behind the ‘apparent’ truth of the façade of this visible world, and therefore would never yearn for worldly things in the first place because he knows them to be illusive, perishable, impermanent and transient by nature besides being the cause of all spiritual bondages and unhappiness. He would only desire the divine things in life, and from the metaphysical and spiritual perspective such things relate only to the truthful Atma and the way to find its liberation from the remnants of delusions that has tethered it to this world of artificiality and deception. A wise and self-realised man would never desire material comforts and pleasures of the senses because he knows that they are both deluding and ensnaring by nature. Instead, he would desire to find access to the truth and

reality that is permanent and the real thing. He then discovers that it is the pure consciousness known as the Atma that is the only spiritually correct thing to access and strive for. This Atma is an ethereal and divine entity which is beyond the purview of physical limitations that all worldly things are subjected to. He discovers that this Atma is his 'real and truthful self' as opposed to the gross body, and that this Atma is an all-pervading, immanent and indivisible entity. Therefore, it is safe to assume that he can gain access to anything that he wants because nothing is inaccessible to the Atma as it is a spirit and can go anywhere it wishes. Besides this, he becomes so fulfilled upon self-realisation that he wants nothing more of the world, and therefore his chances of asking for mundane things are non-existent.

Since this eclectic state is possible by doing natural Yoga, i.e. by doing meditation and contemplation in a natural way and with sincerity without any compulsion, he would gain certain mystical powers known as Siddhis which would automatically make everything reachable by him or accessible to him; they would come automatically to him as a natural accoutrement of success in Yoga. So he need not go and search for them elsewhere. This fact has been stated in all Yoga Upanishads, the most recent ones being Yogtattva and Yogshikha.]

16. The supreme Brahm is also known as 'Pratyagatmaa', i.e. the transcendental supreme Atma which is the universal Consciousness known as the cosmic Soul that is all-pervading, all-encompassing, all-incorporating, omnipotent and omniscient by nature, and which is merely a witness to this world of Maya and Agyan (delusions and ignorance). [That is, the universal Soul known as Brahm or the Pratyagatmaa is not characterised by Maya or Agyan, but is a neutral observer of everything that exists. This is important because since Brahm is the supreme Lord of creation, he has to remain neutral, non-partisan, non-committal and non-biased in order to judge this creation properly and dispassionately.]

A wise and self-realised person who understands the truth and essence of the eclectic statement 'I am a personification of Brahm' indeed becomes one like Brahm. [Since the truthful identity of every man is his soul or Atma which is the consciousness living in his body, it follows that the man who has realised his 'true self' has realised that this Atma is Brahm in a miniature form. This is because Brahm is the universal Atma at the cosmic level, while the individual person's Atma is the counterpart of this cosmic Atma residing in his individual body. Both are fundamentally the same just like a drop of water is basically the same entity whether it is in a restricted or limited form as the water in a cup or spoon, or in its limitless and fathomless form as the vast ocean.] (16).

17. [This verse and the ones following it describe the genesis of creation with a metaphysical perspective.]

From this indivisible, immutable and non-dual universal Consciousness existing in the form of the almighty and omnipotent Brahm were created the different Bhuts with their individual Atmas. This is the subtlest and the most sublime level of creation. It is was like imagining the presence of a snake in a harmless length of rope and then giving effect to this imagination and henceforth calling this 'rope' as 'a snake' in a world of make-belief¹.

Hence, the immutable, indivisible, universally uniform and invisible sky element that represented Brahm was imagined to be divided into five subtle forms. The first manifestation of this segregation appeared in the form of the 'sound' and the perception that hears that sound, i.e. the sense of hearing² (17).

[Note—¹In this instance, Brahm is like the ‘rope’ while the various characteristics attributed to it are like the ‘snake’. Brahm is a neutral entity like the rope; it has both the negative and the positive qualities hidden in its bosom which cancel each other out to make Brahm neutral. But when these qualities begin to polarize even in their minutest of fraction, in the subtlest dimension of space and for the smallest fraction of time, some characters specific to these qualities and the given circumstances begin to appear, thereby destroying Brahm’s neutrality. Gradually over time and as the process of evolution of creation progresses, these minor qualities become major and stand on their own feet, acquiring their individuality and personality. But since they had their origin in Brahm and since Brahm is the vital factor in their existence, it is said that Brahm has these qualities, attributes or characters in it.

For instance, all the five primary elements called Bhuts, such as sky, air, fire, water and earth, have their origin in one single Brahm. But as they grow they acquire their own independent set of qualities which are very different from Brahm and even from each other. For example, water is inherently cool and soothing while fire is scorching and hot. So to say that Brahm is cool like water or hot like fire would obviously be wrong. The great paradox is that these two apparently inimical entities do exist together in Brahm. For proof one can see one’s own body—the fluid part of it such as blood, mucous, urine and digestive and other juices in the body are water personified, while the inherent warmth of the body and even of the blood is a manifestation of the fire element.

Another example would make the point more clear. All types of trees, fruits and flowers have come from the same earth, but can anyone imagine what the earth would look like by seeing them, or for that matter how can the same earth produce such a vast species of members of the plant kingdom? Both the sky and air are said to be very subtle so much so that none of them can be caught or seen, but there is a vital difference between them. The sky does not move and cannot be felt, while the air moves and can be felt when it blows against the skin as wind.

In the case of the rope and snake cited in this verse, both appear alike from their external looks, but only out of ignorance is one treated as the other. A rope is harmless and even if one gets scared stiff thinking it to be a vicious snake it wouldn’t change the factual situation. Similarly, if one neglects a snake and catches hold of it as one does a rope, the snake would surely bite the man; he would not spare him on the pretext of his ignorance. So, to think that Brahm is corrupted like the world and impose this accusation on the former would not change Brahm’s innately immaculate and pristine pure nature. Likewise to think that the world is true because it is Brahm manifested in that form would not change the deluding and corrupted nature of this world. So a wise man analyses each thing in its own right before arriving at any conclusion. External appearances and ignorance of the truth more often than not create real horrendous consequences like the creation of ghosts and blood sucking phantoms out of mere shadows in a dark room!

²Primarily it refers to the creation of the five ‘Tanmatras’, or the five subtle sense perceptions, from the same consciousness that had these senses naturally but not in a segregated and compartmentalized form. These five Tanmatras are the senses of hearing, feeling and touch, seeing, smelling and tasting. All these were the properties of the consciousness even earlier, but they were not treated separately but as a composite character of consciousness. That is, if there is consciousness in anything, it must show these five primary characteristics—i.e. it would hear, see, smell, taste and feel. As creation evolved, these five Tanmatras evolved and acquired their own status as individual entities; they were segregated into having separate and independent existence as is proved by the fact that a person might not be able to see but can taste, hear, smell and feel the sense of touch, he might be dumb and deaf but feel, taste and see things. Once this illusionary separation was done, once the basically immutable and indivisible Atma was deemed to exhibit these characteristics in separate manner

rather than as its composite character, the rest of the illusions followed in quick succession.

This and the following verses basically emphasis the point that all the different aspect of creation which an ignorant man recognises are basically different aspects of the same non-dual and indivisible entity. To cite an example, an ordinary man may treat water in an ocean, in a lake, in a river or a cup or a spoon as separate water bodies, but a wise and truly erudite man would see no difference between them. He would treat all forms of water as 'water' irrespective of the shape the water takes in different places it is found or the different vessels in which it is kept.

To take another example, an ordinary man would say that the water of the stream flowing down the mountain is mineral water, the ocean water is salty, the lake water is sweet, the river water is turbid and polluted, and the well water is too hard to drink because of dissolved salts in it etc. But for a chemist this is not the case, for a water molecule, in its true and real form, consists of two atoms of Hydrogen and one atom of Oxygen and contain no extraneous elements if it is to be called 'water'. Therefore, to say that the water is 'mineral, salty, sweet, sour, polluted and turbid' is a misnomer and misleading about the truth of water. Similarly, the pure consciousness in the form of the Atma is universally the same and shows all the signs of life, but in ignorance it is believed to exhibit these conscious signs separately in distinct organs which are assigned specific functions.]

18. Next in the progression of evolvement of the visible creation came into the being the second element called the wind or the air element from the first element called the sky element¹, and this second element (wind or air) resulted in the creation of the perception of touch².

Thereafter, from the air or the wind element came into being the fire, the water and the earth elements successively in that order³ (18).

[Note--¹The wind or air is the second subtle primary element created, and since it evolved from the sky element it had the characteristics very similar to its parent, the sky. That is, the wind exhibited characters of being invisible, all-pervading, all-encompassing, omnipresence, vast and infinite very much like the sky element. The only obvious discernible difference was its ability to show signs of movement or activity which the sky lacked. The wind was the first revelation of Brahm's stupendous physical prowess and strong arm as proved by the fact that violent storms, tornadoes and hurricanes cause so widespread havoc that no other force of Nature can replicate. The wind can even blow out and overcome the next fierce manifestation of Brahm, i.e. the fire element. It is the wind element which infused 'life' called the Pran into the otherwise basically gross, lifeless and inane body of the creature and makes it alive and active, infusing it with such stupendous abilities that a petite-looking individual is able to build huge structures and magnificent edifices which hold everyone in a spell-binding awe. A body is able to get up, move and perform all the activities because of this wind element inherently present inside it as its Pran.

It ought to be noted here that a hierarchy is followed here—at the top is the sky element, next comes the wind element, then would follow the fire, the water and the earth element. The entity placed at a higher level would naturally have an authority a notch higher as compared to the one placed a rung below it. That is why the sky can overcome even the wind element as proved by the fact that a wild storm might blow for hours in one corner of the sky but as its progresses ahead its violence and punch dissipates gradually so much so that when it finally reaches some other part of the sky it gets completely humbled, tamed and docile; it loses its ferocity and punch.

²The sense of touch exhibited by the wind is for everyone to witness when one feels the wind rustling against and caressing one's face and ruffling one's hair when one stands facing its flow even with eyes, ears and nose closed. Even a slight movement of air can be felt. The sense perception of 'touch' was first felt when this

air came into being because prior to that the sky could not introduce this sense as it had no movement. So, the perception of touch has its genesis in the wind or air element.

³Modern science has established that this world as we know it today was primarily a vast body of gases rotating violently. There was cosmic debris strewn all around as a left-over of the Big Bang, and it swirled along with the accompanying gases. The forces of gravity, the centripetal and centrifugal forces, and other such natural forces of physics came into play simultaneously resulting in the formation of planets and other cosmic bodies. The entire process of turning, shaking and churning took place in the vast bowl of the sky which acted as the crucible of creation, and as time progressed the elements separated from one another according to their density and grossness, with the denser amongst them settling at the bottom and the lighter ones rising to the top. All had their existence in the sky, and since they rotated round and round violently, this circular motion created the 'wind' element in the cosmos. This peculiar origin of the wind element in circular motion of the primordial gel of creation is indicated even today when we observe that wind rotates in a circular motion in whirlwinds, cyclonic storms and twisters or tornadoes which move ahead while rotating rapidly. This is the basic characteristic feature of the wind element—movement, circular as well as lateral and frontal.

This violent churning, random collision, the resultant abrasions, implosions and explosions etc. that might have taken place in the distant past created formidable friction and generated immense amount of heat and energy which resulted in the creation of the 'fire element'. As time passed, the rapidity and violence of movement abated, resulting in a chilling and cooling effect which was followed by condensation, and thus the 'water element' was created.

The 'fire element' was inherent in this creation as the driving force that enabled the entire process to proceed ahead. The friction created between various elements which were being roughed-up against each other in the process of creation created heat and light. Since energy does not vanish but only changes its form, the kinetic energy of rotation transformed into heat energy and light energy, and together this energy in its various connotations took up its habitat as the latent 'fire element' in the elements that came into being. These elements trapped this fire element inside their pores much like sponge traps water. When this sponge is squeezed, the water spurts out. Likewise, when the elements are subjected to pressure and external exertion, fire springs out. This is why when coal, gunpowder and other inflammable elements such as gases or petroleum products are subjected to external agitation such as heat or pressure, the fire element trapped inside them jumps out either as visible fire or as an explosion.

Further solidification was a natural progression as cooling progressed and the violent revolutions and rotations slowed down, and the heavier elements settled down at the lower end of the cosmic bowl and hardened. Thus was created the 'earth element'.

This pyramidal structure is evident even today in the heaviest and grossest of earth being at the lowest rung of the world and forming its base upon which the entire world rests. The next element, which is subtler than it, is the water element which floats on its surface as the vast ocean and sea, and drenches every corner of earth. The next element, the fire element, is dry and finds its place on land. Its subtlety is evident when its flame rises up instead of moving in a horizontal direction in the way the water moves. The water has an innate tendency to move in a horizontal direction instead of the vertical direction like the fire element. The third element, i.e. the air is above the surface of the earth, indicating that it is lighter than the earlier three elements. This air element is immeasurable and subtle; it can be compared with smoke which fills the entire space available, and has a natural tendency to move not only upwards but in all the directions available to it. Like the smoke, the air cannot be caught hold of. Finally we have the sky element which is so subtle and sublime that it

fills the entire void of the vast bowl of creation as far as it stretches, even to those corners of this creation where the wind and air elements cannot go. That is why the far reaches of the cosmos do not have ‘wind or air’ as we understand these two terms to mean. The sky cannot be known and measured; its dimensions and outlines are not known because of its subtlety and sublimity.]

19. [This verse no. 19 describes the subtlest and most sublime form that the Atma takes at the macrocosmic level of creation, while verse no. 20 describes its more grosser form at this level. The verses that follow, i.e. verse nos. 21-26, deal with the microcosmic counterpart of this Atma at various levels of grossness or subtlety in relation to the individual creature.]

The Supreme Being (Brahm) who is also known by the name of Shiva used these five elementary entities to mould the rest of the universe or cosmos from them. [In other words, these five elements, viz. sky, air, fire, water and earth, were used as the building block or bricks and mortar from which the entire edifice of creation was crafted by the master craftsman called Shiva. The uniformity and non-duality between Shiva and Brahm has been expounded in Krishna Yajur Veda’s Dakshin Murti or Dakshin Mukhi Upanishad, and Skanda Upanishad, verse nos. 9, 13.] (19).

20. *In the fathomless bowls of this universe, the animate creation consisting of different forms of life such as the Devas (gods), Danavas (non-gods; the demons), Yakshas (mythological semi-Gods who are employed by Kuber, the treasurer of the Gods, to guard his treasury and keep his gardens), Kinnars (heavenly dancers and singers who are also a kind of semi-god), human beings, animals, birds and other creatures of the living kingdom are actually different manifestations of the same universal Atma. This Atma had to assume one or the other of these distinct forms depending upon the deeds done by it in its previous form¹ (20).

[Note—¹In the beginning obviously there was only one type of life—i.e. there was universal brotherhood and amity. Then arose jealousy and ill-will amongst the various units of this life, leading to hatred and animosity. People become selfish and did deeds not for the general welfare and upliftment of the society as a whole but to satisfy their own desires and gratify their own sense organs. Each individual made his own decisions; he did deeds that he thought fit and took actions that he thought would serve his self-interest, overlooking in the process what was proper, auspicious, righteous, and sanctioned by the scriptures. This is the basic foundation upon which this verse rests. There was so much variations in deeds and actions, and hence obviously in their results, that the generations that came after the initial phases of creation mutated beyond recognition, transforming what was a homogenous society into a varied and multifarious one with so much variation that no two units looked alike and even had any resemblance to the parent Brahm from which everything has emerged. This created a mind boggling array of characters, natures and temperaments, and equal number of countless individuals depicting uniqueness characteristic to them.

*This verse can be interpreted as follows also—In the beginning there was only one universal cosmic Consciousness known as the Atma that was supreme, and it was known as the transcendental Brahm. In due course of time, this Atma lost its neutrality because it wished to do something. Nothing can be physically done if one remains inactive and neutral. In terms of modern chemistry and physics, if the medium is neutral and has to retain its neutrality and homogeneity, then no reaction and change can take place in it. This is because any reaction is bound to change the character of this medium. So as long as the Atma would remain non-interested, non-active, immobile, neutral, renounced and dispassionate, it would not do anything.

Since it wished to do something, it had to break this taboo and indulge in some activity, and therefore its neutrality and non-duality got corrupted. This is because it had to make choices; it had to decide between given options. So it became partisan and biased; it saw one option as good and the other as not so good. For instance, a sleeping man is absolutely neutral and unbiased towards any thing in this world, but when he wakes up he begins to differentiate between this and that depending upon what is good to his self-interest. Looking differently and citing this same example, a sleeping man does nothing, but if he wishes to do anything he would have to wake up and show some movement of his limbs, because simply keeping still and hoping that some work would be done is a most stupid idea.

As soon as he loses his neutrality and begins to depend upon his sense organs in order to relate to this world of deed and actions, the organs get to have the better of him and exploit his dependence upon them. They decide what he likes and what he does not. For instance, the nose has the innate inclinations to smell sweet fragrances, so it would prevail upon the mind and the man in turn to go towards those things that smell sweet and away from smells that are pungent or repugnant and repulsive for the nose. Thus the man begins to exhibit partisan attitudes; his equanimity and neutrality are lost. This simple example is applicable to the cosmic Consciousness called the Atma or Brahm.

Thus, when the inherently neutral Brahm decided to create this creation, it had to assume different roles. In other words, the same Atma assumed different forms as demons, gods, humans, birds and all other forms of living beings in this creation. Each of these units highlighted the predominance of one or the other chief characteristics of Brahm. The uniqueness in these characteristics was caused by the combination and proportion of the three Gunas such as Sata, Raja and Tama which determine the nature and temperament of any individual.

Once this chain-reaction got started, it became unstoppable, and the original immaculate and non-dual Atma got mutated beyond recognition. One simple and single action or deed produced its own result or reward or fruit, and when this was tasted by the Atma it got inadvertently sucked in a bog of deeds and results from which it could not extricate itself for generation after generation. The Atma hopped from one deed and its consequences to another like a bird flying from one branch of a tree to perch on another. Each perch was littered with the bird's droppings.

All the forms listed in this verse, viz. gods, semi-gods, demons, humans, animals, birds etc. showcase the many forms in which the same Atma has manifested—at the highest level as the Gods, and at the lowest level as the birds. And to extend this logic further, to more lower level as worms, insects, single-celled living organisms such as amoeba and bacteria etc., or further still as immobile life in the form of the members of the plant kingdom. All of them have the same Atma residing in them as their 'true self' but with a different set of coverings surrounding this Atma in the form of their physical bodies which helps to distinguish the Atma as a God, a semi-god, a demon, a human, an animal, a bird etc.

Therefore, a wise man is he who does not look at the outer covering of the Atma to recognise the individual Jiva or the living being, but in the entity that is hidden or wrapped inside this outer covering called the body. It is this body that has got so many names as a god, a semi-god, a demon, a human, an animal, a bird etc.]

21. [Verse nos. 21-26 describe the Panch Koshas and Panch Atmas.*]

The gross body made up of bones and veins etc. of all living beings called Jivas is therefore the result of the deeds done by them. [That is, the Atma, which is the true identity of the individual, assumes a particular physical form, i.e. assumes a particular gross body, depending upon the deeds done by it in its previous life.]¹

Thus, the gross body of the creature is the Anna Maye Kosh or the food sheath² of the Atma. That is, the pure consciousness has assumed this gross body

which is formed and sustained by the food eaten by the individual. When the consciousness reveals itself in this sheath, it is known as the 'Anna Maye Atma', or the consciousness that depends upon food for its survival and which has a gross physical structure much like the gross form in which food exists in creation (as vegetables, cereals, fruits and other eatables)³ (21).

[Note—*Why the five Koshas are called the Panch Atma have been explained in note to verse no. 23 below.

The five Koshas have been described in other Upanishad also. Some of them are (i) Rig Veda—Mudagal Upanishad, Canto 4, verse 5; (ii) Shukla Yajur Veda—Paingalo-panishad, Canto 2, verse no. 4; and (iii) Krishna Yajur Veda—Taittiriya Upanishad, Valli 2, Anuvak 3-6; Sarwasaar Upanishad, verse no. 5.

¹This concept has been explained in verse no. 20 above. Besides this, the Adhyatma Upanishad of Shukla Yajur Veda tradition describes the concept of doing deeds and its effect on the spiritual liberation or bondage of the creature in fine detail in its verse nos. 49-60. The 'Karma Chakra' or the giant wheel of deeds and their consequences has been described in the Shwetashwatar Upanishad of Krishna Yajur Veda, in its Canto 6, verse no. 3. The three Paths followed by a creature according to the deeds done by him are referred to in Shwetashwatar Upanishad, 4/7. The Varaaha Upanishad of Krishna Yajur Veda, in its Canto 2, verse no. 48 describes how one can become free from the fetters created by 'deeds'. The Niralambo-panishad of Shukla Yajur Veda, in its verse no. 11-12 describes the concept of Karma. The Sarwasaar Upanishad of Krishna Yajur Veda, in its verse no. 6 describes the concept of how and why the creature becomes the doer of deeds

These concepts and the fact that a creature's destiny depends upon the deeds done by him have been elaborately described elsewhere also in (i) Rig Veda's Kaushitaki Brahmin Upanishad, Canto 1; (ii) Shukla Yajur Veda's Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 33, 36, 5/10-5/11, 6/1/1-6, 6/2/2,14-16, etc.; Adhyatma Upanishad, verse nos. 57-58, 66; (iii) Sam Veda's Chandogya Upanishad, Canto 5, Section 3-10; Canto 7, Section 21; (iv) Krishna Yajur Veda's Taittiriyo-panishad, Valli 2, Anuvak 6; Katho-panishad, Canto 1, Valli 1, verse no. 20, and the whole of Canto 1, Valli 2 right up to Canto 2, Valli 3; Skanda Upanishad, verse no. 7.

What happens to ignorant people after death is explained in Brihad Aranyak 4/4/1. The Trishikhi Brahmin Upanishad of Shukla Yajur Veda tradition, in its Canto 2, verse nos. 23-26 defines what constitutes of true 'Karma Yoga'. The Mandal Brahmin Upanishad of Shukla Yajur Veda, 2/4/2-3 describes the philosophy of Deeds.

²The Atma lives surrounded by five sheaths, called the 'Panch Koshas'. These Koshas form the composite structure recognised as the body of the creature or Jiva. The Atma is the 'true self' of the individual Jiva, while these Koshas are the covering sheaths which enclose the Atma and form its habitat during its sojourn in this life. They wrap the Atma and form its outer recognizable form. These Koshas are what give the Atma its visible and recognizable form in this world—such as Godhead, a demon, a human, an animal and a bird. Therefore we can compare the Jiva or his true self the Atma as the glittering gem gifted wrapped in a five-layered cloth which is so magnificently wonderful and fascinatingly unique that more often than not it outshines the glory of the principal entity for which they were meant. In other words, one is so awe-struck by the external body that he forgets to even un-wrap the package and peer in to look what is hidden inside.

The outermost is called the food sheath or Anna Maye Kosh. The rest of the Koshas are enumerated in the following verses.

³This is an obvious observation because no one has seen the sublime, subtle and invisible 'consciousness' as having an existence except in the form of the signs of life shown by the gross physical body which is sustained by the food eaten by the individual. Thus for all practical purposes, this consciousness, which is perceived in

the form of the external form of the body, is recognised as being synonymous with it, i.e. as the Anna Maye Atma in line with the body being called the Anna Maye Kosh because of its dependence on food.]

22. Inside this Anna Maye Kosh is another sheath called the 'Pran Maye Kosh' or the vital wind sheath. This is the second form in which the consciousness known as the Atma is recognised. Thus, the consciousness that lives inside the gross body in a more subtle form as the vital life-sustaining winds is recognised as the 'Pran Maye Atma' in honour of these winds, and also because the Atma and the Pran are both synonymous with each other as far as the life of the individual is concerned as he cannot live without the either of them¹.

Next in this progression comes the 'Mano Maye Atma' or the consciousness that has revealed itself as the Mana or the subtle mind of the individual. This pertains to the Mano Maye Kosh or the mind sheath. This form of the consciousness is subtler than the Pran Maye Atma². (22).

[Note—¹Like its predecessor the Anna Maye Atma, the consciousness that flows inside the body and is represented by the vital winds such as Pran, Apaana, Vyan, Samaan and Udaan etc. is known as the Pran Maye Atma, named as such because the vital life sustaining winds are collectively called 'Pran'.

²The Mana is the subtle mind of the creature and the consciousness that drives the mind and keeps it active and enabled to carry on with its magnificent duties is the Atma consciousness known as Mano Maye Atma.]

23. The fourth form that the consciousness takes is called the 'Vigyan Maye Atma' because it pertains to the intellect sheath called the Vigyan Maye Kosh or the intellect sheath. This is subtler than the Mano Maye Atma and lives surrounded by the latter.

Subtler than all the other forms of conscious existence of the individual is known as the 'Anand Maye Atma' which pertains to the Anand Maye Kosh or the bliss sheath. This is the innermost layer that surrounds the pure consciousness and is like the transparent veil covering the lighted lamp because it radiates the natural character of the Atma present inside it. Its natural characteristic is to be eternally blissful, contented and happy (23).

[Note—¹It would be noted that the structure that has unfolded is like a circle within a circle. The outer and the first circle is the Anna Maye Atma pertaining to the Anna Maye Kosh or the food sheath, followed by the second inner circle called the Pran Maye Atma pertaining to the Pran Maye Kosh or the vital wind sheath inside which is the third circle of Mano Maye Atma pertaining to the Mano Maye Kosh or the mental sheath, then comes the fourth circle of Vigyan Maye Atma pertaining to the Vigyan Maye Kosh or the intellect sheath, and finally the fifth one known as the Anand Maye Atma pertaining to the Anand Maye Kosh or the bliss sheath. These sheaths are called 'Atma' because they reflect consciousness and life in its various vibrant hues. For instance, the external Kosha called the Pran Maye Kosh which forms the basis of all organs of senses such as those related to perception and those to action have any value and significance for the creature only as long as they have 'life and consciousness' pulsating in each of its pore, cell and tissue. Otherwise they would be worthless and as good as being non-existent. What good and of use is a body which cannot see, hear, taste, feel and smell, or one which cannot move, hold anything, expel waste products from the inside, regenerate and procreate, and generally make life happy and livable for the Jiva—or in brief a body which has no consciousness in it? Since 'life' in all its connotations is synonymous with 'consciousness' or Atma, this Kosha which depends upon food to survive is called the Anna Maye Atma. And this is also the reason why food is equivalent to 'life' or Pran vis-à-vis a Jiva; food is the Atma of all living beings. They just cannot survive without food. The food is

necessary for very survival of all life forms because it provides the outer covering that not only provides the necessary energy and strength but acts as a protective covering for the Atma. This is also the reason why the type of food eaten by a creature helps to classify him—such as non-vegetarians and vegetarians; such as carnivorous, herbivorous and omnivorous; such as civilized eaters or savage cannibals etc.

This logic can be extended to cover all the other four remaining sheaths. For instance, the Pran Maye Kosh is called the Pran Maye Atma because the signs of life and vitality that the vital winds present inside the body depict are a reflection of the presence of the consciousness in the body itself, for otherwise the same wind that is also present outside the body does not show any signs of life-sustaining qualities as the one present inside the body. This innate wind element of creation exhibits astounding ability to sustain life and performs miraculous duties of regulating so many functions of the body that life without wind is unthinkable. Had there been no consciousness in the body, the same wind would be worthless and wouldn't be able to sustain and make the body alive as is proved by the fact a dead body from which the Atma has left shows no signs of life and activity in spite of the wind element remaining in it. Thus the wind element that derives its life-sustaining abilities due to the presence of the Atma is named after it as the Pran Maye Atma. It is actually the virtues of the Atma reflected in the wind element called the Pran. Both the Pran and the Atma are therefore treated as being synonymous.

Next is the Mano Maye Atma. The mind is the center that is the power-house of the living being; without the mind the creature would not receive any information from the outside world, cannot relate to it and cannot do anything whatsoever. The mind regulates all its functions. This is a clear indication of the mind being a manifestation of the Atma's grand virtues. If there was no consciousness in the body, such as the case of a dead body in which the physical organ called the brain is still present in the head, the mind would not be able to think. The subtle and sublime entity that enables the mind and the subtle heart to think and have emotions is the Atma present inside the body, and therefore the grand virtues and characters of the Atma that are reflected in the form of the creature's Mana is called the Mano Maye Atma.

The Vigyan Maye Atma would then be the virtues of the Atma as reflected by the magnificent potentials and powers as depicted by the intellect present in the creature. The ability of the creature to research and analyse, to ponder and think deeply, to discriminate between the good and the bad etc. are manifestations of the stupendous abilities of the Atma, and therefore that unit or Kosha of the body that carries these functions is called the Vigyan Maye Atma.

Finally, there is the Anand Maye Kosh which encloses the Atma itself. This sheath that encloses the Atma acquires the latter's grand virtues of eternal blissfulness, contentedness and happiness because of its very close proximity to it. When a wise and enlightened Jiva comes in contact with this sheath he finds only one predominant character, and that is of eternal and undiluted 'Anand' or the state of blessedness marked by beatitude and felicity. He then realises that the closest sheath (the Anand Maye Kosh) is a reflection of these eclectic and sublime virtues of the Atma, and therefore it has been named the Anand Maye Atma.

The concept of the same Atma having various life-forms extending from one Kosha or one-celled organism to five Koshas or five-celled organism can be understood in the following manner also. The Jivas or living creatures in the living world have been classified into five broad categories and their respective forms are as follows:—(i) Udbhij—these are those life forms that are born from seeds, such as members of the plant kingdom. These have only one Kalaa or aspect of the Atma called Anna Maye Kosh or Kalaa. In other words, they depend on food and become food for others higher up in the evolutionary ladder. (ii) Swedaj—they are those which are born from dampness and sweat, such as fungi, algae, bacteria, germs,

mosquito, lice, flies etc. They have two Kalaas, viz. Anna Maye and Pran Maye. That is, they are formed from food, they live for food and they die as food. Besides this, they also exhibit signs of life, e.g. the mosquito and lice have life like any other member of the animal kingdom. (iii) Andaj—they are placed higher up in the evolutionary ladder, and are born from eggs, whether inside the mother's womb or outside. Such birds as pigeon, sparrow, parrot, peacock etc. come under this category. They have three Kalaas which are Anna Maye, Pran Maye and Mano-maye. The last Kalaa refers to the fact that such creatures have a mind and heart which enables them to think, albeit in a primitive level. (iv) Jaruyuj—these are the creatures that are born as embryo that develops inside the mother's womb. Under this class come the animals such as horses, cows, dogs, elephants etc. They have four Kalaas, such as Anna Maye, Pran Maye, Mano-maye and Vigyan Maye. (v) The last Kalaa refers to their ability to have a higher level of thinking ability called intelligence. The human being comes under this last category with the added benefit of having five Kalaas. Besides the four Kalaas mentioned above in other creatures of this category, the man has the fifth one and it called the Anand Maye Kosh. It is only possessed by a man and not by other creatures in the sense that the man can realise the true meaning of the terms 'bliss and happiness that is eternal and substantial' by the virtue of his attaining higher level of intelligence and his ability to delve into the secrets of the concept of truth itself and then realising that kind of happiness and bliss that is not superficial and which is not limited to enjoyment of the sensual pleasures of the body and the material comforts of the world, but which has a holistic and all-inclusive dimension that incorporates the spirit or the soul.]

24. These different forms of the Atma enumerated above are just for the purpose of study and each depends upon the other in the order mentioned above—viz. the outer Anna Maye Atma is filled from the inside and is sustained by the Pran Maye Atma. Likewise, the Pran Maye Atma is filled by the Mano Maye Atma from the inside and is sustained by it (24).

25. The Mano Maye Atma is filled with the Vigyan Maye Atma from the inside and is sustained by it, and likewise the latter is filled by the Anand Maye Atma and sustained by it from the inside¹ (25).

[Note—¹This concept can be understood by a simple example of the earth. The earth's body consists of layers after layers of rocks and other structural materials of varying density and strength, with each inner layer forming a base and support for its immediate outer layer, and this progression continues till we reach the outer surface of the earth which would obviously collapse if the earth were not supported by these inner rings that form the different strata of the earth's structure. It is like the case of a hollow ball which cannot survive any external pressure and beating as compared to a solid ball which would not collapse despite it being punched and hammered or pressed in from the outside.

That is, the inner-most core of this ball-like structure consists of the Anand Maye Kosh and the consciousness that gives it its life is called the Anand Maye Atma. This central core is surrounded by the Vigyan Maye Kosh and the consciousness that lends it its vitality and life is called the Vigyan Maye Atma. This applies to the other layers also—viz. the Mano Maye Atma corresponding to the Mano Maye Kosh surrounds this Vigyan Maye Atma and is surrounded by the Pran Maye Atma pertaining to the Pran Maye Kosh; and finally the Anna Maye Atma pertaining to the Anna Maye Kosh sits comfortably upon this Pran Maye Kosh.

This verse implies that all the forms of the Atma as enumerated in these verses are basically the same consciousness performing different functions in these individual forms and therefore there is no difference between them. The different layers envisaged are hypothetical entities delineated for the purposes of

understanding of how the creation works but refer to the same consciousness that prevails throughout the entire being of the individual. No one form of the Atma can be sheared off from the other if the individual is expected to survive as a living individual entity. For example, it is impractical to extract the mind and let the intellect function, or to shear off the external covering of the body called the Anna Maye Kosh and expect the other parts of the body to live and survive. Each unit depends upon the other.

The body of the creature has been crafted by the supreme creator most intelligently and wisely. His expertise in craftsmanship and his prudence is evident when we examine what precautions he took to protect the Atma or the 'true self' of the creature. In order to protect the subtle Atma which is the most delicate and sublime entity in creation from being harmed, he protected it with a five-tier security mechanism consisting of these five Koshas. Even if one protective ring got somehow damaged, the Atma would still have the other rings for its protection. For instance, even if the eye fails, the consciousness is not much affected because the other organs gear up to replace this shortfall and become more alert, active and diligent. Even if the body is paralyzed and unable to move, all the internal organs work smoothly to protect life in it. A mad man whose mind is not under control or is malfunctioning can still survive and live a long life just like a stupid fool who has no intellect and its wisdom. Again, even though the man is most unhappy and disgusted in life indicating the absence of a properly-tuned Anand Maye Kosha, he would still live on and on showing that the Atma is protected by the other sheaths in the absence of cooperation from the Anand Maye Kosh which has malfunctioned.

In this context it is pertinent to note that a wise and enlightened man in terms of metaphysics is one who is 'self realised', i.e. who has 'realised' his 'true self' by his own efforts. In other words, he has acquainted himself with the truthful entity known as the Atma or pure consciousness living in a house having these five structural walls called the Koshas. The world erroneously recognises the body consisting of these five Koshas as the gentleman concerned, but it is a grave misconception, because the house cannot be the same as its inhabitant. Here the inhabitant is the Atma, and the house is the five-layered body.]

26. The Anand Maye Atma representing the bliss sheath surrounds the innermost core called the pure consciousness or the Atma representing the supreme Brahm that is an all-pervading and universal entity residing in the bosom of all the living beings as their inner self or inner being. There is no other thing present inside this Brahm, and so the latter is deemed to be the ultimate core of all that exists. It is like the hidden and mysterious power present inside a seed that enables it to create a tree virtually from nothing (26).

[Note—The individual creature derives its physical form and shape with the help of the Anna Maye Kosh or the external gross body; its energy, vitality, stamina and strength from the Pran Maye Kosh or the vital winds which pump in air and fresh energy into the body and drains out toxic waste from it and generally help the various organs of the body to perform their respective duties; its desires and wishes and aspirations from the Mano Maye Kosh or the mental sheath because it is the mind that makes all hopes and desires besides creating this world of material objects and the need to enjoy them; its higher level of intellectual achievements through the Vigyan Maye Kosh or the intellect sheath, and its ultimate bliss through the Anand Maye Kosh or the bliss sheath. Since these functions are manifestations of the various aspects of creation, they are called the different forms of the same Atma because all that lives is nothing but the Atma. The different names assigned to the Atma are only because it performs different functions.]

27-28. The transcendental non-dual supreme Brahm which is unique in itself and embodies the virtues of Gyan and Satya (eclectic knowledge and the absolute truth) is the basic shelter and support of the entire creation, and is the provider of succour and solace to all. Brahm is the essence and the ultimate truth of everything that exists. When a living being who has a gross body that is mortal and perishable obtains access to the eternal essence and truth that is imperishable and eternal [27], he experiences an overwhelming surge of the grand eclectic emotions of happiness and joys all around him; his entire being is filled with contentedness and bliss¹. Where else can one find an equivalent sense of extreme happiness and joy, carefreeness and contentedness, ecstasy and bliss that are eternal and imperishable as the one obtained by becoming acquainted with and having access to the supreme treasury of these virtues in the form of Brahm²?

So when the wise and enlightened creature realises that the source of this eternal happiness and bliss known as Brahm resides in his own bosom as his own Atma, he is overcome with eternal peace and tranquility along with bliss and happiness³ [28] (27-28).

[Note—¹This is because the creature now has realised that it has a guardian angel in the form of this Brahm to support and afford protection to it in the face of all sorts of fear and consternations arising out of worldly delusions such as the fear of death and harm to the body from others. This is based on the fundamental premise that the living being has realised that his true 'self' is an entity known as the conscious Atma residing inside his gross body, and that this Atma is a personified Brahm with all the divine eclectic virtues lauded in and extolled by the scriptures. So, with this divine and noble personality so close to one's self, there should be no cause of any depression, distress and a sense of loss. Further, this Atma is as imperishable as Brahm, and therefore there is no fear of death. The Atma has no enemies, so there is no reason of fearing anybody. And so on and so forth.

²This world is perishable and transient, it is false and illusionary like the water in the desert mirage—so how can one expect to find eternal happiness and contentedness in such a world? On the other hand, Brahm has the opposite qualities as those possessed by this world, so naturally when one gains access to such a magnificent, eclectic and glorious fount of happiness and bliss that is eternal and profound he is bound to get hold of the treasury that he was yearning for so long.

³He realises that the gem that provides eternal happiness, peace and bliss that he had been searching for so long everywhere in this world is discovered to be present inside his own self like the case when a man searches the entire haystack for a piece of gold that is lying in his breast pocket. He was so stupid and naïve that he had spent a lifetime in searching it outside. This discovery leads him to exult spontaneously in an overwhelming surge of ecstasy for he has made a discovery of a lifetime. He has uncovered the gem called the Atma.]

29. Which living creature can ever hope to live and show any signs of life and activity without the presence of this consciousness residing inside him as his Atma that represents Brahm¹? The supreme Brahm in the form of the pure consciousness pervading throughout the entire being of the living organism is perceived by the intelligent man's mind by due process of analytical deductions of all available evidence and making intelligent conclusions (29).

[Note--¹This is proved by the fact that as soon as the Atma leaves the body at the time of death, the creature is not even able to move an eyelid or even a finger. All activities that were done by his body were actually being done by the consciousness present in this body, the consciousness that is given different names such as Anna Maye Atma, Pran Maye Atma etc. as described in verse nos. 21-26 above.]

30-31. The supreme transcendental conscious Being known as Brahm who pervades uniformly in all the living beings as their own individual consciousness, and also as the individual's Atma known to exhibit such eclectic virtues as bliss and contentedness and which resides in each individual's inner self in the form of his 'truthful identity and his true self', is the entity that provides constant and eternal peace and tranquility to all the living creatures who are otherwise engulfed by miseries and sorrows in this world¹.

A person is deemed to be a 'Maha Yati' (i.e. an acclaimed ascetic who is spiritually enlightened as well as Brahm-realised and self-realised) if he is able to be acquainted with (i.e. if he has realised the truth of) this supreme Divinity known as Brahm possessing such grand virtues as being invisible and having no attributes, being most astounding and magnificent, being most enigmatic, esoteric and mysterious, being immutable and indivisible, and being non-dual and unique in all respects.

This divine Brahm is unconnected to and beyond the reach of all the taints and evils that swirl in this mundane and artificial world. It is separate from and unaffected by the influences of time and circumstance as well as the activities of the individual creature in which it lives as the latter's Atma².

The Brahm is an embodiment of Truth; it is Truth personified. It is the supreme state of existence where there is no tinge of fear and consternation. It is the most refined elixir of existence called Amrit which is marked by eternity and imperishability. It is auspicious, holy and divine (30-31).

[Note--¹In other words, the only source from where the tormented soul of the creature can expect to find any form of solace and succour for its self, the only source that can act as a beacon of hope and reassurance for this tormented and suffering soul, the only point which can supply the balm of peace and tranquility to the scorched and agonized soul— is the one point known as Brahm. This Brahm is the eternal fount of bliss and happiness, and fortunately it is not inaccessible for anyone as it lives inside the body of all living beings in the form of the individual's own Atma. This is the ultimate spiritual Truth which, when realised and firmly convinced of, gives eternal happiness and peace to the soul of the creature. This is what is known as Brahm Vidya. On the contrary, if the creature tries to find happiness and comfort in this material world of delusions and falsehoods, it would only trade one misery for another for the simple reason that a source of misery cannot give anything other than misery.

²In other words, the creature's Atma representing Brahm is not tainted even if the creature is deemed to be sinful. The reason for this assertion is not far to seek. The deeds that taint any person are done by the gross body, and the thoughts that taint him are the function of the subtle mind—the pure consciousness known as the Atma or soul which is not only a personification of Brahm but also the true identity of the individual is not at all involved in this scenario, as it is only an observer that prefers to remain neutral. Now as long as this observer remains neutral, nothing can taint him, but if unfortunately he allows himself to get involved in things that he is expected only to observe neutrally then of course he would be regarded as a participant and therefore a partner to all the consequences, whether good or bad, that follow in the wake of the deeds done by the body or the thoughts swirling around in the mind. In the latter case there can be no escape from punishment as every action has a reaction. So the same Atma can be untainted on the one hand and become tainted on the other hand. What decides this factor? The answer lies in 'self realisation, wisdom and enlightenment'. A wise person would not allow himself to play fools with muck representing delusions and material sense objects of the world and thereby get spoilt and tarnished for ever as opposed to an ignorant or deluded

person who would rather enjoy the current pleasures proffered by this material world with the thought 'who bothers for tomorrow or who has seen the future'. The former person would be the one whose Atma is deemed to be non-involved in this world, while the latter person is the one who has voluntarily entered the slush and allows his Atma to enter the cycle of sufferings and miseries associated with this world.

The Atma is in fact neither the gross body consisting of the sense organs of perception and action nor the subtle body consisting of the mind and intellect. It is not even the causal body but a resident in it. Obviously a resident is not the gross structure of the dwelling in which he lives; both of them are independent of each other though very and intricately related to each other. For instance, a palace is identified with a king or an emperor, and with no other ordinary citizen of the kingdom. So when one refers to the 'palace' he means the king or the emperor and not the building called the palace. For example, we usually say that an order was issued by the 'palace' and not the 'king', but this implies that the order has come from the gentleman residing in this palace and not from the brick and mortar structure called the palace!]

32-35. It is only as long as a person doubts this Brahm and determines, under delusions and ignorance, that the creation having three aspects or parts is distinct from the supreme transcendental Divinity whose virtues are enumerated herein above, is he afraid of death and its attendant miseries. Brahm whose non-dual and immaculate nature has been described herein above is not a separate entity from the one who has revealed itself in the form of these three worlds¹. There is no doubt about it.

[In other words, as long as the deluded person sees this world of three facets or phases as being a separate entity from Brahm, as long as he sees 'duality' in this world and thinks that Brahm is to be found somewhere else which is not included in this world, it is only till then that he fears death or destruction. The reason is Brahm has revealed itself in the form of whatever that exists, and nothing exists that is out of the Brahm's purview. So if this is the case then whatever that exists should basically be viewed as having the fundamental characteristics of the principal from which it is made, i.e. Brahm, and therefore must also possess the same characteristics as possessed by Brahm, such as being fearless and blissful. With this eclectic and grand perception of the world and existence, the person would have no fear from anything, including death.]

Every living entity, right from the miniscule one-celled organism to the colossus and all pervading supreme Lord known as Vishnu, experiences and witnesses the presence of this blissful Brahm residing in the Anand Maye Kosh (i.e. in the bliss sheath) inside their own self directly in proportion to their level of wisdom and degree of self-realisation. [It follows that Vishnu enjoys perpetual bliss because he is very enlightened as opposed to the fallen creature who remains engrossed in this material world and surrounded by its grief-ridden delusions which restricts his access to the eternal fount of bliss present inside his own self.] [32-33½].

A wise and enlightened self-realised Brahmin (i.e. any wise person) who has renounced the comforts and pleasures of this physical material world of sense objects that is transient, mortal and delusory as well as the other world in the heaven (where he goes after his death to enjoy the benefits of a noble life, only to come back to this mortal world of miseries once the good effects of his deeds wear off) is able to experience this divine fount of eternal bliss and eclectic happiness sprouting out from his Anand Maye Kosh (the bliss sheath). He therefore remains in a state of perpetual ecstasy and unfettered joy. [That is, once a person experiences the nectar-like bliss obtained by contemplation upon the inner self where the Brahm resides in the form of

the consciousness known as the Atma, the spiritual aspirant would no longer seek peace and happiness outside in this world. It is deemed and natural to expect from him that he would have realised that the greatest of happiness and joys that he derives from this world are very transient and perishable as compared to the one obtained by experiencing and witnessing the divine glory of the eternal Atma through self-realisation and spiritual pursuits. This is because the happiness, joy and bliss that come with attaining access to the Atma are as eternal, non-perishable and infinite as the Atma itself; if the source is pure, uncorrupted and holy then its product would be equally and assuredly pure, uncorrupt and holy.]

The sense of perpetual bliss and joyous abandon is available to him in the form of his own blissful 'self', i.e. as his own pure conscious Atma which is his truthful and enlightened self. It is not available externally anywhere [34-34½].

This experience is most eclectic and divine, and is in consonance with the exalted state of existence which is equivalent to being one with the supreme Brahm. It is so mysterious and enigmatic that words and speech cannot confine them in their embrace. That is, it cannot be described in words and expressed in speech no matter how erudite, skilled and expert a person is with them [35]. (32-35).

[Note—¹The word 'Tri' used in the first part of verse no. 32 means 'three', while the word 'Parichedda' means 'separation, determination, section, chapter, reference, paragraph, part' and the word 'Vivarjitam' has a negation effect, meaning 'not applied to, to bar, to restrict, to stop'. The meaning of the first half of the verse becomes clear—'the Brahm has a divine form as described in preceding verses and it is not to be restrictively viewed in the context of the Tri world—such as what is seen in the form of the terrestrial, the celestial and the nether world, or as the world that was in the past, that is in the present and would be in the future. This universally immaculate Brahm should not be viewed through the tainted glass of the three Gunas, viz. the Sata Guna, the Raja Guna and the Tama Guna. It is transcendental and supreme in the truest sense.]

36. The transcendental state is so exalted and mystical as well as self-sufficient and self-supporting that it does not require any props to support it and advertise its exalted existence and divine glories. So when the speech tries to extol its virtues in the hope of basking in the glory of being part of the process of establishing the greatness of something that is already great and the divinity of something that is already divine, it is defeated and put to shame. It comes back in humiliation because it fails miserably in its attempt to describe the transcendental state so much so that its reputation of being able to describe everything and anything is severely damaged.

That transcendental entity which is the essence and a fount of supreme spiritual bliss, ecstasy and joy that is beyond the purview of all definitions and descriptions, say how can it be accessed by faculty of speech and its medium of expression in the form of words. [That is, the bliss and exhilaration experienced upon witnessing the Atma and the presence of Divinity effusing out from it is so overwhelming that words, whether written or spoken, are not competent enough to express it.] (36).

37. The Mana (mind) of the creature that yearns for peace and tranquility besides seeking some source of happiness and bliss tries to search it out in the external world by constantly roaming here and there for it (like a vagabond rummaging for food to satisfy his hunger and searching for drink to quench his thirst). It uses the instruments available to it—such as the gross body consisting of the sense organs of perception like the ears, the tongue and eyes etc. along with their respective functions such as

hearing pleasant sound, tasting pleasant things and seeing pleasant sights, as well as the sense organs of action such as the hands and legs that the creature uses to the best of his ability in his search of that illusive fount of eternal happiness and peace.

These gross organs have a limited field of action, a limited reach and a limited mandate under which they have to function. [For example, the eye cannot taste as this is the exclusive domain of the tongue, and the tongue cannot see for this is the function of the eye.]

So the creature's mind fails in its attempts to find the eternal fount that would give it complete, wholesome and all-inclusive eternal happiness and bliss. This is because whatever happiness and joys that the mind (creature) gets in this attempt by searching for it in this physical world accessible by the sense organs are all temporary and illusionary. None of the things of this material world give it its much desired happiness and peace, let alone eternal bliss and ecstasy. It is then that it turns inwards to seek it inside the Anand Maye Kosh and finds the elixir hidden there, the elixir for which it had been fruitlessly wandering in this world and stumbling here and there at random. [This is the state of 'self-realisation' when the creature transcends the physical and reaches the supernatural ethereal state which does not have any physical boundaries for the simple reason that the 'spirit' is a very subtle entity and not subjected to the physical limitations imposed by things which are gross and dense like the various sense organs of the body.] (37).

38-40. The gross organs of the equally gross body are not competent at all to access something that is extremely sublime, subtle and ethereal.

Hence, a self-realised, wise and enlightened aspirant who has become acquainted with the eclectic truth of Brahm and is convinced that this Brahm with the divine virtues of being, inter alia, non-dual and beyond the scope of doubts and debates, being blissful and a fount of eternal happiness and peace, being without any describable attributes and qualities, and being Truth and eternal Consciousness personified [38] is none else but the aspirant himself, then such an aspirant has nothing to fear from anything anywhere.

That is, when the enlightened spiritual aspirant becomes self-realised about his true 'self', when he is firmly convinced that he is a personification of the supreme Brahm himself, he would not have to search peace and bliss outside of his own self in this external world. He would find everything worth finding inside his own self. [This is because he would have discovered that the fount of bliss, happiness and peace that he had been searching in this world for time immemorial is present inside his own self as his Atma or pure consciousness, he feels fully contented and filled with an overwhelming surge of ecstasy and unexpected spiritual calmness. He would not have to fear losing this bliss, happiness and peace because it arises from the Atma which is sublime, eternal, imperishable and infinite, and this Atma is his own 'self'. It is completely different from the world where he had been searching for these virtues because the world is mortal, transient and gross.] [38-38½].

In this way, any diligent and self-controlled person who has established full restraint over his self and the body is able to obtain access to the divine and eclectic fount of eternal bliss that comes with Brahm-realisation by witnessing his own Atma residing in his own bosom by relying upon the spiritual guidance provided to him by his Guru (moral preceptor and spiritual guide). Such a self-realised man is no longer deluded, and neither is he any longer tormented by deeds, whether good or bad. [That is, once a wise person has realised that the much sought-after peace and happiness and its attendant bliss is to be found inside his own 'self' in the existence of the pure

conscious Atma, and not in the external world accessed by the sense organs, he would no longer seek the help of the body and its organs to obtain it in the world outside by doing various deeds and taking so many actions. This implies that he would no longer be mentally and emotionally involved in doing deeds and taking actions actively in order to seek happiness and joy in this material world. With the need of doing deeds and taking actions becoming redundant, there would be no cause of good or bad deeds being done consciously and willingly, and therefore there would be no cause of any accumulation of good or bad results which the man would have to enjoy or suffer from according to the principle of action and reaction. This would automatically absolve him of the consequences of deeds, and he would find liberation from the fetters that deeds create upon his Atma. The entire chain becomes extinct.]

The sub-conscious mind is the entity that perceives this world of material objects, while this material world of sense objects and enduring delusions is the entity that creates all sorts of torments and miseries to the soul of the creature, trapping it in an endless cycle of sorrows and delusions. In other words, it is due to the interplay of the mind and the charming objects of the world that the soul of the creature is eternally subjected to immense grief and torments. So when the wise creature is able to distance his mind from this world by inculcating spiritual wisdom in it and making it taste the nectar-like bliss that is obtained by contemplation upon the inner self, the mind would automatically divert its efforts away from the world and turn them inwards. Once this happens, the external world would cease to exist, because it was the mind that had created attraction for the world in the first place. With the cessation of the world, the need for doing deeds in it would also vanish¹ [39-40]. (38-40).

[Note—¹An example would illustrate the point. It is the eye that sees pleasant things and then creates a desire to obtain them. Then the man makes efforts to go to that place and obtain that object which the eyes had made him aware of. For this he will do so many things and go even beyond decent limits in order to satisfy his lust for that attractive object. However, if the eye is closed then the desire would automatically not arise in the first place, and therefore the whole chain is broken even before it takes shape. This is what is meant in this verse—i.e. with the mind vanquished and turned inwards, the creature is able to taste the real elixir of bliss and happiness because all his extrovert actions would become extinct.]

41. It is proclaimed and affirmed by the Vedas and the Upanishads that this divine entity (known as Brahm) is present in the form of the Atma (the pure consciousness; the soul) of all the living beings. The Supreme Being who has revealed himself as the cosmic Consciousness known as the universal Atma that resides in all the creatures as their individual Atma as well is a personification of purity, divinity and immaculacy (41).

42. This Supreme Being (known as Brahm and cosmic Consciousness) has certain eclectic and unique qualities. For instance, it is said that he is an eternal 'Pramaataa'—i.e. the one who knows everything; the one who is all-knowing and omniscient; the one who is a literal great grandfather of the entire creation. He is both the 'Pramaan' as well as the 'Prameya'—i.e. he is the proof of the existence of this world because the latter shows signs of life and consciousness so typical of Brahm along with the fact that the world is a visible manifestation of the invisible and attributeless Brahm. This Brahm is the ultimate touchstone of truth and reality against which the truthfulness or falsehood of the rest of creation is judged. At the same time, he is known by inference and knowledge of the existence of divine qualities in this world with its stupendous variety and astounding magnificence. Had this world not

been in existence, if anyone had no knowledge of the world and the cause of its existence, one would have been unaware of the existence of Brahm. In fact, this world illuminates and highlights the existence of Brahm complete with all its stupendous glories, authority, powers and magnificence, while Brahm too highlights and illuminates this world in the sense that if there was no Brahm with its accompanying consciousness and inherent virtues such as those of wisdom, erudition and knowledge, this world would not have had any existence in the first place. And even if it did, no one would have had the necessary mental development and the ability to recognise this world and its astounding array of charms and fascinations in the way it is now known to exist. If one is not aware of something, or if one is not aware of its value and importance, then it is as good as being non-existent and worthless. So we can safely say that there is a sort of symbiotic relationship between the existence of this world and that of the supreme transcendental Brahm.

In other words, Brahm is the fruit of this world and this world is the fruit of Brahm. That is, it is only due to the existence of this visible gross world in which the creature lives that he tries to find out and research about the cause of this visible world coming into being, and he comes to the conclusion that some divine entity, however mysterious, esoteric, indefinable, subtle and imperceptible it may be, does exist that not only controls everything in this world but is also responsible for it coming into being in the first place. So by going backwards and applying logic and common sense to what is visible and apparent he can deduce about something that is not visible but is nevertheless an absolutely certainty in as much as without the latter the former cannot be. So he concludes that this world had its origin in an entity that is supreme and transcendental, that cannot be known by worldly yardsticks and measurements. Thus, the proof of the existence of Brahm lies in the knowledge of existence of the world (and its analysis in an intelligent manner, thereby necessitating the importance of such eclectic virtues as wisdom, erudition, sagacity, ability to analyse and discriminate, the ability to separate the grain from the chaff, and this in turn would need proper and correct knowledge of the Truth).

This world has come into existence because Brahm decided that it should come into existence. Had Brahm did not wish so, there would have been no chance of setting into motion of this wonderful wheel of creation. Not only that, but once this happened Brahm entered his own creation and took up residence in it in an imperceptible manner as its soul or pure consciousness. This he did to ensure that the creation was 'injected with a vibrant life, consciousness and vitality'. Otherwise, the creation would have been there in the form of the visible world, but it would have been lifeless and gross like rocks and mountains or barren stretches of desert on earth. There would not have been life with its full dole of colour and vibrancy in the form of countless species of plants and animals. Thus we conclude that this world is the fruit of Brahm. In other words, this visible and vibrant world with its thriving life-forms is like the reward or fruit of Brahm's labour; it is the result of Brahm's initiative.

So we conclude that it's a symbiotic relationship between Brahm and the world—for without 'consciousness' the world would be dead and worthless, and without this magnificent world coming into existence the stupendous cosmic powers Brahm would have remained unknown. Thus, the symbiotic relationship between Brahm and world is established beyond doubt.

But since this world is visible and exhibits characteristics quite the opposite of those ascribed to Brahm, it is believed that these two—i.e. Brahm and world—are separate and distinct entities; that they are dual entities. But essentially this is not the true case, for this world is nothing but a manifestation of Brahm, and the latter is

invisibly present inside it in a diffused and all-pervading manner as the essence of existence in the form of the universal Atma or soul without which the world would lose its value and significance (42).

[Note—The relationship between Brahm and this existential world can be understood with two simple examples. One, it is like the relationship between light and a lighted lamp—if there is light (world) then surely there must be a lamp (Brahm) from which this light emanates. And two, it is like the relationship between the seed and the tree—if there is a tree (world) then there has to be a seed (Brahm) because without the seed the tree cannot come into existence.]

43. The divine entity that is transcendental and immaculate Consciousness and enlightenment personified cannot be affected or influenced by delusions and ignorance called Maya. At the same time, it remains free from the limitations that are inherent to all things that have a form and name that ignorance and delusions create in this world. [This world is a manifestation of the cosmic Consciousness called Brahm, both at the macrocosmic level of creation as well as at the microcosmic level as the individual creature. Everything that exists has a form, no matter how gross or subtle it might be. Similarly, each form is assigned a particular name by which it is recognised. These are like artificial limitations and parameters imposed on an entity that is innately not limited and bounded. For instance, we have so many names for water, such as ocean, sea, lagoon, lake, pond, well, river, puddle etc., but the element known as ‘water’ is much beyond these limited descriptions. No one form can describe ‘water’ in its entirety; at the most each name describes one of the numerous qualities of water. Likewise, Brahm has revealed itself as countless creatures with as many forms and names, but none of them define Brahm even by a fraction. At the most, they only depict one of its countless and infinite glories.]

Since everything in existence is created by the supreme Lord known as Ishwar, it follows that this Maya is also a creation of Ishwar. But being the Lord of Maya, the Ishwar keeps the latter under leash and subservient to him. Though this is true but still Maya would not desist from showing its maverick tricks as proved by the fact that the inherently detached and untainted Brahm, the supreme transcendental Being which has no attributes and names, comes to be known as an ‘Ishwar’ when associated by Maya. [Technically, the word Ishwar refers to the sum total of all the causal bodies in creation when considered at the macrocosmic level. The very fact of ‘having a body, causal or otherwise’ shows that Maya has influenced Brahm. The fact that this Brahm in association with Maya created the rest of the creation is clearly reflected in the word ‘causal body’ of Brahm known as Ishwar—i.e. the body which is the ‘cause’ of the rest of the things.]

Extending this logic further, when the originally enlightened Brahm allowed itself to be accompanied by Maya, the latter cast its dark shadow of ignorance on the former and this resulted in what is known as ‘Agyan’ to come into existence. Being under the influence of this Agyan—ignorance of its truthful divine nature and supreme stature—Brahm became a Jiva, i.e. it became an ordinary living being who is oblivious of his exalted lineage, and who remains engrossed in an endless cycle of delusions and ignorance (43).

44. Since Brahm is related to the inner self of this Jiva in the form of the latter’s pure conscious Atma which is characterised by inherent wisdom and enlightenment, it is known as ‘Pramaataa’—one who is inherently all-knowing and omniscient.

Since the mind and intellect can analyse and come to the conclusion of its (Brahm’s) existence by studying the scriptures and dissecting all available evidence, it

can help the Jiva (living being) to experience and witness the presence of Brahm in his own bosom as the pure conscious Atma by the process of meditation and contemplation. This is known as Pramaan—to prove something as the quintessential and irrefutable truth by intelligent deduction, application of logic and critical analyses in spite of the fact that it cannot be visibly verified and proved in material terms or any other method known for proving things in this gross world. Witnessing of the Atma in one's own inner self as a fount of eternal bliss and happiness is an unequivocal, inviolable and irrefutable proof of its existence because of its first hand experience. Since this Atma is the cosmic Consciousness known as Brahm residing in a microscopic form in the bosom of the individual, it follows that the existence of Brahm is also proved by first hand deduction. The mind and intellect obviously plays a crucial role in this spiritual endeavour.

The mind and its sub-conscious have come to the conclusion that such a divine entity (known as Brahm, Atma or cosmic Consciousness) does exist, but it is so esoteric, mysterious, enigmatic, subtle and sublime that it only be 'self realised' but not described to others in words (such as by preaching and giving long discourses)¹ (44).

[Note—¹In other words, when the creature becomes self-realised, i.e. when he has witnessed the presence of the conscious Atma in his own inner self, he is very sure of its existence, but when he is asked to describe it to others he fails to do so. It is like one tasting a sweet dish and being asked to describe its taste; dictionary is unable to define or narrate how he actually felt and how the dish actually tasted. The only way is to taste it by eating it oneself. But it must be remembered that it is the mind that has made the man to know about this sweet dish, make efforts to get it, eat it, enjoy the taste and then have save this information as a memory of its divine sweetness for future reference. The mind would then tell the man automatically as if upon cue if the thing that he eats is as sweet as the one he had enjoyed so much earlier. It is the mind where all information is received, sorted out and analyzed. In short, the mind and the sub-conscious play a very crucial role in the man's ability of tasting and enjoying the sweetness of the sweet dish. But the irony of the situation is that if the same mind is asked to describe this sweetness or the taste of the dish it fails to do so though it also controls the faculties of speech, sight, smell and touch. Likewise, the truthfulness and divinity of the Atma and Brahm can be witnessed and be convinced of but not narrated or described to others. One can show the path to be followed to witness the Atma and Brahm, such as doing Yoga and other spiritual paths, but they cannot be put on a platter and presented.]

45. As long as that pure conscious divine entity known as Brahm is being searched, it is known as Prameya—one that can be known by inference and evidence. But once it is known, it becomes a fruit of this search, the 'Phal' (45).

46. Therefore it is ordained that a wise and self-realised spiritual person should be convinced of the divinity and immaculate truth about his pure conscious Atma which is his true 'self' by firmly believing in the statement 'I am free from all epithets and attributes'. [These epithets and attributes are related to the gross body which is not the Atma.] This sets him free from bondages of ignorance and delusions, i.e. makes him Mukta or spiritually liberated.

In this way, he who knows the essence of things and the reality of everything has access to the divine Truth and is able to achieve the exalted state of Brahm-realisation, a state that bestows upon him the stature equivalent to being one with Brahm (46).

47. I (Prajapati Brahma) have narrated the essential teaching of the Vedas in their truthful form (i.e. without distortions and imaginary interpolations).

The living being is bound to his deeds and it is due to them and their effects that he takes birth, dies or remains in a rudimentary form (as spirit of ancestors or as gods and semi-gods without finding final emancipation and salvation by becoming one with Brahm and losing his identity by merging it with Brahm).

Whatever is happening is a play of the Atma (pure consciousness personifying Brahm) and nothing else. Nothing exists except this Atma. Or, nothing exists except the Truth. Verily, this is the teaching of this Upanishad. Amen! (47).

-----*****-----*****-----

Chapter 26

Rudra Hridaya Upanishad

This Upanishad is very significant in the sense that it establishes the principle that Lord Vishnu the sustainer and protector of creation, and Lord Shiva the concluder of creation are one and the same entity. It further affirms that Brahma the creator and Shiva the concluder are also the same divine Supreme Being in his different roles. In other words, all the three gods of the Trinity, and for that matter all other forms of different Gods and Goddesses representing the various aspects of Divinity and forces of Nature are nothing but the same Supreme Being known as Brahm in each of those forms, and playing different roles in creation. Therefore, since the term 'Brahm' includes everything in existence, it naturally follows that even the seemingly opposing and inimical forces or aspects of creation such as the sun and the moon, the former signifying the boiling cauldron of fire that provides heat, energy and light to the creation while the latter is the soothing elixir which is cool and balm-like, also are Brahm personified; they represent a personified form of these two apparently virtues of the Supreme Being. And to extend this argument further, we can safely affirm that even the Jiva, the living being, is also Brahm in his basic and truthful form. This sets at rest once and for all the eternal dichotomy and the concept of duality that has existed from time immemorial about the separate existence of the Supreme Being from the rest of the creation.

The name of this Upanishad is derived by joining the two words 'Rudra' and 'Hridaya'. The word Rudra is one of the main names of Lord Shiva, and the word Hridaya means heart. Thus the composite word 'Rudra Hridaya' implies the Upanishad that teaches the fundamental principles behind the concept of Shiva. A close equivalence of this Upanishad is the Kalagni Upanishad which is Chapter 10, Dakshin Murti Upanishad which is Chapter 18, and Skand Upanishad which is Chapter 19 of this volume, and the Rudra Upanishad which is included as Appendix no. 2 of this volume.

It was expounded in the form of a dialogue between sages Veda Vyas, the legendary classifier of the four Vedas and narrator of the Purans and Mahabharat, and his son Shukdeo, the sage having the body of a parrot. When Shukdeo asked his father

who was the most exalted amongst the Gods, the answer was 'Rudra', i.e. Shiva. Thereafter, the magnificent knowledge that Rudra and Vishnu are one, the three forms of Rudra to indicate the Trinity Gods (Brahma, Vishnu and Shiva), its reflection in the three forms that the Atma symbolically assumes (as the Jiva, Parmatma and Atma), and the fact that one is spiritually liberated when one acquires this supreme transcendental knowledge is elucidated in detail.

The Upanishad extols the greatness of the tenet of 'non-duality' and uniformity of creation expounded upon and espoused in the philosophy of Advaitya Vedanta. It stresses that true overcoming of spiritual torments and sorrows is possible only by having respect for, firm faith in and allegiance to the eclectic 'truth' as propounded by this philosophy of oneness of the 'soul' called the Atma of the individual creature with the supreme Brahm who is the transcendental Atma of this creation. This conviction would at one go remove all artificial dichotomies and delusory perceptions that cause so much consternation and perplexities for the soul, thereby giving it eternal rest and peace.

Verse nos. 1-9 is an exposition on the oneness of all forms that the Supreme Lord had taken in order to carry on with the varying needs and demands of this creation which is his own creation; verse nos. 10-12 describe the three hypothetical forms in which the Atma has been classified for the purpose of understanding, while its divine nature has been outlined in verse nos. 31-33. The two classes in which knowledge or Gyan has been divided are described in verse nos. 28-30, while verse nos. 46-52 are expositions on the non-dual nature of the ultimate Truth. The metaphor of the tree is used in verse no. 13 to describe the world, of two birds sitting upon the same tree to describe the relationship between the Jiva (living being) and Ishwar (the supreme Lord) in verse nos. 41-45, and of the bow and the arrow to narrate how the Atma can reach Brahm in verse nos. 38-39. Finally, verse nos. 16-24 is in the form of a prayer that comes out spontaneously from the heart of a self-realised and Brahm-realised spiritual aspirant who has discovered the ultimate Truth so much lauded and expounded by the Upanishads.

For this world torn asunder by countless opinions and numerous philosophies creating endless confusions and consternations in the mind of a spiritual aspirant, this Upanishad comes a bright ray of sunshine that would remove all sorts of dichotomies and differences, and therefore it has great moral and spiritual value.

-----Shanti Paath-----

Please see Appendix no. 1 for the meaning of this Shanti Paath.

1. Rudra Hridaya, Yogkundali, Bhasma Jabal, Rudraaksha Jabal and Ganapati Upanishads are the five scriptures that delve into the metaphysical essence of the concept of OM. They are like the five great Mantras (spiritual formulas) used for doing the great sacrifice represented by an effort to acquire knowledge of Brahm, the supreme transcendental divine Truth in creation. They personify the great sayings of the Vedas. [That is, what these five Upanishads teach is the basic tenet of the Vedas. They are essentially directed at espousing the non-dual and supreme nature of Brahm and its unequivocal truthfulness, transcendence and quintessential divinity.]

Sage Shukdeo¹ bowed his head before his revered father, the great sage and seer Veda Vyas², and requested him—'Oh Lord! Which is the one God so much

talked about in the Vedas and extolled by them as the Supreme Being? Who is that God in whom all the other Gods are deemed to have their existence? (1).

[Note—¹*Shukdeo* was the son of the legendary seer and renowned sage Veda Vyas. He was highly respected and was born of the celestial maiden named Ghrataachi when she had taken the form of a parrot, called Shuka in Sanskrit, to produce Shukdeo. He had his education under the expert guidance of his father Veda Vyas (refer Maho-panishad of Sam Veda, Canto 2, verse nos. 1-20, and the entire Rudra Hridaya Upanishad of the Krishna Yajur Veda tradition which is presently being narrated). He was fortunate enough to have as his wise Guru (moral preceptor and teacher) the legendary king Janak, the father of Sita of the Ramayan fame and the most self-realised and enlightened king of his time (refer Maho-panishad of Sam Veda, Canto 2, verse nos. 28-77) and Lord Shiva himself (refer Shuka Rahasya Upanishad of Krishna Yajur Veda which was preached by Lord Shiva to Shukdeo). His self restraint was so profound that the celestial Apsara, the dancing damsel of the court of Indra, the king of Gods, failed to trap him in her honey-trap of lust and passions. Shukdeo learnt the epic Bhagvata Mahapurana from his father and then narrated it to Parikshit at the culmination of the Dwapar Yug (the third era of the four-era celestial cycle of mythology) and the beginning of the present era called Kali Yug. In an incident narrated in Maho-panishad, Canto 2, verse nos. 21-27 it is described how sage Shukdeo had to wait for twenty-one days before king Janak granted him an audience to test his self control over anger, ego and self-pride of being a son of an enlightened father of the stature of sage Veda Vyas as well as his sincerity and steadfastness of purpose which are important virtues that must be present in a student of spiritualism and important criterion by which his eligibility as a disciple can be judged.

The Tejobindu Upanishad of Krishna Yajur Veda describes him as a truly Brahman-realised sage along with sage Sankaadi in its Canto 1, verse no. 47.

Shukdeo learnt the epic Bhagvata Mahapurana from his father and then narrated it to Parikshit at the culmination of the Dwapar Yug (the third era of the four-era celestial cycle of Hindu mythology) and the beginning of the present era called Kali Yug (which is the last of the four-Yug cycle).

²Sage *Veda Vyas* was the son of sage Paraashar and Satyavati, a fisherwoman. Since he had dark complexion, he was also called Krishna, and since he was born on an island, he was called Dvaipayana. Hence his other name was Krishna Dvaipayana. Veda Vyas gathered all the Mantras of the hitherto undivided Vedas, edited them and grouped them according to the use to which they were put during fire sacrifices. This added another epithet to his name—viz. ‘Vyas’, the one who knew the Vedas like the back of his hands and was therefore able to classify and divide them into four distinct texts as they now exist; the one who is the best preacher of the subject and made it easy for dissemination and teaching purposes. He had also penned the epic Mahabharat, the eighteen Purans and the eighteen sub-Purans. It is said that Ganesh, the most revered and wise son of Shiva who has the head of an elephant, was the scribe who wrote down the dictation of Mahabharat as Veda Vyas narrated it non-stop, a job which is not a child’s play. It is also believed that inspite of remaining a chaste saint for life, he had begot the three legendary figures of Mahabharat, viz. Dhritraashtra, Pandu and Vidur, from the wives of Vichitravirya at the behest of his mother Satyavati. He gave divine sight to Sanjay, the charioteer who narrated the on going famous battle of the Mahabharat to Dhritraashtra who was blind. Being a contemporary sage of the Mahabharat period, he knew almost all the persons of this great epic.]

2. Please tell me also who that one God is by worshipping whom I would have worshipped all the other Gods, and they would be pleased with me?’

When Shukdeo asked this question, his father (Veda Vyas) replied—(2).

3. [The following verses are an exposition on the basic truth of the principle of ‘non-duality’ or Advaitya Vedanta—that all the different forms of Gods and Goddesses, and for that matter ‘all that exists’, are essentially the same Supreme Being known as Brahm revealed or manifested in all these individual forms in order to fulfill the varying needs and different functions of creation. The Gods cited here are the primary Gods in creation, such as Brahma the creator, Vishnu the sustainer, Shiva or Rudra the concluder, the Sun God and the Moon God who represent the warmth and energy giving Fire God (verse no. 3) and Vishnu the protector of life and its sustainer (verse no. 4) respectively. The remarkable thing is that these Gods are not independent Godheads, but interchangeable and synonymous with each other as would be evident when one reads the verses, especially verse nos. 3-24.

The Goddesses represent the dynamism of Brahm and his stupendous creative powers, and they are principally two—viz. (a) Uma (verse no. 4, 9) or Bhagwati (verse no. 8) who is depicted as the divine Mother and the consort or counterpart of Shiva or Rudra because he is deemed to be the supreme Father and Lord of creation, and (b) Laxmi who symbolises the necessary wealth that is needed to sustain the creation created by the Supreme Being in the form of the Viraat Purush who is also known as Vishnu. It ought to be noted that there appears to be a bit of confusion in the maze of names and epithets, and so each verse is accompanied by notes to explain the concepts. Perhaps, this was purposely created in order to warn and tell the spiritual aspirant not to be confused by so many names of the same Principal that appear in the scriptures, but understand that they all refer to the same non-dual entity known as Brahm that is supreme and transcendental.]

‘All the Gods are incorporated in the divine form of Lord Rudra (a form of Shiva) and they are different manifestations of this one Lord known as Rudra. In other words, Rudra personifies all the divine virtues in creation represented or symbolised by all the Gods independently and jointly.

On the right of Rudra¹ are established the three Gods such as Surya² (the Sun God), Brahma (the creator of visible creation as well as of the Vedas), and the three forms of Agni³ (the Fire God; the three sacred fires)². [There is great significance in this statement. Brahma the creator, the Sun God and the Fire God are all metaphors for and harbingers of life and creation; they stand as symbols of vitality and life-infusing energy. Brahma is personified Supreme Being (Brahm) as the grandfather and patriarch of visible creation who not only created the creatures but all the knowledge and codes needed for proper regulation of this creation even for time in infinite future. The Sun is an evident source of the basic requirements of life such as light, heat and warmth; the Sun regulates the seasons and the year as well as the cycle of day and night. Its importance can be fathomed from the fact that plant photosynthesis depends directly upon its light and heat, and all forms of life depend on plants, directly or indirectly, for food without which life would be extinct. We know that one primary reason why the dinosaurs vanished from earth is the blocking out of sunlight due to dust that was raised when a meteor hit earth long time ago. Not only this, the very existence of earth depends upon the Sun because it keeps the earth from spinning out of control and getting lost in the bottomless void of the cosmos by its gravitational pull which helps the earth to remain firmly tethered to its position without any other thing to support its position in an empty void of space. Similarly, ‘Fire’ is an important aspect of life—it provides the necessary heat and warmth without which no life is imaginable on earth. The fire is present inherently in the earth

itself, and it is the fire that helps the earth to harbour life in all its myriad variations. That the 'fire' and 'life' are synonymous with each other is proved when a man dies and his body becomes cold. As long as this body is warm, it is deemed that vestiges of life remain in it and when it becomes 'dead cold' it is a clear sign that the man has died. Fire is needed to cook food, to digest this food, to produce food, to keep the body warm, and so on and so forth that its importance need not be emphasized at length. In fact, these three godheads—Brahma, Sun and Fire—are the symbolic Trinity Gods who bring about the existence of creation into effect.] (3).

[Note—¹Lord Shiva has eleven forms called *Rudras*. For details, see note no. 2 of verse no. 7 of the Ekaakshar Upanishad which is Chapter 22 of this volume.

Lord Shiva is considered to be the most enlightened of the Trinity Gods, and is therefore called *Maheshwar*. He always remains in a meditative posture, always contemplating and meditating on the supreme Soul and the Truth. But still he shows anger and mercilessness, because one of his tasks is to punish the evil and sinful ones by ruthlessly slaying them in order to protect the good and righteous souls in the creation. Further, when his meditation and peace is disturbed he also becomes angry. He remains aloof and disinterested in the world, because he is very wise and enlightened, and he stays in the form of an ascetic. Ordinary people think that he is proud, arrogant and haughty because he does not give a damn to worldly formalities and niceties of behaviour. Shiva's failure to conform to set norms of proper and sane conduct makes him look most odd God. The word 'Rudra' is used as a metaphor for anger, wrath, vehemence and cussedness.

One of the other names of Rudra is *Kalagni-Rudra* which literally means Lord Shiva, the concluder, in his most ferocious form which is like the fire of dooms-day. Shiva is the greatest ascetic, a great renunciate, most auspicious and regarded as an enlightened God. So his invocation helps the spiritual seeker to burn all his worldly delusions and taints arising out of ignorance and attachments to falsehoods. This paves the path for his ultimate liberation and deliverance from the cycle of birth and death. Lord Shiva is the designated Authority that controls death and destruction, not only of the gross physical world and its visible objects but also metaphorically of all the evil tendencies, all the blemishes and faults that are characteristic of this deluding world and which usually cover the soul of the creature like a layer of thick scum floating on the surface of the otherwise crystal-clear waters of the mountain lake.

The Rudraaksha beads (seeds of the tree *eleocarpus ganitrus*) with five faces or surfaces used in rosaries and necklaces are also called Kalagni-rudra beads because these are very much liked by Lord Shiva.

Refer 'Rudraaksha Jabal Upanishad' of the Sam Veda tradition, and 'Kalagni Rudra Upanishad' of Krishna Yajur Veda tradition.

²The entire Akchu Upanishad is dedicated to the Sun God. It is Chapter 23 of this volume.

³The three fires referred to here are the following—(a) 'Garhyapatya' fire—i.e. the fire of the household hearth; the main fire of the formal fire sacrifice; the fire that every householder is supposed to keep alive and worship regularly and from which the first spark is taken for the rituals associated with religious ceremonies), (b) 'Dakshinagni' fire—i.e. the fire used as a witness to making charities or any other religious festivity; the fire lit at the site of a sacrificial fire ritual, near its south end, and (c) 'Ahawaniya' fire—i.e. the fire lit to invoke the Gods during a ritualistic sacrifice.]

4. To the left of him (Rudra) are established the three divine entities such as Goddess Uma (the divine consort of Shiva, also known by her more famous name of Parvati), Lord Vishnu (the sustainer and protector of creation) and Som (the Moon God). [Earlier verse no. had narrated what was to the 'right of Rudra'. Now this verse

describes what is to his 'left'. In other words, Rudra is in the center, and these Trinity divinities are to his right and left just like we have the right and the left hands on either sides of the torso. This is to say that these Trinity Gods help Rudra to carry out his functions of creation, sustenance and conclusion of creation. Uma is a Goddess personifying the dynamic power and energy of Brahm, in this case personified as Rudra or Shiva, to actually implement his decision to create and then not only carry it out effectively but exercise effective control over the vast creation which would have become unmanageable had Brahm not exercised his overall controlling and veto powers. She represents the female aspect of creation, and therefore is called the cosmic Mother. In this role she is depicted as the divine consort of Shiva because the latter is Brahm, the cosmic Father, personified. Once the creation was conceived in Uma's womb and later on when it emerged in the form of the visible world as we know it now necessitated an arrangement for its perpetual sustenance, nourishment and protection. This Brahm did in his manifestation as Vishnu. Som literally is the soothing elixir of life and eternity—and it is appropriate to use this as an epithet for Vishnu in his role as the sustainer and protector of creation. There is another way of looking at the concept of 'Som'. Since the latter is also the drink drunk during fire sacrifices and by the Gods as it provides bliss and ecstasy, and its physical form resembles the viscous fluid responsible for creation, i.e. the male semen, it is likened to these feelings during the course of sexual intercourse when the male semen is implanted in the female sexual organ as a necessary part of the process of creation. Since Vishnu is also the Viraat Purush from whom the entire creation is said to have come into existence, and he had done the cosmic fire sacrifice in order to set this chain reaction in motion, the epithet of Som for Vishnu is most apt.]

Uma is Lord Vishnu¹, and Vishnu is Som², the Moon God. [That is, all these three are the different manifestations of the same Divinity revealed in different forms according to the needs of the circumstance in creation as described above.] (4).

[Note—¹Lord *Vishnu* stands for the Viraat Purush, the macrocosmic gross body of the supreme Brahm from whom the rest of the creation emerged. Since Brahm is neutral and does not do anything, so when he decided to initiate the process of creation he used his inherent power, authority and energy to kick-start the process. This 'dynamic energy, strength, vitality, power and stamina' of Brahm manifested itself in the form of Shakti known as Prakriti. The latter revealed itself in a grosser form as Uma or Parvati, the divine consort of Shiva when the Viraat Purush assumed the form of the Trinity Gods. Therefore by extension, the divine husband of Uma, i.e. Shiva, is Vishnu by another name. *Uma* is the dynamic principle of Brahm in the latter's manifestation as Vishnu.

²*Moon God* is said to be the custodian of Amrit, the elixir of eternal life drunk by gods. More importantly, this elixir represents the primary life-infusing vital fluid (semen) that was used by Brahm to implant his spark (sperm) in the womb of Prakriti (Mother Nature) to initiate the process of creation. In other words, this Moon God was symbolically a personification of Vishnu's vital life-infusing and life-sustaining abilities in the form of the white cosmic semen. That is also why the moon is white like the semen.

The Moon God is known as 'Chandrama' in Sanskrit, and he appears first in the Rig Veda, 10/85/19). He is the patron God of night. His origin is in the Mana (heart and mind; the emotions and thoughts) of the Parmatma or the supreme Lord (the Viraat Purush or Vishnu) (Yajur Veda, 31/12; Taiteriyā Brahman, 3/10/8/5). His existence depends upon the Sun God. On the dark night, he is supposed to enter the Sun (Aiteriyā Brahman, 8/28). Chandrama is synonymous with Som, the divine elixir and sanctified drink drunk during the religious sacrifices as it gives its drinker peace and a long life (Kaushatiki Brahman, 16/5; Aiteriyā Brahman, 7/11). He is the

controller of seasons and months; he always changes so appear to be like a new born everyday. He gives peace and long life to the 'Stota', the chanter of hymns as prayers (Rig Veda, 10/85/19).

Chandra or the Moon Gods appears in the Vedas as follows-- Rig Veda—10/85/19; Yajur Veda—1/28; Atharva Veda—6/78/1-2; 19/1.

The Yogshikha Upanishad of Krishna Yajur Veda tradition describes this Moon as being as the symbolic form of the water element. The moon is said to be the celestial pitcher of Amrit, the elixir of eternity and bliss that is drunk by the Gods. In the human body, it is represented by the Eda Naadi passing through the left nostrils and which is used during do Pranayam. [Refer Canto 1, verse 166.] It is also present as the crescent moon, the Ardha Chandrakar Chakra, which is said to be the shape of the water element of which the patron deity is Vishnu, the sustainer of creation, and located from the knee to the hip region. [Refer Canto 1, verse 176 and Canto 5, verse no. 13.] At other places it describes the symbolic importance of creating a union of the moon and sun as metaphor for the union of the creature with the supreme Brahm. [Refer Canto 1, verse nos. 56 and 68 for instance.] In the context of Pranayam it is used to indicate the bliss obtained by the ascetic. [Refer Canto 1, verse nos. 120, 127.]

Canto 1, verse no. 133 of this Upanishad describes the great Mantra 'So-a-ham' and asserts that the moon stands for the letter 'sa' of this Mantra. Other instances where moon appears in Yogshikha Upanishad are Canto 1, verse nos. 133, 146, 176, Canto 3, verse no. 11, and Canto 6, verse no. 4.]

5. To bow before Govind (one of the numerous names of Vishnu) and pay obeisance to him is equivalent to bowing before Lord Shiva and paying obeisance to the latter (because they are both the same Divinity personified). Those who worship Vishnu (who rides the Gurud, the legendary heron of eagle) with devotion and reverence are indeed worshipping and showing reverence to Lord Shiva who rides a bull (5).

6. Those who do not like the strange and unconventional form of Shiva as 'Virupaksha' that is very odd and inconsistent with the usually pleasant form of Vishnu, and therefore resent it and have aversion for it cannot hope to ever please Lord Janaardan (Vishnu, the compassionate Lord who is merciful towards his subjects, protects them and loves them). It is equivalent to having resentment for and aversion to Lord Janaardan himself¹.

Those who do not know the mysterious secrets of Rudra (Shiva) can never know the esoteric secrets of Keshav (Vishnu) as well; they are ignorant of who Vishnu actually is² (6).

[Note—¹This verse is a clear indication that both these Gods—Shiva and Vishnu—are to be treated alike and with the same degree of respect and honour. This proves the fact that this Upanishad aims at establishing harmony and goodwill between the worshippers of Vishnu and Shiva who were traditionally at odds with each other.

Shiva is called 'Virupaksha' because of his external appearances which are most odd and unconventional. He is depicted by the Purans as being naked, wearing only animal skin and having ash of the cremation ground smeared all over his body, has serpents wrapped all round him, eats intoxicating herbs and remains perpetually in an intoxicated state, lives in the cremation ground in the company of ghosts and phantoms, gets angry at the slightest provocation or pretext, etc. This external behaviour of the Lord is obviously at odds with that of Vishnu who is depicted in a flamboyant form with magnificent and colourful attire, fully decked up with priceless ornaments, having a charming demeanour, pleasant speech that offends none, good company, a regal abode in the heaven, and always sporting an enchanting and

benevolent smile captivating the heart of millions of his devotees as compared to the fear-instilling, grave and somber mood in which Shiva lives.

So this verse intends to enlighten the spiritual aspirant that he should not be misled by these and other such dichotomies and differences that exist in this creation, or the various forms in which the different godheads are depicted in the Purans and other texts, but peer underneath and see the reality and the truth that they represent. External appearance is no criterion to decide that one God is senior to the other, as this is necessary so that the concerned God can play his role in the cogwheel of creation perfectly. This wisdom, erudition and enlightenment would be called acquisition of 'true Gyan' or knowledge that is 'true' and 'enlightening' in the real sense.

The outwardly odd behaviour and fearful external appearance of Shiva which makes him 'Virupaksha' is misleading—for the simple reason that the Shiva is very enlightened and self-realised who has totally detached himself from worldly involvement and pleasures, and instead prefers to remain engrossed in meditation and contemplation. He has tasted the divine elixir of self-realisation and the peace that comes with meditation and contemplation, so is the least bothered by how he looks and what people think of him. He is an ascetic par-excellence. Hence he is always seen with closed or half-open eyes. His short temper is due to this trance-like state of his blissful inner self—for when his internal peace of meditation is disturbed by any kind of external disturbances, he gets extremely annoyed and exceedingly peeved. His staying in the cremation ground is indicative of his close acquaintance with or understanding of death which makes him totally aware of the perishable nature of life and the futility of pursuing it at the cost of liberation and deliverance of the soul. Since he constantly sees death in the face, no charms of this world can ever be sufficiently enticing as to trap him in its snare.

But does this mean that Vishnu is engrossed in enjoying this perishable world and is in any way less self-enlightened and divine than Shiva? Not the least; the Lord has to carry on with the function of sustenance and protection of this creation, and so has to adopt a posture that suits his job. He needs wealth and powers and authority to provide for the necessities of this creation, create prosperity for its future wellbeing, and maintain law and order in this creation. Shiva is only concerned with conclusion, so he can afford to maintain a distanced life style. That is also why Shiva is usually the patron God of ascetics and their like because they symbolise the last phase of life marked by total renunciation, spending time on meditation and contemplation, and generally preparing to face the ultimate truth that all material objects of this world are perishable and they have to be abandoned at the time of death. So a wise man should not hanker after them and get unduly perturbed and anxious for them at the internal level of his 'self'. At the most, they should be used to fulfill the obligations of existential life as and when they present themselves during the course of the soul's journey in this world, but not thought to be the truthful thing to be aimed at and achieved at any cost whatsoever. The world does not provide long-term bliss, peace and tranquility, and neither is it eternal and restful.

²Shiva stands for the last phase of life and is the manifestation of Brahm to bring about the conclusion of creation at the macro level, and of the individual in the form of the death of the body at the micro level of creation. What is the secret to be known? It is the fact that in spite of being the great God called 'Mahadev' who is most powerful and omnipotent, Shiva prefers to remain away from the limelight of creation. Iconographically, he has been depicted as being submerged in deep meditation and contemplation on his inner self. This indicates that he has learnt that true peace comes with realising the bliss emanating from the Atma, and not by remaining engrossed in the material world of sense objects which only create delusions and consternations. He is deemed to be the most enlightened God as indicated by the fact that he is the only one to have the activated 'third eye' of wisdom located in the middle of the forehead between the eyebrows. Shiva remains

submerged in the ecstasy and blissful state of Brahm realisation. Which brings us to the main point of this verse—that is, this Brahm upon whom Shiva meditates had manifested himself in the form of the Viraat Purush who is also known as Vishnu at the time of the first stages of creation. So Shiva is actually meditating upon Vishnu. This fact has been affirmed in the epic Ramayan where Lord Ram, an incarnation of Vishnu, calls the image of Shiva installed on the shores of the ocean before his departure for the conquest of Lanka and its demon king Ravana, as ‘Rameshawar’—literally meaning ‘the Lord of Ram’. It also means ‘One who’s Lord is Ram’. In other words, Ram as an incarnation of Vishnu is the Lord of Shiva, and vice versa.

Therefore, in the lexicon of metaphysics, Vishnu is the supreme Brahm upon whom Shiva meditates and remains engrossed in his memory. Shiva represents the extremely enlightened and dispassionate form of Brahm, whereas Vishnu stands for his more worldly manifestation that is engaged in affairs of creation and its maintenance. This Upanishad also asserts that the Jiva, the living being in his essential and truthful form as the Atma, the pure consciousness, is Ishwar or the supreme Lord personified—refer verse nos. 41-45 on the one hand, and on the other hand that this supreme Lord is no one else but Shiva—which is the basic theme around which this Upanishad is built. So, when it is said that Shiva meditates upon Vishnu it also implies that an enlightened man who has realised who he actually is worships the supreme Lord of creation known as Vishnu. It is easy for him to worship Vishnu than Shiva for one other reason. Vishnu had incarnated on several occasions and lived amongst humans, creating a legion of stories and worldly deeds that are well documented in the different Purans and Itihasas, such as the Bhagwat Maha Puran and the epic Ramayan that the ordinary man can read, find practical to follow and easy to relate to because they describe to him things and circumstances and the world with which he is very much acquainted and which is the one that is causing him all the problems in the first place.]

7. Rudra symbolises the ‘Beej’ or seed (represented by the sperm) which is the basic unit carrier of life, while Janaardan (Vishnu) stands for the cosmic womb in which this Beej is planted in order to develop the embryo of creation¹.

Rudra is Brahma the creator, and the latter is Fire God himself². [Refer verse no. 3 above.] (7).

[Note—¹That is why the Viraat Purush, the subtler form of Vishnu, is said to have done the initial fire sacrifice and implanted the spark of creation in his own self. The one and the same entity became known as the male Viraat Purush and the female Prakriti by a very subtle polarization of virtues. This is the primary form of asexual reproduction when the Viraat Purush produced the Prakriti out of his own self.

With this holistic view-point, it is easy to understand this verse. That aspect of Brahm which is neutral and totally oblivious of this world and remains self-contented is known as Shiva, while when it took up a dynamic form in order to initiate the process of creation it came to be known as Vishnu. Presently here, Shiva is regarded as the Viraat Purush, and Vishnu is regarded as Prakriti or Mother Nature. This is because the Viraat was the ‘cosmic Father’ who provided the sperm, the ‘vital spark of life’. The cosmic bowl where the creation was conceived was not a hollow devoid of the presence of the Viraat for the simple reason that whatever that existed was nothing but Brahm, and this Viraat Purush was Brahm’s gross macrocosmic body that was all-pervading and all-encompassing; nothing existed outside of it. Therefore, this so-called ‘cosmic womb’ was also the body of the Viraat Purush from which the sperm was produced. Hence, the Viraat acted as the cosmic Father as well as the cosmic Mother called Prakriti. Again, since Vishnu and Viraat Purush are the same entities, it follows that Vishnu and Prakriti are also the same. Since the Mother is responsible for nourishing the offspring with her milk after it’s born and with her own fluids when it was still in its formative stage in her womb, Vishnu is

called the Janaardana, the sustainer, nourisher and protector of creation, as opposed to Shiva. That is, Vishnu is a manifestation of Shiva for the purpose of sustenance and protection of creation.

²It has just been said in this verse that Rudra or Shiva is the cosmic Father of creation by providing the 'seed' or sperm of life. Since the function of creation is the duty of Brahma, it is now confirmed that Rudra is none else but Brahma, or Brahma is a manifestation of Rudra for the purpose of creation. An interesting thing is to be observed here—whereas traditionally Rudra is regarded as the God responsible for death, in this verse he is shown as being the cosmic father and creator. The 'sperm' inherently has the dynamism, the strength and the vital life-creating powers and energy required to initiate the process of creation, and since this is provided by Rudra it is obvious that he is the Father of the entire creation, including the Gods and Goddesses. That is why he is honoured with the title of 'Maheshwar', the great God—refer verse no. 9.

Now, 'fire' which stands for the eclectic virtues of light, heat, warmth, energy and vitality is the most important requirement for life in all its forms. Life, heat and warmth go hand in hand; one cannot separate the warmth and heat of fire from the earth and imagine it to be habitable by any stretch of imagination. This is proved by the fact that no life is sustainable in frigid conditions and sub-zero temperatures, while warm climate teems with life in all its colourful hues. Since Brahma has the mandate of creation, he is regarded as the personification of the Fire God. Or, by extension, Brahma and the Fire God are both manifestations of Rudra (Shiva) for the purpose of creation. In fact, the word 'Rudra' means the ferocious form of the otherwise calm, amiable and docile Shiva, and 'fire' is a metaphor for anger and ferocity, the qualities opposite of Shiva.

This verse, like many others in this magnificent Upanishad of Advaita Vedanta, is a remarkable exposition to prove the uniformity and non-duality of creation!]

8. Lord Rudra (Shiva) is manifested as both Lords Brahma the creator and Vishnu the sustainer and protector of creation. Besides this, the visible world overlooked by the Agni (the Fire God represented by the celestial sun) and the Som (the Moon God represented by the celestial moon) is also a manifestation of this same Rudra¹.

All the males of creation represent Rudra, while all the females symbolise Bhagwati (one of the many names of Uma or Parvati, the divine consort of Rudra or Shiva)² (8).

[Note—¹This is why Shiva is often referred to as 'Maheshwar', the Great God, essentially implying that he is senior to all the other Gods including the other two Gods of the Trinity, i.e. Brahma and Vishnu. It is like the case of an equilateral triangle having all the three sides equal and therefore all the angles also of equal degree, but to be a 'triangle' it must have an apex corner or point and two base corners or points. This 'apex' point is personified by Shiva, while the other two base corners are represented by Brahma and Vishnu. Further, since the entire visible creation is not only created and pervaded by Brahm, the Supreme Being, but also is considered as his visible revelation, it obviously follows that whatever there is in this world is Brahm and by extension Rudra or Shiva. Therefore, the sun and the moon are also within this sphere of definition of Brahm.

²Rudra is one of the dynamic forms of Shiva. The latter represents the Viraat Purush who is the male aspect of creation. From the Viraat was created the female counterpart called the Shakti. As the process of creation progressed, the Viraat Purush came to be known as Vishnu and Shakti as Bhagwati. The word 'Bhag' refers to the female genital where the male sperm fuses with the female egg to form the embryo. Hence, the form of the Lord that acted as the cosmic womb where the cosmic egg was conceived and nourished till it emerged as the visible creation was called Bhagwati—i.e. one who is possessed of the Bhag, one who is the Lord of the female as its rightful

husband and therefore has full right over the sexual process associated with her organs. In other words, the Supreme Being revealed in the form of the Trinity Gods is the unquestioned Lord of creation that has emerged from the cosmic womb represented by Mother Nature called Prakriti. Since Prakriti has the magnificent ability to bear such a vast creation in her bosom, she is also called Shakti, or the eclectic virtues of strength, energy and powers personified.

Earlier verse no. 7 has already stated that Rudra symbolises the cosmic sperm or 'Beej' representing the male aspect of creation while Vishnu stands for the cosmic womb or the female aspect of creation. It has been said elsewhere that at the time of creation, the Viraat Purush had assumed the form a man or male. Therefore, the Shakti aspect of creation revealed as the female. Hence, all males are manifestations of Rudra, and all females of Bhagwati. The basic idea in this verse is that one should not distinguish between any two humans as one being of a higher class and the other being of a lower class. The eclectic and well considered enlightened view is to treat all the creatures as one or the other forms of the same macrocosmic form of the supreme transcendental Lord who is the only truthful 'One' in creation and who is present in all the distinguishable forms in which we see this world at our microcosmic level. Refer notes to earlier verse nos. 3-8 also.]

9. Similarly, the entire creation—both the animate as well as the inanimate—is nothing but Rudra and Uma personified, a visible form of the invisible Rudra and Uma¹.

The entire visible world symbolises Uma (the active principle of Rudra and dynamic aspect of Brahm that is known as Prakriti), while the entire invisible world stands for Maheshwar (literally the 'great Lord' referring to the Viraat Purush who is the invisible macrocosmic manifestation of Brahm and represents the gross body of the creation as a whole; the passive aspect of the supreme transcendental Brahm) (9).

[Note--¹This indicates that the entire creation having a male component and a female component represents the two divine aspects of Brahm known as Rudra and Uma which correspond to Brahm's passive and active forms respectively.

The entire creation has come into being from the Viraat Purush. Had the Viraat Purush not undergone self-mutation to produce a male and a female and then cleaving to give them separate and independent existence, there would have been only one sex in creation, and we would not have separate male and female. Since the Viraat had metamorphosed himself as a male and a female in order to initiate and propagate creation in the very beginning of creation itself, we still have these two forms of creatures who continue with this basic function of creation even today. To ensure that his progeny did not abstain from this task of procreation, the Lord was so clever that he made this exercise of having sex as the most attractive of all deeds in this creation. A person who can overcome this 'natural instinct' is therefore regarded as a personified Shiva because he would be like Brahm himself who did not indulge in any sexual activity when he decided to create. So, does this mean that a self-restrained ascetic has any less powers than the man who exhibits his prowess by creating a new life in the form of his off spring? Not at all for the simple reason that all Yoga Upanishads emphasise that a self-realised ascetic acquires a number of mystical powers called the 'Siddhis' which empower him with such great powers that even the Gods are no match for him.]

10-11. The cosmic union of Uma (Shakti representing the active and dynamic aspect of the supreme Brahm and transcendental Divinity) and Shankar (Rudra or Shiva representing the passive aspect of the supreme Brahm and Divinity) creates Vishnu (the Viraat Purush—the macrocosmic and invisible gross body of Brahm from which the rest of creation unfolded)¹.

Therefore, those who bow to Vishnu with great reverence and worship him with great devotion are deemed to be knowledgeable about the three aspects of the Atma (the divine entity known as the universal Soul and the quintessential Consciousness of creation)—viz. the Atma, the Parmatma and the Antaraatma². This wisdom, erudition and enlightenment helps them to know the eclectic quintessential Truth of creation and the fundamental Reality behind all that exists, which in turn provides them with an opportunity to become self-realised and Brahm-realised. In other words, they find shelter in the supreme Atma which is the Truth representing their own self and the rest of the creation³ (10-11).

[Note—¹When the passive aspect of Brahm known as Shankar or Rudra decided to initiate the process of creation, he activated his own creative dynamic energy that was hitherto in a latent and dormant format, thereby enabling himself to do so. This activated dynamism of Rudra came to be known as Uma. The resultant off spring was the Viraat Purush. Hence, the Viraat Purush is the result of the symbolic union of the male aspect of Brahm as Shiva or Shankar or Rudra, and the female aspect as Uma.

²The three aspects of the Atma, the pure consciousness, mentioned here are as follows—(1) The word *Atma* refers to the divine cosmic entity that is pure consciousness and without which no existence is possible. The Atma is universal, uniform, all-pervading, all-encompassing, the ultimate Truth and Reality of creation, most divine, magnificent and glorious, pure and uncorrupt cosmic Consciousness. It is the soul and essence of existence; it is the base upon which everything is founded. In fact, what is non-Atma is considered as non-truth in creation. This Atma is transcendental and beyond the purview of time, space and definition. The glorious and eclectic virtues and divine nature of this Atma is the subject matter of a number of Upanishads. (2) At the macrocosmic level, this Atma is known as the supreme Atma or *Parmatma*. This refers to the superior macrocosmic version of the Atma that was revealed when Brahm decided to initiate the process of creation and manifested his own self as the all pervading and all encompassing Viraat Purush, or as the different Gods of the Trinity such as Brahma, Vishnu and Shiva or Rudra. This is the Parmatma or the supreme Atma or the supreme Lord at the macrocosmic level who is being referred to in this verse. (3) Finally, when the creation came into being, this supreme Consciousness represented by the Supreme Being known as Parmatma took up residence in the inner being of the individual creature as its Atma or soul. This aspect of the Atma was called *Antaraatma* as it resides in the inner self of the individual creature. This is the microcosmic aspect of the Atma known as the Parmatma at the macrocosmic level, and as the Atma in its primary and fundamental level that transcends all these known forms of creation. The term 'Atma' in its principal and elementary form is the Consciousness in its purest and most sublime form.

Therefore there is no fundamental difference between these three forms of the Atma just like there is no difference between the basic nature and identity of an entity known as 'water' whether it is in a cup, in an ocean or as invisible moisture which is uniformly distributed in the atmosphere but not visible to the naked eye. The water in the cup is like the individual Atma of the creature that is limited by the space of the cup representing the body of the creature, the water of the ocean is like the macrocosmic counterpart of this individual Atma because of its vastness and infinite dimensions, and the water molecule of the water vapour or moisture is the Atma in its microscopic and atomic form as the basic element called Consciousness.

³This wisdom is called 'self awareness and enlightenment'. It is the awareness of the ultimate Truth and Reality of creation. Once a wise man comes to know this truth, he would abhor all delusions and falsehoods pertaining to the gross body and the material world as if they were the spiritual plague.]

12. The Antaraatma is Brahma the creator, Parmatma is Maheshwar (literally the 'Great God' but meaning Shiva), and the universal and eternal Atma is Vishnu the sustainer and protector of creation (12).

[Note—The Antaraatma is the consciousness residing in the bosom of all living beings as their own individual Atma. It forms the core of the inner self, the individual creature in his true form. This can be roughly translated as the sub-conscious mind that directs the conscious mind to act. Since it is the mind that creates this world by its imaginative powers and then believes it to be true, it is said that the Antaraatma is the creator of the physical visible world, or is equivalent to Brahma who created this world by using his mind. This is because Brahma had the technical knowledge that was required for this process, and knowledge and its application is the function of the mind and intellect.

The Parmatma is of course the Supreme Being, the Lord of all that exists. Hence, he is 'the Great God' or Maheshwar. He remains in a passive state of meditation and perpetual contemplation as symbolised by Shiva.

Finally, Vishnu is the Atma because he symbolically represents the Viraat Purush and displays all the unique characteristic qualities of the Viraat Purush, the macrocosmic invisible Lord of creation from whom the three visible Gods—viz. Brahma, Vishnu and Shiva—emerged. So therefore, Viraat is like the soul and the basis upon which the entire edifice of this creation is built, and who is at the very foundation of creation of these Trinity Gods.]

13. This creation as a whole is like a huge tree¹. The three parts of this creation are known as the three worlds (celestial, terrestrial and nether or subterranean), and they are like its outstretched branches. [Refer verse no. 41 also.]

The upper part of this cosmic tree is represented by Vishnu. Its middle part (trunk) is represented by Brahma. And its roots are represented by Maheshwar (Shiva symbolising the supreme Brahm)² (13).

[Note—¹The metaphor of the *tree* has been employed in Katho-panishad of Krishna Yajur Veda tradition, Canto 2, Valli 3, verse no.1 also to describe the creation.

²The upper and outer branches of a tree spread out in the sun and their leaves absorb sunlight and carry on photosynthesis. The branches give shelter to so many forms of fauna and animal life—birds, flies, insects, centipedes and reptiles etc. (e.g. the caterpillar, snakes, squirrels, lizards etc.). This is a clear symbolism of the functions of *Vishnu* who is assigned the task of sustenance and giving protection to the creation.

The trunk and central branches stand for *Brahma* the creator because it is out of this central core that the outer branches and leaves and flowers emerge and spread out. In the case of the huge Banyan tree it is seen that these branches produce secondary trees by first touching the ground and then transforming this apparent prop into a stem or trunk of the second spread. It is symbolic way of how Brahma unfolded the creation and then let it spread out on its own and reproduce itself. The trunk of the tree is a link between the upper part bearing the leaves, fruits and flowers, and the root that anchors the whole structure to the ground and absorbs nourishment from the soil. The trunk helps the nourishment absorbed by the root to be taken and distributed equally to all the distant parts of a huge tree. In other words, Brahma the creator is that aspect of the supreme transcendental Brahm (the ultimate Absolute Truth and cosmic Consciousness) that helped to reveal the existence of the latter when he unfolded the multicoloured and multifarious vast creation which is so infinite, varied and unique that it defies all definition, narration and imagination.

The visible aspect of the world is like the unfolding of the upper part of the tree consisting of the stem, fruit, leaves and flowers, while the root is like the Viraat Purush from whom the entire creation evolved. The seed which is the 'basic cause' of the entire structure coming into existence, including the root, is like Brahm. At a

slightly grosser level of evolutionary ladder, the three Gods of the Trinity, i.e. Brahma, Vishnu and Shiva would represent the trunk, the root, the flowers and the fruits depending upon how one interprets this analogy. For instance, Brahma made this visible creation possible and laid down its foundation; hence he is like the trunk as well as the root. Vishnu sustains and takes care of the world; hence he is like the root which absorbs nourishment and the trunk which distributes this nourishment to all the parts of the tree. Shiva is like the leaves, flowers and fruits because they lend beauty to the tree, are its essence and auspicious reward, and produce the seed from the next tree would be born along with the sign of the tree's final years of its life-cycle.

Since it is the root that is at the foundation of the entire edifice, it can also be compared to Maheshwar—the great God who is the anchor of everything in existence. Had it not been for the root, the tree would not have come into existence in the first place. The root anchors the tree and prevents it getting uprooted in the fiercest of storms. The tree draws its basic nutrients from the ground through the root. Without the root, there would be no tree. Even if the tree is cut on its upper side but its roots remain intact, it would regenerate itself.]

14. Vishnu personifies the auspicious objective or aim of doing anything. Brahma represents the actual process of doing deeds or giving effect to one's plans. And Maheshwar stands for the cause behind anything that happens, or occurrence of any circumstance that requires action to be taken and deeds to be done (14).

[Note—*Vishnu* signifies that the aim of any deed should be righteousness and auspiciousness. This aim ensures that the deed is done in a righteous and auspicious manner and subsequently bears good results and fosters all round happiness and goodwill for the creature in life. When this does not happen, the creation suffers. This is why when unrighteousness represented by the evil forces of creation personified by Demons are in the ascendance, Vishnu incarnates himself as one or the other incarnations to slay these Demons and restore order and the virtues of righteousness and auspiciousness in creation.

Brahma is the godhead that actually took necessary actions to initiate the process of creation of the physical world once the Viraat Purush had decided to do so. Therefore, Brahma symbolises the virtues of implementing decisions and taking appropriate actions so one's dreams and aspirations can be fulfilled. Brahma also created the vast repositories of knowledge in the form of the Vedas, indicating that it is not only sufficient to do deeds but more importantly to do them in the correct manner.

Finally, *Shiva* stands for the end of life, the culmination of one's efforts and ensuring a good end. Obviously, no one would want to ruin one's future and die in sufferings, pains and agonies. So Shiva is the cause which would indirectly propel a person to do things righteously and with due diligence. Again, one can reach an end only when there is a beginning, for without a start there cannot be an end. Therefore, Shiva indirectly is the 'cause of the beginning' so there can be an ultimate 'end'. Shiva inspires a person to make an auspicious beginning immediately with the avowed aim of finding eternal peace and happiness for one's self.

Shiva is the patron God of ascetics, hermits and mendicants because he symbolises a high degree of self-realisation, renunciation, dispassion, wisdom and enlightenment. When a man becomes enlightened and self-realised, he sees the futility of pursuing this world and decides to renounce it by taking the vow of Sanyas, or the life of renunciation and detachment from the material world. This is literally a new beginning, a new life for him. It is a life of awakening and self-realisation which leads to liberation and deliverance as opposed to the earlier life of delusions and entrapments.

Shiva is the patron God of death implying the end of all delusions and bondages to this body and the material world, and the beginning of a new life spiritual freedom marked by self-realisation and enlightenment.]

15. Dharma (the virtues of righteousness, auspiciousness, probity and propriety) personifies Rudra. The Jagat (the world, both the animate and the inanimate) is a symbolic representation of Vishnu. And Gyan (knowledge, wisdom and erudition) stands for Brahma¹ (15).

[Note—¹Dharma is like *Rudra* because it is very strict and uncompromising in its discipline. If any violation is observed in the implementation of the virtues represented by Dharma, such as the good virtues of righteousness, auspiciousness, probity and propriety, then it would immediately get angry and cast death and destruction upon the perpetrators of evil and misdeed. It is uncompromising in this aspect even as death symbolised by Shiva is unrelenting in its job. Here Dharma is a personified form of all the good virtues of Rudra.

The living world is like *Vishnu* because it throbs and pulsates with vibrant and colourful life. It sustains itself in a perpetual manner if it is auspicious and righteous. Noble virtues are always at a premium and given due respect even today in this world, indicating that Vishnu is hidden in this world imperceptibly because the world would not accept the unrighteous and corrupt, and it treats with disdain everything not auspicious and according to the righteous code of conduct and ethics. The visible creation is self-sustaining. Once having come into existence, it moves ahead on its own steam. The father takes care of his son when he is young, and the son takes of the father when the latter grows old and infirm. The world creates its own resources, makes discoveries and innovations as and when the need arises, it builds, destroys and re-builds again in an endless cycle of creation, sustenance and destruction. This ability of the world to sustain itself is a personified virtue of Vishnu whose mandate is to support the creation on a perpetual basis.

Finally, since *Brahma* had created the Vedas, the repositories of all available knowledge needed for mankind, he is regarded as a personification of Gyan meaning knowledge, erudition, sagacity, wisdom and awareness of the truth.]

16. Therefore, a wise and enlightened man who repeats the great Mantra ‘Rudra Rudra’ and remembers the great Lord is symbolically worshipping all the Gods and repeating their Mantras. This helps him to overcome the evil effects of all sins and misdeeds (16).

[Note—In the view of what has been expounded in this Upanishad, the Mantra ‘Rudra-Rudra’ would deem to include the divine Mantras of all the Gods of the Trinity—i.e. Brahma, Vishnu and Shiva. Much like OM which is the universal Mantra for the supreme transcendental Brahm, this Mantra ‘Rudra-Rudra’ is the universal Mantra for all the Gods combined.]

17. [Now the Mantras used in the process of invoking Rudra and offering worship to him are being described from verse no. 17 to 23.]

‘I repeatedly bow most reverentially to Lord Rudra representing the male aspect of creation (i.e. the Viraat Purush), and goddess Uma representing the female aspect of creation (i.e. Prakriti, Mother Nature)’ (17).

17½. ‘I repeatedly bow most reverentially to Lord Rudra representing Brahma the creator (symbolising divine knowledge because he had created the Vedas), and goddess Uma representing Vaani (speech, the dynamic aspect Brahma because his knowledge is expressed by speech and the spoken words)’ (17½).

18. 'I repeatedly bow most reverentially to Lord Rudra representing Vishnu the sustainer and protector of creation, and goddess Uma representing Laxmi, the goddess of material wealth (which is needed by Vishnu to carry on effectively his functions of sustenance and protection of this world)' (18).

18½. 'I repeatedly bow most reverentially to Lord Rudra representing Surya, the Sun God (symbolising the light of knowledge and enlightenment), and goddess Uma representing Chaaya (shadow, symbolising the darkness that prevails if something intervenes between the creature and the Truth)' (18½).

19. 'I repeatedly bow most reverentially to Lord Rudra representing Som, the Moon God (symbolising the most prominent and reassuring presence of the supreme Lord in the otherwise foreboding and dark world of ignorance and delusions represented by the background of the night sky), and goddess Uma representing the Stars (symbolising the presence of numerous Gods and Goddesses who are not able to eliminate the darkness of the night inspite of being so numerous in number, whereas the single moon representing one Brahm can do so)' (19).

19½. 'I repeatedly bow most reverentially to Lord Rudra representing Day (symbolising the divine light of self-realisation because one can see everything very clearly during the day time), and goddess Uma representing Night (because darkness of night symbolises Maya or delusions which is the other aspect of Brahm and has the opposite effect to that of the day which symbolises knowledge)' (19½).

[Note—Both the day and the night are the two aspects of the same Brahm. This verse is a clear indication of the fact that what appears to be 'dual' is actually the two sides of the same 'non-dual' entity. We can understand this phenomenon with the aid of a simple illustration. The earth rotates around its axis along with revolving round the sun. The former creates the day and the night, and the latter the seasons. Now, the appearance of day on a particular spot on the surface of the earth does not mean that it would undergo any fundamental change during the night, except for the absence of light and the lowering of temperature. No physical change has taken place on the surface of the earth; there is no change in its dimensions or constituents either in the day or in the night though the earth's contours appear to be different during the two phases. The same thing applies to the sky as well—the sky is always universally the same, but the day sky is very different from the night sky, and even during the course of the day it continuously changes its hues. The idea is that the external appearances are very misleading and not the real thing.

All the dichotomy and differences that appear in the world are due to delusions and ignorance of the reality and truth.]

20. 'I repeatedly bow most reverentially to Lord Rudra representing Yagya (a fire sacrifice or any other religious and auspicious activity done with sincerity and commitment as a noble activity), and goddess Uma representing Vedi (the altar on which the sacred fire is worshipped and sacrifices made)' (20).

20½. 'I repeatedly bow most reverentially to Lord Rudra representing Vahini¹ (the sacred fire element), and goddess Uma representing Swaha (the word pronounced at the time of making offerings to the fire; regarded as the wife of the Fire God)' (20½).

[Note—¹A related concept is the Vahini Yoga. The Vahini Yoga 'वह्नियोग' deals with the activation of the vital wind/air with the fire/energy of life. For it, various techniques, processes, postures and exercises have been prescribed in Yoga, the chief among them being the activation of the Kundalini by Pranayam. The 'fire' required to

heat and activates the 'Apan' wind and push it upwards comes from the 'Sun Chakra' or the 'Surya Chakra' (subtle energy center) located in the region of the navel. It is done by 'Surya Pranayam'. During this meditative practice, it is imagined that leaping flames are flaring up from the core of the sun symbolically residing in the navel of the Yogi, and these flames are virtually heating the Sushumna nerve (also called the pathway leading to Brahm) as well as the other vital winds present in the lungs, the heart, throat etc. By heating the lower end of the Sushumna nerve, which is akin to heating one end of a heating rod or coil, alongside the heating of the Kundalini and the Apan wind, the opening of this Sushumna nerve, which was up till now blocked, is unclogged and the subtle energy of the coiled Kundalini, which was hereto before trapped inside it, is released and pushed up by the Apan wind into the spinal cord through this Sushumna nerve where it rises up through this channel right up to the mind or the top of the head, mixing with it all other winds en-route, collecting all their impurities with it, much like the hot air above the surface of the earth developing into whirlwind and rising up into the atmosphere, taking up along with it the dust particles, dry leaves, twigs etc. as it goes up. This polluted wind is finally exhaled through the right and left nostrils during the process of Rechak. The rising of the Kundalini is similar to the rising of heated mercury in a thermometer. When the bulb is heated, the mercury shoots up. Here, when the Kundalini is heated, the energy trapped inside it rises up the Sushumna nerve.

Vahini Yoga is so-called because it stokes the latent fire energy lying dormant hitherto in the body of the spiritual aspirant by activating the vital winds, especially the warm Apan wind present in the lower end of the intestines, and utilizing its powerful force to stoke and activate the Kundalini, thereby heating it and releasing its subtle energy through the opening of its mouth covering the lower end of the Sushumna Naadi (nerve). This released energy then snakes up this Naadi and reaches the head, first at the root of the nose and center of the eyebrows and ultimately the top of the head at the point of the Brahm Randhra, the hair like slit on the skull, from which is finally escapes at the time of death of the ascetic, giving him liberation from the fetter of this body for ever.

Refer Yogchudamani Upanishad, verse no. 38 and 107 of Sam Veda tradition, and Dhyandindu Upanishad, verse no. 66-68 of Krishna Yajur Veda tradition.]

21. 'I repeatedly bow most reverentially to Lord Rudra representing the Vedas (the sacred body of divine knowledge), and goddess Uma representing Shastras (the scriptures such as the Upanishads and Purans that elaborate upon and explain the practical meaning of the Vedas and their philosophies)' (21).

21½. 'I repeatedly bow most reverentially to Lord Rudra representing Vriksha (tree), and goddess Uma representing Valli (branches and shoots)' (22½).

[Note—In this context, refer verse no. 13.]

22. 'I repeatedly bow most reverentially to Lord Rudra representing Gandha (fragrances and scents emanating from flowers), and goddess Uma representing the Flower itself' (22).

[Note—A flower is so much sought after because of its attractive fragrance. Even if the flower is not visibly visible, its presence can be determined by its fragrance. So, if one knows what the true meaning of Rudra is, he can determine what actually to expect from the world, or what is the 'truth' in this world.]

22½. 'I repeatedly bow most reverentially to Lord Rudra representing Artha (the essence and meaning of any thing; the secret and essential meaning of any body of knowledge without the awareness of which the knowledge itself is worthless and

useless; here symbolising the fact that the Supreme Being is the essence in this creation and is the only Truth worth knowing, and without which the creation would be worthless), and goddess Uma representing the Akshar (the letter that is the foundation of any language and the basis of words from which the entire language evolves symbolising the fact that once the Supreme Being created this world, the latter propagated on its own)' (22½).

[Note—The verse lays emphasis on the fact that the power of any text consisting of words formed out of letters lies on the proper understanding of its meaning. Mere 'letters' and 'words' would not give the desired results if one does not understand the meaning of what they intend to convey. Taken in a broader metaphysical perspective this verse implies that one would come to realise the supreme Truth only if one understands the esoteric meaning of what has been said in the scriptures. Similarly, a wise and enlightened man would see the Akshar, i.e. the imperishable, eternal, evergreen and infinite Brahm as the quintessential Artha or meaning and essence in everything in existence.]

23. 'I repeatedly bow most reverentially to Lord Rudra representing Linga (the image of Shiva in the form of a cylindrical structure raised above a circular platform), and goddess Uma representing the Peeth (the base on which this image is consecrated)' (23).

[Note—The concepts of Linga and Peeth have been elaborately described in Yoga Upanishads of Krishna Yajur Veda, viz. Yogshikha Upanishad Canto 1, verse nos. 131, 167-8, 170-175; Canto 2, verse nos. 5-11; Canto 5, verse nos. 8-12; and Dhyan Bindu Upanishad, verse nos. 27-28, 44-45. These two Upanishads appear as Chapters 21 and 15 respectively.]

24. In this way, I bow to Shiva and his divine consort Parvati separately as well as in his different manifestations as separate Gods and Goddesses, and offer my worship to all of them individually and jointly (24).

25. Wherever a man is, he can do Japa (repetition of Mantras) with these Mantra dedicated to Lord Shiva. Even a man accused of killing a Brahmin can be absolved of his crimes and forgiven if he repeats these divine Mantra while standing in water (of a river etc.) (25).

[Note—This is just to indicate the power of these Mantras, and not to actually mean giving blanket pardon for such heinous crime as murder!]

26-27. When one comes to truthfully realise and understand the secrets of the enigmatic and most esoteric Divinity known as Brahm who is the base and shelter of all that exists, who is untainted by and beyond the purview and reach of any kind of confusions, doubts, suspense and perplexities arising out the concept of duality, who is an embodiment of 'Sat-chit-anand' (truth, consciousness and bliss), who is incomprehensible by the mind and intellect as well indescribable by the faculty of speech, who is eternal and universal, and who is supreme and transcendental Sublimity personified—oh Shuk (a reference to sage Shukdeo who is hearing this discourse), it is only then that one is able to understand and become enlightened about all the other secrets of creation.

This is because there is nothing separate from Brahm in creation; there is nothing beyond Brahm, and there is nothing that is not Brahm (26-27).

28-30. There are two basic types of Vidyas (knowledge) that one should know about—one is called the ‘Paraa Vidya’, and the other is known as ‘Aparaa Vidya’¹.

Oh sage! The knowledge of the four Vedas such as Rik, Yajur, Sam and Atharva, and other forms of knowledge that come within the ambit of formal education such as the Kalpa (study of Vedic rituals), Vyaakaran (grammar), Nirukta (the exposition of the Vedas; commentaries on the scriptures), Chanda (poetry and its style of composition used in the scriptures), and Jyotish (astronomy and astrology based on mathematics and calculations)—all these come within the ambit of Aparaa Vidya. This is because they can be physically studied by anyone and expertise obtained in them by due diligence, high intelligence, steady concentration, constant practice and sincere perseverance. These are known texts and can be accessed by a sincere student. One can become expert in them and acquire fame and acclaim. They can be discussed, debated, taught and learnt. The Aparaa Vidya therefore relates to all types of knowledge except the one related to the Consciousness and the Atma. The latter is discussed below.]

On the other hand, the knowledge that enlightens one about the ‘true self’, the knowledge pertaining to the realisation of the Atma, the pure consciousness that forms this ‘true self’, is called the Paraa Vidya. [This is because it is not contained in any oral or written text. It has to come with enlightenment and realisation of the ‘self’ that obtained by sincerely putting into practice the essence of what has been learnt from the scriptures, and needs a lot of patience and deep insight. It is not restricted to literary expertise of the scriptures, and is beyond the scope of the Vedas though the latter teach about it. There have been numerous instances of great souls who had no formal education and initiation into the scriptures but were nevertheless most enlightened and self realised. The words of the Vedas can only help to show one the true thing, but that ‘true thing’ has to be experienced himself by one in order to truly understand about it. That is why it is repeatedly emphasised that once a person becomes self-realised he no longer needs to study the Vedas or perform any set of rites or conform to any set of rules. Once the aim is achieved, there is no longer the need of the vehicle that has brought one to one’s destination. Refer Krishna Yajur Veda’s Yogshikha Upanishad, Canto 1, verse nos. 4-5; Akchu Upanishad, Canto 2, verse nos. 41-41 ½; Avadhut Upanishad, verse nos. 15 ½, 18; Kathrudra Upanishad, verse no. 6.]

This essential entity called the Atma is super-natural, sublime, subtle and ethereal; it is supreme and transcendental; it is pure consciousness personified; it is the true self and identity of the enlightened man; it is Brahm at the macrocosmic level. [Refer verse nos. 10-11.] (28-30).

[Note--¹The words *Paraa Vidya* refers to that knowledge which is transcendental and beyond the normal field of knowledge that can be acquired in this mundane world by study; the knowledge which relates to the supreme ‘self’ or the pure conscious Atma; the knowledge of things that is beyond the range of perception and comprehension. On the other hand, *Aparaa Vidya* means just the opposite of the Paraa Vidya, and it refers to that body of knowledge which can be acquired by diligent study of the scriptures and other texts.]

31-32. That (the Atma at the micro level of creation, and Brahm at the macro level of creation) is neither physically visible nor can it be physically grasped. It has no names, lineage, form and colour. It has no physical sense organs such as hands, legs and ears etc. [31].

It is eternal, constant, perpetual and everlasting (Nitya). It is all-pervading, all-encompassing, immanent, omnipresent, almighty, steady, immovable and

magnanimous (Vibhu—an epithet applied to Vishnu and Shiva; the Supreme Being). It can go anywhere and lives everywhere; it is universal and there is no place that is inaccessible to it (Sarwagat). It is most microscopic and atomic in form and nature; nothing is smaller than it (Susuksham). It is without any faults, errors, shortcomings, blemishes and taints (Avyaya). It is the origin of all the elements as well as of all the living beings (Bhut-yoni).

Those who are intelligent, wise and enlightened as well resolute, steady and firm in their path and convictions (Dheer) see that supreme entity that is sublime and divine in their own inner self as their Atma, the pure and pristine Consciousness (31-32).

33. It is that universal and uniform Atma which is all-knowing and omniscient—for it knows the past, the present as well as the future besides knowing the inner thoughts of all (Sarwagyata), and it is an embodiment of all forms of knowledge that exist in this creation along with being their foundation and fount from where they sprout forth (Sarwavidyo). It personifies true knowledge, wisdom, erudition, enlightenment and skill of all kinds (Gyanmaye), as well as the grand virtues of austerity and penance (Tapa).

It is from such an astoundingly magnificent, eclectic and sublime Divinity (known as cosmic Consciousness) that this visible living world consisting of Annna (food) and its consumer (the living being who depends upon food for survival) have come into being (33).

34. This world which appears to be so real and true is present in this supremely magnificent and divine entity just like one imagines the presence of a serpent in a length of rope¹. [That is, it is out of ignorance, and delusions arising out of this ignorance, that one imagines the presence of the artificial and mortal world in Brahm which is infinitely true and non-artificial as well as imperishable and eternal much like imagining the presence of a snake in a harmless piece of rope and then building an imaginary aura of fear and horrors around it.]

But that divine and supreme entity is true and real (instead of being imaginary like the snake and perishable like the world). When one develops this wisdom and it gets firmly engrained in his inner self it is only then that the man attains the eclectic state of spiritual freedom and deliverance from all ignorance and delusions, which lead to his ultimate emancipation and salvation (called Moksha or Mukti) (34).

[Note--¹The concept of a *snake and a rope* is used as a metaphor to describe how lack of awareness of the truth leads an ignorant man to imagine that a harmless piece of rope is a vicious snake and instill in him a horrible fear of life. References of this concept—(a) Krishna Yajur Veda: Kathrudra Upanishad, verse no. 17; Yogkundali Upanishad, verse no. 79-80; Yogshikha Upanishad, Canto 4, verse nos. 1-2, 22; Tejobindu Upanishad, Canto 5, verse nos. 48-49; Canto 6, verse no. 77. (b) Shukla Yajur Veda: Niralamba Upanishad, verse no. 14.]

35. The only way to break free from the fetters that tie the soul of the creature to this ensnaring world of delusions, artificiality and miseries is by the means of Gyan (i.e. with the aid of truthful knowledge and wisdom about the spiritual reality of the soul, its quintessential divine nature, and the truth about the Supreme Being), and not by doing deeds (even the auspicious and righteous ones in the hope that they can help break the shackle represented by this world)¹.

In order to achieve this end (i.e. in order to acquire this true Gyan), one should approach a self-realised and wise Guru (moral preceptor, teacher and guide) in the

proper way to acquire this knowledge from him. The Guru should himself be well-versed in the scriptures (so that he can give proper and correct guidance and present a well considered and filtered version of them to the spiritual aspirant, instead of misleading him with wrong guidance and confusing him with contradictory advice, as that would be suicidal for the disciple), should himself have firm belief and conviction in Brahm, should himself be Brahm-realised, and should himself be extremely devoted and faithful to Brahm (because it is only then that he would have the necessary commitment, conviction and faith when he preaches about Brahm to his disciple) (35).

[Note—¹This is because deeds would be done in this world with the help of the gross body and their results would also appear in this world to be suffered from or enjoyed by the gross body. This body and the Atma, the soul, are different entities. The Atma is the pure conscious and the truthful ‘self’ of the creature, while the body is only a residence of this entity. So when the Atma thinks that one can find freedom by doing some kind of deed, it naturally has to depend upon the body because deeds in this gross world can only be done by the body using its sense organs. This involvement of the body would naturally have its consequences, the least of which is to make the Atma dependent on it, making the latter lose its much flaunted and much lauded virtue of freedom and independence. An Atma under obligations is bonded, and bondage of any kind can never give peace and happiness. This makes the deluded Atma living inside the body live like a prisoner inside a prison—it thinks that if it ever wishes to obtain auspicious end for it then it must take the help of the body to do good deeds so that the auspicious effects of these deeds would bless it (the Atma) with freedom. This fallacious conception makes it remain subservient to the body perpetually. So when the body suffers or enjoys the results of the deeds done by it, the Atma too gets involved; it also shares these sufferings and enjoyments. This vicious cycle is got rid of only when the Atma takes the shelter of Gyan—i.e. when it realises the ‘truth’ about its own self and the nature of its relationship with the body along with the fact involvement in deeds is a trap laid down by Maya, the maverick delusion creating powers of the Supreme Being designed to keep the creature involved in the affairs of the world so that the wheel of creation set in motion by the Lord himself keeps on rolling. That is why it is said that those who realise this great dilemma of creation are the fortunate ones whom the Lord himself wishes to give freedom and liberation from the cycle of birth and death by making them wise and enlightened. For the rest, the wheel continues to rotate!

An enlightened man understands that his true ‘self’ is the Atma and that it is eternally free, divine and auspicious, so where is the question of doing something to obtain these ends? The Atma is not a gross entity like the body, but the divine ethereal Soul that need not worry about finding freedom by doing any physical deeds to obtain emancipation and salvation. It must not forget that the very root of all its present predicaments is that it had allowed its self in getting involved in doing deeds in its past life that led to this present situation. So why should it repeat the same mistake?

It is to be noted here that this observation is open to misinterpretation. What it actually means is that one should do deeds with the correct wisdom and spiritual perspective. The very fact which is stressed here that spiritual liberation is possible by Gyan implies that one would be aware of the theory of how to do deeds and still ensure spiritual freedom from its shackles. Briefly, it is do deeds with total detachment from them and neither expecting any rewards from them, whether good or bad. This presupposes that a man is aware of the eclectic view of metaphysics that it is the gross perishable body that actually does any deed and either enjoys or suffers from their consequences, and not the pure ‘self’ or the Atma which is however the true identity of the wise man. Only ignorant fools think that it is their body which is

their 'self' and that this world is real and the true, and therefore they indulge in both of them as if that is the only thing for them to nourish and harbour.

So one need not run away from doing deeds, but rather inculcate the correct spiritual view in doing them. That way, a wise and enlightened man can benefit from both—he can fulfill his worldly obligations while remaining aloof and untainted from them much like the lotus flower that remains in a dirty pond but not a single drop of water sticks to it.

There are two terms used in the context of 'deeds'—one is *Kriti* and the other is *Karma*. '*Kriti*' refers to the act of doing, accomplishments, making an effort, performing an act. '*Karma*' refers to the work done or the deeds that are undertaken by a man. Both these terms are closely linked with each other and cannot be separated and understood correctly. If one does any deed, he is naturally taking some action. Whereas the term 'action' applies to the physical activity, the process of doing anything, the activity itself, the term 'deed' would apply to something someone has done, a notable achievement. An action is taken to accomplish success in one's endeavour, while the deed would describe in general terms the category under which one's actions can be classified—i.e. whether the action was good and auspicious, in which case we say that his deeds were good and he is remembered for his noble deeds, or bad and inauspicious in which case we say that his deed were so bad that he has left a scar on the society.

The word '*Karma*' generally refers to deeds done by a man, the actions he has taken, to act upon or implementing one's firm faith and conviction, commitment and dedication towards any entity or object which one adores, admires, honours or reveres. The word '*Kriti*' in the spiritual context with its various connotations refers to, inter alia, righteous deeds and actions involving self restraint, observance of strict codes of conduct and morality, and the ability to focus and concentrate the mind upon the supreme Truth and absolute Reality or Brahman while doing all the deeds or taking all the action in detached and dispassionate manner. One should be sincere and honest when he pursues any object or make efforts to obtain success in any enterprise, whether it is in the spiritual field or in the mundane worldly realm. Firm commitment, dedication, faith and singularity of purpose are the necessary ingredients for success in any action or deed. In other words, the '*Kriti*' of a man helps to determine the degree of '*Nishtha*' that he has. The way a man does anything will show how committed he is to his work—whether his heart is in it or not, whether he is doing it under duress or doing it willingly, how much faith and devotion he has in both the action as well as its consequential result or reward. Half-hearted and disinterested actions can't be hidden. That is why it is said that a 'man is known by his deeds or actions'.

The best spiritual path to be followed is not to shy away from doing the deed itself but to remain detached from it and its results. The deed is not in itself entangling but it is the notion of 'I' or 'me' that is the chief culprit. When the man thinks that 'he' has done anything, he is bound to be proud of good deeds and their results, and ashamed of bad deeds and their evil results. But this thought is erroneous in itself because of many reasons. First, a wise man knows that the deeds are done by the gross body which is not his 'self', as this 'self' is the pure consciousness known as the Atma residing in this body which is definitely different and separate from the body. Therefore the deed cannot be done by the 'me'. Second, all deeds are done in a physical gross world of material sense object that is artificial and illusive. Therefore, the deeds and their results are like the water in a mirage—artificial and illusive. Third, the results are also suffered or enjoyed by the gross body consisting of sense organs of perception and action, and not by the Atma. Thus, why should the Atma become overworked by something that does not concern it?

In brief, only as long as the person thinks that he is the 'doer' of deeds is he accused of doing it, but if he mentally remains detached and disassociated from them he is free from the deeds and their results; he can rightly claim that he has not done

anything. So, mental detachment, dispassion and non-involvement in any deed whatsoever is the clue of doing the deeds but remaining free from their consequences. It is the mind that is the cause of all attachments and involvements, and if the mind is properly reined in, the rest is easy to follow.

Another way prescribed in the scriptures is to do the deeds dispassionately and as a service to the supreme Lord or Brahm. When the deeds are done for the Master, there is no question of the doer having any right over the result just like the labourer who works in the field of his master has no right on the produce of his labour. He cannot say that since I have toiled so much, the harvest is mine. This would automatically create a psychological detachment from the deed because one has no expectation of either enjoying its fruits or suffering from its evil consequences, such as an abundant harvest or failure of crop in this present example.

The concept of 'deeds' is a central theme in many an Upanishads, some of which are as follows. The Adhyatma Upanishad of Shukla Yajur Veda tradition describes the concept of doing deeds and its effect on the spiritual liberation or bondage of the creature in fine detail in its verse nos. 49-60.

The Kathrudra Upanishad of Krishna Yajur Veda, in its verse no. 13 asserts that the supreme transcendental Brahm or the quintessential spiritual Truth of creation as well as Mukti or liberation and deliverance is not possible by doing various deeds in this mortal world. This same idea is endorsed in Rudra Hridaya Upanishad of Krishna Yajur Veda tradition, in its verse no. 35 which asserts that deeds or Karma do not provide the Atma of the creature with liberation and deliverance from this world but it is Gyan (truthful knowledge of the spiritual truths) that do.

The 'Karma Chakra' or the giant wheel of deeds and their consequences has been described in the Shwetashwatar Upanishad of Krishna Yajur Veda, in its Canto 6, verse no. 3. The three Paths followed by a creature according to the deeds done by him are referred to in Shwetashwatar Upanishad, 4/7. The Varaaha Upanishad of Krishna Yajur Veda, in its Canto 2, verse no. 48 describes how one can become free from the fetters created by 'deeds'. The Niralambo-panishad of Shukla Yajur Veda, in its verse no. 11-12 describes the concept of Karma. The Sarwasaar Upanishad of Krishna Yajur Veda, in its verse no. 6 describes the concept of how and why the creature becomes the doer of deeds.

These concepts and the fact that a creature's destiny depends upon the deeds done by him have been elaborately described elsewhere also in (i) Rig Veda's Kaushitaki Brahmin Upanishad, Canto 1; (ii) Shukla Yajur Veda's Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 33, 36, 5/10-5/11, 6/1/1-6, 6/2/2,14-16, etc.; Adhyatma Upanishad, verse nos. 57-58, 66; (iii) Sam Veda's Chandogya Upanishad, Canto 5, Section 3-10; Canto 7, Section 21; (iv) Krishna Yajur Veda's Taittiriyo-panishad, Valli 2, Anuvak 6; Katho-panishad, Canto 1, Valli 1, verse no. 20, and the whole of Canto 1, Valli 2 right up to Canto 2, Valli 3; Skanda Upanishad, verse no. 7; Kathrudra Upanishad, verse nos. 20-26.

What happens to ignorant people after death is explained in Brihad Aranyak 4/4/1. The Trishikhi Brahmin Upanishad of Shukla Yajur Veda tradition, in its Canto 2, verse nos. 23-26 defines what constitutes of true 'Karma Yoga'. The Mandal Brahmin Upanishad of Shukla Yajur Veda, 2/4/2-3 describes the philosophy of Deeds.]

36-37. The Guru should impart the eclectic knowledge that would enlighten his disciple about the oneness of the Atma and Brahm, called the 'Paraa Vidya'. [Refer verse nos. 28-31.]

A spiritual aspirant who is able to witness and experience the secret presence of the imperishable and eternal Brahm inside his own inner self (as his pristine pure and self-illuminated consciousness known as the Atma) is able to untie the great spiritual knot representing misconceptions, ignorance and delusions about the truth

and reality pertaining to his own 'self' as well as the rest of the world, and consequentially obtain freedom from its shackling effects. This helps him to receive the reward of spiritual freedom by way of realising the eternal essence of 'Shiva'—the imperishable and infinite bliss and ecstasy that comes with realising the eternal truth about the Atma and Brahm, the knowledge which itself is truthful, beautiful and auspicious, hence 'Shiva' in its nature, contents and essence.

Those desirous of reaching the ultimate fount of eternal spiritual bliss and ecstasy, the citadel of spiritual peace and tranquility, the pinnacle of unbound spiritual happiness and joys, should endeavour to acquire this knowledge and unfold this secret as described herein above (36-37).

38. The ethereal vibrations of the cosmos that resonates imperceptibly in the entire being of the living creature (in the form of the resonance of the divine Mantra OM¹ as revealed during meditation) is like the stringed bow, while the Atma (the consciousness and life factor in the body that enables a man not only to live but to live with intelligence, conscience, wisdom and enlightenment that would help him to hear this divine resonance of cosmic Consciousness in his inner self and personally witness the presence of Brahm inside his own self) is regarded as the arrow mounted on this bow². A wise and erudite man uses this to aim at Brahm (the supreme transcendental Truth and Reality of creation; the ultimate divine 'self' in the context of the creation as a whole; the Supreme Being who is the protector and guardian Angel of the spiritual aspirant; the ultimate spiritual goal of life that can give permanent liberation and deliverance to the soul from the endless cycle of birth and death).

Therefore, one should not be apathetic towards this spiritual goal and pursue it relentlessly, sincerely, and without any indolence or carelessness.

Only like a person who concentrates upon the target can ever hope to successfully pierce it with the arrow, only a sincere and diligent person who is steady and relentless in his spiritual pursuit can ever hope to reach and realise Brahm, and not otherwise (38).

[Note—¹The Mantra OM pertains to Pranav, the cosmic transcendental Consciousness known as Brahm. During meditation and contemplation (Yoga and Dhyana), OM is used as a universal Mantra to focus one's attention and harness the divine energy of the cosmic Consciousness. Like a kite riding a wind or a ship riding a high tide, the individual's atomic 'self' called the Atma rides atop the crest of the cosmic sound waves that the repetition of OM generates in his inner self to reach the top of the head, in the region called the Agya Chakra located between the two eyebrows where the Atma experiences an extreme sense of bliss and contentedness that makes it realise its true nature. As the repetition continues, the sound waves gather more energy and finally the Atma reaches the top of the head, in the region called the Brahm Randhra which is a hair-like slit in the skull (cranium) which opens up due to these cosmic vibrations and allows the Atma to escape from the prison of the body for ever. This is called the 'Kaivalya' Mukti or the final liberation and deliverance of the creature.

The entire process of how this comes about has been described in Yoga Upanishads. For instance, the Kshuriko-panishad, verse nos. 18-20, the Amrit Naad Upanishad, verse no. 27, the Yog Kundali Upanishad, Canto 3, verse nos. 12-17, the Dhyana Bindu Upanishad, verse nos. 103-106—all of them describe the concept of obtaining Mukti or liberation and deliverance by the Pran escaping through the Brahm Randhra.

The vibrations caused by the constant chanting of OM create such an ambience of tranquility that it completely overwhelms the spiritual aspirant so much so that he thinks of nothing else. This is like the surging waves of the ocean which just splashes

on the shore and drenches everything present there. Just like music is soothing for the nerves, the different notes and tones of OM massage the aspirant's nerves and calm him down. There are number of Upanishads that describe the divine value of OM Mantra and how it akin to the cosmic music played by the creator at the cosmic level. Some of them are the following—(a) Rig Veda—Naad Bindu Upanishad. (b) Krishna Yajur Veda—Taittiriya Upanishad, Valli (Canto) 1, Anuvak (sub-canto) 8; Amrit Naad Upanishad, verse no. 2, 4, 24-25, 31-32; Dhyan Bindu Upanishad, verse no. 2, 9-18 (which narrates how each letter of OM stands for different aspects of creation), 37, 102; Tejobindu Upanishad, Canto 1, verse nos. 1, 6; Yogtattva Upanishad, verse nos. 136-139; Brahm Vidya Upanishad, verse nos. 2-12, 69-71 ½ which narrates how each letter of OM stands for different aspects of creation; Varaaha Upanishad, Canto 5, verse no. 70; Shuka Rahashya Upanishad, verse no. 20 describes how OM is used for the purpose of ritualistic worship according to the Tantra philosophy involving Anga Nyas, Shandanga Nyas etc.; Akchu Upanishad, Canto 2, verse nos. 42-43 ½ describe how the three states of existence (waking, dreaming and deep sleep) and the three types of bodies (gross, subtle and causal) came into existence as manifestations of the three letters A, U and M of the word OM. (b) Shukla Yajur Veda—Taarsar Upanishad, Canto 2, and Canto 3, verse nos. 1-7; Hans Upanishad, verse nos. 6-17. (c) Sam Veda—Yogchudamani Upanishad verse no. 74-81, 85-88; Pranavo Panishad which has only 13 verses dedicated to OM. (d) Atharva Veda—Ram Tapiniopanishad, canto 3, verse no.5-9.

²The metaphor or analogy of the bow and arrow—refer also to Mundak Upanishad of the Atharva Veda tradition, Mundak (Canto) 2, section 2, verse nos. 3-4.]

39. The target represented by Brahm is present everywhere, the arrow represented by the Atma is also present everywhere¹, but it is only when the archer represented by the spiritual aspirant develops the same degree of highly evolved, highly wisened and highly enlightened views about the universality and uniformity of Brahm and Atma—that is, only when he sees 'non-duality' in creation and observes nothing but his targeted Brahm everywhere, seeing Brahm and nothing but Brahm in the entire creation—is he eligible and competent to reach his spiritual target of reaching and realising Brahm. In other words, it then becomes very easy for him to aim for and realise the ultimate Truth and Divinity in creation that is the beautiful, auspicious and eternal entity known as Shiva. [Here Shiva and Brahm are treated synonymously.] (39).

[Note—¹This is a highly evolved spiritual view in the field of metaphysics and marks the culmination of enlightenment. A true self-realised and Brahm-realised person is expected to have a universal view of the Atma, the view that the Atma or pure consciousness is a non-dual entity that pervades the entire creation uniformly, and that the individual Atma and the cosmic Atma known as Brahm are the same thing. The same consciousness resides in all the living beings as their individual 'self' or Atma as well as in the rest of the creation as the irrefutable and universal cosmic 'truth' or Brahm. When this wisdom dawns upon the aspirant, he need not go anywhere to search this Atma or Brahm because it is present inside his own being, in his own inner self. He need not offer worship to any separate God who lives in some far away heaven, as the supreme God is residing within himself. Thus, he sees Brahm everywhere in this creation, and this marks the pinnacle of spiritual achievement for the aspirant. This is indeed the great teaching of the Upanishads.

We can visualise how this comes about by a simple example from day to day life. When one wishes to hear a particular radio station, he has to tune in to the right frequency by tweaking the knob on his radio receiver. The radio waves of all the

broadcasting stations are omnipresent in the atmosphere and saturate it. When a person switches on the radio set, he hears so many of them, but he immediately neglects them and navigates through the dial to search for his favourite station. Similarly, in the case of Mantras too there are so many of them, and each relates to one aspect of Divinity personified as some God. But if one wishes to have access to the Supreme Being, the Mantra OM is meant for him. So it is only when the Atma focuses on OM that it can have access to the supreme Brahm. We cannot expect to hear station 'A' by tuning in to station 'B'!]

40. That Supreme Being whose divine abode is far beyond the reach of the Sun and the Moon because their light cannot reach it (or in other words, this abode is so magnificently bright and blindingly dazzling that the light of the sun and the moon fade in comparison to its brilliance, and therefore are utterly insignificant there)¹, where even the all-pervading and omnipresent wind or air element cannot go (i.e. it is far away in the deep bowls of the cosmos, much beyond the solar system and the world as seen by humans), and which is even inaccessible to the different Gods who are deemed to be eternal and all-powerful (implying that even the Gods cannot know fully about the Supreme Being)—the same Lord reveals himself when the devotee (spiritual aspirant) seeks him and remembers him with due devotion and sincerity.

The Lord then manifests himself for such an aspirant in all his pristine pure and gloriously illuminated divine form that is still invisible to others. [That is, the Supreme Being known as Brahm reveals himself as the self-illuminated Atma or pure consciousness that is present inside the inner self of the enlightened and self-realised aspirant which only he can witness. This Atma is invisible and imperceptible in the conventional sense of seeing and perceiving anything in this material world. That is why when Brahm reveals himself to the spiritual aspirant, no one else can see the Lord. It is very personal experience and it cannot be shared by others. The very fact that such Brahm-realised holy men effuse a divine glow in the form of a halo around them, and possess some unique traits and supernatural powers not otherwise possible in this world, delineates them from the rest of the ordinary persons.] (40).

[Note—¹This statement is intended to remove any confusion in the mind of the reader regarding where the abode of Brahm is. Earlier verses have cited the instance of the Sun and the Moon (verse nos. 3-4), the animate and the inanimate world (verse no. 9) and the three worlds consisting of the terrestrial world, the nether world and the heavenly world (verse no. 13) as the possible places where the supreme Brahm can be searched and found. Does it mean that Brahm is localized to these places only, because it creates the impression that the Supreme Being is to be found in the realm of the solar system only where the sun and the moon and the known forms of life such as those known to be present upon earth or seen from earth are present? Does it mean that the rest of the creation is devoid of Brahm? This doubt is sought to be removed by this verse. The solar system is merely like a hair on the body of the Viraat Purush, and there are countless such solar systems in varying degrees of development in his vast colossus body that has 'infinity' and 'fathomless-ness' as its dimension. Since the seers or sages who had envisioned the grand philosophy of the Upanishads had lived on earth, their conceptualization was based on whatever observations they could make from earth. But they were wise people, and so to remove any possibility of error creeping in the broader vision of things they had in mind, they first said something then modified what they said to encompass even those things that were beyond even their own imagination—to stress the point that their instances and metaphors should not be taken too literally but understood in the correct spirit. Words have their own limitations and they cannot butt and bound something that even the scriptures declare as being beyond description and definitions. In the present instance for example, the light of the Sun and the Moon do not reach the other

end of the universe to light it; there are numerous such solar systems scattered in the vast bosom of the universe. Each star is a sun in its own right, lighting its own realm, and if the 'Sun' is deemed to be the 'eye' or 'manifestation of transcendental Consciousness' then it obviously follows that these far-away stars or Suns are also Brahm revealed in all these forms.

Therefore, 'Brahm' is not limited to where humans or animal and plant life exists in the universe, but is present even in the farthest and the remotest corners of creation as far a field as the universe stretches, and even beyond it so that it forms the outer boundary of this entire creation. That is why the Upanishads treat Brahm as an equivalent to the sky element which has no limits and which is present anywhere wherever there is creation in any form imaginable. In fact the word 'sky' refers to the infinite 'space' which has no limits and boundaries! Refer—Krishna Yajur Veda's Brahm Vidya Upanishad, verse no. 40, Ekachar Upanishad, verse no. 12, Panch Brahm Upanishad, verse nos. 19-23, Varaaha Upanishad, Canto 2, verse no. 38 in this context.]

41. [Verse nos. 41-45 espouse the philosophy of uniformity and non-duality of the soul, the philosophy central to Advaitya Vedanta. It establishes why and how there is no difference between the Jiva, the living being, and Ishwar, the Supreme Being.]

In this tree represented by the creature's body, two birds live. One is the Jiva (the individual), and the other is the Ishwar (the supreme Lord). Out of these two, the Jiva enjoys and suffers from the consequences of the deeds done, while the Ishwar remains a neutral spectator or witness to that deed. [The Shwetashwatar Upanishad, Canto 4, verse nos. 6-7 uses this example of two birds to beautifully describe the relationship between the creature and the supreme Brahm. The metaphor of the tree is also used magnificently to describe this creation in Katha/Kathvalli Upanishad, Canto 2, Valli 3. Both these two Upanishads are part of this volume.] (41).

[Note—The *Jiva* refers to that aspect of consciousness that makes the creature think that it is the 'doer' of deeds, and therefore is liable for its results, both good and bad. Such a deluded individual thinks that the body is his 'self' and therefore what the body does is being done by 'him'. Such a person would naturally be affected by what is produced by the deed done because all actions have a reaction, and since he regards himself as the doer he must face the results as well.

On the other end of the thinking process is the eclectic view that the 'self' is not the body but the pure consciousness known as the Atma, and this Atma is separate from the body and it does not have anything to do with the deeds done by the body because the Atma is merely a temporary resident of the body. Besides this point, there is an element called 'conscience' in all individuals which tells them what is good and what is not. This conscience is the voice of the Atma inasmuch as it always tells the person about things which are righteous and auspicious and noble. Whenever the man indulges in worldly things or sinful acts, this conscience would warn him, even though for a fleeting moment, that the path he has chosen is not going to be conducive for his long-term good. This voice of the Atma, so-called, is the voice of the Ishwar referred to here in this verse. In other words, the consciousness revealing itself as the conscience is the *Ishwar*.

There is a very fine and almost imperceptible difference between the terms Ishwar and Brahm. While the word Ishwar generally refers to the supreme Lord of creation worshipped as a God by his devotees, the term refers to the cosmic Consciousness that is the 'soul' of this Ishwar. This 'supreme, cosmic Consciousness' is called Brahm; it is the ultimate Truth and the quintessence of everything of any worth in existence. In the individual creature this Brahm resides as his own 'self' or Atma. Therefore, Brahm is Ishwar because the former is the Lord of creation, and

Ishwar is Brahm because it is Consciousness personified in its macrocosmic revelation. Practically, they can be used synonymously.

Since the Atma is a manifestation of Brahm and the sovereign residing inside the body of the individual, it is also called the Ishwar residing inside the heart or the inner self of the creature. This view is proved by the fact that the sublime and subtle Atma shows characteristics special to Brahm, the Ishwar, the Supreme Being, such as its eternity, imperishability, self-illumination, wisdom, enlightenment, all-pervading and all-knowing abilities etc.—qualities that the gross body lacks. This is affirmed in verse no. 44 below.

Therefore, this 'Ishwar', the resident Supreme Being or Brahm in the form of the conscious Atma, does not do anything and remains neutral towards the deeds done by the 'Jiva', the individual who thinks that the body is his 'self'. Thus, the former (Ishwar) is merely a witness to the deeds while the latter (Jiva) is neck-deep in them.

It would be noted that the difference between the Jiva and the Ishwar lies in the level of erudition, enlightenment and wisdom by which things are perceived by the individual person. An ordinary man thinks that he is known as an individual because of the body, that the body is his 'self' and identity, and therefore he is subjected to all the characteristic features and qualities associated with the body—i.e. that he would die, that he takes a birth, that he suffers from this and that, that he does deeds and therefore must either enjoy the rewards of these deeds or suffer from their consequences, that this world and its enchantments are real, are meant for him and therefore must be enjoyed, and so on and so forth.

On the other end of the spectrum is the enlightened view that one's true identity is not the body but the soul or the pure conscious Atma which is the ethereal spirit that is imperishable and eternal, that this spirit neither takes a birth nor dies, that it is uniform and stable under all circumstances, and therefore it neither gets agitated or excited, nor depressed and dejected by circumstances or as the result of deeds, that it is untainted, untarnished and pristine pure, and therefore not affected by the various faults associated with this murky world which can only influence the external body and not its resident Atma, and so on and so forth.

The body is regarded as a tree on which both these birds live to indicate that the same body can lead to spiritual entrapment for one person while providing emancipation and salvation to another. The same body is used by a pervert man to commit horrendous sins and torment others no end, and a holy person uses the body to alleviate their sufferings and serve humanity selflessly. The same body can be a snare trapping the Atma, and it can also be a means of its liberation and deliverance. If a man gets involved with the world and uses his body as a means to gratify himself, he would be shackled to it, while if he uses it to study the scriptures and perform righteous deeds in an auspicious manner without getting involved in them and their results, he would be using the body to achieve liberation and deliverance. Even Yoga Upanishads emphasise the fact that meditation and contemplation is an important instrument by which the Atma can find its liberation, called 'Kaivalya Mukti' by doing various Yoga exercises, and these can only be done with the help of the body. So, in brief, it is the way one handles anything that is of greater importance rather than the thing itself.]

42. The Maheshwar (the great Lord; the truthful 'self' representing Brahm; the Atma as a representative of Brahm) does not enjoy or suffer from the consequences of deeds done by the Jiva. The former is merely a witness of everything. [That is, the sublime Atma does not have to suffer from what the gross body does. It just watches silently in a dispassionate way the deeds of the body.]

In fact, the difference between the Jiva and Brahm is artificial and is created by Maya—i.e. by ignorance-incited delusions about one's true nature and essence.

This knowledge itself is like an illumination that can remove this dark shadow of Maya¹. [Refer verse no. 44.] (42).

[Note--¹That is, basically there is no difference between the individual creature and the supreme Brahm because the true identity of the individual is his eternal and enlightened Atma, the pure consciousness or soul residing in his gross body, and not the external perishable body that is gross, inert and inane to the extreme. This Atma of the individual creature is the microcosmic counterpart of the cosmic Atma that is the essence and the principal entity of creation known as Consciousness, and therefore both are the same. What pervades in the entire creation also pervades in one's own body; what gives life to the rest of the creation also gives life to the individual creature. This is the considered eclectic non-dual view of the Upanishads. It is out of ignorance of the fact that the creature thinks that the supreme Lord is somewhere else in the heaven and has to be sought outside his own self. It is out of ignorance of the Truth about one's true 'self' that a creature thinks that he is a Jiva, a living being with a gross body, who is different and separate from Maheshwar, the great Ishwar, the supreme Lord of creation. This delusion and false conception is the result of Maya.

Once the creature becomes enlightened and wisened of this fact, once he realises that the difference between himself and Brahm is artificial and illusionary because his 'true self' is not the gross body but the ethereal cosmic Consciousness known as the Atma that is universal and uniform everywhere in creation, and that his own Atma is a microcosm of the omnipresent cosmic Atma that uniformly pervades in each form and each unit in creation, he immediately begins to see that there is no fundamental difference between his 'true self' and the supreme 'Self' of creation.

Hence, this knowledge that the dichotomy created between the Jiva and the Ishwar is an artificial creation of Maya is an awareness that would immediately lift the veil of delusions created by ignorance of the 'truth and reality'. It is like the illumination provided by the light of a candle of knowledge that cuts through the darkness of ignorance and the attendant phantoms and ghosts stalking the creature and horrifying him no end.

Refer verse no. 43 below that explicitly clarifies this point.]

43. Just like the Ghatacash and Mathakash (the space present inside a hollow pot, and the space inside the building of a monastery respectively) are imaginary and artificial segregations or partitions of the same Akash (the sky and its infinite stretch of space) which is fundamentally immutable, indivisible, uniform and universally all-pervading and all-encompassing by nature, the Supreme Being known as Brahm too is imagined to have two separate existences as Ishwar and Jiva. In fact, this artificial and imaginary distinction between the two manifestations of the same non-dual and immutable Supreme Being (Brahm) as the Ishwar and Jiva is due to ignorance about the truth and reality (43).

[Note—This is because both the Jiva and Ishwar are two sides of the same coin—one is at the gross and micro level of creation, and the other is at the sublime and macro level of creation, inspite of the fact that both have the same consciousness living inside them. That is, whereas Ishwar is the all-powerful, ethereal, macrocosmic, all-pervading and all-encompassing gross body of Brahm which has no physical barriers, the Jiva is the microcosmic gross body of the same Brahm as the individual creature with limitations of the gross body. The Ishwar is the nearest analogue to Brahm inasmuch as it is eternal, infinite, sublime, subtle, invisible, macrocosmic, universal and all-pervading in Nature, while the Jiva is mortal, gross and limited to his gross body. Both have the pure consciousness known as the soul or the Atma central to their existence. In the case of Ishwar, it is 'cosmic Consciousness', and in the case of the Jiva it is 'individual consciousness'. So the difference between the duo—the Jiva and Ishwar—is only based on an erroneous perception of the truth. Once the correct

perception is taken into consideration, the dichotomy vanishes—and this is called enlightenment and self-realisation. That is, if the ‘truthful’ identity of both is ‘consciousness’ and this consciousness is Brahm, then it follows that Jiva and Ishwar are the same. In other words, a self-realised individual who has known his true self is like an Ishwar personified.]

44. In fact, the consciousness personified as the Atma is nothing but Shiva (the auspicious beautiful Truth itself) personified. It is the level of spiritual wisdom and enlightenment that whether or not one distinguishes between a Jiva and Ishwar; actually there is no basic difference between them. [This is because the Jiva has a predominance of delusions and ignorance in it making it unaware of its glorious and divine true ‘self’, whereas Ishwar is the pinnacle of wisdom and enlightenment who knows this fact. Therefore, if the Jiva also becomes wise and enlightened then he would too become one like Ishwar. In this context, refer verse no. 42.]

If there was a real difference between them then their basic conscious nature would be compromised with. [Since a living being has consciousness in it, it is not inanimate like rock or tree, and therefore it is different from the inanimate forms of life in this creation. The difference between a Jiva and a tree has been explained by sage Yagyavalkya in Brihad Aranyaka Upanishad of Shukla Yajur Veda, in its Canto 3, Brahman 9, verse no. 28/1-7. But a lowly fallen man is not different from those who are wise, enlightened and noble except for the degree of these auspicious virtues possessed by them. Both have the same body showing the same functions, both take a birth and die, both reproduce and eat and drink, but here the similarity ends. The mental and intellectual setups of both are as varied as the sky and the earth. It is the level of erudition and wisdom or Gyan that decides whether a person treats himself as a Jiva or as Brahm personified as his Atma or pure conscious ‘self’.] (44).

45. The apparent difference between the two categories of consciousness present in the Jiva and the Ishwar is dependent upon the level of their Gyan, i.e. their spiritual awakening, wisdom, enlightenment and conscience factor. The difference is due to the dominance of gross negative values in the former, and the sublime and noble values in the latter. So to say that ‘the pure consciousness’ has two types of existences—one as a Jiva and the other as Ishwar—is imaginary and due to ignorance of the absolute reality and quintessential truth about consciousness. And this truth is the fact that the ‘consciousness’ in reality is a uniform, universal, immutable, non-divisible and non-dual entity. Therefore the apparent dichotomy is due to the veil of ignorance about its immaculate pristine pure nature that surrounds the creature like a dark cloud of ignorance and delusions, leading it to believe that the Jiva (the ‘true self’ of the living being as his pure consciousness known as the Atma) is separate from the supreme Brahm (who is the supreme ‘Self’ and cosmic transcendental Consciousness) known as Ishwar, the supreme Lord of creation.

The very fact that one sees two entities in what is essentially non-dual and immutable itself shows the low level of intellectual development and the deluded mind of the creature that sees this difference. [It is like the case of hallucination when one sees two images of the same object with two eyes whereas the two eyes ought to be seeing a combined three-dimensional single image of that object. It’s like seeing many images of the sun or the moon in many pans full of water and thinking that there are as many suns or moons in the sky as the number of images seen. Refer Amrit Naad Upanishad of the Krishna Yajur Veda, verse no. 12 which precisely describes this phenomenon.] (45).

46-47. The uniformity and oneness of the consciousness can be arrived at by intelligent application of the mind so that it can sift through and analyse available evidence and make intelligent deductions from it by applying wisdom, logic and the elimination process.

Once this uniformity and non-dual nature of the consciousness is established (i.e. once the wise man knows that the only thing of worth in whatever that exists in this world has the same basic nature and essence known as 'consciousness', that there is no duality and dichotomy in the world in the real sense because its basic worth lies not in its gross form but in the consciousness present in it, and that whatever duality that apparently exists is due to total stupidity and ignorance of the truth) the wise and enlightened man becomes free from all sorts of mental confusions and emotional agitations. He no longer remains tied to the shackles of delusions and ignorance¹.

He finds access to the eternal fount of extreme beatitude and felicity that comes with obtaining the essence of or knowing the truth of 'Shiva' which is non-dual and only one of its kind² (46-47).

[Note—¹The intrinsic value of a golden ornament lies in the quantity and purity of its gold content rather than its external form. Would anyone pay the same amount of money for a decorative piece of jewelry if he knows that it is not gold, but brass? Both gold and well-polished brass look almost alike to a naïve person; even the quality and purity of gold is not possible to be judged easily by a lay person. But all his confusions and doubts about the true value of the ornament are removed when its value is judged by an expert gold-smith. Likewise, 'Gyan' (truthful knowledge, wisdom, erudition, information and enlightenment) tells a man what the real value and worth of the world is, what the 'reality and truth' of this world of uncountable sense objects and astounding charms is, what spiritual value does it have? It is then the man becomes 'enlightened' and sees the reality behind the fascinating external façade of pompous artificiality and illusive charms. He realises that everything is perishable and transient, and therefore of no actual and eternal value. He discovers that the only thing of any spiritual worth in this world is the 'consciousness' much like the gold in the ornament cited above. It is the true secret of life and existence; it is eternal and imperishable. When this happens, the darkness of delusions and ignorance are dispelled, and instead light of enlightenment shines through to illuminate the entire existence for the spiritual aspirant.

²The word Shiva refers to the eclectic divine virtues of auspiciousness, righteousness, beauty, piety, holiness, renunciation, wisdom, erudition, enlightenment, purity and truth. When a person becomes wise enough to rise above the mundane and lowly existence of remaining engrossed in worldly affairs of the sense objects and self-gratification, a selfish life which lacks broadness of vision and long-term welfare of the soul, when he gets to see the 'truth' in the light of wisdom and enlightenment, it is only then that he begins to see things from a higher pedestal, with a broader perspective of existence and the truthful nature of the soul and its future, and thereby develop a panoramic view of existence. It is like seeing earth from space when all the warts on the earth's surface—the mighty mountains and the meandering rivers, the green fields and the dry deserts, the artificial boundaries that separate nations and states—vanish. What is seen is a beautiful blue ball hanging from nowhere in the vast dark void of space. One then begins to wonder why men fight each other for a yard of land and cut each others throat for a gram of gold!

Thus, a wise man begins the search for the 'truth and reality' by studying the scriptures and consulting wise men. He trains his mind to gather all information and then analyse it to intelligently arrive at conclusions that are not based on hearsay, whims and misconceptions but on sound ground and reasoning. He understands the essence of the fundamental tenets of the scriptures and sees the eclectic,

quintessential and undeniable spiritual ‘truths’ encoded in them. He applies this learning in practice and realises their true worth along with discovering who he himself actually is. He then becomes ‘Shiva’ personified; he has discovered the ‘Shiva’ principle, or the grand irrefutable Truth of creation. He has accessed the magnificently grand virtues that are the hallmarks of divinity and holiness which are collectively called ‘Shiva’.]

48. The supreme divine entity (Brahm) is the ultimate Truth and pure Consciousness that not only uniformly pervades in this entire creation but is also the base and foundation of this creation; it is the support and succour of this entire creation; it is where this creation finds its final resting place in peace.

Wise and enlightened men become free from all sorrows and miseries (i.e. they become restful and peaceful) by realising the truth of the eclectic statement ‘I am that supreme Divinity known as Shiva or Brahm personified’¹ (48).

[Note--¹Here the word ‘I’ refers to the Atma and not the gross body of the man, and the word ‘divinity’ refers to the Supreme Being represented by Brahm, the transcendental cosmic Truth and Consciousness as well as Shiva who is an embodiment of such grand eclectic virtues as auspiciousness, righteousness, holiness, divinity, renunciation, wisdom, erudition, enlightenment, purity and truth. Such wise men have come to the conclusion that their ‘true self’ is as glorious and divine as the supreme Divinity and Truth itself, and thus they become free from all sorrows and perplexities created by not knowing their high pedigree. Now they would no longer have to run after some distant God in order to worship him for his blessings, or worry for their death and what would happen to them after death as they have realised that they, in the form of their Atma, are basically immortal and eternal like the supreme Brahm, and as auspicious, truthful and holy as Shiva. They are not concerned with pursuing the material objects of the world any longer, and whatever comes their way are gladly accepted by them to sustain life happily and contentedly while they live in this world. Therefore there is no cause for anxiety and frustration, or for any ill-will and hatred and jealousy. They are fully contented and fulfilled. They might be living in a physical world surrounded with miseries and pain, but are so detached from it internally that they remain totally unaffected by anything pertaining to the world just like the case of the lotus flower living in a dirty pond remaining unaffected by the filth and muck that surrounds it. It’s indeed a life of spiritual Utopia.]

49. Only those persons who have cleansed their inner self of all taints and blackening soot created by Maya (representing all sorts of delusory and ignorance-based conceptions and misunderstandings pertaining to the actual reality and truth) are able to see the reflection or image of the Supreme Being in their inner self. This image is as glorious as its principle who has his own self-created body (i.e. who does not live in some other body like the creature’s Atma which lives in another gross body when it takes birth in this world), is self-illuminated, and is the universal witness and observer of everything in this creation (which implies that he is present everywhere, inside and outside of everything, at the same time, and also in all phases of time such as the past, the present and the future).

Therefore it follows that those who are covered by the veil cast by Maya and tainted by its evil shadow of deceit and illusions can never hope to see this glorious Divinity shining in their inner self (49).

[Note—It is like the case of seeing the image of the sun or the moon in a mirror. If the mirror is clean, the image would be perfect, and the dirtier or the more tarnished the mirror is the more unclear and distorted would the image be.]

50. A wise and enlightened ascetic who is truly self-realised and knows the true nature and form of his Atma (as described herein above) has obtained spiritual maturity, and for such an ascetic there is no going anywhere. He is deemed to have found liberation and deliverance for his soul while he is still alive, and even after death he does not have to go anywhere else as his Atma simply dissolves and merges with the supreme Atma of the cosmos present everywhere in this creation¹ (50).

[Note--¹That is, he does not go to any heaven or take another birth in a higher rung of creation. For him the heaven, which is the abode of the Supreme Being, is located in his very own 'self' where his Atma resides. He does not take any birth because he comes to know that the Atma is eternal and imperishable, and therefore the question of it first dying and then taking a new birth does not arise. Besides this, he knows that the Atma does not do any deeds and neither is it involved in the deeds done by the body. His Atma remains free from the consequences of these deeds, the primary cause for one having to take any new birth according to the principle of deeds and their consequences which compels a creature to take another birth in order to enjoy or suffer from the unrequited results of the deeds done in the previous life.]

51. Even as the sky does not go anywhere or comes from anywhere (because it is present universally and uniformly everywhere), the wise and self-realised person who has known the truth of the Atma as his 'true self' also does not have to go anywhere or come from anywhere. [That is, he neither dies and goes to heaven or hell, nor takes another birth for the simple reason that the Atma is universal, uniform, eternal, imperishable, infinite, all-pervading, omnipresent and steady as the sky element.] (51).

52. An exalted and self-realised sage, who is wise and enlightened enough to know for certain who the Supreme Being known as Brahm is, has the spiritual grasp of the Truth and Reality and therefore is established in his own 'self' which is Brahm personified. Hence, he becomes as divine and sublime as the Sat-Chit-Anand Brahm, i.e. he becomes a living embodiment of such glorious virtues as Truth, Consciousness, and Bliss and Ecstasy unbound. In brief, he becomes one like Brahm himself.

This is what this Upanishad affirms. This is its teaching. Amen! (52).

-----Shanti Paath-----

-----*****-----*****-----

Chapter 27

Yog Kundali Upanishad/Yogkundalyu-panishad

The Yog Kundali Upanishad/Yogkundalyu-panishad, as the name suggests, is dedicated exclusively to Yoga—its exercises, its practice, its pitfalls and precautions, its spiritual benefits, and how it can lead to one's liberation and deliverance from this trap-like perishable body as well as from the cycle of birth and death. It has three Cantos. It is one of the main Yoga Upanishads and come under the category of the revealed ones— as it was revealed by the patron God of Yoga himself, i.e. by Lord Shiva, to the creator Brahma (refer Canto 3, verse no. 1). It was also preached by Shiva to sage Gautam (Canto 1, verse no. 3). It has three Cantos.

Canto 1 deals with the concept of breath control, called Pranayam, and explains its various forms along with the Aasans and Bandhas that aid in activating the spiraled subtle energy center in the body, called the Kundalini, that had hitherto been lying dormant in the body in order to harness its latent spiritual energy. Amongst the interesting things narrated here are the four types of Pranayams (viz. Surya Bhedan, Ujjaayi, Shitali and Bhastrika), the three types of Bandhas (Mool, Uddiyan and Jalandhar), and the detailed process of kindling the dormant Kundalini fire.

Canto 2 elaborately describes a special meditative technique called 'Khechari' which bestows mystical powers upon its practitioner. It empowers him with certain unique abilities such as the ability to float or fly in the air.

Canto 3 describes the successful culmination of Yoga and its spiritual rewards—viz. self-realisation and Brahm-realisation, the submergence of the self in the supreme Self, the enlightenment about the pure consciousness known as the Atma, and the resultant eclectic and spiritually exalted state of having achieved Mukti—liberation and deliverance—from this body as well as the world.

Other relevant Upanishads of this Veda dealing with Yoga are—Yogtattva, Yogshikha and Varaaha.

-----Shanti Paath-----

The meaning of this Shanti Paath is given in Appendix no. 1 of this volume.

Canto 1

1. The reason why the mind is so undecided, restless, fickle and unsteady that it cannot remain concentrated on anything for long and continues to jump from one object to another, remaining always in a state of flux, are two—viz. (a) Vasanas (natural, inherent and inborn passions, desires, yearnings and lust pertaining to the gross organs of the body and the gross sense objects of the material world which a creature carries down to this present life as a baggage from his past life) and (b) Samir (the wind or air element, here referring to the vital winds called Pran that keep the body active and restless much like the air inside the balloon; when the body is restless the mind too would be restless because the mind is directly affected by the body and its sense organs).

If a person is able to control anyone one of them, the other is automatically controlled (1).

[Note—The various *Vasanas* in a person, i.e. the inherent desires and wishes, the latent passions and hidden yearnings that he has vis-à-vis the material world and its sense objects, inspire and propel him to do things in this world that would satisfy them. They manifest themselves as his Vrittis or natural urges, inclinations, tendencies and temperaments. For instance, if a man wishes to become a literary scholar and acquire name and wealth on this account in this life but fails to do so due to some reason, this unrequited desire would not die with the death of the body but would be carried over to the man's next life as his unfulfilled desire. This would create in him an overriding desire for knowledge in the new life that he has got as a result of so many other factors. So he would have the necessary inborn aptitude, natural intelligence and mental skills along with the urge and drive for knowledge that his sibling would probably lack though both have the same biological parents.

This explains why two brothers or sisters vary so dramatically in their nature and habits as well as in their mental and intellectual development, and why a child often shows traits quite the opposite of the ones present in its either parents. The secret lies in the fact that the child's 'true self' is the Atma which had acquired this new body due to the cumulative effects of so many factors related to its past life, such as the deeds done by the individual in its past life and their cumulative consequences, the unfulfilled desires and aspirations that he had, his earlier Vasanas (worldly passions, desires, yearnings etc.) and the resultant Vrittis (inclinations, habits, tendencies) that he has carried over to this new life, and so on and so forth.

Since the body is only a medium for the Atma to carry out its desires, and the body is able to perform any task only as long as the vital winds present in it allow it to function and carry out its designated duties, it follows that as long as there are Vasanas, the *Samir* (i.e. the vital winds or Pran present in the body) is forced to remain active so as to enable the creature to fulfill these Vasanas with the help of the body. Since the *Samir* is responsible for keeping the body active so that the individual can interact with the world to satisfy his list of Vasanas, it follows that the former cannot rest as long as the creature has Vasanas in him.

Interacting with the material world of astounding charms and fascinating sense objects create a new set of Vasanas for them. This is in addition to the baggage of desires and yearnings carried over from past life. Involvement with this world and attachment with the body in the erroneous belief that the world is the real thing, that it is meant to be enjoyed and lived to the full, and that the body is a person's true self and identity, creates a new wave of Vasanas. Constant interaction with the world makes the creature aware of newer opportunities and attractions of the material world, and this stokes the fire of Vasanas.

The natural corollary is that if the Vasanas are controlled, there would be no need for the body to remain active and be an active participant in the affairs of the mundane world of material sense objects that are by nature entrapping and creators of numerous problems for the creature. This translates into the *Samir* being put under control.

Again, since interaction with the world of stupendous material charms and full of sense objects that has a natural tendency to attract the individual towards themselves, an active *Samir* results in creation of fresh Vasanas.

In other words, Vasanas and *Samir* are inter-related; they work in close coordination. As such, if one is vanquished, if one of them is controlled, the other would naturally submit it's self. For instance, if a man has no desire for gratifying his sense organs, he would pay scant attention for the charms of the material sense objects of the world, and this lack of interest or Vasanas would calm his restlessness which is indicative of the calming of the Pran or *Samir*.

Keeping a safe distance from the pleasures of the sense objects and the comforts offered by the material things of the world would help eliminate a burning desire to acquire them, and then worry about their retention and enhancement. Since acquisition of material things of the world and satisfying the urges of the sense organs of the body needs deeds to be done and actions to be taken, once a man overcomes his Vasanas he automatically gives his body rest, which translates into the *Samir* become calmed and quietened. If the *Samir* is calmed down and willfully controlled, the body would be calmed down and lose its natural habit to be restive, which would mean that it would no longer be obsessive about the thoughts of the world which gratifies its sense organs, and would instead accept whatever comes its way with a great degree of equanimity and dispassion. It would no longer yearn for sense gratifications and attempt to indulge in the enjoyment of the material comforts and pleasures of the world which however is intrinsically deluding and entrapping. Thus, the individual is able to avoid creation of new Vasanas.]

2. Out of the two, it is better and easier to first conquer and control the Samir (vital winds called Pran that reside inside the body of the creature). [This is because once the Pran is controlled, once the body stops its natural restlessness and its organs stop their outwardly run in pursuance of the objects of the material world that lure them constantly with their irresistible charm, it would be very easy to overcome the Vasanas—the inherent desires for acquiring and enjoying the enticingly charming sense objects of the world, the various aspirations and yearnings for worldly fame and wealth, the natural tendency to appease the organs and gratify their carnal urges etc.]

There are three methods for obtaining control over the Pran, i.e. doing Pranayam or breath control exercises of Yoga successfully—(a) Mitaahaar (control over what is eaten by eating moderately and correctly), (b) Aasan (various sitting postures of Yoga), and (c) Shakti Chaalan (activating the subtle energy centers in the body, such as the activation of the Kundalini, and making them upwardly mobile along with the vital winds of the body, especially the Apan wind) (2).

3-4. Oh Gautam (name of a sage belonging to the lineage of the enlightened sage Gautam)! Listen, now I shall tell you about the first method—viz. being vigilant about what is eaten, along with the proper method of eating that is conducive to one's all round welfare. [That is, food plays a very important role in success of Yoga. The stress is on regulated diet—both in its quality and its quantity, as well as the proper way of eating food that is conducive to all round health—both physical and spiritual.]

A wise spiritual seeker and a practitioner of Yoga should eat soothing food that is non-irritating, non-stimulating and has a calming and relaxing effect on the body, invigorating it and helping it to remain healthy and agile. Such foods include eatables that are sweet and lubricating. He should not eat more than a half of the capacity of his stomach. [That is, he should not eat more than absolutely necessary, and definitely avoid overeating or indulgence in food. The food should fill only half of the stomach, and the next quarter is to be filled with water, while the last quarter is to be left empty.]

This is the correct and proper way to eat which would be good for the spiritual aspirant. In fact, this is regarded as the food eaten on behalf of Shiva or an offering to Shiva¹.

Now I shall tell you how to conquer the Pran. For this, there are two main Aasans—viz. Padmasan (lotus posture) and Vajrasan (the strong and invincible posture which is as inviolable and potent as Vajra, the strong and invincible weapon used by Indra, the king of Gods) (3-4).

[Note--¹This is because Shiva resides in the body of the creature as his truthful Atma, the pure consciousness called the 'self' of the individual creature. The food eaten is regarded as an offering to this resident deity just like offerings are made to the patron deity by putting them in the fire pit during the formal fire sacrifices. The food eaten by the aspirant is similar to this formal offering because just like the fire of the sacrifice that burns the offered food and reduces it to ashes, the food eaten by the aspirant is also burnt or digested in his stomach and its energy extracted to nourish the resident Atma. The food eaten helps the 'self' to maintain a healthy life and gives one the necessary energy, strength and stamina to remain active and productive in life. Medically also it is an established fact that over-indulgence in food is very injurious for health. It not only shortens one's life but also makes the body riddled with numerous problems besides creating drowsiness, lack of attention and lethargy. Eating slowly helps each morsel of the food eaten to be properly chewed and mixed with digestive juices in tongue before it reaches the stomach. This not only gives a

sense of satisfaction from the food eaten but puts so much the lesser load on the digestive organs. Eating fast and in a hurried fashion is never medically advisable.

If we draw a parallel from the way offerings are made during the formal fire sacrifice we would note that each offering is followed by a pause when Mantras are pronounced before the next offering is made to the fire pit. This gives the fire sufficient time to burn the previous offering before accepting the next round. From practical point of view, this helps the fire to remain kindled with sufficient vigour and heat to devour the whole lot of offerings, for had the latter been dumped in to the fire pit in large quantities then either the fire would have been pre-maturely doused or the major quantity of the offerings would have remained un-burnt. The pause for Mantras is devised to ensure that neither of these happens. The same logic applies to the food eaten by a man. If the food is eaten slowly, one not only enjoys it to a greater extent but it also prevents over-straining the digestive organs which would become weak if the practice of eating fast and in large gulps becomes a routing affair. Another benefit of slow eating is that a lesser amount of food is fulfilling; it prevents over-eating.

The food eaten is to be regarded as an offering to the resident deity inside the body, which is the Atma representing the cosmic Shiva principle, and therefore should be given the same respect and sanctity as shown for the offerings to Gods during a fire sacrifice.

This great importance and superior value of this symbolic 'internal fire sacrifice' that is done by making offerings to the Divinity residing in one's own self as the pure consciousness or Atma has been espoused and explained elsewhere in other Upanishads also, viz. (i) Avadhut Upanishad, verse no. 7; and (ii) Pran Agnihotra Upanishad, verse nos. 21-22.

The eclectic spiritual view that Lord Shiva lives in the body of the spiritual aspirant has been described in detail in the Yogshikha Upanishad of Krishna Yajur Veda tradition which has a number of verses dedicated to this symbolic worship of Lord Shiva in the form of the Lingam—viz. Canto 1, verse nos. 72, 167-168; Canto 2, verse nos. 6, 8-14, 20; Canto 3, verse nos. 1-15; Canto 5, verse nos. 2-5, 5-16 (as abode of Shakti); Canto 6, verse no. 33; and the Brahm Vidya Upanishad of Krishna Yajur Veda, verse no. 80 which describes the Shiva Lingam symbolically present in the body. The Yogshikha Upanishad describes the human body as a holy city or pilgrim site where the Atma is the Lord, or where Lords Vishnu and Shiva have their abodes along with their respective divine consorts Laxmi and Shakti. The relevant parts are Canto 1, verse nos. 165-168, and Canto 5, verse nos. 2-5. This Upanishad, in its Canto 1, verse 72 describes the body as the palace where the Lord known as the Atma resides.]

5. The Padmasan is basically to sit in an erect position, cross-legged, so that the sole of one foot rests, facing upwards, on the thigh of the opposite leg. This posture of meditation helps one to overcome all sins and their evil effects (5).

6. The Vajrasan is to sit in a posture such that the body is ram-rod straight, i.e. the neck, the head and the spine are in a straight line. Then the left leg is bent inwards at the knee joint and turned backwards so that the heels press against the 'Mool Kandha' (the genitals). The right leg is similarly bent in and its heels placed above the heel of the left leg (6).

[Note—This Aasan is usually used done with a slight variation—instead of putting the right heel on top of the left heel which together press the genitals, they are placed side by side below the genitals. This is a far more convenient posture than the one describes above. Everything depends upon the ability of the practitioner. This is also the sign of Siddhasan.]

Refer Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse no. 84 also in this context.]

7. The main center of the cosmic dynamic energy in the body is known as the Kundalini¹. A wise and expert practitioner stirs it and activates it, thereby unleashing its hitherto dormant energy and easing it up (by means of various Yoga exercises) so that it rises from its location at the lower end of the body to reach the high point in the body located between the two eyebrows. [This is the location of the so-called 'third eye of wisdom and enlightenment' because once this subtle energy reaches this point, the aspirant begins to experience the ecstasy obtained by spiritual awakening and coming closer to the cosmic vibrations called Naad that constantly resonates in his mind and entire being but was hitherto not discerned by him due to lack of proper tuning of his mental faculties. This area of the body is called the 'Agya Chakra' and corresponds to the cerebrum of the brain.]

This is called 'Shakti Chaalan'—or activating and moving the subtle cosmic energy that is hitherto present in a latent and dormant mode inside the body of the aspirant (7).

[Note—¹The *Kundalini* is located at the base of the spine and is so-called because it is in a spiral form. This coil-like center of subtle cosmic energy normally lies in a dormant state. By doing Yogic practices, the stupendous energy trapped in its coils can be released by the unplugging of its mouth which opens into the 'Sushumna' nerve. This energy then rises up the spinal cord and ultimately reaches the top of the head. The Yogi who practices this Kundalini activation, called 'Kundalini Jagran', experiences brilliance and dazzle unmatched by any other experience. Since it requires a lot of willful effort and energy to make this happen, and an activated Kundalini helps the spiritual aspirant achieve success in his meditation and contemplation on the one hand and providing sufficient energy to his Pran or vital life forces present inside the body to enable the pure consciousness known as the Atma to experience extreme bliss and ecstasy that comes with 'self-realisation', the process is called 'Shakti Chaalan'—or activation of the hidden energy of the body for the aspirant's spiritual upliftment.

The process of activating the Kundalini has been elaborately described in the book 'The Serpent Power' by Arthur Avalon & Sir John Woodroffe.

The Upanishads that deal with Kundalini and its activation are the following—(a) Krishna Yajur Veda's Yog Kundali Upanishad, Canto 1, verse nos. 7-8, 43-46, 65-74, 76, 82-84; Dhyanbindu Upanishad, verse no. 66-69; Yogshikha Upanishad, Canto 1, verse nos. 82-139; Yogtattva Upanishad, verse nos. 81-84. (b) Sam Veda's Yogchudamani Upanishad, verse no. 36-39.]

8. There are two main ways to activate the Kundalini—(a) Saraswati Chaalan (by using the power of knowledge and expertise to accomplish the task of activating the Kundalini, because 'Saraswati' is the patron goddess of knowledge), and (b) Pran-rodh (meaning control of the vital winds called Pran that are present inside the body by doing Pranayam and other Yoga methods).

By practicing Pran-rodh (Pranayam), the coiled Kundalini is straightened out (i.e. it becomes uncoiled, or loses its rigidity and stubbornness, thereby releasing its trapped dynamic cosmic energy that was hitherto present in a subtle form and was lying dormant and untapped) (8).

9. [Verse nos. 9-18 describe what is known as 'Saraswati Chaalan' in Yoga parlance.]

Let me first tell you about Saraswati Chaalan¹. Ancient scholars used to call this Saraswati as 'Arundhati'² (9).

[Note—¹The Yoshikha Upanishad, Canto 5, verse no. 23 says that the *Saraswati* Naadi rises from the Naadi Chakra located in the lower part of the body and goes up

to the tongue, thereby controlling the function of speech. That is why it is designated as 'Saraswati', as this Goddess presides over this function.

Basically, the Saraswati Chaalan involves doing Pranayam or breath control exercises, the two Aasans called Padmasan and Vajra Aasan, and uncoiling of the Kundalini and enabling its subtle energy to enter the Sushumna Naadi with the aid of the Saraswati Naadi and the vital winds called Pran located in the lower parts of the body.

The word 'Saraswati' refers to knowledge, erudition, wisdom and sagacity along with their relevant skills and expertise. This verse implies that a person who has embarked on a spiritual journey and plans to do Yoga to realise the ultimate Truth of existence and become enlightened about himself should first become well conversant with the theoretical aspect of the metaphysical knowledge pertaining to this field. He should be fully acquainted with all the pros and cons of Yoga, all its intricacies and complexities, before actually practicing it. Half-baked information and knowledge, or misconceptions and confusions of any kind, no matter how small and insignificant, would be more dangerous for him than not stepping on this path at all. This is because Yoga is a highly technical field which requires great expertise, resilience and patience. A wise man is one who gathers all background information and prepares himself well in advance before actually embarking on an adventurous journey to the unknown and un-chartered territory. He moves slowly and cautiously, testing his ground, his preparedness and his aptitude. If he lacks any virtues, he should first inculcate them, and practice hard and with sincerity. Yoga is not a summer holiday camp!

The Saraswati Chaalan can be translated as 'activating the power of wisdom, knowledge, erudition and information as a precursor to attaining success in Yoga, or any endeavour for that matter, and a launch pad for the spiritual journey of the aspirant that enables him to attain a state of self-realisation when he can experience the presence of cosmic energy and consciousness within his own self, realise his true potentials, and become truly enlightened'. It involves getting fully acquainted with all the different steps of Yoga, such as the crucial 'Pran-Rodh' or control of the vital winds mentioned in verse no. 8 above. Since no success is possible in any field with the backing of knowledge that is technically correct, updated, precise and practical, the importance of invoking Saraswati, the patron Goddess of these eclectic qualities and intellectual assets, is too evident to be emphasised or highlighted. It enlightens the aspirant about the pitfalls, how to overcome them and what precautions are necessary to pre-empt them, what are the landmarks on this journey and how one judges one's success, which is the correct path to follow and how to walk on this path, what is the truthful goal and how best to realise it, and so on and so forth. Thus, Saraswati Chaalan basically prepares the spiritual aspirant for the arduous journey ahead. See note to verse no. 17 of this Canto 1 also.

This philosophy of the Saraswati Chaalan also requires the spiritual aspirant to exercise the greatest of restraint over what he speaks because Saraswati is the patron Goddess of this faculty, and second, it envisions the activating of one's dormant subtle spiritual energy and harnessing it for obtaining bliss and ecstasy of conscious awareness of the pure 'self' made possible by following the disciplined system of Yoga.

²*Arundhati* was the most erudite, sagacious and wise wife of sage Vashistha, the moral preceptor, guide and teacher for the line of kings of Ayodhya in which Lord Vishnu manifested himself as the famous incarnated divinity known as Lord Ram around whom the well known epic Ramayan is built. She was the daughter of Prajapati Kardama and his wife Devahuti. Sage Atri's wife Anusuiya was her sister, and sage Kapil was her brother. Her famous son was sage Shakti. She was a preacher and a well known scholar of the scriptures in her own right, and was no less enlightened than her husband Vashistha.

Her glory and virtues have been immortalized by believing that one of the distant stars is her manifestation, and this star is named after her as 'Arundhati Nakshatra'. It is the star called Alcor belonging to the Great Bear group. It is a very dim star and rarely visible, but its importance lies in the fact that all newly wed Hindu couples are obliged to view it as it is considered auspicious and a bestower of good fortunes to them. Since it is poorly visible to the uninitiated, the couple's priest gradually guides them to it by first pointing to the brighter stars nearby and then gradually guiding them to this star. This process is called 'Arundhati Darshan Nyaaya'. It has great symbolic value—because it implies going from the gross to the subtle, from something that is very evident and appears to be the real thing but isn't to something that is not so evident but is indeed the real thing, from the known to the unknown. In philosophy it implies arriving at a definite conclusion and reaching one's sought-after goal by using logic, intelligent deductions and analysis of all available information.

Ancient scholars honoured Arundhati and acknowledged her superiority in wisdom, knowledge and erudition by calling her Saraswati, the patron Goddess of wisdom, erudition, speech and knowledge. In other words, she was a living image of all the virtues that this Goddess Saraswati was famous for; she personified Saraswati.]

10. At the time when one breathes through the Ida Naadi (i.e. the left nostril) during the course of Pranayam, one should steadily sit in the meditation posture called Pranayam (verse no. 5). By doing this practice diligently, the Kundalini would be activated by itself in a natural way (10).

[Note—The Yogshikha Upanishad, which is Chapter 21 of this volume, describes the process of Pranayam in stepwise detail wherein the breath is passed through one nostril at a time.

The word *Naadi* literally refers to a tubular duct present inside the body through which all the vital forces of life travel from one point to another and keep the body alive, active and healthy. It is through the Naadi that the vital winds known as Pran flow; it is through them that blood flows; it is through them that senses travel from the sense organs of the body to the brain and from the brain to all the corners of the body; it is through the Naadis that various juices and fluids of the body are secreted and made to reach their targeted areas. Even if one Naadi is damaged, the body suffers.

But in the context of the Kundalini activation, the word Naadi refers to the central nervous system passing through the spinal cord.]

11. Then that Naadi (here referring to the area of the Kundalini in the body which is the waist area and the base of the spinal column from where this Ida Naadi originates) should be wrapped by a length of cloth that is twelve fingers-width long and four fingers-width broad (11).

[Note—The Gheranda Shahita and the Hath Yoga Pradipika (3/113) also mention this wrapping. While the Gheranda Sanhita prescribes that this cloth should be white and soft, and then the rest of the body should be smeared with ash of the fire pit, the Hath Yoga Pradipika says that this cloth is not a physical wrapping of cloth but implies that this area where the Kundalini is located, i.e. the Mool Kanda area, is approximately of this size and is naturally covered or wrapped around by the sky element.]

12. The thumb and the fore-finger should be used first to firmly clasp both the nostrils and shut them tightly. Then the practitioner of Pranayam should do Rechak and Purak (exhalation and inhalation respectively) alternately through them as convenient to him¹ (12).

[Note--¹That is, first one nostril is used to exhale by closing the other, then the process is repeated through the second nostril. The entire process of Pranayam

consisting of three stages—viz. Rechak or exhalation, Purak or inhalation, and Kumbhak or retaining the breath inside the body for a given time—is described elsewhere in other Yoga Upanishads as well, such as the following— (i) Shukla Yajur Veda = Trishikhi Brahmin Upanishad, 2/53, 2/92-120. (ii) Sam Veda = The entire Canto 5-6 of Jabal Darshan Upanishad; Yoga Chudamani. (iii) Krishna Yajur Veda = Brahm Vidya, verse nos. 21-22, 66-76, Dhyan Bindu, Yoga Tattva, Yogshikha and the present Yoga Kundali Upanishad.

The Patron Gods of Pranayam have been enumerated in Dhyan Bindu Upanishad of Krishna Yajur Veda tradition, in its verse no. 21 which says that the three phases of Pranayam have three patron Gods. That is, the Purak phase (in which breath is inhaled) has Brahma the creator as the patron God; the Kumbhak phase (in which breath is held inside the body) has Vishnu the sustainer and protector of creation as the patron God; and the Rechak phase (in which the breath is exhaled) the patron God is Shiva or Rudra.

The benefits of Pranayam have been enumerated in Yogshikha Upanishad, Canto 1, verse nos. 91-99, as well as in Yogtattva Upanishad, verse no. 44-46, 53-55.]

13. This Ida Naadi ought to be kept activated—i.e. the process of breathing through the left nostril by closing the right nostril should be done for a period of two Murhuts¹. At the same time, attempt is to be made to simultaneously pull up the Sushumna Naadi a bit from the Kundalini² (13).

[Note—¹*Murhut*—This is a time measurement and applied for a short period of time. It is approximately a period of time equivalent to 48 minutes, or 1/30th part of the day consisting of 24 hours. Therefore, the day has 15 Murhuts and the night also has 15 Murhuts.

²That is, a conscious effort is made to exert a pull on the Sushumna Naadi so that the trapped energy of the Kundalini is sucked upwards. This Sushumna Naadi is the duct or nerve that passes through the center of the spinal cord from its lower end right up to the head.]

14. With this method, the Kundalini is activated and its energy sneaks into the Sushumna Naadi through its lower opening and begins to gradually move upwards. Simultaneously, the various vital winds called Pran present in the various parts of the body begin to enter the Sushumna as soon as its lower end is opened by the activating of the Kundalini (14).

[Note—The Kundalini keeps the lower end of the Sushumna Naadi blocked. When the former is heated by doing Pranayam and other Yoga Aasans and Bandhas, it opens this mouth. The trapped vital winds inside the body which cannot escape, because all escape routes have been closed by means of the various Bandhas, Aasans and Pranayam, now enter this only opening left for them—i.e. they enter the Sushumna Naadi. This is the central nerve passing through the spinal column.]

15. By exerting upward pull and creating sufficient pressure on the vital winds by constricting the throat and pulling in the muscles of the abdomen, these vital winds are constrained to move upwards towards the chest and even reach higher in a gradual manner. This is the effect of the Saraswati Chaalan process—i.e. it is the combined effect of Pranayam whereby exhalation through the Ida Naadi or the left nostril creates a natural upward pull on the Pran¹ along with the simultaneous and conscious pulling up of the vital winds from the lower part of the body through the channel of the Kundalini and Sushumna Naadi (15).

[Note—¹This phenomenon is commonly observed even in day-to-day life. The chimney above the fire-place in the house expels hot air and creates a suction action which generates convection currents in the air. As a result, hot air of the fire-place

which is lighter rises up through the chimney and cool air from the outside is sucked into the house through the various openings such as windows, doors and ventilators. The same phenomenon applies here as well. When breath is expelled through the nostril, it creates a vacuum inside the body, and since other openings such as the anus and mouth are closed, the vital winds trapped inside the body and heated due to this incarceration are then sucked up. Since the only opening open to them is the Kundalini and the lower end of the spinal cord represented by the Sushumna Naadi, these winds force themselves into these channels and make their way upwards. Their movement upwards is felicitated also by the fact that they are heated, as hot air is lighter and has a natural propensity to move upwards.]

16. When this is accomplished, the Pran or vital winds can be made to rise up higher still from the region of the chest by doing Rechak or exhalation through the Surya Naadi (i.e. the right nostril—by closing the left nostril during this stage) simultaneously with constricting of the throat muscles (16).

[Note—When verse nos. 15 and 16 are read together, we determine two distinct phases here. The first phase is narrated in verse no. 15 when the Pran (the vital winds) is pulled up from the lower end of the abdomen up to the region of the chest by using the Ida Naadi. The second phase involves lifting or pulling up of the Pran still higher up from this region to enable it to reach the upper part of the body, i.e. the region of the throat and the forehead.]

17. That is why a person (who is desirous of activating the Kundalini and harnessing its latent cosmic energy for the purpose of obtaining the ‘high’ of conscious awakening) should practice this process of invoking the blessing of the patron goddess of speech and sound, i.e. Saraswati, for the fulfillment of one’s desires¹.

An aspirant who does this successfully is able to free himself from all sorts of diseases. [That is, the exercise of Pranayam gives him good health, and not only spiritual bliss.] (17).

[Note--¹Since the process of Pranayam involves the control of the passage of breath through the nostrils from where the basic nasal sounds are produced which are not only symbolic of the presence of life and awareness in the body but also form the basic vowel sounds of the Sanskrit language. Besides this, throat and chest muscles are also constricted during Pranayam so as to prevent the escape of the Pran through the mouth and generating sufficient pressure so that the breath can cause the vocal cords to vibrate and create sound—refer verse no. 49 of this Canto 1. This combined effort is how ‘speech’ is created, of how the spoken word is generated.

Since spoken words, especially the ones done with finesse and wisdom, are indicative of a person’s knowledge, scholarship, erudition and expertise not only in the language spoken but the subject he is talking about, they help one to express himself and are indispensable instruments for dissemination of knowledge and information. Therefore, this method of pulling up of the Pran to enable one to speak is called Saraswati Chalan because it activates the function of speech of which Goddess Saraswati is the patron deity. Verse no. 28 ½ of this Canto clearly emphasises that Pranayam clears the throat of accumulated mucous, thereby felicitating clarity of speech and a properly tuned speaking apparatus.

Since acquiring knowledge is a painstaking affair and requires concentrated effort of all the faculties of the body over long periods of time and usually undertaken by sacrificing the natural urge of the body and the mind to indulge in pleasures and comforts of the sense organs and the material world, the activation of the Kundalini and release of its stupendous reserves of energy gives the necessary support and impetus in this auspicious endeavour. Speaking effectively and loudly, articulately and coherently so that others can learn from one’s own knowledge, as is done by

teachers, public speakers and preachers, requires physical stamina and energy, the activation of the Kundalini takes care of this aspect as well. Since knowledge and learning, speaking and understanding are personifications of the grand virtues symbolised by Goddess Saraswati, the entire phenomenon of activation of the Kundalini is named after her.

There is another way of looking at this thing—the Saraswati Naadi is the mainstay of the effort of pushing up the energy of the Kundalini into the Sushumna Naadi. It not only provides the necessary impetus but also enables the aspirant to experience the progress of this energy upwards and observe the gradual enhancement of the level of conscious bliss and ecstasy as the process advances. Since knowledge is central to anything requiring technical skills and expertise as this exercise of Yoga does, it is deemed to be under the domain of the Goddess who presides over knowledge, i.e. Goddess Saraswati. See note to verse no. 9 also.]

18. By this ‘Shakti Chaalan’ practice¹, the practitioner of Yoga is able to get rid of diseases such as excrescence (an abnormal outgrowth of the body, such as tumors etc.), dropsy (inflammation of the body and filling of water in tissues), enlargement of the spleen, and all other diseases related to the stomach and abdomen (18).

[Note—¹*Shakti Chaalan* is a dynamic practice of Yoga which involves such exercises as Pranayam, sitting in the two postures of Padmasan and Vajrasasan, sucking in the vital winds called Pran and pushing them up through the Kundalini into the Sushumna Naadi along with the Kundalini’s subtle energy, and then directing them upwards till they finally reach the head region. This process is called Shakti Chaalan because of two reasons—viz. one, it activates the hitherto dormant cosmic energy in the body that was trapped inside the Kundalini, and two, it requires a lot of energy, stamina, strength and self-control to successfully accomplish it. ‘Shakti’ itself is indicative of this aspect as it stands for the virtues of power, strength, stamina, vitality, energy and dynamism.]

19. [In the following verse nos. 19-62, the process of Pranayam is described in great detail.]

Now I shall narrate the process of controlling the Pran (vital winds present in the body such as Pran—breath which moves in the upper part of the body, and Apan—the wind that passes down the intestines and remains located in the lower part of the body). This process is called ‘Pranayam’.

Pran is a broad term that is used to define the wind or air element that moves inside the subtle space of the body. When this inherently mobile wind or Pran is made to become static, when its mobility is controlled and it is literally put on hold, then this process is called ‘Kumbhak’¹ (19).

[Note—¹The word *Kumbhak* comes from ‘Kumbha’ meaning an earthen pot or pitcher. Just like the air inside this closed space is static and unaffected by the wind blowing outside the pot or pitcher, the practitioner of Yoga is able to build calmness inside himself inspite of the turmoil and upheavals of the outside world in which he lives if he is able to control the vital winds inside his body by holding them inside his abdomen by doing the process of Pranayam in a reenactment of the air of the pot or pitcher becoming static inspite of the storm raging outside.]

20. Kumbhak is said to be of two types—viz. ‘Sahit’ meaning ‘including, inclusive, or incorporating; with the help of others, or aided and accompanied by other means’, and ‘Keval’ meaning ‘only, without any match, unparalleled, independently, and without any aid’.

The Sahit form of Pranayam should be done till the time one is not able to become an expert in Yoga and able to do Keval form of Pranayam successfully (20).

21. The Sahit Kumbhak has four types—viz. Surya Bhedan, Ujjaayi, Shitali/Sheetali and Bhastrika (21).

[Note—The four types of Kumbhaks described here have been explained below as follows—(a) Surya Bhedan in verse no. 24-26; (b) Ujjaayi in verse nos. 26-29; (c) Shitali in verse no. 30-31; and (d) Bhastrika in verse no. 32-39.]

22-23. [These verses describe the location to be selected for doing Pranayam.]

One should select an isolated place which is conducive to spiritual practices and relatively comfortable to sit upon (i.e. there are no stones and pebbles or any other thing that can prick and cause constant annoyance and bodily discomfort because this diverts the attention from Yoga by creating diversion), there are no grass and shrubs around (from which insects such as mosquitoes, grasshoppers etc., and reptiles such as snakes, snails and worms etc. can cause any disturbance), and there is no fire, water and cold in the immediate surroundings (i.e. the place is not too hot nor damp or chilly). The place should be calm, quiet and serene as well as generally free from all pollutions.

The aspirant should select an even ground which is neither too high nor too depressed or low but is comfortable in a general way (i.e. the ground should be reasonably even and smooth, and should not have sharp ridges, furrows and grooves as found in ploughed fields, hill or mountain sides, rocky plains etc.), and then spread his meditating mat there. He should sit on it and take the 'Baddha Padmasan'—the lotus posture (described in verse no. 5 above) in which the two legs are closed in from the knee joints so that the soles of the foot rest one on the top of the other in front of the groins, and the open palms of the hands are placed on the soles in such a way that they rest upon each other and point upwards. Thus, the palms would be roughly placed just in front of the navel. The body is held ram-rod straight, with the buttocks, the spine, the neck and the head in one straight line.

Sitting in this posture, he should practice the Saraswati Chaalan process as described in the previous verses (as described in verse nos. 9-18 above) (22-23).

24. The air should be drawn in gradually through the right nostril and held in the abdomen. Then it is exhaled gradually thorough the left nostril called Ida (named after the Ida Naadi that goes up to here) (24).

25. In the process of 'Kapal Shodhan'¹, the phase of Rechak, i.e. the phase when the air held inside the body is exhaled, is done slowly. [That is, the breath is not expelled in a hurry or forcefully snorted out, but gradually exhaled in a controlled fashion.]

This helps to eliminate the four types of diseases associated with disturbed Vaat (winds or air) in the body, as well as those ailments that arise from worms (25).

[Note—¹The word *Kapal Shodhan* literally means the cleaning, scrubbing, decongesting or purging of the head of all impurities that clog its subtle spaces. Here it has a physical significance as the process of Pranayam is able to clear any congestion that is present in the mucous linings of the head and restores its original decongested form so that it can think clearly, cogently, coherently, analytically and intelligently, and function in its prime format. The head is freed from general heaviness, congestion, headaches, drowsiness, listlessness and fatigue that are usually caused by numerous diseases that block the Naadis or different nerves and veins that supply impulses and blood to the brain. This is a every day experience that when one suffers from cold and catarrhs, or disturbed stomach or metabolism, or any other disease that cause general discomfort to the physical body, the first to suffer is the

man's mind and its ability to work properly. Since Pranayam has an overall cleansing effect on the body by not only de-clogging and scrubbing clean the blocked Naadis (nerves, veins, arteries, ducts etc.) present in the body but also rejuvenating and kindling afresh the body's dying and smouldering fire of life and vitality that has become overburdened and is on the verge of being doused due to numerous factors, it is natural that the brain feels revived, refreshed, invigorated, revitalized and restored. Since the brain is the central processing unit of the body and its controller, a rejuvenated brain directly has a reviving effect on the body. In other words, the aspirant gets a new lease of life and feels re-invigorated and refreshed.

From the perspective of metaphysics and spiritualism this Kapal Shodhan refers to the removal of all doubts and confusions that shroud the mind and prevents it from thinking clearly, intelligently, analytically, rationally and coherently. It helps the mind to become alert and agile so that it can peep behind the external façade of the world to see the hidden 'truth and reality' of existence. An alert and active mind is able to use all its faculties to the best of their abilities; it helps the spiritual aspirant to think intelligently and analytically so that he can separate the chaff from the grain. A mind restored and rejuvenated by Pranayam is an important aid in one's spiritual attainment; it acts as a comrade-in-arm.

It is just like the case of a king having a wise and intelligent Chief Minister as his advisor as opposed to one who is advised by a lax, lazy, incompetent, stupid or drunk advisor. The mind is inherently intelligent and wise; it is its indulgences, misuse, overburdening with trash, wrong company and polluted environment etc. that make it dull and stupid and lose its astounding abilities and glittering virtues. It becomes dull, dark, tainted and corrupted, being shrouded in delusions and ignorance, it generally begins to hallucinate. How can such a mind be an able and wise advisor for the spiritual aspirant? On the other hand, an alert and refreshed mind would naturally be freed from all these fetters and regain its freedom and ability to think and advise the aspirant wisely and intelligently. This is a clear and practical benefit of Pranayam and Yoga in general terms.]

26-29. The above exercise (of verse no. 24-25) should be done repeatedly. This is also called 'Surya Bhedan' Kumbhak [25 ½].

[Now, the second form of Kumbhak called 'Ujjaayi' is being described.]

While keeping the mouth closed, the air (breath) should be drawn in through both the nostrils (as opposed to drawing it in through only one nostril at a time) in such a manner that it produces a subtle sound of hissing or rustling while being drawn in. This air (breath) should then be filled in and confined to the region of the throat and heart [26 ½]. After holding this air inside the body as described here, it should be slowly exhaled through the left nostrils called Ida [27].

This helps to eliminate the heat of the head region (and clears the way for the mind to work properly, along with the removal of congestion in the head causing headaches, heaviness, drowsiness, forgetfulness, lack of alertness, and other ailments of the head region), clears the throat of cough, rekindles the subsided fire of the digestive organs (i.e. restores hunger and appetite by making the digestive organs work properly), and thereby remove the very cause of many a diseases. It also helps to re-invigorate, refresh and revive the working of the different ducts in the body (such as the alimentary canal, the various other ducts such as the bile duct, the urethra, the trachea, the nerves, the veins, the arteries, the capillaries and etc.) along with helping one to get rid of different diseases related to Naadis (veins and nerves), as well as from dropsy, incontinence and diseases related with disturbed metabolism [28 ½].

This Kumbhak called 'Ujjaayi' can be done while one sits in any Yoga posture or even while moving around. [That is why inhalation through both the nostrils is

allowed—a necessity when one is walking or jogging around or doing any other strenuous activity so that adequate amount of oxygen is taken inside the body to provide oxidation to the tissues and release sufficient energy that is required during physical activities that are strenuous and burn more energy in the body than usually done when Yoga is practiced while sitting quietly.] [29] (26-29).

30. [Verse nos. 30-31 describe the third type of Kumbhak called 'Shitali'.]

During the Shitali Kumbhak, the air is drawn in (i.e. Purak is done) by the open mouth, with the help of the tongue (like done by a panting animal). [That is, in this form of filling the body with inhaled breath, the air is drawn in through the mouth instead of the nostrils as done otherwise in normal Purak.] This inhaled air is held inside the body for a given period of time and then gradually exhaled through the nostrils (and not through the mouth) [30].

[Note—Breathing through the open mouth helps the moist surface of the tongue and the buccal cavity to absorb more quantity of oxygen and at a quicker pace than the normal process by breathing through the nose. It helps better, faster and more intake of oxygen and hence more oxidation of the tissues to not only release extra burst of energy but its faster replenishment. Fresh air is the fuel for the fire burning inside the body in a subtle manner. If the fire does not get proper ventilation, it would be choked to extinction. That is during vigorous exercises we find it extremely convenient and necessary to breathe through the mouth as the body's requirement of oxygen goes up to replenish its faster depleting stock.]

31. This helps to eliminate such diseases as those related with malfunctioning or enlarged spleen, excrescence (an abnormal outgrowth of the body, such as tumors etc.), disturbed bile, fever due to these or related causes, excessive thirst etc. [31].

32-39. [Verse nos. 32-39 describe the fourth type of Kumbhak called 'Bhastrika'.]

To do Bhastrika Kumbhak the practitioner should sit in Padmasana (lotus posture) so that the body is held ramrod straight and the neck is in line with the spine.

To begin with, the mouth is closed and the air (breath) exhaled out or Rechak is done through the nostrils [32].

Then the air is drawn in (inhaled) rapidly during the phase of Purak so that its movement is felt by the throat, palate, head and heart [33].

The process of Rechak and Purak (exhalation and inhalation respectively) is done in quick succession and repeatedly like the ironsmith blowing in air into his bellows [34].

In this way, the air or wind element present inside the body should be carefully activated and mobilized. If one feels fatigued or exhausted in any way, then the Purak (inhalation of air) should be done through the Surya Naadi (corresponding to the right nostril), the air is then held inside the body during Kumbhak by clamping the nose with all the fingers except the index finger (which is held erect), and then Rechak (exhalation of air) is done through the Ida Naadi (corresponding to the left nostril) [36 ½].

This practice eliminates the sensation of burning in the throat (due to excess acidity and disturbances in the mucous lining of the throat) along with increasing or reviving the ebbing fire of the intestines (i.e. this practice restores or increases hunger and appetite). [With restored appetite and rejuvenated digestive organs, it is natural that not only the burning in the throat would vanish as it is usually a symptom of disturbed digestion and excess of bile and acidity, but the general health of the practitioner gets a positive boost and he feels energetic and restored.] [37].

This Pranayam helps one to become aware of the presence and powers of the Kundalini (because the latter gets automatically jerked into activity as affirmed earlier in verse no. 10 above). It bestows all round auspiciousness, blessedness, happiness and joys on the practitioner. It is very auspicious and good for him [37 ½].

Whatever obstacles such as accumulated mucous etc. that are present at the mouth of the Sushumna Naadi and block it, creating a hindrance for the subtle energy of the Kundalini along with the Pran from entering this Naadi, are removed by this practice of Pranayam [38].

It also helps to rupture through or break open the hardened Granthis or knots that symbolically represent the inherent stubborn nature and temperament of the aspirant that have been caused by the three Gunas such as Sata, Raja and Tama present in him in varying proportions. [These Gunas are the basic qualities present in all living beings in different and varying proportions, and their combination decides the individual's personal character and nature. These have so firmly established themselves in him, so firmly engrained themselves in his personality that they appear metaphorically like hard tumors of the body, or gnarls of the fingers, or knurls and knots found on a tree—very stubborn and difficult to remove. The aspirant who does Pranayam is able to overcome this symbolic hardened stiffness in his character or stubbornness in his nature, and instead becomes merciful, compassionate, considerate, malleable, affable, generous, kind and of a general gracious nature. This is equivalent to the symbolic piercing of these knots. Refer verse nos. 67-68 of this Canto 1 also.]

That is why one should diligently practice this Bhastrika Pranayam regularly [39]. (32-39).

[Note—Refer also Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse no. 100.]

40. An aspirant who has sincerely devoted himself in pursuing this path of Yoga should employ three 'Bandhas' (closings or restrictions of subtle apertures of the body) while doing the above described four types of Kumbhaks¹ (40).

[Note--¹The *Bandhas* refer to the closing of the subtle apertures of the body through which the Pran or the vital winds could escape when pressure is exerted on them while doing Pranayam. The three Bandhas are described below.]

41. The three Bandhas are the following—Mool Bandha, Uddiyan Bandha and Jalandhar Bandha. Now there signs or the way to do them is being described (41).

[Note—Refer Dhyani Bindu Upanishad of Krishna Yajur Veda tradition, verse nos. 73-78 ½.]

42. [This verse, along with verse nos. 43-45, describes the Mool Bandha.]

Mool Bandha involves the constriction of the anus and forcefully diverting the Apan Vayu¹ upwards. This wind is naturally present in the lower part of the body and has a natural tendency of moving downwards and out of the anus instead of going upwards. [This is the reason why force is to be exerted on it to make it change its natural movement and change direction. So it becomes an arduous task to divert it upwards against its will and natural habit.] (42).

[Note—¹The *Apan* wind is the one that is present in the intestines and moves down and out through the aperture of the anus. It is responsible for movement of the food downwards in the intestines and expulsion of the waste from the body through the anus. When the anus is constricted and shut closed, the trapped Apan wind gets heated and then when pressure is exerted on it during the course of Pranayam, it is forced to change its direction and move upwards. Besides this, heated air is lighter

than cool air, and when it cannot find any exit through the lower end of the body, it would have a tendency to rise up and find an escape route. Thus, finding no other opening except the lower end of the spinal cord, or the Sushumna Naadi, it would force its way in it and then snake upwards. This procedure is called *Mool Bandha*—literally ‘closing of the root’, so named because the Mool Kand, the carrot-like knot of Naadis which form the base or foundation of the body, is located in the region of the anus and the genitals.

The *Tejobindu Upanishad*, Canto 1, verse nos. 27 of Krishna Yajur Veda describes Mool Bandha as follows—“The ‘Mool Bandha’ is closing of that spot in the body which is like the base or foundation for all living beings. It is possible to control the mind and its attention by controlling this Mool or root, which can be done by closing it or doing the Mool Bandha. Those who are well versed in the philosophy pertaining to meditation as a tool of Brahm-realisation should be very particular about it (as it helps them to control their mind and its faculties)”.

The word ‘Mool’ means the origin or basis of anything, and ‘Bandha’ means to stop or close. The Mool Bandha is done by pressing the genitals with the heels and constricting the muscles of the anus to close this opening. Meanwhile, the Apaana Vayu (the wind present in the rectum and anus region) is pulled upwards forcefully. It is described in *Dhyanbindu Upanishad*, verse no. 73-74^{1/2} of Krishna Yajur Veda, as well as in *Yogchudamani Upanishad*, verse no. 46 of Sam Veda tradition.]

43-45. [These three verses describe how the Kundalini is activated by Mool Bandha.]

When this restricted Apaana wind (whose natural movement downwards and out through the anus is restricted by the latter’s closure by doing Mool Bandha) begins its movement upwards, it comes in contact with the fount or the pit of fire (located in the Kundalini and the rest of the sac-like lower abdomen). This hitherto dormant fire is now stoked by this wind/air which begins to swirl around the lower part of the body, thereby rekindling the dormant fire; it begins to burn with renewed vigour and energy [43].

When the Pran (literally ‘the combined life-giving vital wind forces in the body’) is heated and stirred into activity by the combined effect of the fire element present in the body and the diverted Apaana wind¹, it is able to burn all the impurities that have accumulated in the body. [It acts like the blast furnace which burns all things put into it.] [44].

The result of this natural heating process is that the dormant Kundalini is shaken up and stirred into activity much like a sleeping snake being prodded by a heated stick. It then hisses and becomes straightened like that snake [45]. (43-45).

[Note—¹It is to be noted here that this Mool Bandha is done in combination with the Kumbhak phase of Pranayam. When the air is held inside the body during Kumbhak it is natural for it to get heated by the latent heat present inside the body. This is a natural process, especially when Pranayam is done for a prolonged period and the exhalation and inhalation are done rapidly as described in verse no. 34 above.

Refer also verse no. 64-66 of this Canto 1 below.]

46. [This verse describes how the activated energy of the Kundalini enters the Sushumna Naadi.]

When heated, the energy present in the Kundalini now expands and enters the lower end of the Sushumna Naadi (which had hitherto closed the mouth of the Kundalini by plugging it with its lower end) much like the awakened snake slithering into a cave.

That is why it is ordained upon ascetics that they practice Mool Bandh regularly (46).

[Note—Refer Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse nos. 104-105, 108.]

47-50. [These verses describe the Uddiyan Bandha.]

The Uddiyan Bandha is done before doing Rechak (exhalation of breath) after the period of Kumbhak (holding of air in the body). This Bandha helps the Pran (here referring to the Apan wind which has been heated earlier and diverted into the Kundalini) to enter the Sushumna Naadi and move upwards inside it. Since this particular Bandha makes the Pran upwardly mobile, it is called Uddiyan by ascetics. The word 'Uddiyan' means 'one that enables an entity to fly; one that becomes upwardly mobile and is able to fly; one that lifts up' [47 ½].

To do Uddiyan Bandha, one should sit steadily in the Vajra Aasan posture (described in verse no. 6) and put the hands on the bent legs [48]. The heels are pressed against the genitals from below and this helps to exercise great pressure on the Kanda area—i.e. the Mool Kanda, or the area around the groins [48 ½]. While doing this, the muscles of the abdomen are forcefully pulled inwards and upwards along with similar attempt to constrict the muscles of both the throat and chest. [In brief, attempt is made to constrict the entire muscular system of the lower part of the body and the chest area so that great pressure is exerted on the wind that has entered the Sushumna Naadi, thereby facilitating its upward movement in this Naadi.] [49].

By practicing this exercise, the Pran (vital winds) are able to get absorbed in the tissues of the abdomen in a gradual manner. This helps to eliminate all diseases of the stomach and abdomen. [This is because this exercise tones up the muscles and invigorates them, providing them with new energy and strength to function with renewed vigour. When the tissues are well ventilated and energised, when their toxic wastes are removed by the scrubbing affect of the Pran rubbing against them, they would too regain their lost strength and energy to function in a prime shape.] That is why this exercise should be practiced regularly and persistently [50]. (47-50).

[Note—Refer Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse nos. 106-107.]

51. [This verse describes the Jalandhar Bandha.]

The Jalandhar Bandha is said to be the constricting of the muscles of the throat that is done at the end of Purak (inhalation of breath or air) so that the inhaled air is prevented from escaping (51).

[Note—Refer Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse nos. 109-111.]

52. In this way, when the Pran (referring to the vital winds present in the body) is restricted from all sides and put under great pressure by doing Mool Bandha (constricting the anus), Jalandhar Bandha (constricting the throat) and Uddiyan Bandha (constricting the abdomen), it is natural that it would enter the Sushumna Naadi and move up in it. [This is because all exit paths have been blocked and the air inside the sac-like body is pressurized by drawing in and making the muscles taut and rigid. The only opening left open for it is the lower end of the Sushumna Naadi, so it sneaks into it. Since this Naadi is like a tube, the heated wind then automatically moves upwards.] (52).

53. By sitting properly as described above, one should practice the Saraswati Chalan process of Yoga (as described in verse no. 9-18) and develop control over the Pran, the vital winds (as narrated from verse nos. 19-52) (53).

54-55. [These verses describe the duration of time till which the Pranayam should be done.]

All the four types of Kumbhaks (verse no. 21) should be done ten times each on the first day, and then gradually increased by five times on each consecutive day, i.e. on the second day each type is done fifteen times, on the third day twenty times, and so on. All the three Bandhas (verse nos. 41-52) are employed while doing these four types of Kumbhaks (54-55).

56-57. [These verses list the various precautions that are to be taken while doing Yoga, for otherwise they make the practitioner sick very easily and prove to be his undoing.]

Sleeping during the day, keeping awake during the night, withholding the urge to evacuate the bowels and the bladder (i.e. to resist going to the toilet when necessary), to walk excessively that causes fatigue, not doing the various Aasans (sitting postures) properly, to strain too much in doing Pranayam (breath control exercises), and to constantly worry (over imaginary and real problems)—these are some of the pitfalls or perils against which a wise practitioner should guard because they can make him sick very quickly (56-57).

58-61. [These verses list the ten obstacles in the practice of Yoga. These act as a scourge for him.]

If the practitioner imagines that he has developed some disease by doing Yoga exercises and stops midway, then this is the first obstacle of Yoga [58].

The second obstacle is not to have full faith in the practice and doubt its effectiveness and authenticity. The third obstacle is to get intoxicated and become careless and callous while doing Yoga practice, lacking diligence, perseverance and sincerity. The fourth obstacle is to be lazy and indolent, doing Yoga half-heartedly, without interest and enthusiasm as if it was a forced burden imposed upon him against his will. The fifth obstacle is sleeping too much, more than what is necessary for the body [59].

The sixth obstacle is not to do Yoga lovingly and with great desire to succeed in it, i.e. not having affection for it and lacking sincere devotion for and commitment towards it. The seventh obstacle is to make errors and be deluded with pretensions, such as having a false sense of pride at the greatness, honour and importance that Yoga bestows upon its adherents, or that access to some great mystical powers are just round the corner which would make him much sought after and respected in the society, or that honour, respect, laurels, power and authority are in the offing as a natural reward of Yoga. The eighth obstacle is to be indulgent in and having a yearning for the objects of the senses in this material world along with a desire for self gratification. The ninth obstacle is the fear of ill fame, ignominy, ridicule and dishonour should one fail or not be completely successful in Yoga as expected, or doing Yoga in spite of others around him not doing it or not approving of it as something alien to them, or because they think, though erroneously, that it is some sort of black magic involving postures and exercises that seem to be ridiculous or bordering on black magic, or secret occult practices that are not acceptable in modern society [60].

Wise ones have said that the tenth obstacle is not being able to successfully understand the essentials of Yoga and not being able to obtain its basic benefits (both in terms of spiritual upliftment and enjoying the ecstasy and bliss of realisation of the

conscious self, as well as the attainment of various other physical benefits such as acquisition of mystical powers, fine tuning of the body and getting rid of bodily ailments, acquiring name and fame etc.)¹.

A wise and erudite aspirant should ponder over them deeply and take precautions against them. He should eliminate these hindrances in Yoga to be successful in its practice [61]. (58-61).

[Note—¹This observation that ‘the tenth obstacle of Yoga is not being able to successfully understand the essentials of this eclectic philosophy and not being able to obtain its basic benefits’ also implies that one has not been able to properly and correctly understand the wide meaning and great importance of Yoga, both in its physical form as the numerous exercises involved as well as in its metaphysical and spiritual aspects. It includes not properly understanding how to do the various Yoga exercises properly and subsequently failing in them, not knowing their benefits or the pitfalls to guard against, and not understanding that the main purpose of Yoga is to bring about a harmonization between scattered units of a person’s personality and life so that he becomes one complete whole and achieve the optimum level of energy, strength and stamina. Yoga enables him to work to his full capacity and ability to achieve success in life and obtain his set goals with ease and continued enthusiasm. He achieves sufficient backing to reach the pinnacle of spiritual ‘high’ or reach the state of enlightenment when he can personally experience the ecstasy and bliss obtained upon realisation of the supreme Consciousness that pulsates in his entire being as described in the scriptures. He no longer feels depressed and bogged down with so many bodily and worldly problems, but feels a new surge of restored energy and vitality inside his inner self that not only re-invigorates him but also lifts him from a life of dejection, lethargy, ignorance, delusions and hopelessness to a life of hope, vigour and enlightenment.

From the spiritual perspective, the main objective of Yoga is to bring about a union between the individual ‘self’ with the cosmic supreme ‘Self’. This is not hypothetical and imaginary but actually possible because both of them are essentially personified forms of the eclectic and divine ‘Shiva’ principle in its pristine purity and majestic glory, albeit viewed at different planes, for while the individual ‘self’ exists at the micro level of creation, the supreme ‘Self’ prevails throughout the entire creation at the macro level. Both these units of creation are fundamentally the same; there is no difference, distinction or duality between them. They are called ‘Shiva’ because they are the same Consciousness that is pure, divine, auspicious, truthful, beautiful and enlightened.

The bringing together of the different vital winds called Pran in the body is a metaphoric way of depicting the union of the various scattered units of creation into one unified whole as mentioned above. All the different Prans in the body control different organs and perform different designated functions. According to *Subalopanishad*, Canto 9, verse no. 1-14 of the Shukla Yajur Veda tradition, there are twelve vital winds present in the body. It lists their functions as follows—(1) Pran—this controls eyes and the faculty of sight (verse 1); (2) Apan—this controls ears and the faculty of hearing (verse 2); (3) Vyan—this controls nose and the faculty of smell (verse 3); (4) Udaan—this controls the tongue and the faculty of taste (verse 4); (5) Samaan—this controls the skin and the faculty of touch (verse 5); (6) Vairambh—this controls speech (verse 6); (7) Mukhya—this controls the hands (verse 7); (8) Antarayaam—this controls the legs (verse 8); (9) Prabhanjan—this controls the anus (verse 9); (10) Kurma—this controls the genitals (verse 10); (11) Shyen—this controls the Mana or the thoughts and emotions (verse 11); (12) Krishna—this controls the discrimination, intellect and wisdom (verse 12); (13) Shwet—this controls Ahankar or the notion of ego, pride, arrogance, vanity etc. (verse 13); (14) Naag—this controls the ‘Chitta’ or the faculty of concentration, memory, sub-conscious, reasoning (verse 14).

So, as is evident now, the scattered working of the consciousness through each of these Prans is brought under one umbrella by doing Yoga. Yoga should not be restricted as merely doing physical exercises to tone up the body like going to a gymnasium and exercising there, but as an all-important and indispensable vehicle for obtaining bliss of spiritual realisation and its attendant all round calmness and tranquility which is the hallmark of self-realised persons and those who have accessed the ultimate Truth of creation that is known as the 'Shiva principle'.]

62. Hence, one should be very sincere and diligent in doing Pranayam. He should be careful and vigilant; he should inculcate the proper virtues of wisdom, erudition, expertise and correct knowledge, both in terms of detailed procedure of Yoga as well as the real aim of doing it, the various perils and obstacles that are to be guarded against, and so on and so forth before embarking upon this spiritual journey in order to eventually succeed in it. [It should not be done for narrow-minded vested interests such as acquiring mystical powers that come automatically with success in Yoga and then using these majestic super-human powers to acquire worldly fame and clout, or terrifying others into submission by threatening them with dire consequences if they disobey, or doing Yoga with half-baked knowledge in a hurry to excel, or to test the veracity and efficacy of the philosophy of Yoga. This would not only be unproductive but very harmful for the practitioner too. It is like playing with live electricity to test its might.]

This due diligence and proper care in how to do Yoga in the correct way and with the correct perspective helps one to concentrate upon doing it. The sub-conscious becomes engrossed in meditation as a result of which the Pran wind begins to move inside the Sushumna Naadi (the duct moving through the spinal cord from its lower end where it opens into the Kundalini, and goes right up to the top of the head). [As any work, even routine worldly duties, requires paying of attention and concentration of all the faculties of the body in order to achieve success in it and getting the best result out of the effort, it is never possible to do Yoga successfully if the mind is fickle and diverted elsewhere. This concentration of the mind also makes the ascetic become conscious of the subtle sensations and titillations emanating from the Sushumna Naadi as it gets activated and the vital winds and the subtle energy of the Kundalini begin to move up in it. An exhilarating sensation of spiritual satisfaction and its accompanying ecstasy overwhelms the practitioner when the rising vital winds and the released energy of the Kundalini begin to tickle the sensory nerves in the spinal cord.] (62).

63. [This verse advises as to when the Apan wind should be attempted to be moved in and up the Sushumna Naadi.]

Only when the body is fully de-toxified and all the congestions are removed (by doing Pranayam, Aasans, Bandhas etc., and observing other rules of Yoga such as diet control, overcoming the ten obstacles and other pitfalls mentioned earlier) can the Pran (vital winds such as Apan) move freely inside it (i.e. inside the Sushumna Naadi). It is only then that an attempt should be made to move the Apan upwards (through the Sushumna Naadi), and not before (63).

64. The process whereby the anus is closed to divert the Apan wind upwards is called Mool Bandha. This enables the Apan wind to get heated and accompanied by the energy of the latent fire energy present in the body it begins to move upwards. [Refer verse no. 42-45 also.] (64).

65-66. [These verses tell how the Kundalini is activated.]

When the Pran is also heated, it combines with the Apan to become one unified 'activated Pran'. [That is, the artificial distinction between Pran, the breath residing primarily in the upper part of the body, and Apan, the wind in the intestine and primarily residing in the lower part of the body, is removed when they are heated. Actually, air is one, undivided and immutable element that is universal and non-dual. The various distinctions and nomenclatures are made on the basis of their functions and locations to facilitate study, analysis and understanding. The Pran is located in the upper part of the body and is the term applied to the air moving in and out of the body through the nose and mouth. On the other hand, the Apan is the wind moving down in the intestines and out through the anus. When the nose and mouth along with the throat are closed during the Kumbhak phase of Pranayam, especially done with the Jalandhar Bandha, and it is accompanied with the closing of the anus by doing the Mool Bandha, it is natural that the Pran and the Apan get trapped inside the sac-like abdomen. This not only heats them but enables their mixing. Thus the artificial distinction is removed, and the combined duo is known hereafter by a single name of 'Pran'.]

The accumulated heat (caused by trapping of the winds inside the body and the closing of the mouth, the nose, the throat and the anus) and the agitated winds exert a combined pressure on the Kundalini, the coiled energy center at the base of the spine, resulting in its uncoiling and getting straightened. It then pushes against and finally enters the mouth of the Sushumna Naadi which lies just at one end of the Kundalini. [The Sushumna Naadi emerges from the center of the spinal cord and blocks one end of the Kundalini facing the lower end of the spinal cord. So when the Kundalini is heated, it straightens and pushes against the Naadi. The pressure and the heat melt the blockade of the mouth of the Sushumna Naadi, and the Kundalini pushes itself into it. Then it releases its energy into this Naadi. This energy and the accompanying vital winds then rise up in it like the mercury does in the bore of the thermometer or a snake slithers into its hole. Refer also verse nos. 42-46, 82-84.] (65-66).

67-68. [These verses describe how the energy of the Kundalini is able to rise high in the Sushumna Naadi and reach the head by breaking through the three 'Granthis' or knots symbolising the three ganglions or glands located at three strategic points in the body. These Granthis are like three formidably strong forts that have to be overcome before the aspirant can reach the citadel where he would come face to face with the 'emperor' called the 'true self' in the form of pure consciousness that comes with self-realisation which is attended by extreme bliss and ecstasy. This experience is the successful culmination of Yoga; it is like conquering of the final fort. If the body is to be treated as a prison for the Atma, the pure and truthful 'self' of the aspirant, then this would mark his liberation and final deliverance because at the height of Yoga, his Pran reaches the top of the head from where it escapes out of the body by rupturing the Brahm Randhra, the slit in the cranium, and merging with the cosmic wind element present outside. The body subsequently disintegrates into its elements such as earth, water, fire and sky. This ensures that there is no new birth for him in any time in future. This is like a prisoner breaking free from a fortress and finding eternal freedom in the vast world outside.]

The subtle cosmic energy released from the activated Kundalini then overcomes the hindrance created by the three 'Granthis' by piercing through them. [The three Granthis are the three knots that tie the various Naadis in the body. Here it refers to

the three main ganglions that coordinate all the nerves as well as the three glands which regulate all the veins in the body.]

The first Granthi to be overcome and pierced through by the Kundalini (i.e. its subtle energy which is also called Kundalini Shakti) is the Brahm Granthi (located at the base of the spine). The energy of the Kundalini is like a brilliant ray of electric or a powerful concentrated beam of laser, and potent enough in rupturing this Granthi. In simple words, it is the opening of the mouth of the hitherto blocked Sushumna Naadi or the lower end of the spinal cord. Therefore, it enters the Sushumna Naadi after overcoming this first obstacle, and moves up in it.

Then it reaches and passes through the second Granthi, i.e. the Vishnu Granthi located in the Hridaya Chakra (which is the swirling energy center located in the region of the heart). Finally, it reaches the Rudra Granthi (located in the Agya Chakra in the forehead in the mid-point between the two eyebrows) (67-68).

[Note—The word *Granthi* means a knot. It also refers to the ganglions that help to coordinate the different nerves just like major junction boxes in the network of electric wires in a building. The word Granthi also refers to the glands that control all the major functions of the body, including those of the nerves and veins. Just like a knot binds something, these Granthis of the body bind the subtle energy present in the body from being released. If we treat them as representing the ganglions then it means that by the process of Yoga in which the subtle energy of the Kundalini is released in the spinal cord, or the Sushumna Naadi to be precise, these hitherto clogged and inactive ganglions are reactivated and they begin to function in prime shape. If we consider them as glands then it would mean that the functioning of these glands is restored and this in turn helps the body to work properly.

These Granthis can be also regarded as aphorisms for the numerous spiritual hurdles faced by a spiritual aspirant in his spiritual journey. The three Granthis are like the three forts that have to be overcome before the final victory over the citadel. If the body is considered as a metaphoric prison for the Atma of the aspirant, then rupturing of the various Granthis is like his breaking free from its walls and finally escaping to the world outside to gain freedom by rupturing the Brahm Randhra located on the top of the head in the final stages of Yoga.

The location of the Granthis is very significant in this context. Let us have a look at this aspect and see why these have been considered as formidable fortresses in this discussion.

The *first* Granthi known as the ‘Brahm Granthi’ is located in the region where the sexual organs are located. The very fact that Brahm in his manifestation as Brahma the creator is responsible for creating this world, the Granthi is so named after him because the sexual organs are responsible for creation. Overcoming this Granthi is tantamount to control over one’s sexual urges which is a very formidable task under normal circumstances. Control of sexual instincts requires a lot of self-control, and once this is successfully achieved the person retains his internal energy that is otherwise wasted in sexual indulgences. The power to create new life by the sexual process makes a man equivalent to Brahma the cosmic creator and the *first* of the Trinity Gods.

The *second* Granthi is known as ‘Vishnu Granthi’ and is located in the region of the subtle heart. Lord Vishnu is responsible for sustenance and taking care of the creation with care and love. The heart is associated with the virtues of emotions and sentiments as well as of love, compassion, kindness and graciousness as well as longing and desires. This Granthi symbolises the natural characteristics of the heart. It stands for worldly involvement and attachment with the numerous charming material sense objects of the world. It is the heart that makes a man emotionally and sentimentally involved and attached with the world. The obstacle of the heart is so formidable that more often than not the heart prevails over the sane advice given to

the creature by his mind not to pursue certain things, and this overbearing nature of the heart only lands him in immense troubles. To overcome the natural impulses of the heart and bring it under control is tantamount to piercing of the second Granthi. Involvement with the world and its affairs is symbolised by the word Vishnu who is the *second* of the Trinity Gods.

Finally, the *third* Granthi is called the ‘Rudra Granthi’ as it is located in the head where the brain symbolising the mind and intellect with their formidable abilities is located. It is called ‘Rudra’ because when a man is unable to satisfy his urges and cannot obtain his desired objects, if his ego and pride are hurt, if he fails in any of his endeavours, if he finds that his compatriots succeed in anything in which he has failed, it is natural that he becomes angry, vengeful, wrathful and fretful. In other words, he displays the virtues of being ‘Rudra’ personified. It is an equally daunting task to control one’s anger and its accompanying wrathfulness. Once an aspirant is able to control his anger along with the control of the other two natural urges, he becomes a truly self-controlled and realised soul. Display of the virtues of Rudra makes a man equivalent to Lord Shiva, another name of Rudra, who is the *third* of the Trinity Gods.

According to Tantra literature, there are three Granthis—viz. Brahm Granthi, Vishnu Granthi and Rudra Granthi. They obstruct the upwards movement of the energy or power of the Kundalini. Each of the six Chakras (whirling energy centers of the body) has two Granthis on either side.

The Brahm Granthi is situated between the Muladhar Chakra and Swadisthan Chakra. The Vishnu Granthi is situated between Manipur and Ahahat Chakras. The Rudra Granthi is located between Vishuddha Chakra and Agya (Gyan) Chakra. The energy or cosmic divine powers of the Kundalini has to pierce through these three knots before it can reach the Sahasraara Chakra at the top of the head.

Refer Yogshikha Upanishad, Canto 1, verse nos. 86-89 which belongs to the Krishna Yajur Veda tradition also, and is Chapter 21 of this volume.]

69. It then passes through the center of the eyebrows (i.e. through the Agya Chakra) and reaches the realm of Chandra (Moon) where the Anahat Chakra shaped like a lotus flower having sixteen petals is located (69).

[Note—The *Chakras* according to the Tantra philosophy are swirling energy centers of the body, and they are shaped like lotus flowers having varying number of petals. The Chakras and their colour, functions and locations etc.: they have been briefly outlined in note to verse nos. 85-86 of this Canto 1 below.]

70. This energy of the Kundalini which has reached the realm of the Chandra (Moon) in the forehead (between the eyebrows and the root of the nose) now dries up the secretion of the Chandra which effuses in this area. [That is, it dries up the mucous that might be present in the area of the sinus region of the forehead. It acts as a natural decongestant that clears the head and makes the practitioner mentally alert. See verse no. 71 below.]

Being propelled by the vital wind forces of the body, and stoked by the energy of the Surya (Sun) subtly present in the body and represented by the latent heat energy that prevails throughout the body and its tissues, the ‘Kundalini Shakti’ (i.e. the dynamic cosmic energy arising from the Kundalini which had been mixed earlier with the two vital winds—viz. the Pran and Apaana according to verse no. 65)—now accepts the blood and bile of the body. [In other words, it symbolically accepts the heat and energy present inherently in these two entities—blood and bile. Or conversely, it cools them down and absorbs their energy to re-energise and revive itself by restoring its low level of energy and heat that it might have lost earlier whilst overcoming the Granthis and breaking through the various other hurdles as it moves

ahead from the lower part of the body to the upper parts. It is like the case of a space vehicle which has reached certain height after its initial launch when it fires another rocket to provide it with sufficient boost and power to enable it to break free from the gravitational pull of the earth and enter space for its onward journey to another planet, which in this case would be the ultimate 'Shiva Tattva' or the ecstasy of Brahm-realisation mentioned below in verse no. 74.] (70).

71. Upon reaching the area called the realm of the Chandra (Moon) the Kundalini Shakti heats and then soaks up the white mucous present there by its own inherent heat. Thus it removes the coldness from this area. [This refers to the stuffy feel that comes with the nostrils and the forehead getting choked by mucous when one catches cold. The practice of Pranayam would activate the Kundalini, and its heat would act as a decongestant and clear the blocked nose and head of sticking mucous. The heat of the Kundalini Shakti would literally burn or kill the germs and therefore act as a natural anti-biotic in colds and catarrhs. This would effectively remove 'cold' from this area.] (71).

72. The Kundalini Shakti heats the white Chandra representing the tissues that effuse white mucous, and having done this it then moves ahead upwards. [That is, once the passage of the nostrils and the forehead is cleared, the subtle energy of the Kundalini and Pran now move to the top of the head to give the practitioner the much sought-after sense of extreme bliss and ecstasy.] (72).

73. This is the stage when the aspirant tastes the nectar-like bliss and experiences the exhilarating joy that accompanies the realisation of the presence of the eternal fount of bliss and divine ecstasy that resides in his own 'self' as the consciousness known as the Atma. As a result, his mind—which had hitherto sought to acquire happiness and joy from the external world and its material objects of sense gratifications which are nevertheless transient and perishable by nature—would now no longer need to do so because it has now found an eternal source of bliss and unbound ecstasy inside the aspirant's own self (in the form of the bliss and ecstasy that comes when one experiences the presence of the pure consciousness residing in one's own bosom) (73).

[Note—Refer Yogshikha Upanishad of Krishna Yajur Veda, Canto 1, verse no. 127, 146 in this context.]

74. In this way, the Kundalini Shakti is able to transcend or overcome the hurdles created by the eight-fold Prakriti or the eight types of hindrances that come in the way of one realising one's true nature as pure consciousness known as the Atma¹.

As a result, the ascetic is able to have a first hand experience of 'Shiva' (the eternal Truth and auspicious consciousness known as the Atma) residing in his own self. This realisation is self-realisation. The cumulative affect of all this is that the grosser form of the cosmic consciousness in the form of the various Prans (vital winds of the body that keep the body alive and active) plunges into and become one with the subtler form of the same divine cosmic consciousness known as the Atma (the 'true self' of the man and the only truth that really matters from the spiritual perspective).

In other words, the culmination of Yoga is to help one realise one's true divine form and find rest in the spiritual glory of self-realisation, the discovery of the ultimate fount of bliss and joy residing in one's own bosom as the 'consciousness' known as the Atma (74).

[Note--¹These eight obstacles are the following—the five elements such as the sky, air, fire, water and earth which form the structure of the gross body + the Mana or mind + the Buddhi or intellect that together make up the subtle part of this body + Ahankar or ego and pride which forms the basic quality that prevents a man from coming to terms with the fact that what he has acquired in this world is not the real thing and all his efforts of gaining happiness from the material objects of the world have yielded nothing for him in real value. Thus the total comes to 5 elements + 1 Mana + 1 Buddhi + 1 Ahankar = 8.]

75. The 'Raja', i.e. the fluid of the female organ which is red in colour representing the fiery celestial cauldron known as the sun (and personified by the blood element of the body which stands as a metaphor for life and heat because blood sustains life and is hot by nature), and the 'Shukla', literally meaning 'white' but here referring to the male fluid called semen which is white in colour and symbolises the moon (which is personified as the mucous element of the body), are thoroughly churned, battered and mixed by this process of Yoga. This combination then rises up the Kundalini and the Sushumna Naadi when whipped up by the vital winds, i.e. the Pran and the Apaana, as these are heated and made to enter the Kundalini and move up the Sushumna Naadi (as described in earlier verses).

At the culmination of this process, these two—the two primary fluids that infuse life into this body, i.e. the female Raja and the male Shukla, and the two vital winds called the Pran and Apaana, merge into one homogenous entity that is known as 'Shiva'. That is why these four units of creation are said to have a similar origin¹ (75).

[Note--¹This is a symbolic representation of the basic fact that every life form has only one origin in the supreme transcendental Consciousness known as Brahm at the macrocosmic level of creation, and as the Atma at the microcosmic level of existence. It is from the single cell that the sperm and ova are formed, the distinction arising due to the role that they are assigned to perform in the scheme of creation, and similarly no matter what name is assigned to the wind element depending upon the function it performs it would nevertheless always remain the same indivisible element known as air or wind which has no inherent distinctions between its various manifestations. The primary aim of Yoga is to bring about a union and harmony between two or more units of creation which are fundamentally one and the same but for reasons arising out of ignorance and its attendant delusions have come to be regarded as separate and independent units—which they are basically not. When this eclectic knowledge dawns upon the spiritual aspirant, he is overwhelmed with the bliss that comes with obtaining eternal peace and a sense of achievement that accompanies the fulfillment of one's long-lasting search for the real and eternal Truth.

This process of mixing of the vital forces of Nature present inside the body so that oneness or uniformity between them is obtained is the main aim of Yoga as prescribed in this and other Yoga Upanishads. It is symbolised by the stirring of the Kundalini's subtle cosmic energy and activation of the Sushumna Naadi aided by the process of Pranayama and various Asanas and Bandhas. The churned and heated vital winds called Pran and Apaana whip up a virtual storm inside the body and arouse the other two fundamental elements of life, i.e. the male energy and the female energy representing Brahm and Shakti or Maya respectively, and mix them into one homogenous gel that then rises up the Sushumna Naadi to pass through the various hurdles and finally reach the forehead. It then transcends it to finally reach the upper area of the head where the aspirant experiences the sensation of extreme ecstasy and bliss that comes with realisation of the presence of the supreme fount of eternal consciousness present in one's own self. This is the culmination of the process of Yoga and the fulfillment of the desire for attaining self-awareness and self-realisation.

The word *Shiva* here refers to the subtle, sublime, auspicious, divine and truthful consciousness of which one becomes aware at the time of culmination of Yoga. It is the symbolic union of the independent forces of life inside the body into one uniform non-dual Atma, the true 'self' of the aspirant. This is the picture at the microcosmic level of the individual. When this is Pran finally escapes from the body into the outer atmosphere to merge with the all-pervading air or wind element outside, the other component elements of the gross body—such as earth, water, fire and sky—too merge with their primary forms when the body lacking the Pran dies and disintegrates. This finishes off the job of attaining final Mukti or liberation and deliverance for which the aspirant had set about doing Yoga in the beginning. This merger of the elements with their cosmic counterparts lends the individual creature a macrocosmic presence. Once a wise, enlightened and self-realised person becomes aware of the universal spiritual truth that his 'true self' is not the gross body but the subtle and sublime Pran symbolising the cosmic spark of life called 'consciousness', he no longer remains a gross person with a body, but becomes sublimity and subtlety personified!]

76. Even as solid gold melts and expands when subjected to heat, the subtle and sublime cosmic energy lying hitherto dormant and coiled-up inside the body (in the Kundalini) expands and spreads throughout it—whether this body is small (such as those of a child) or big (such as those of a grown up man)—to cover each nook and corner of the body when the energy is stoked and heated. [This is done by the arousal of the Kundalini as per the process described in this Upanishad above.] (76).

77-78. [These verses describe the subtle changes that take place in the body when the divine energy of the Kundalini is activated by the process of Yoga. Refer also verse nos. 65-66, 70-71.]

Under the auspicious influence of the divine and sublime cosmic energy when it is activated inside the body (by the process of Kundalini activation), this gross body assumes a form that is godly in nature—that is, from being 'Adhibhautik' it becomes 'Adhidaivik' (i.e. from being mortal and perishable, inert and inane, subject to various faults and shortcomings associated with the gross organs and the buffeting effects of the restless mind—collectively called the Adhibhautik body, it becomes one that is stable, eternal, holy and imperishable, a body that assumes certain divine characteristics that transcend the limitations imposed on a gross physical body by the forces of Nature—collectively called the Adhidaivik body). The gross body transforms into a most subtle and sublime form [77].

It (the body) abandons its gross, perishable, polluted, lowly, inane and inert nature to become sublime, subtle and divine in form that is clean, holy, auspicious and conscious of its exalted stature as being the abode of the supreme Brahm residing inside it as the pure conscious Atma. This exalted state of the body is obtained only by those who have obtained success in Yoga (as narrated in this Upanishad), and not by others who are engulfed in ignorance and delusions [78]. (77-78).

[Note—This is the reason why holy men effuse a divine glow of divinity and spiritual energy which forms a halo around them. Ordinary men lack this effulgence. Yoga cleans the body so thoroughly that all the impurities that normally cloak the Atma and prevents its natural illumination from shining through are removed, resulting this divine light to illuminate the whole being of the aspirant. The divine halo that is observed around holy and self-realised persons is actually the light of the Atma, the pure consciousness, shining through. It is like cleaning the glass covering around the wick of a lantern so that its light can illuminate the surroundings.

The skin is not as transparent as the glass of the lantern, but is more like a translucent piece of glass found in chandeliers and decorative lightings. The lighted wick is not clearly visible here, but only its diffused light illuminates the surroundings. The skin is so thick that one cannot see the bones and other internal organs, so it is no mean achievement that the glow of the consciousness is visible from the outside as a halo around enlightened men.]

79-80. When the spiritual aspirant becomes aware of his 'true self', i.e. about his pure consciousness as his Atma representing his truthful identity as the 'self', it is only then that he finds Mukti, or freedom from the fetters of this mundane life of birth and death involving a gross and perishable body (because he would have now realised that his true self is not the body which takes birth, gets old and dies, but the Atma which never takes any birth and never dies as it is eternal and imperishable). He is deemed to be therefore liberated from the shackles of Kaal, or death personified (because he no longer fears death and being the eternal and imperishable Atma instead of the body, he will not have to die at all).

Successful culmination of Yoga makes him wisened and enlightened about the existence of the 'truthful self' in the form of the consciousness residing inside his bosom which is distinct and separate from the gross body. He is reassured of the truth that this body is perishable and mortal when all delusions arising out of ignorance of the 'true self' are removed just like a person feeling reassured and confident when he discovers the illusion that what he was fearing as a dangerous snake is in fact a harmless piece of rope, or when he discovers that the appearance of silver foil inside the shell of an oyster (because the inside glistens like silver foil does in light) is nothing but an optical illusion, or that the distinction between a male and a female is basically artificial when he realises that the same Atma lives inside both the bodies and the fact that both the bodies have the same ingredients as their fundamental building blocks. That is, these facts make him wiser, and he is no longer led astray by illusionary appearances (79-80).

81. Such a wise and enlightened spiritual aspirant sees no difference between a rounded ball of cereals called Pinda and the universe both of which are rounded in their external form. He also sees no fundamental difference between his subtle truthful 'self' and the microcosmic Atma—as both are the same 'consciousness' personified. Therefore, he is firmly established in the ultimate Truth of creation—that the self-illuminated Atma of the individual and the cosmic supreme transcendental Atma at the macrocosmic level called the Parmatma are one and the same entity (81).

82-84. [These verses describe the shape of the Kundalini and how the dormant fire element in the body is ignited.]

The Kundalini is like the coiled stem of the lotus flower, while the Mool Kand (the clutch of Naadis at the base of the spinal cord) is like the bulbous root of the same lotus. Much like a snake coiled in such a way that the end of its tail is inside its mouth, this Kundalini lies with its mouth covered by the Braham Randhra Naadi¹ [82 ½].

To awaken this Kundalini, the aspirant is advised to sit in a Padmasan posture, constrict and pull up the anus, do Kumbhak (holding of the breath during Pranayam), divert the vital wind (i.e. the Apaana wind) of the body upwards and make it strike the Swadisthan Chakra² so that the dormant fire element in the body is ignited³ [84]. (82-84).

[Note—¹This Brahm Randhra Naadi is the Sushumna Naadi—so called because it goes right up to the top of the head where the Brahm Randhra, the hair-like slit in the skull, is located, and through which the vital winds find their way out when an expert ascetic wishes to leave the body at the time of his death. In other words, the lower end of the Sushumna Naadi blocks the opening of the Kundalini like a cork on a bottle.

²The Swadisthan Chakra is the swirling subtle energy center of the body located in the region of the groins of males and the Bhug area of females. It has a 5-headed male phallus like a sprouting seed and its counterpart in the female is the clitoris.

³In essence this verse means that when the Apaana wind is restricted by doing Mool Bandha involving the closing of the anus along with Jalandhar Bandha when the throat is closed and constricting of the muscles of the abdomen during Uddiyan Bandha, an immense amount of pressure is exerted on the Apaana wind. It buffets the Swadisthan Chakra which is like blowing of air in the lower end of the furnace. This would obviously stoke the fire energy present in a dormant form in the Kundalini. This situation is like the lighting of the fire in an oven. When air is blown into the ovens from the lower end, the firewood placed on the grate catches fire easily and burns vigorously.

Refer verse no. 42-46 and 65-66 of this Canto 1 also.]

85-86. By this method the sleeping or dormant Kundalini is awakened or shaken up and made active. The subtle cosmic energy present in it is then unleashed and it rises up to pierce through the three Granthis, viz. the Brahm Granthi, the Rudra Granthi and the Vishnu Granthi¹, besides piercing through the six Chakras² and reach Sahastraar Chakra symbolically depicted in the form of a subtle lotus with a thousand petals present in the top of the head, i.e. the Brahm Randhra which is located at the top of the head just below the cranium.

At this point of Yoga one experiences a gloriously divine spray of extreme bliss and ecstasy spraying upon him and drenching him from all sides, which metaphorically represents the union of the divine Shakti with the eternal fount of truthfulness, bliss and joyous abandon called Shiva³. [Here, the 'Shakti' is symbolised by the cosmic divine conscious energy that is made active by doing Yoga and activating of the Kundalini, and 'Shiva' represents the awareness that comes with it of the presence of the pure consciousness called the Atma as one's true 'self'. This Atma is eternal, truthful, imperishable, immutable and non-dual; it is divine and sublime. When the aspirant becomes aware of it, he is filled with an extreme sense of spiritual achievement and contentedness at the fulfillment of his desire for attaining a state of eternity and perpetual bliss. He would want nothing more; he has reached the pinnacle of spiritual attainment that is rare and difficult to achieve.] (85-86).

[Note—¹The three *Granthis* and their vanquishing has been described in note to verse no. 67-68 of this Canto 1 above.

²The six *Chakras* are the subtle energy centers of the body. Briefly they are the following—(1) The 'Mooladhar Chakra' is located between genitals and anus in the area called the perineum. It is the site of the symbolic Shiva Lingam (Yogshikha Upanishad, Canto 1, verse no. 168) and the route through which the Apaana wind finds its entrance in the Kundalini (Yogshikha Upanishad, Canto 2, verse no. 13). It is also here that the ascetic hears the Naad. It is said to be a symbol of Shakti or the dynamic powers of Shiva principle (Yogshikha Upanishad, Canto 2, verse no. 8, 11-12 and Canto 3, verse no. 2). (2) The 'Swadhisthan Chakra' is located in the region of the groins of males and the Bhug area of females. It has a 5-headed male phallus like a sprouting seed and its counterpart in the female is the clitoris. (3) The 'Manipur Chakra' is located in the navel area, is shaped like a gem and is surrounded by the network of Naadis (nerves) called solar plexus. It is also the site of the Sun energy. (4) The 'Anahat Chakra' is located in the chest between the heart and lung area and it

is shaped like a swan looking downwards. It is also assumed to be like an 8-petal lotus facing down. It is also called the Hridaya Chakra because of its close proximity to the heart and close association with it as the Atma or pure consciousness resides in the subtle space of the heart. (5) The 'Vishuddha Chakra/Kanth Chakra' is located in the throat. To the left of it passes the Eda nerve representing the moon, to its right goes the Pingla nerve representing the sun, and in the center is the Sushumna nerve through which the Kundalini energy rises up from the base of the spine to the skull. (6) The 'Agya Chakra or Bhru Chakra' is located between the eyebrows and root of the nose. It is also called the third eye of enlightenment and wisdom.

Besides these six, there are some other important Chakras, and they are the following—(7) The 'Brahm Rahandra Chakra or *Sahasraar* Chakra' is located in the head and has the form of a grey cloud or smoke. It is the hair-like spilt in the top of the skull from where the vital wind called 'Pran' makes its exit from the body of a Yogi (ascetic) at the time of his death. (8) The 'Vyom Chakra' is symbolic of the sky and it is shaped like a 10-petal lotus located at the top of the head. (9) 'Bhug Chakra' is triangular in shape and represents the female genital organ. It is also called 'Kaam Roop Peeth' from where all passions and desires originate (refer Yogshikha Upanishad, Canto 1, verse no. 170-171). (10) The 'Talu Chakra' is also called Raajdant as well as Ghantikaa, and it is closely related to the Kanth Chakra. It is the route to the 10th door of Brahm. It is located in the palate (back of the mouth).

The Chakra's location have been mentioned in Canto 3, verse no. 9-11.

³Refer verse nos. 67-75 above of this Canto 1 in this context.]

87. This eclectic and exalted state of existence is tantamount to spiritual liberation and deliverance, called Mukti, and is the blissful and ecstatic state of enlightenment and self-awareness (87).

[Note—In this context of Mukti obtained by activation of the Kundalini and the Sushumna Naadi through which the Pran of the ascetic moves to the top of the head, the Kshuriko-panishad of the Krishna Yajur Veda tradition, in its verse nos. 18-19, describes how the Pran finally escapes through the Brahm Randhra to provide final liberation to the spiritual aspirant.]

Canto 2

[This Canto describes in detail one of the most difficult but nevertheless an important exercise of Yoga called the 'Khechari'. While on the one hand it is so potent that it can bestow upon its practitioner the ability to float or fly in the air, but on the other hand it is most dangerous to adventure into this field without proper guidance as it is equally potentially fatal if not done properly. So it should always be practiced under the aegis of an experienced teacher. It is a long haul endeavour, taking as much as twelve long years to be rewarding. Refer also to Yogchudamani Upanishad, verse nos. 51-59 of the Sam Veda tradition, Mandal Brahmin Upanishad, 2/1/8 of Shukla Yajur Veda tradition, and Yogshikha Upanishad, 5/40-42 of Krishna Yajur Veda tradition in this connection.]

1. Now we shall discuss the Khechari¹ Vidya (i.e. the knowledge pertaining to the special posture of Yoga called by this name of Khechari). This knowledge and its diligent practice helps one to become free from old age and its decrepiting effects as well as having a long life and becoming eternal in a symbolic way² (1).

[Note—¹The word *Khechhari* is derived from the root ‘Khe’ which stands for the sky, and ‘Chari’ means to move, to wonder or to roam. Therefore, the combined word ‘Khechhari’ means one who can move in the sky. This Mudra has been graphically described in Gherand Sanhita, Chapter 3, verse no. 25-28, besides the Yogshikha Upanishad, Canto 5, verse nos. 40-42, the entire Canto 2 of the Yog Kundalini Upanishad; and Dhyani Bindu Upanishad, verse nos. 81-93 of Krishna Yajur Veda; as well as in Yogchudamani Upanishad, verse nos. 52-64 of the Sam Veda tradition, and in Mandal Brahmin Upanishad, verse no. 2/1/8 of Shukla Yajur Veda tradition.

It ought to be noted that the Yogchudamani Upanishad, verse nos. 52-64, and Dhyani Bindu Upanishad, verse nos. 81-93 elaborately describe its benefits, and one such practical benefit is the natural way of contraception as clearly described in these two Upanishads.

The *Khechhari Mudra* is amongst the best and toughest body postures that can be adopted by any ascetic, but at the same time it can empower the practitioner with stupendous mystical and occult powers and potentials. It involves elongation of the tongue by constantly pulling it out and making it flexible by constant flexing, rolling and shaking from side to side. The nerves and veins at the lower end are cut so as to make them senseless. To obtain success in this, the tongue is smeared with butter and stretched by holding it with an iron tong. This results in the tongue getting sufficiently elongated as to reach the inner opening of the mouth by inverting it backwards, and then it is tucked at the base of the upper palate to close the opening of the nostrils at the roof of the mouth cavity. When the elongated and backwards bent tongue is stuffed here, these openings of the nostrils are closed by it, thereby blocking the flow of air (breath). Meanwhile, the sight is fixed unwaveringly at a point midway between the two eyebrows.

The benefits of Khechhari Mudra have been listed in Yog Kundali Upanishad, Canto 2, verse nos. 1-4, 21-24, 49.

²Yoga in general has a definitive positive affect on the body and general health besides its spiritual value. It's a very potent and powerful instrument in the hands of any spiritual aspirant to reach his goal of liberation and deliverance on the one hand, and to maintain good health and lead a fruitful life by ordinary people who might not be as spiritually enlightened on the other hand. For the latter, the hidden benefits of Yoga would come on a platter even without their asking for them and as an unexpected bonus or gift. What better can any endeavour be when its rewards are got even without seeking them almost as an expected windfall. Since Khechhari is a higher form of Yoga, its results would also be commensurate to its exalted stature; its rewards would be equally more enduring and powerful. The speed with which the body decays and suffers from the decrepiting effects of old age is reduced and virtually put on hold if one practices Yoga diligently. This is because he observes rigid self-discipline in all spheres of life—such as in his eating habits, his general life style, his working, his indulgences and all other physical activities as well as mental thoughts. All these help to tone up the body, and though the latter is destined to come to an end one or the other day but it would be a painless and natural process rather than that imposed by artificial living which shortens life and makes it more of a burden than something to be enjoyed. Lack of discipline and self control plays havoc with the body and its functions, which in their wake make the person prey to numerous diseases and problems that begin to afflict him and have an upper hand on him. A long life led healthily and peacefully to its natural end in some distant future in comparison to a life full of bodily aches and pains so much so that the person prefers death than another day of agonies is a metaphoric long life begot as a reward of Yoga.

In practical life it is observed that certain people lead a happy and peaceful life inspite of facing the same set of problems that seem like a burden to others. Yoga calms one down sufficiently enough to achieve this exalted mental state of equanimity and calmness.

Besides this physical benefit, the philosophical aspect of long life is the eclectic realisation that the 'true self' is not the gross body but the ethereal Soul or the Atma which is nothing but pure consciousness living in this body, and that this sublime and divine entity known as the Atma is eternal, imperishable and infinite unlike the body. Hence, the aspirant indeed becomes 'eternal, imperishable and infinite' like the Atma because the latter is his true 'self'.]

2. A person who is tormented by old age, numerous diseases and death staring in his face should diligently practice the Khechari Vidya (2).

3-4. One should acquire a thorough knowledge of this Khechari Vidya by seeking it from some wise and expert teacher by taking shelter with him and becoming his devoted disciple. [In other words, an aspirant who wishes to overcome the various problems of the body should practice Yoga, and for this he must first seek out a competent teacher who himself is an expert in this field and then request the latter to accept him as his student. He should take refuge with such a wise teacher of Yoga, and put himself in his care and guidance.]

The teacher ought to be carefully selected as he must be well accomplished and well known in this world as an expert in this specialised field of knowledge called Khechari. He should have thoroughly studied this Vidya from scriptures dealing with it, should be an acknowledged expert in this field who has an in-depth knowledge of all its finer intricacies and different aspects, besides actually practicing this form of Yoga himself. [Because it is only then that he would be able to give correct and precise guidance to the aspirant and alert him on its various pitfalls and perils besides advising on how to best avoid them or overcome them.]

This Khechari Vidya has the mystical potentials of eliminating the miseries and torments associated with old age, death and various diseases. Its knowledge and practice are both very difficult (3-4).

5. This Khechari Vidya is fruitful only when it is practiced along with the mystical meditation process called 'Melan¹'. In other words, they must be practiced simultaneously or in close association with each other (5).

[Note—*Melan* literally means establishing a union between the Pran Shakti (the mystical powers of the vital life-infusing wind forces inside the body) and the Shiva-Shakti (the divine and supernatural powers of the consciousness called the Atma residing inside the bosom of the aspirant). The 'Shiva' is the cosmic Truth and Consciousness that resides in the body of the individual as his Atma or soul, and the 'Shakti' is the power, strength, authority and potentials of the Atma.

The union or Melan is brought about by the method of using the Mantras meant to be repeated during the Khechari Mudra (and this is given in verse nos. 17-20 of this Canto 2 and in verse no. 1 of Canto 3) under the proper guidance of the teacher. It helps to bring about this union by focusing of the mind.]

6. Oh Brahmin! It might be possible to do practice but it is rare to achieve Melan even after hundreds of births (6).

[Note—One might be successful in doing the physical exercise of Khechari form of Yoga, but its final aim to bring about a union between the Pran and the Atma is difficult to achieve. It is like a student being successful in finding admission in an excellent college but that does not mean that he would either excel in his studies or in life. At best, the environment of the college, the faculty and the facilities available there can help him in the pursuit and attainment of his own goals in life, but the final result and achievement would depend upon the individual's own diligence, efforts,

competence, aptitude, intelligence, wisdom, sincerity and so many other factors. Learning the skills in college and being able to apply them in practice in real life situations are totally different propositions.

Similarly, a good teacher and circumstances can aid a spiritual aspirant to reach higher spiritual goals of life, but ultimately he is the one who would have to walk the mile which is like walking a tight-rope as far as Yoga is concerned, because while it is rewarding on the one hand, it is equally dangerous if not done properly on the other hand. The road can lead up to the citadel, but the road would not move there and neither would the citadel come down to receive him!]

7. This Melan (union between the Pran and the Atma as described in note to verse no. 5 above) is achieved by an aspirant after diligently trying to accomplish it in many births, and after a long period of sincere practice (7).

8. It is only when the aspirant accepts the Melan Mantra (i.e. the mystical formula that brings about successful fusion of the Pran (or vital life-infusing winds) and Shiva (or the truthful 'self' known as the Atma which is cosmic Consciousness living inside the body of the individual) from an accomplished Guru (a moral preceptor, a teacher and guide of Khechari Vidya) and practices it sincerely according to the prescribed method as laid out for it in the scriptures that he attains success in it in the sense that it bears fruits for him and bestows upon him certain Siddhis (mystical authority and super-human powers) (8).

9. When the aspirant is able to understand this Melan Mantra fully and comprehend its esoteric meaning and spiritual import, it is only then that he gets liberation and deliverance from the shackles of this ocean-like intractable and un-crossable gross world and becomes a personification of the truthful, eternal, divine and sublime entity known as Shiva. [That is, by properly understanding the spiritual importance and significance of the Melan Mantra and how it brings about a union or fusion between his Pran and Atma at the microcosmic level of existence, and between this combine of Pran-Atma at the individual level and the all-pervading and all-inclusive cosmic transcendental Consciousness at the macrocosmic level, he is able to establish oneness between his gross existence as the man having a body and his sublime existence as the Atma or soul which is pure and conscious 'self' residing inside his own bosom as a personification of Brahm symbolised by the word Shiva—an entity that is truthful, eternal, divine, holy and auspicious. When this is achieved, the grossness vanishes and only sublimity survives.] (9).

10. [Verse nos. 10-13 stresses the importance of the scriptures and their study.]

It is most important to note that even the wisest of Guru is not able to impart knowledge without the help of scriptures; therefore it is imperative for a wise student or disciple to have direct access to the scriptures. That is, oh wise sage, since no knowledge is available and sustainable without the scriptures, it is of utmost importance to have knowledge of the scriptures (10).

[Note—Even the teacher has learnt anything through a thorough study of some text, and it is better for a student to access this text directly. The reason is that, one, if there is some confusion then there is a standard text to decide the matter, and second, there is always a possibility of the teacher himself erring inadvertently or himself not being aware of certain things that the more intelligent student might discover. After all, the teacher is a human being himself with his own limitations and failings. Therefore, the

importance and significance of the scriptures can never be either overstated or underrated.]

11. Therefore, the aspirant should diligently and sincerely search for the scriptures everywhere in this world wherever they are available even if it involves going to far off places in search of them. When truthful scriptures (i.e. the ones that are genuine, authentic and original without interpolations and tweaking done by others, because they would then be deemed to be corrupted) are accessed and studied thoroughly, their teaching should be implemented in life. It is then that spiritual success and its attendant rewards are soon and easily available to the aspirant (11).

12-13. Success and accomplishment in any field, let alone spiritual practice, is not possible in the whole world having three dimensions (i.e. in the past, the present and the future time; in the terrestrial, the heavenly and the nether worlds) without a thorough study and implementation of the various principles and doctrines enunciated by the scriptures. [That is, one should always consult standard texts if one expects to inculcate truthful knowledge in any field, and metaphysics is no exception. If the source material of any knowledge is corrupted, it is obvious that the knowledge it imparts would also be corrupted and prove detrimental for the good of the seeker of this knowledge. So, great importance should be placed on accessing truthful and authentic scriptures from reliable sources.]

That is why the Guru who teaches the scriptures and explains them, who himself practices the great tenets of these scriptures as well as the Yoga of Melan (i.e. who puts the knowledge of the scriptures into practice himself and practices meditation that helps to bring about a union between the individual and his true self as the pure conscious Atma), is deemed to be a revered image of the exalted God himself¹.

Such a wise teacher who is a regular practitioner of what he teaches is to be regarded as a living image of Shiva, a personification of Shiva, and offered due reverence and worship. An aspirant should seek his shelter and patronage in his own spiritual pursuit. [This is because such a man is the right guide who would show the correct path to the aspirant. He has had a first hand experience of the pitfall, perils and obstacles of Yoga and the precautions needed to avoid them or overcome them. This expert guidance makes the path all the more easier for the aspirant.]

It is expected that once one has acquired this eclectic mystical knowledge, he would not disclose it to unworthy people (because this knowledge of the Khechari Mudra of Yoga is like live fire, and put into wrong hands it would be catastrophic and devastating). [Refer verse no. 25 of this Canto 2.] (12-13).

[Note--¹This is basically meant to emphasise the point that since it is the teacher who makes a man worth his salt as a human being, what he is worth for, since it is the teacher who him the light and spiritual path by unfolding the great secrets enshrined in the scriptures—or for that matter any field of knowledge—and explains them threadbare to the disciple, removing all his doubts and misgivings, and generally bringing the esoteric texts and their mysteries and hidden meaning within his grasp, for otherwise the same knowledge might have been worthless for the student like a set of meaningless words had they not been explained to him by the teacher, it follows therefore that the teacher deserves all the respects and regards that a disciple can muster for someone who has shown him the true path of knowledge and made him educated and enlightened by removing the veil of ignorance that had shrouded him earlier like a foreboding dark shadow.

The teacher is like someone who comes to the rescue of a person trapped in a bog and is being rapidly sucked in. The material world and its delusions are like entrapments that not only ensnare the creature but rob him of all his peace and happiness for all times to come. He is so pre-occupied with the world and its never-ending work that he does not realise that he is trapped at all. It is only when he reads the scriptures or comes in contact with liberated souls who are fortunate enough to have tested spiritual freedom that he realises his predicament and precarious state of existence. A wise creature would then decide that it is never too late to make a beginning, for without making the first move, without taking the first step, no one can reach the destination however far it is. So, he takes the shelter of a Guru because the person is totally ignorant of the path ahead and the proper way to walk on it with full preparation. He needs expert advice and guidance.

Citing the example of the bog here as mentioned above, even his own companions are of no help to him because they themselves are trapped and need help. Therefore, when he comes in contact with a wise and self-realised Guru, it's like a boon from the heaven for him. The Guru extends a helping hand and extricates him from the bog represented by his ignorance, delusions and entrapments of the world. The Guru puts him on solid ground and shows him the path that would lead him to his destination. How can anyone with scruples ever be ungrateful to such a Guru who has given his doomed destiny new lease of life and salvaged his soul from the pit of darkness and endless miseries? It's a basic obligation on the part of the disciple, and a sign of decent and civilised behaviour that he pays due respect and recognition to the Guru.]

14-15. Keeping this acquired knowledge secret and concealed, one should approach an expert Guru wherever he is available and practice it diligently under his expert guidance (14-15).

[Note—The plausible reason for advising one to keep the knowledge secret is that if he advertises about it, people would flock to him and this would snatch him of his peace and serenity. He would be facing so many curious people who would treat him as a novelty that either he would be pumped-up with a false sense of importance and scholarship, or would end up with numerous self-declared expert advisors who would throw him in a tailspin of confusions and doubts with their own bit of 'expert advice' that they claim has proved very effective for them! The result would be catastrophic for the spiritual aspirant either way. So it is best to keep quiet and maintain a low profile.]

16. With the acquisition of success in the practice of Khechari Vidya, one acquires the mystical ability to float or fly in the sky. This Vidya should be practiced with the aid of the relevant Mantra called the 'Beej Mantra' or the basic formula for Khechari that can enable a practitioner to successfully float or fly in the sky (16).

[Note—It is having knowledge of the key secrets of this mystical ability that would empower the person to lift himself from the ground and float in the air. More contemporarily it is like learning the skill of flying and getting a practical hands-on experience of it under the guidance of an expert flying tutor before a man is able to take to the air on a glider or an air plane. If the flying student is not well trained or is not able to handle the entire routine of flying properly, he would crash land and die. In the field of Yoga it is a well established principle that if its practice is a giver of immense powers and authority on the one hand, it can be very dangerous and potentially devastating if not handled properly on the other hand. It can be injurious, and sometimes does more harm than good.

The Beej Mantras are like the key formulas that one must remember in order to solve complicated problems of science or mathematics. A flight engineer is expected to know his science of flying and the vehicle he is handling like the back of his hand

when he is piloting an air plane or a space craft, for otherwise merely relying on the automatic flying software of the on-board computer would land him in serious trouble if some emergency occurs. He would not have the time to refer to manuals and text books when the plane is about to crash land.

In other words, the practitioner of Khechari Vidya should have a thorough, not only 'adequate' knowledge of it before he endeavours to do it. Khechari Yoga lifts the ascetic from the ground; he begins to levitate against the forces of gravity like a heavier-than air plane lifting from the ground. So if he fails or is careless even for a moment, he would crash-land. This repeated failure would be de-moralizing for him. Lifting the body requires deep concentration and a sharp coordination between the body and the mind.

This is a metaphoric Melan or coordination or union between the gross body and the subtle mind. Once this initial Melan is achieved, the practitioner progresses to the next level where a coordination is brought about between the various units of the vital wind that supports life inside the body, such as the Pran also known as breath, and Apaana which is the wind that moves in the lower part of the body. In the next step, the unified Pran wind obtains Melan or union or unification with the Atma or the consciousness that resides in the body. This Atma is his true self. Further ahead, this individual 'self' or Atma is brought in union with the cosmic Atma or cosmic 'Self' which is no other entity but the supreme transcendental Consciousness known as Brahm. In other words, the ultimate aim of Yoga in all its forms is to bring about a Melan between the individual's consciousness and the supreme transcendental cosmic Consciousness. This is the 'Truth' called the Shiva Tattva which is absolute and quintessential.

The idea of 'floating in the air' during practice of Khechari is a metaphoric way of saying the soul has attained an exalted and lifted state of existence, that it has risen from a low plane of existence to a higher plane of existence. This means that a practitioner of Khechari Yoga and Melan Mantra has lifted himself from a lowly life of delusions, ignorance and worldly involvements, has broken such fetters and has risen to an exalted level of enlightened living which is spiritually mature and liberating. Such a person becomes self-realised and Brahm-realised.]

17. [Verse nos. 17-20 describe the Beej Mantra for doing Khechari Mudra of Yoga.]

A successful aspirant is able to become a leader of the Gods who roam in the sky; he obtains free access to the sky and can roam in it as he wishes¹.

Now, the primary Beej Mantra² of Khechari is being described. The Sanskrit alphabet 'Ha' represents the 'Khechar' aspect of this Mantra. [That is, the seed letter 'Ha' of the Mantra is the esoteric formula which injects into the main Mantra the mystical power that would enable the person who has mastered this Mantra's use to be able to fly or float in the sky or space.]

Similarly, the alphabet 'Ee' (as pronounced in *eel*, *keen*, *feel*), which is the long vowel sound and the fourth vowel of the Sanskrit language, represents the Dharna. [That is, this alphabet 'Ee' represents a firm determination and unwavering resolution on the part of the aspirant for obtaining success in this knowledge and its implementation. It indicates his steadfastness of purpose and his ability to keep this Mantra in memory at all times during his sojourn in the sky. This is important, for should he forget it, he would fall back immediately. This is like an air plane pilot always remembering the intricate science of flying and running the air plane during flight, for otherwise it is impossible to fly a huge plane and to meet emergencies should they occur. There is no time to consult books in flight; it would be absolutely incredulous even to think in this term! It is also like the jet engine of a plane which is revving up for take-off.]

The fire element is represented by the alphabet 'Ra', and the water element by the 'Anuswar' (the dot placed on the top of an alphabet to give it the nasal sound)³.

The combined effect is the creation of the mystically charged esoteric letter 'Hrim or Hring'. The seed/root monosyllable Mantra Hrim or Hring stands for the 'Shakti' element of creation. This represents the cosmic energy and divine powers of creation which regulates everything in existence. It is therefore used to invoke the divine energy and seek its intercession on the behalf of the aspirant who uses this Mantra for worship. (17).

[Note—¹An aspirant who practices Khechari Yoga in a holistic manner along with the relevant Mantra dedicated to it is deemed to be as exalted as the Gods. He is not subjected to any of the physical limitations and grossness experienced by ordinary creatures whose movements are limited by the principles of physics because they have a gross body with fixed dimensions, weight, contour, constituent parts etc. For instance, it is not possible for any human being to float in the air without any aid as is a normal practice for the Gods, but Khechari Yoga enables him to achieve this super-human and magical feat.

An ordinary creature's physical compulsion of having to be limited to the ground and his inability to lift himself up and float in the air is symbolic of the fact that he is eternally bound to this mundane world of material sense objects, trapped and shackled to it for life. He lacks the will and the wherewithal to break free from this fetter. Yoga empowers him; it provides him with the necessary conducive environment and the instrument which can enable him to do so—to break free from the fetters of the body as well as the world and find his ultimate liberation and deliverance. By being able to float in the air due to success in Khechari Yoga, the aspirant should understand its great spiritual import and significance. He must realise that it indicates he has risen above the ordinary and mundane, and instead has attained an exalted spiritual stature where liberation and deliverance is just round the corner.

There is another way of looking at Khechari Yoga and its potential powers to make its followers equivalent to the exalted Gods. There are five basic elements—viz. earth, water, fire, air and sky in this order of subtlety, with the earth being the least subtle and the most gross, and the sky being the most subtle and the least gross. The ordinary life of miseries and pains where the aspirant remains engrossed in this world, when he has not yet stepped on the path of Yoga symbolises this earth element. He is like an ordinary creature rooted to the earth and unable to break free from its shackles and find freedom or the ability to lift himself up from the quagmire in which he has landed. On the other extreme end is the sky element symbolised by his ability to float in the air which he achieves by doing Khechari Yoga.

The air element is very much like the sky element and only slightly less subtle as is evident from the fact that it is only the air element that is able to fill the entire space of the sky as compared to other three elements. So, when the aspirant is able to practice Pranayam which indicates his ability to control the air element, it is deemed that he has obtained full control over this element of creation.

The next hurdle is the control of the water element which is done by practicing the various Bandhas, especially the Jalandhar Bandha which indicates his ability to directly overcome the hurdles created by the water element.

The fiercest and the most untamable of the five elements is the fire element. This is done by controlling the Kundalini and harnessing its stupendous energy during Yoga as described in the present Upanishad.

With these controls in place it is more than clear that there is little to differentiate between the practitioner of Yoga and the Gods. Such a person is indeed no less powerful than the Gods. He is deemed to have acquired the powers and virtues possessed by the Gods.

²The *Beej* Mantras are also called the seed or root Mantras. The word Beej refers to the fundamental, essential, elementary part of the Mantra. They are monosyllables which encrypt all the divine, spiritual, mystical and eclectic powers, potentials and authority possessed by the patron deity for which that particular Beej

Mantra is meant. These Beej Mantras are used in formal ritualistic worship, as during fire sacrifices, in occult forms of worship when worship instruments consisting of geometrical lines and figures, called the Yantra, are employed much like we have the circuit diagrams in an electronic instrument, as well as for doing Japa or constant repetition of a particular letter or word or phrase having divine and mystical qualities in order to invoke their powers and potentials for the benefit of the aspirant, and meditation and contemplation. These Beej Mantras are added as a prefix or suffix to the main Mantra to enhance and multiply its effects and potentials. For example, the root/seed/Beej Mantra 'Ra' stands for Lord Ram as well as the fire element. In other words, when it is used during a formal form of worship, it would boost the effect of the main Mantra of Lord Ram as well as subtly inject it with the stupendous and magnificent powers of 'fire'.

They are monosyllables and are much like the alphabets used in science and mathematical equations to denote other elements or factors. They encrypt great secret powers of creation in them, and must be pronounced and used properly even as the different alphabets standing for different atoms in organic chemistry must be properly placed at their designated places to make any sense out of them; otherwise the entire complex chemical compound represented by these monosyllable alphabets would be meaningless. Even in algebra, we use alphabets to denote certain things, and then go on calculating on the basis of these hypothetical assumptions to arrive at conclusive results. This system is used in all spheres of science. Therefore we conclude that the use of these 'Beej' Mantras during occult practices and ritualistic forms of worship to invoke divine powers and seek results is like the time tested scientific method applied in the sphere of metaphysics.

³The fire element would be like the heat produced by the combustion of the plane's fuel which powers the engine and enables the heavier-than-air machine to leave the earth and become air borne. The water element would be like the coolants used to cool down the engine and other parts of the plane and prevent their overheating. In the case of Yoga we can visualise their practical contribution in lifting a person's body from the ground as follows—

The Khechari Mudra is practiced not in isolation but in close coordination with other Mudras and Aasans (postures) of Yoga along with Bandhas (restrictions and closures of various apertures of the body), Pranayam (breath control), Shakti Chalan and Kundali activation etc. as described earlier in Canto 1 of this Upanishad. All these activities generate heat in the body which in turn warms up the water content of the latter and creates subtle steam. Steam has immense power as is evident when it can turn turbines that generate electricity and move the piston of huge engines that power the steam locomotive or the ship on high seas. The same thing happens here though in a different way and at a different plane. The fire let loose by activation of the Kundalini not only provides heat to warm the body's fluid contents or its water element, but also the air element. Hot air is known to rise up as is seen in hot air balloons. The combined effect of these two primary elements of Nature, water and air, getting heated is that the body is lifted from the ground much like the lifting of the hot air balloon. The Kundalini present at the lower end of the body provides the fire that keeps the air and water elements sufficiently hot and activated. Since all exit points of the body have been closed tight shut due to various Bandhas, Aasans, Mudras and Pranayam, the only option for heated air and the steam trapped inside the body is to lift the latter up.]

18-20. The Khechari Yoga is accomplished by using this Mantra. The next part of the Mantra is as follows—The Beej Mantra representing the Som or Moon is the alphabet 'Sa' (pronounced as in *sun* or *son*). Before this is the letter 'Bha' (pronounced as in *abhor*) which is the ninth alphabet of the Sanskrit consonant when counted backwards from 'Sa', and is followed by the letter 'Ma' (pronounced as in *mother*) which is the

eighth letter from 'Sa' when counted backwards. This letter 'Ma' is followed by the letter 'Pa' (pronounced as in *punk*, *pun*, *Pundit*) which is the fifth consonant when counted backwards from the letter 'Sa'. The letter 'Pa' is followed by the letter representing the Moon, i.e. the letter 'Sa' once again. The last letter in this sequence is 'Ksha' which is a combination of the letters 'Ka' (pronounced as in *kerb*, *kernel*) and 'Cha' (pronounced as in *champion*).

The resultant Mantra is the following—Hrim + Bha + Sa + Ma + Pa + Sa + Ksha = 'Hrim Bhum Sum Mum Pum Sum Kshum' (18-20).

[Note—The Mantras have the nasal sign 'Anuswar' which is represented by putting a 'dot' over each letter to represent the fact that they are empowered with cosmic divine powers. The Anuswar is also called the Bindu, a dot. This Bindu has great metaphysical significance as described in numerous Upanishads that deal with Yoga and Naad (the ethereal sound of creation). The concept of Naad and Bindu, called the 'Naad Shakti', has been explained at length in Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse nos. 105, 167, 178; Canto 2, verse no. 6; Canto 3, verse nos. 2-3, 11; Canto 4, verse no. 47; Canto 5, verse no. 28; and Canto 6, verse nos. 21, 48-49, 71-73.

The relationship between the Bindu, Naad and the Mana (the mind) has been described in Yogshikha Upanishad of Krishna Yajur Veda, Canto 1, verse no. 178, Canto 6, verse nos. 71-73.

The Anuswar sounds like 'um' in the word 'Rum', or like 'ung' as in 'Rung'. Hence, the alphabet 'Bha' becomes 'Bhum' or 'Bhung', and so on and so forth.]

21-23. When one accepts this above Mantra from a wise and expert Guru and does meditation using it, i.e. repeats it with due diligence, sincerity and concentration, it is activated and becomes very potent and powerful. Then it is able to bestow upon him all types of mystical super-natural powers called Siddhis.

By doing Japa (repetition) of this Mantra twelve times a day, all sorts of Maya (delusions and ignorance pertaining to this artificial material world and the gross perishable body) cease to have any effect on the practitioner even in his dreams. [That is, when the mind and intellect are purified by the good effects of this Mantra, they would be fine tuned and enable the person to see through the dark veil of delusions that mislead him into believing as true things that are false and illusionary by nature. This Mantra acts as catalyst of change and enables the practitioner to rise higher from the muck of ignorance-induced worldly fantasies to the divine world of spiritual reality.]

An aspirant who does Japa of this Mantra for five Lakh times (1 Lakh = 1,00,000) while observing all the sanctioned rules and regulations meant for doing such a Japa, is able to attain success in acquiring expertise in Khechari. All the problems of his life are eliminated, and he obtains happiness and joys that are equivalent to those enjoyed by the exalted Gods (21-23).

24. The wrinkles of the body disappear as do the graying of hair. That is, even an old man becomes comparatively younger in his body than his actual physical age. This is why this Khechari Vidya is called 'Maha Vidya' or the great knowledge. One should not doubt its efficacy, and therefore should endeavour to practice it with due diligence and firm faith (24).

25-26. Oh Brahmin (Gautam)! If due care and diligence is not shown while practicing this Khechari Vidya, it would not yield any result and become potentially dangerous

for the practitioner; he would have to suffer instead of benefiting from its practice. [Refer verse nos. 12-13 above of the present Canto 2.]

Even if total success is not achieved initially inspite of being careful and diligent and doing practice in a holistic manner, one should not be disheartened and dejected to an extent that he abandons Yoga midway, but have patience and show resilience by persisting with it under the guidance of an expert guide or teacher, for it ought to be noted here that without the regular help and guidance of an expert guide and teacher, success is difficult to obtain in this spiritual endeavour. The Mantra for Khechhari should be consistently and persistently repeated inspite of initial failures (for it is bound to show results sooner or later) (25-26).

27. If one is fortunate enough to have received the scripture pertaining to this knowledge of Khechhari (i.e. if one is lucky to come across the knowledge of this mystical practice in some ancient text or is able to locate an expert teacher of this subject who can explain its intricate details and give practical advise, which is a rare possibility because such wise persons are difficult to encounter), then he should practice this mystical form of meditation sincerely and with the greatest of diligence and faith.

In this way the practitioner is sure to achieve success in it and be blessed with the mystical powers that accompany this success in a natural way (27).

28. [The actual process of Khechhari is being narrated now from here onwards.]

To begin with, the aspirant should, under the expert guidance of a teacher, vigorously rubbing the rear end of the roof of the mouth cavity (i.e. the hind part of the palate) so that it is scrubbed and cleaned thoroughly (28).

29. Using an instrument which is as razor-sharp at the edges as the plant called 'Thuar' (the plant with the Latin name *Euphobia neriifolia*; the cactus plant), the aspirant should make a very small incision in the muscular tissue that connects the tongue to the lower surface of the mouth cavity at its rear (29).

30. On this incision he should sprinkle a powder made of a mixture of rock salt/mineral salt and myrobalan (a herb) for seven consecutive days. Then another minute incision is made again deeper in the tongue (30).

31. By repeating this process continuously for six months (i.e. by making deeper incisions each time), the tongue is detached from the lower jaw (i.e. it is now freed from the muscular tissue that ties it to the lower surface of the mouth cavity) (31).

32-36. Then the tip of the tongue should be covered with a clean cloth and slowly elongated by regularly and persistently pulling it outwards by clasping its tip with the fingers and drawing it out in slow rhythmic to-and-fro movements of the hand.

Constant practice of this elongation process lengthens the tongue sufficiently enough to reach the area of the forehead between the two eyebrows, and if this process is persisted with, the tongue can be stretched to reach the two ears also. It would protrude out to reach the chin without much effort [33 ½].

If this practice is continued for three years without break, the tongue would be so long as to reach the hairs on the head. By this time, the tongue has been sufficiently lengthened so as to enable it to reach the shoulder blades on the side of the neck on the one hand and the Adam's apple in the throat on the other hand. [Naturally, if the

tongue is made flexible and elongated enough so as to reach the shoulder blades, it would be easy for it to touch the Adam's apple which is closer at hand.]

If the practice of stretching the tongue is continued for another three years, it can reach the back of the neck and its base in the front.

By and by the tongue can be elongated sufficiently enough to go right up to the top of the head where the hair-like slit called the Brahm Randhra is located in the cranium and cover it. There is no doubt in it [34-36]. (32-36).

[Note—It would be evident by now why this Khechari is considered both rare and dangerous to practice. Besides this, it is a long haul process, requiring a lot of patience and resilience on the part of the practitioner. Pulling, flexing and stretching the tongue besides cutting it from its root in the way narrated herein above is of course not a child's joke under any circumstances. It can be very dangerous and fatal even.]

37-38. As has been observed, this elongation process enables the tongue to become elastic and stretchable. It can then be easily used to cover the Brahm Randhra and close it like a doorway (or like a cork on the mouth of a bottle). To do this along with the assiduous practice of doing Japa of the prescribed Beej Mantras for this form of Yoga systematically (as described in verse nos. 17-20) is obviously a very difficult proposition¹.

These Beej Mantras should be invoked properly and in a systematic way, i.e. the two basic rituals of 'Kar Nyas' and 'Anga Nyas'² must be painstakingly done to fully harness their mystical potentials. Otherwise, the results are not very encouraging; they might not even be worth the effort put in (37-38).

[Note—¹The elongation process of the tongue is already so stressful and painful, and when one is expected to concentrate upon the Mantras while doing so it becomes all the more impossible. Then the long time factor involved—a total of approximately twenty one long years, counting the 3 + 3 years required to sufficiently elongating the tongue as mentioned in verse nos. 32-36, another 3 years to tuck it inside the mouth as would be described below in verse nos. 39-42, and another 12 years as mentioned in verse no. 48 when the tongue is inverted and tucked inside the rear of the mouth cavity and the nostrils are vigorously rubbed by a stick while the eyesight is focused at the center of the eyebrows—would undoubtedly make it a very daunting and foreboding task. By simply visualizing a man being able to sustain the strain of this most formidable form of Yoga for such a long period of time, observing its strict tenets and sitting in the grotesque and extraordinary postures for prolonged durations and not faltering in his resolve is indeed difficult to imagine. It not only seems a Herculean task but involves a lot of danger and hurdles.

²*Kar Nyas* and *Anga Nyas* of the 'Beej', i.e. the seed or root of the main Mantras, are the two basic rituals of invoking the divine powers of the Mantras which are basically mystical formulas employed in religious practice, specially during occult rites and meditation of which this Khechari is a part. The word 'Kar' means hand, and 'Anga' means body, while 'Nyas' refers to an invocation, or vesting or assigning any entity with something, or entrusting an entity with some trust and responsibility; to deposit, repose, trust, pledge, entrust, to keep a thing in mind, etc. This is a ritualistic process in which certain parts of the body are touched and certain Mantras are said. It also means the purification of the individual parts of the body and the installation of the individual letter of the invoked Mantra, complete with its full potentials, at those points. Therefore, Nyas is a process of pledging utmost faith and conviction on the divine and holy Mantra's supernatural powers and potentials by invoking it and reposing it on the various locations of the body and its vital parts, such as the limbs, the abdomen and chest, the throat and forehead etc.

In the context of the Beej Mantras, it refers to invoking their divine cosmic powers and establishing them on various parts of the body, or assigning the patron Gods of these seed Mantras some specific part of the body so that they can establish themselves there.

Hence, doing Kar Nyas with the Beej Mantras would be to establish these symbolic Gods representing the cosmic, divine and mystical powers that are encrypted in the different Beej Mantras on the hand of the practitioner, while Anga Nyas would be to do the same on other parts of the body such as the chest, abdomen, shoulders, throat, forehead etc.]

39-41. This exercise should be done very gradually, with great patience, resilience and painstaking efforts; it cannot be rushed through. Done in a hurry or impatiently, it can be very hazardous for the body.

If the tongue is sufficiently long it would be possible to invert it with the help of the tip of fingers and tuck it into the opening at the back of the mouth where the rear of the palate opens into the wind pipe. This spot is called the 'Brahm Vivar'¹ (39-41).

[Note—¹The *Brahm Vivar* is literally a hole-like aperture present at the back of the mouth where it opens into the wind pipe which connects the lungs to the nose. This is the location of the 'Talu Chakra' or the swirling subtle energy center located at the rear of the palate. It has a direct link to the Brahm Randhra present in the cranium at the top of the head, and which is the hair-like slit marking the suture joint between the two parts of the skull.]

42. By constantly practicing this for three consecutive years with patience, the tongue can be made to enter the 'Brahm Dwar', literally the 'doorway to Brahm' which is another name for the Brahm Vivar (as described above in verse nos. 39-41).

Once the tongue enters this spot, the latter should be systematically rubbed by the former (42).

43. There are some practitioners of Yoga who have obtained success in Khechari even without this rubbing of the Brahm Dwar/Brahm Vivar with the tongue, but only those who have previously attained expertise in systematically invoking the Mantra of Khechari can ever hope to do so. [In other words, only those who have mastered the art and skill of invoking the Mantras of Khechari are exempt from going through this most arduous and difficult exercise of inverting the tongue and rubbing it against the back of the mouth and the rear of the palate. The plausible reason is that the Beej Mantras are made up of both vowels and consonants capped with the 'nasal sound' of Anuswar. See verse nos. 17-20. Constant practice of repeating these Mantras create vibrations that perhaps have the same scrubbing effect as obtained by the physical rubbing done with the help of the tongue.] (43).

44-46. Quick results are obtained by simultaneously doing Japa of the Mantra (i.e. to devotedly repeat the Mantra and use it as tool to do meditation with) and doing Manthan (literally the vigorous churning, or rubbing of something with another thing).

For the purpose of Manthan, a thin stick or rod made of iron, silver or gold is used. Its tip is wrapped in some tissue-cloth soaked in milk, and then it is inserted in the nostril while the practitioner sits in Sukha Aasan (the sitting posture which is comfortable for him), holds the Pran (breath) in the region of the heart (chest), and has focused his eyesight at a point midway between the two eyebrows. The inserted

stick is then rubbed against the mucous lining of the nostril at its hind part where it opens into the wind pipe. This process is called Manthan.

If the process is done with perseverance for a period of six months, it begins to show results (44-46).

47-48. During this period, the state of the Yogi (the practicing ascetic) is like that of a sleeping child. It should be noted that this process of Manthan is to be done only once a month, and not daily [47].

The tongue should be repeatedly inserted into the Brahm Dwar on a regular basis (as described in verse no. 30-42). [That is, though the Manthan should be done only once a month, the insertion of the tongue into the back of the mouth cavity should be done on a daily basis. This restriction means that the main purpose of Manthan with a stick is to clean the clogged holes of the nostrils and scrub clean its mucous membranes like one cleans the tongue while brushing the teeth in the morning. It is also like a periodic cleaning of the household chimney or drain pipes so that all blockages are removed.]

If this process is done for a continuous period of twelve years then it is sure that the Yogi would get success in it, and consequentially attain mystical powers that accompany its successful completion (47-48).

49. At the successful culmination of this Yoga, the aspiring ascetic is able to have the divine vision of the entire creation in mirror of his inner self. [That is, he witnesses the presence of the cosmic Divinity inside his own bosom as the pure consciousness known as the Atma. Since whatever that truthfully exists is nothing but the Atma in its all-pervading and universal form as consciousness, when the ascetic sees this Atma he is deemed to be metaphorically witnessing the entire world in his own bosom.]

According to the philosophy of Yoga this is made possible because in the stage when the ascetic is successfully able to insert the tongue in the Brahm Dwar (verse no. 42) he would be able to taste the exhilarating nectar that provides eternal bliss and ecstasy as the divine subtle energy of the activated Kundalini is making its way up through this region by passing through the Rajdanta or the Talu Chakra¹ on its way up to the Brahm Randhra (49).

[Note--¹The *Rajdant* is also called the 'Talu Chakra' as it is located at the rear of the palate and the back of the mouth where this opens into the wind pipe. It is closely related to the Kanth Chakra or the subtle energy center located at the pit of the throat. It is the route which leads to the so-called 10th door of Brahm which refers to the Brahm Randhra located at the top of the head. Earlier, Canto 1 has described in detail how the activated energy of the Kundalini accompanies the Pran or the vital winds present in the body as they move up the Sushumna Naadi during Pranayam and Kundalini activation to ultimately reach the forehead, and then proceed ahead to finally reach the top of the head in the region of the Brahm Randhra.

The Talu Chakra is like the tri-junction or the meeting point on the highway called the Sushumna Naadi that links the Kundalini located in the lower part of the body to the Brahm Randhra located at the top of the head. At the Talu Chakra, the inverted tongue can metaphorically 'taste' the elixir of bliss and ecstasy that drips from the surrounding tissues of the body when the aspirant experiences these eclectic sensations as his vital life forces represented by the Pran accompanied by the Kundalini Shakti are on their way up through the Sushumna Naadi. In practical terms it indicates that some sort of sweet fluid begins to effuse from the tissues of the brain when its nerves are titillated as the Pran rustles up the Sushumna Naadi towards the Brahm Randhra. This is why the practitioner of Khechhari Yoga is said to experience first hand the bliss and ecstasy that comes with Brahm-realisation.]

Canto 3

[This Canto describes how the spiritual aspirant who follows the fundamental philosophy of Yoga—here emphasizing the importance of meditation and contemplation more than the physical exercises of Yoga—achieves the exalted state of self realisation and Brahm realisation. It was preached by Lord Shiva, the patron God of ascetics and Yoga, to Brahma the creator.]

1. Lord Padmaj (i.e. Brahma the creator, so-called as he was born sitting aloft a divine lotus that emerged from the navel of the Viraat Purush in his manifestation as Vishnu at the beginning of creation) said (to Lord Shiva)—‘The Melan Mantra of Khechari is “Hrim Bhum Sum Mum Pum Sum Kshum”. [Refer Canto 2, verse nos. 5 and 17-20 for detail.]

Oh Shiva! Please tell me what is the significance of the three cardinal days of Amaavasya (the day of the dark moon), Pratipada (the first day of each half of the lunar month), and Purnamaasi (the day of the full moon) as described in relation to this Melan Mantra’ (1).

2. [Lord Shiva replied--] ‘These three days are symbolic representations of the three phases through which the spiritual aspirant passes in his journey of self-realisation and discovery of the pure consciousness residing in his own self with all its divine glory and brilliant splendour.

Hence, the dark moon night/day stands for the first phase of his existence and intellectual vision which is veiled by the dark shadow of spiritual ignorance just like the darkness that covers the bright disc of the moon and prevents its glorious shine from being visible and giving any light.

The second phase is the night/day just after this dark moon. It signifies the emergence of the first ray of hope and the first light of enlightenment and self-realisation that emerges out from behind this dark veil of total ignorance and falsehoods as soon as one starts his trek of discovery of the Truth and the pure Consciousness residing in his bosom, and which is nothing but his true divine ‘self’.

The final phase of the full moon is the metaphoric depiction of the successful culmination of his spiritual journey when he has discovered his true self and the brilliant splendour of his self-illuminated consciousness that removes all the causes of his spiritual delusions. This is the most auspicious state of existence for him. It marks the pinnacle of his spiritual journey when he becomes self-realised and Brahm-realised. His glory and divinity shines like the disc of the full moon; his enlightenment and spiritual fulfillment are complete and untainted. The world basks in his spiritual illumination, the light that emanates from his divine ‘self’, the exalted pure conscious Atma, much like it does in the moon’s soothing light. His mere presence is enough to spread peace and happiness all around much like the mere presence of the moon fills the entire sky with its nectar like moonlight (2).

3. When a man runs behind the sense objects of the material world with a great desire and longing for them, these desires and longings go on increasing exponentially instead of being satisfied and getting abated and calmed down¹. There is no end to this pursuit (because it is like running behind a mirage in a desert—the further the man

runs, the more the world and its artificial attractions retreat from him, baiting him to come hither to nowhere!).

Therefore, it is only by distancing oneself from both the sense objects of this material world and the desire, the greed and the lust for them that one can ever hope to obtain something that is truthful and eternal, that is faultless, taintless and without any of the shortcomings that are the hallmarks of everything in the world that the man seeks so assiduously out of his ignorance of the truth and reality² (3).

[Note--¹The reason is the man cannot obtain sufficient amount of satisfaction from this urge for sense gratification, as the objects of sense gratification are infinite, and the comforts and pleasures that they offer are equally infinite. Besides this point, the fact is that these material objects of the world are like the mirage seen in a desert— i.e. not only is it false but it runs further away from the man just at the time when he thinks that it is within his reach. So he continues to fruitlessly pursue the world eternally for the entire span of his lifetime without actually getting any worthwhile results from his efforts. This leaves him frustrated, distressed, weary and dismayed, which cause endless agitation and restlessness for his soul. It's like trying to catch hold of the sky with one's hand, which is an impossible proposition, or like attempting to grab the moon by catching hold of its image as seen in a mirror or pot full of water. As soon as the fingers touch the surface of the water, the entire moon vanishes, only to come back when the surface of the water become smooth and static to tease the person to try again.

²That is, only by relinquishing one's desires for sense gratification and for obtaining the material objects of the world that pepper him ceaselessly with colorful promises of giving him unimaginable charms and pleasures can a man ever hope to find real and eternal peace and tranquility. As long as the mind is distracted by the world which keeps it firmly shackled by its charms, thereby keeping the man enthralled and ensnared in shackles called Maya which are delusions arising out of ignorance of the reality, it is impossible for the mind to focus on something else. It is like the case of the flame of a candle flickering widely in a gust of wind, where the wind would stand for the various desires for this world and the flame would represent the mind. Only when the surge of uncountable worldly desires are eliminated from the landscape of the mind by training the latter wisely that one can get rid of the world and its shackling effect inspite of living in it and surrounded by its material sense objects. The key to overcome Maya is the key to obtain spiritual liberation and deliverance, and it is to distance one's self from the world and its numerous illusions and deceptive charms. Dispassion, detachment, renunciation, non-involvement and indifference are some of the important tools to achieve this noble spiritual end.]

4. A wise person who wants his own spiritual good should abandon his involvement with the sense organs as well as with the material world of sense objects permanently. Instead, he should focus his attention on the cosmic Shakti (i.e. the divine energy of the pure consciousness) residing in his own self (as his pure conscious Atma). He should become steadfast in this and be firmly focused on this fount of divine Shakti (4).

5. To examine the working of the mind with its internal in-built checking mechanism called the intellect, and using this intellect to analyse its functioning and seeing where it has erred, and then freeing oneself from the mind's wayward activities and tendencies is called 'Param Pada'. That is, freeing one's self from being hostage to the mind and its nefarious designs and pitiful state of worldly indulgences, to free one's self from remaining engulfed in ignorance and submerged in delusions created by the mind is tantamount to attaining the exalted spiritual state of wisdom, erudition,

enlightenment and self-realisation, which is the supreme state of conscious existence called 'Param Pada'.

It is an established principle that it is the mind that is the root which creates this delusory world, while at the same time it is the same mind that is the point source or 'Bindu' from where the wellspring of wisdom, erudition, sagacity and enlightenment springs forth. It is the mind that can cause all sorts of delusions for the creature and make him believe that something that is inherently false and misleading is true and real, while it is the same mind which when properly trained and guided can lead him to the auspicious path of greatness as well as spiritual liberation and deliverance (5).

[Note—This verse essentially describes how the Mana or the mind can be a source of both entanglements with the world as well as the source of liberation and deliverance from it. The most important component of a creature's body is his brain. It is the level of development of the brain that determines in which rung of evolutionary hierarchy the creature stands. The brain has two components—the grosser mind and the subtler intellect. The mind is always in a state of flux, remaining undecided and running hither and thither like a mischievous child let loose in a toy shop, while the intellect is marked by stability and is like a wise adult who knows what to do and what to choose. When the child (here referring to the mind) is put under the care of his parent (here referring to the adult intellect), it would have a proper upbringing, would be disciplined, well behaved and well trained. This child would not commit some grave error because he has been trained to be alert and think before acting, while an uncared child would be a nuisance for the society. Likewise, the mind, when it is under the supervision and guidance of the intellect, is under leash, and such a mind can be very productive for the man just like a properly raised child can give a lot to the world and the society when he grows up.]

6. Just like clarified butter is created from milk, the Bindu (the point-source of enlightenment leading to self-realisation) springs forth from the mind. Hence, whatever faults and shortcomings there are in the mind are restricted to it and they do not taint the Bindu¹ (6).

[Note--¹Butter is produced by churning milk, and only the best creamy part of milk floats on top and removed as butter, while all the impurities and adulterations in milk are left behind. Similarly, the wisdom and enlightenment that is produced is very refined and unpolluted as compared to the mind from which it has emerged. Another illustration would be the lotus flower. It emerges from the dirty pond but remains unaffected by the latter's pollutions.]

7. The Shakti (i.e. the life-giving energy of breath) that flows through the two Naadis called Surya and Chandra (i.e. the right and left nostrils respectively) has a limiting effect on the creature. So in order to obtain freedom from this artificial limitation imposed upon the inherently unlimited and eternal consciousness which is the true self and identity of the creature, attempt should be made by a wise aspirant to establish this Shakti (the cosmic energy that infuses life in an otherwise inert and inane gross body and miraculously transforms it into a living being) in the channel which runs between these two—i.e. in the Sushumna Naadi¹.

When this Shakti moves through this central channel (i.e. the Sushumna Naadi) it can pierce through all the obstacles (represented by the different Granthis as explained in Canto 1, verse nos. 67-68) on the way and reach the citadel from where the expert aspirant can break himself free from all the fetters tying him down to this body and the world to obtain final liberation and deliverance as and when he so wishes².

So, assiduous attempts should be made to painstakingly divert the Pran (the vital life sustaining winds in the body which help the consciousness to keep the body alive) into this Sushumna Naadi to give the creature his much-wanted freedom and deliverance from the shackles of the gross body and the world in which this body is bound to live, instead of merely keeping the Pran moving through the nostrils because this would only help to keep the gross body alive, and with it to keep all the shackles intact³ (7).

[Note—¹This is because he lives only as long as the breath flows through these two nostrils. Otherwise he would suffocate to death. In other words, his life and existence becomes dependent upon the breath that flows in and out through the nostrils. This breath, called the 'Pran', never finds rest or liberation because as soon as it is exhaled or manages to slip out of the body to freedom in the outer atmosphere, it is immediately pulled back in as inhaled breath. The man becomes so restless and suffocative that he gives no second thoughts in pulling the Pran right back in as soon as it leaves the body as exhalation. But this does not end here. Once inside, the restlessness continues as the Pran finds itself trapped and suffocated in a sac-like body, a state which is not in the nature of wind element as it likes to be eternally free and unfettered. So it tries to go out immediately, and the man has to breathe it out as exhalation. This oscillation of the Pran is symbolic of the man's continuous cycle of birth and death, with the inhalation standing for birth because it infuses life in the body, and exhalation for death because at the time of death the vital wind leaves the body and renders it lifeless. Thus, the man never finds true liberation and deliverance as long as his Pran continue to move in the nostrils.

On the other hand, if this same Pran is diverted and made to travel through the channel of the Sushumna Naadi, it can finally and permanently escape from the Brahm Randhra in the last stages of Yoga, thereby providing the spiritual aspirant his final liberation and deliverance which is called Mukti in metaphysical parlance. Since this is a one-way exit of the Pran, it provides him with Moksha or final emancipation and salvation. He no longer would have to re-enter the body, which translates into his not having to take any birth in the future.

The way the Pran exits from the body by these two methods—viz. one, by the normal breathing process wherein it flows in and out of the nostrils, and two, by the movement through the Sushumna Naadi as done by Yoga techniques, it would be clear for the spiritual aspirant that if he sincerely wishes to obtain Mukti or Moksha then he should aim at moving his Pran through the Sushumna Naadi instead of the nostrils. In other words, he should diligently practice Yoga as described in this Upanishad with a lot of patience and commitment on his part.

²This refers to the subtle cosmic energy of the Kundalini accompanied by the vital life-consciousness symbolised by the vital winds collectively called the Pran reaching the forehead where the ascetic can experience the bliss obtained when he becomes aware of the presence of pure consciousness residing inside his own self. The irony is that this consciousness was always present in his bosom as his Atma but it could not be experienced by him because the faculty of the brain which would actually do so was previously too pre-occupied with the passage of breath through the nostrils and the numerous sensory perceptions of the world that it received through the medium of the sense organs of perception present in the body and responding to them that it had little energy and time for other things.

But now when the aspirant has decided that enough is enough, that he no longer wishes to be charmed by false things of the world or enjoy its material sense objects that are however transient and perishable and never give true happiness and peace, but would rather seek things that give him eternal, true and real happiness and peace, things that have an enduring spiritual value, he begins to distance himself from the artificial world and its material objects. He trains his body and mind to get detached

from them and treat them as traps, and instead strive for nobler issues in life which would enable him to taste the nectar of eternity, bliss and contentedness.

With the mind-intellect freed from its overburdened task of dealing with the ever-changing world, it can now concentrate upon the spiritual dimensions of existence. Being freed from the grosser aspects of existence, it now has the time and the energy to think and deal with the sublime and subtler things of life. It is only when the grosser part of life is eliminated that one can experience the subtle things. For instance, when hard rock music is blaring in the background, it is impossible for anyone to enjoy the soothing effects of classical instrumental music or some Sufi songs.

This spiritually exalted and enlightened state empowers him with the third eye of wisdom, so-called because now he has become spiritually enlightened and is able to see things in their non-visible aspect which is beyond their mere physical form. That is, he gets a transcendental vision. Further on, this Shakti reaches the Brahm Randhra and can empower the Pran (the life-infusing vital winds of the body) to escape through it should the ascetic wish to leave his gross body and obtain what is called 'Videha Mukti', or liberation of the soul from the fetters of the gross body.

³Moving the Pran or breath through the nostrils would ensure that the gross body does not die, but that would also entail continued sufferance from the numerous problems that the creature endures because of this gross body. Once the Pran abandons its movement through the nostrils and instead moves up through the Sushumna Naadi, it would be a one-way movement that would take the creature to the citadel of 'spiritual high'—i.e. the exhilarating feeling of spiritual awareness and its attendant bliss and ecstasy. Merely moving the winds through the nostrils, i.e. merely breathing through the nose, would be literally frittering away the stupendous abilities of the vital winds that can enable the Atma to obtain final liberation and deliverance from the fetters of this gross body and equally gross world. This is only possible when the Pran moves up the Sushumna Naadi.]

8. The Pran (i.e. the consciousness that injects life into the body and which is manifested in the form of the life-infusing divine mystical powers inherent in the vital winds of the body) should be focused in the 'Bindu' (literally the 'dot'; here referring to the point in the forehead between the two eyebrows which is called the Agya Chakra). Simultaneously, the Vayu (i.e. the physical winds that move inside the body as breath and flatulence) should be controlled in the nostrils (by the process of Pranayam). [This combined effort helps the aspirant to achieve the spiritual high of experiencing bliss and ecstasy that comes with becoming aware of the stupendous fount of these virtues present in one's bosom as the pure consciousness.]

The three aspects of this creation—viz. the Bindu (symbolising the single point from which the entire creation has emerged, i.e. the supreme transcendental Brahm, the cosmic Consciousness), the consciousness residing in the bosom of the creature as his truthful Atma (which is his true 'self') and the Prakriti (which is the Nature at the macrocosmic level of creation and a creature's individual nature and inherent temperament at the microcosmic level of existence)—are actually an extension of this Pran Vayu. So, as soon as the Pran Vayu ceases to exist, the world also ceases to matter for the aspirant¹ (8).

[Note--¹That is, it is only as long as the vital winds that sustain life in the gross body keep the latter alive that the creature relates to the world, and the world has any meaning for him. As soon as this Pran Vayu leaves the body and the latter dies, the world ceases to matter or exist for all practical purposes as far as the creature is concerned. In this scenario, the 'creature' would be some entity different from the body. What or who is it then? The answer is 'the Atma or pure consciousness'—it is the truthful identity of the creature. How does this Atma interact with the world, or

how does the creature become aware of the world? The answer is ‘through the medium of the body and its sense organs as well as its mind and intellect’. The body is kept alive by the Pran Vayu, hence the existence of the world is only till the time the Pran Vayu lives in the body and keeps it alive. This happens till the time the creature breathes. And therefore, when this Pran Vayu stops moving through the nostrils and instead moves along the Sushumna Naadi to reach the point in the forehead where the extreme sense of bliss and ecstasy is experienced by the aspirant, the breathing stops automatically because this diversion of the Pran Vayu is possible only when it is stopped from moving through the nostrils and instead diverted to the Sushumna Naadi. When this happens, the world would also stop to exist for the sensory perceptions of the body as the mind would be engrossed in enjoying the bliss and ecstasy obtained at this juncture.]

9-11. The spiritual aspirant should learn about the six Chakras of the body¹ and then find rest (i.e. fix his attention and the energy of the Pran and consciousness) in the Chakra which gives him extreme sense of bliss and ecstasy (i.e. the Sahasraar Chakra).

The six Chakras are the following—Mooladhar, Swadhisthan, Manipur, Anaahat, Vishudha and Agya [9 ½].

The Mooladhar is situated near the anus, the Swadhisthan near the genital, the Manipur in the area around the navel, the Anaahat in the heart region, the Vishudha in the pit of the throat, and the Agya in the forehead [11]. (9-11).

[Note—¹The *Chakras* according to the Tantra philosophy are swirling energy centers of the body, and they are shaped like lotus flowers having varying number of petals. Refer also to: Canto 1, note to verse no. 85-86.

The Chakras have been described in detail in other Upanishads as well, notably the Saubhagya Laxmi Upanishad, Canto 3 of Rig Veda tradition, Dhyanbindu Upanishad, verse nos. 44-49 and Yogshikha Upanishad, Canto 1, verse nos. 168-178 as well as Canto 5, verse nos. 5-15 of the Krishna Yajur Veda tradition, as well as Yograjo-panishad, Yogchudamani Upanishad, and Jabal Darshan Upanishad, Canto 4 of the Sam Veda tradition.]

12. Having acquired the knowledge of these six Chakras, the aspirant should first focus on concentrating the Vayu (i.e. the Pran winds; the vital wind forces in the body which keep the body alive) one by one on these, raising it from the lower level to the next higher level until it reaches the Sahasraar Chakra where the extreme sense of bliss and ecstasy is witnessed by him. But this is not the goal. He should divert it still ahead and push it upwards into the head (so that ultimately it reaches the top of the head to enter the Brahm Randhra Chakra¹) (12).

[Note—¹The concept of how the ascetic is able to obtain final Mukti or liberation and deliverance when his Pran or vital life-bearing winds representing consciousness reaches the Brahm Randhra have been elaborately explained elsewhere in Amrit Naad Upanishad, verse no. 27, and Kshuriko-panishad, verse nos. 18-20 of the Krishna Yajur Veda tradition.]

13-17. By this practice, the Pran gets established in the symbolic universe located at the top of the head¹. In other words, the spiritual aspirant gains knowledge of everything worth knowing in this world. He virtually sees the world from a high ground and thus have a broad and panoramic view of existence.

In this holistic manner, the ascetic is able to have knowledge of and become enlightened about all the vital factors of life present in his body which is treated as a miniature universe—i.e. he acquires knowledge of and gets acquainted

with such potentially powerful aspects of the universe as Vayu (the various vital winds and their functions and how to harness their potential powers), the Bindu (literally the 'drop' and 'point', here referring to his vital forces of life and inherent strength that is represented by the drop of semen which he becomes able to self-control as well as the drop of blood and lymph and other important fluids in the body, and also to the point in the forehead where he experiences the exhilarating sense of extreme bliss and ecstasy when the Pran reaches this point during meditation), the Chakras (the swirling dynamic energy centers of his body which were hitherto clogged and unable to release their divine energies but which now have been opened up, empowering the aspirant with stupendous energy and powers), and the Chitta (the subtle aspect of the mind, the sub-conscious mind and its astounding abilities and powers).

This metaphorically makes the ascetic aware of the supreme Authority and the universal cosmic power that regulates the entire universe, and this eclectic knowledge fills him with the ecstasy and a sense of fulfillment that comes with the knowledge of the 'Supreme' and being acquainted first hand with the 'Lord' of creation. [After all, this is the ultimate aim of all spiritual endeavours—to become acquainted with the supreme Brahman. So, when the ascetic is able to achieve this exalted stage of enlightenment, he indeed becomes Brahman-realised.]

This is the culmination of Yoga—aimed to bring about a union between the individual and the Supreme Being. This is called the state of Samadhi wherein the ascetic tastes the nectar-like bliss of truth realisation and self-realisation [13 ½].

Just like the case wherein the fire inherent in the firewood cannot be brought to light without rubbing the latter vigorously, the astounding potentials and magnificent powers of Yoga cannot be demonstrated without stringent and painstaking effort and practice [14 ½].

Even as a lighted lamp covered by a clay pot cannot show its light unless the pot is broken, the brilliant light of enlightenment and self-realisation that emanates from the knowledge that the ascetic acquires of the supreme Truth of creation known as the cosmic Consciousness when he has successfully completed his Yoga practice and has experienced its attendant bliss and ecstasy that is likened to dripping nectar called Amrit inside his own self (as his pure conscious Atma) cannot be brought to light unless the covering in the form of the pot-like gross body is done away with². This is possible with the help of and guidance from a wise and self-realised Guru (who is a moral preceptor and an expert Yoga teacher himself) [16 ½].

The Guru is like a 'Karnadhaar', i.e. a helmsman or a boatman³, who can take a man across this world which is like a deep sea that is choppy and awe inspiring [17]. (13-17).

[Note--¹Obviously, the skull and its inside do resemble the inverted 'hemisphere of the sky' under which the entire universe is located. The brain is also located here, and the latter is the center of knowledge and wisdom without which life would be as good as non-existent. The grosser part of this brain, the tissues etc. are like the lifeless parts of this universe such as lifeless plants, asteroids, rocks and mountains etc., while its subtle part, the thinking and intellectual part—i.e. the mind and intellect, are like 'life' personified. 'Life' does not simply mean living like an animal, but living a fruitful life of intelligent and auspicious living which is only made possible by the use of intelligent aspect of the mind which can analyse and determine what is good, noble, auspicious, righteous and correct, and what is not. Even an ordinary animal has brain, but what distinguishes it from a human being is the latter's ability to think

rationally and intelligently, to determine and choose between options, to be able to differentiate between the good and the bad, between the gross and the sublime. This intellectual and wise aspect of the mind forms the subtle, the most important and useful part of the brain.

²The body is a gross thing much like the clay pot, while the consciousness residing in it is like the lighted lamp burning inside the pot. That is why consciousness is often called 'self-illuminated' because it gives light. In the present context, the 'getting rid of the body' has two connotations—one is to actually leave the body which the ascetic accomplishes by doing Yoga and forcing his Pran to make its exit from the Brahm Randhra at the culmination of Yoga, while the second meaning would be to disassociate and detach himself from the physical gross body and realise that his true self is the pure consciousness that is an ethereal Spirit. This Spirit is like the wind or air element that is not limited like the body, and is free from all the encumbrances associated with the gross body. Further, when the ascetic de-links himself from the body, he is not at all affected by the grossness, limitations and faults associated with the latter. This is what is meant here. A truly self-realised and acclaimed ascetic would rise above the grossness and limiting effects of the body, and instead become universal and ethereal like the Spirit that is his Atma.

³The word *Karnadhaar* literally means a helmsman, but here the meaning 'a boatman' is more apt because he is supposed to take his ward, the spiritual aspirant, across a 'sea' represented by this world. Only an expert boatman can do this.]

18-19. This ocean-like world called the Bhavsagar can be crossed only on the strength and powers that come to a spiritual aspirant with constant practice of Yoga (meditation and contemplation on the Truth) and inculcating noble, auspicious and righteous virtues called 'good Vasanas'.

Enlightenment and realisation sprouts in the creature like a divine flower that first emerges as an un-opened bud, then its two or more sepals unfold to reveal the petals which then follow suit and open out to make the flower bloom in its full glory and magnificence. This is the metaphor for the culmination of Yoga and self-realisation in a graded and step-by-step way that is natural but time consuming.

It is also like the faculty of speech ('Vaikhari') which has its secret origin in the thoughts of the man, then these thoughts are given words which can be likened to the sepals of the unfolding flower, followed by the actual process of speaking when the thought is made public which is like the blossoming of this symbolic flower. When the speaking is complete, when the man has completed the task of expressing himself, the speech rests and the man becomes quiet which is a metaphoric way of saying that all the aspirations and desires of the ascetic, which had made him undertake the rigours of Yoga in the first place, are fully satisfied when he experiences the extreme state of bliss and ecstasy that comes with self-realisation, and it is then that he becomes rested, contented, calm and steady (i.e. he reaches the stage of Samadhi which is a trance-like state obtained in the higher stages of Yoga; refer verse no. 13 ½ above of this present Canto 3) (18-19).

20-23. When the spiritual aspirant who has developed this wisdom of thought that the supreme entity that empowers the faculty of speech to speak is the supreme transcendental Lord (Brahm) residing in his own bosom as his true self (as pure conscious Atma), he would behave accordingly. So, when someone speaks ill of him, or speaks to him with words that are rough, insulting and generally unwarranted, or on the contrary even speaks good of him and say comforting nice words to him, he would remain steady, composed and calm with stoic equanimity

in both the cases. He would not at all be affected either by the uncalled for words and insinuations and lose his poise and calm, nor would he feel elated and proud at being praised and spoken good of. In both the cases he would remain completely indifferent to, unruffled by and unconcerned with what is being said. [This is because he knows that the Lord is speaking to him—scolding him for his wrongs, errors and shortcomings, or testing his patience, resilience and resolve, or lauding him for his goodness and virtuousness. So he must accept everything with great humility, for therein lies his greatness and proof of his exalted and enlightened state of existence.] [20 ½].

The creation at the microcosmic level of the individual creature is said to be of three kinds—viz. *Vishwa*, *Taijas* and *Pragya*¹. The same creation at the macrocosmic level of the universe is said to be also of three kinds—viz. *Viraat*, *Hiranyagarbha* and *Ishwar*². The created world, i.e. the gross world, is similarly of three kinds—viz. *Bhu*, *Bhuvaha* and *Swaha*³ [22].

All the various aspects of creation have unfolded from one basic source (the *Bindu*)⁴, and when the time comes for conclusion and folding up of the world, they would naturally revert to their original and basic form from which they had sprouted in the beginning. [This single source is the supreme entity known as *Brahm*.] That is, when things are seen in the correct perspective and analysed with intelligent application of the mind, all extraneous appearances vanish and only the basic oneness of the entire edifice of creation is visible. In other words, when the world comes to a conclusion, it would merge and become indistinguishable from the egg-like primordial source from which it had emerged [23]. (20-23).

[Note—¹The *Vishwa* refers to the gross body of the creature, i.e. his sense organs of perception and action which makes him aware of the external material and artificial world during his waking state; the *Taijas* refers to the subtle body of the creature, i.e. the mind-intellect complex that is active in his dreaming state of consciousness when the external physical world has ceased to exist but the mind still conjures up a colourful picture of the world in the dream and keeps itself as well the consciousness as active in it as in the physical world; and *Pragya* is causal body of the creature, i.e. the deep sleep state of consciousness when the mind has also ceased to exist.

²Similarly, the three levels of existence at the macro level of creation are called respectively *Viraat*, *Hiranyagarbha* and *Ishwar*. The word *Viraat* refers to the gross body of the cosmic consciousness that is vast and all-incorporating ('*Viraat*') and forms the sum total of all the gross bodies that exist at the micro level of creation; the *Hiranyagarbha*, literally the golden egg of the creation, refers to the subtle body of this *Viraat* from which the latter has emerged; and *Ishwar* is the macro level counterpart of the causal body of the creature, i.e. it represents the causal body of the *Viraat* and the sum total of all the causal bodies in creation.

Since the 'body' must have some living entity residing in it, it follows that this 'someone' or 'some living entity' is different from the body and it uses the body merely as its habitat or dwelling. This 'living entity' is known as the supreme transcendental consciousness called the *Atma* of the individual at the micro level of creation, and *Brahm* at the macro level. It is 'transcendental' because it goes beyond the limitations and definitions of the gross or subtle body. Since *Brahm* is the 'cause' of the entire creation coming into being, the inner chamber of the body where it lives is called 'causal'—one that causes something to happen. The counterpart of *Brahm* in the creature's body is the *Atma*. It is called 'consciousness' simply because it is the only truly living entity in the otherwise entirely inert and inane gross body made up of different elements which are themselves lifeless and lack any inherent consciousness in them besides being perishable and comparatively gross as compared to the pure Consciousness. Since the living being shows all signs of life and consciousness, since it has emotions and feelings, it is more akin to this *Atma* than it

is to the gross inert body. This fact is acknowledged when the scriptures assert and affirm that the true nature and identity of the creature is the Atma and not the body in which this Atma lives.

Taking the example of this material world, physical science tells us that everything has a visible structure that depends upon molecules which themselves are formed by arrangement of atoms in different permutations and combinations. The atoms also have a world of their own, with the electrons circulating the central nucleus consisting of the protons and the neutrons. When we apply this theory to metaphysical understanding of creation, we can draw a parallel and deduce that the visible physical world is the gross body of Brahm, the molecules are the subtle body, and the atom is the causal body. The nucleus of the atom without which the atom—and therefore the entire edifice of the material world dependent upon this atom—would cease to have an existence is the Brahm of Vedanta. This would be the macrocosmic view of creation. Its microcosmic partner would be the atom itself—with its rounded structure being the gross body, the component of the electrons, neutrons and protons etc. being its subtle body, while the nucleus itself would be causal body which houses the neutrons, protons and other sub-atomic forces that regulate the functioning of the edifice of the atom as a whole.

³The seeds of the three worlds that would come into existence were encrypted in the three words that the creator Brahma had pronounced at the time of creation. They were—‘Bhu’ from which was created the mortal world represented by earth and its inhabitants, ‘Bhuvaha’ from which the space above the earth was created, i.e. the world of the sky where birds as well as Spirits etc. would live, and ‘Swaha’ represented the heavens where the Gods would have their abode. Therefore, these three words are the seeds from which the huge tree of this creation came into existence.

In the context of what has been said in note 1 and 2 above, the Bhu would correspond to the gross body of creation, Bhuvaha to the subtle body, and Swaha to the causal body, while the supreme Brahm would be the one who pronounced these words to initiate the process in the beginning.

⁴This phenomenon can be best understood with the example of the huge tree with numerous big and small branches with their leaves, multicolored flowers, succulent fruits and hordes of birds, insects et al that find their temporary perch or permanent abode on it. The entire tree has had its origin in one single seed that is minuscule as compared to the size of the tree. This seed is like the ‘Brahmaand’ or universe in a miniature form, while the tree itself is the unfolded universe with its astounding variety and an astonishing array of multifaceted characteristics. When someone wishes to know the fundamental truth about the origin of this colourful tree, he would obviously come to conclusion that it is the seed. Similarly, when one goes deeper and deeper and sees the basic unit from which this edifice called the universe has emerged he would finally come to the conclusion that it is the microscopic Atma known as cosmic consciousness or Brahm. This is essentially the philosophy of the non-dual nature of the creation and the basis of Vedantic canons.

We can take another example to understand this phenomenon of the world having its origin in one single source—the ‘dot’, the Bindu, and then extending to reveal itself in its full bloom and vibrancy, and finally retracing itself back into the dot or the ‘self’ from where it had started out in the beginning on its journey of adventure should it wish to find its place of origin. Suppose one wishes to draw a line on a paper. The first point where the pen touches the paper is the metaphoric ‘dot’ or Bindu, and this is then stretched to become a line of whatever length one wishes. Can anyone draw a line without first making a dot? So it is safely deduced that the line is actually an extension of the single dot or Bindu, that the line consists of uncountable number of dots that add up to appear in the form of the line, and that the dot or Bindu is the parent-source of the entire line. When this ‘stretched dot’ known as the line ever wishes to retrace its step and find its source of origin, it is obvious that it would

come back to the point called the dot which was made when the tip of the pen had first touched the paper. Similarly, if the line wishes to know its true nature it would discover that it is nothing but a series of dots.

Every modern man who has encountered the computer with its astounding and stupendous abilities knows the basic fact that the machine works on a series of zeros and ones; it knows no other language except the zero and the digit one. Likewise, a wise and enlightened man knows nothing else except the Atma and Brahm. The entire edifice of creation revolves around these two units as far as he is concerned. But does this mean that there is duality? No, never, for he learns that the Atma and Brahm are the same entities at different planes of existence, the former at the micro level of existence and the latter at the macro level of existence.]

24. When the spiritual aspirant reaches this exalted and most divine state of existence of self-realisation which is tantamount to Brahm-realisation, all distinctions between his independent existence as a man and the universal nature of the Atma that transcends all physical boundaries created by the gross body are erased for ever, and consequentially he becomes one with the universal and all-pervading Consciousness known as the supreme Atma or Soul. In other words, he loses his independent and separated existence and merges with the universal Atma that has no separate and alienable existence. He becomes a personified Brahm himself.

It is such a mysterious state and form that defies definition—it cannot be said to have any light, and at the same time it cannot be said that it has no light. [The Atma is said to be ‘self-illuminated’, but can anyone physically ‘see’ this light? The answer is ‘no’. But not being able to see this light does not imply that there is no light in the Atma because otherwise a self-realised man would not have the so-called ‘light of wisdom and enlightenment’ that is so unique to him. Drawing an example from the physical world and cited in verse no. 15-16 above and verse no. 25 below, the fact that one cannot see the light of the lamp burning inside the clay pot as long as the lamp is covered by this pot does not mean that the lamp is not burning. Another instance would be the firewood cited in verse no. 14 ½ of this Canto 3 above. The fire element is always and intrinsically present in the firewood, and this is the reason that this wood has the word ‘fire’ prefixed to it. But can anyone see the latent fire present inside this wood? Since the fire is not actually visible, does it mean that it is not there in the firewood?] (24).

25. In this supreme state of enlightenment, only the realisation of the Truth prevails. This Truth has no particular name or form; it cannot be delineated and defined, and it is one of its kind in existence. It is indistinguishable from this creation though it remains invisible. The aspirant should visualise his self-illuminated Atma residing in his own bosom as the lighted lamp inside the clay pot—hidden from view but nevertheless giving out a subtle light that emanates from it and radiates out in every direction. [Refer verse no. 16 ½ of this Canto 3.] (25).

26. This exalted Atma is symbolically like the wick of a lighted lamp which has a flame the size of a thumb. Its light is bright and without any smoke. It is illumination and brightness personified. It is eternal, infinite, imperishable and truthful. The spiritual aspirant should always remember and concentrate his attention on this Atma resident in his bosom (26).

27-28. Essentially the Atma is inherently wise and enlightened, but when it assumes a gross body to live in, it comes under the corrupting and tainting influence of Maya (ignorance-induced delusions). Consequentially, this Atma begins to imagine that it has the three states of existence in this world—the Jagrat (waking state), the Swapna (dreaming state) and Sushupta (deep sleep state)¹. With this faulty thinking, it becomes a victim of the bad influences of Maya.

When the good effects of his numerous past lives (here meaning ‘when he is fortunate to have come in contact with wise men and has had the opportunity to study or hear the scriptures’ that) create a conducive environment that fosters right thinking, breeds wisdom and inculcates the desire to know the truth and analyse the situation threadbare, the man begins to wonder what his faults were that had led him into this quagmire of birth and death in the first place, given the fact that his ‘true self’, the Atma, is supposed to be free from life and death, and that it has no physical body. Then why has he come to such a sorry state of existence? He ponders on the eternal spiritual question—‘who am I, what are my shortcomings or faults, and how come I have come to live in this gross world’? (27-28).

[Note—¹See also verse no. 20-23 above of this Canto 3. Refer also to (a) Shukla Yajur Veda—Brihad Aranyaka Upanishad 2/1/16-20, 4/3/9-38. (b) Krishna Yajur Veda—Brahm/Amrit Bindu, verse no. 11; Varaaha Upanishad, Canto 1, verse no. 11.]

29. ‘During the waking and dreaming states of existence, it appears that I am doing so many things. But what happens during the deep sleep state?’ [During the waking state, the man does so many things with his gross body in this physical world, while in the dreaming state it is the subtle mind that makes him do so many things in the imaginary world of dreams. That is why in both the cases the man is doing something or the other—whether real or imaginary. But in the deep sleep state of existence, the mind becomes defunct, and consequentially there is no activity in spite of the fact that the consciousness does exist in the same body and radiates in it. This is proved by the fact the body does not die, and all its internal functions—such as the working of all its internal organs as the heart, liver, bladder, kidneys, lungs etc.—continue uninterrupted during this deep sleep state as if the man was awake and active. So what is that which lives in this state of deep sleep?]

This question haunts him and he keeps on contemplating upon its answer. [And upon deep analysis and study of the scriptures he comes to the conclusion that the entity which remains alive and active during this phase of deep sleep is called the ‘consciousness’, and it is this entity that is his true ‘self’.] (29).

30. Even as a bale of cotton is reduced to ashes immediately on contact with fire, the worldly ignorance and its attendant delusions are eliminated as soon as the light of wisdom and enlightenment emanating from the pure consciousness lightens up the inner self of the man. This ends all his torments and miseries pertaining to ignorance, delusions and the world (30).

31-32. In this way, when the darkness of ignorance that this gross material world and its delusions are metaphors for are eliminated by the light of true knowledge and wisdom, its place is taken over by the brilliant light representing this truthful knowledge and wisdom. And this knowledge is about the self-illuminated Atma which is pure and uncorrupted, which is untainted and immaculate, which is

eternal and truthful, and which is Consciousness personified. [When the world is eliminated, it implies that the gross body consisting of the gross organs of perception and action is also eliminated. These gross organs are the five organs of perception—ear, eye, nose, tongue and skin, and the five organs of action—hand, leg, mouth, anus and genital. It is through these that the Atma interacts with the world during the waking state of existence. Their removal from sight means that for all practical purposes the physical gross world has been done away with.]

This true knowledge and wisdom are the torch bearers of enlightened state of existence. It removes every trace of darkness and veils of all kinds that cover the glorious light of the Atma and prevent its shine from coming out. True knowledge also enlightens the creature about his distinct identity which is separate from the gross body called the Anna Maya Kosh consisting of the organs of perception and action, as well as the subtle body consisting of the vital winds called the Pran Maya Kosh and the mind-intellect complex called the Mana (mind) and Vigyan (intellect). Therefore, since the creature's 'true self or true identity' is the pure conscious Atma, it follows that both the gross and the subtle components of his existence are eliminated if one were to trace this 'true' identity. [When the creature is asleep, he dreams. During this stage of his existence, the outside body is asleep but the mind and its sub-conscious remain as active as before. The intellect was active when the man was awake in this world and was thinking actively, but it has a hidden role to play here in the dreaming world as well because it is the intellect that decides what the man would remember and learn that forms the basis of the data stored in the mind in the form of memory which his sub-conscious relies upon during dreams. So by erasing or eliminating the role of the mind and intellect altogether, the subtle body which covers the Atma is also removed.]

With the removal of these two bodies that had been covering the Atma like the clay pot covering the lighted lamp (as described in verse no. 15-16 and 25), it is obvious that the light of the Atma would shine through and illuminate the entire inner self of the spiritual aspirant just like the light of the lamp lighting up the surrounding area after removal of the clay pot covering it (31-32).

33. Hence, an enlightened man who is steadfast in his spiritual pursuit, who remains perpetually focused on his Atma during the course of his routine life and manages to do the same thing at the time of his death is able to obtain 'Jivan Mukti', i.e. he obtains freedom from this mundane and tormenting life while he is still alive in this world of artificiality and delusions, a world that is illusionary and entrapping like the mirage of the desert, a world that is like a dark swampy quagmire of contradictions, predicaments, miseries, misfortunes and confusions from which it is too difficult to extricate oneself easily.

Therefore, such an aspirant is deemed to be most wise and enlightened; he is deemed to be most lucky and fortunate; he is privileged and exalted; he has attained complete fulfillment of all his spiritual aspirations and desires (33).

34. An aspirant who has obtained this eclectic and exalted state of Jivan Mukti while he is alive in this world and goes about his routine life while remaining focused on his Atma would obtain the eternal state of liberation and deliverance of his Spirit called the state of 'Videha Mukti' (literally freedom of the Spirit from the limitations or bondage of the gross body) at the time of his death when his Pran and Atma leave the gross body effortlessly and merge seamlessly with their

cosmic counterparts just like the air inside a clay pitcher emerging from it and merging seamlessly and without creating even a ripple of movement into the air present outside this pitcher when it is broken (34).

35. That which remains at the end when all that is untruth and falsehood are eliminated is called the Brahm. This Brahm is without a beginning or end; it is perpetual, ever-present, eternal and infinite; it is imperishable and un-diminishing; it is majestic and magnificent, great and grand. It is steady, constant, unwavering and unmoving. It is free from the tainting effects of the five elements that create such perceptions as taste, smell, words (speech), touch and hearing. It is without any faults and blemishes of any kind whatsoever, it being absolutely immaculate and pure.

This is the teaching of this Upanishad; it is its tenet and canon. Amen!
(35).

Chapter 28

Pancha Brahm Upanishad/Panchbrahmo-panishad

This Upanishad is one of the revealed ones as it was first preached by Lord Shiva to sage Gaalav (refer verse no. 33). Later on, this metaphysical knowledge was passed on in the form of a discourse that was given by sage Pippalaad when he was approached by sage Shaakalya with the question—‘what or who was produced in the beginning of creation’ (verse no. 1).

The entire creation is envisioned as a three dimensional complex matrix made up of five primary elements that are divided and sub-divided into a crystal-lattice structure having different levels or planes of grossness or subtlety. There is no clear delineation between any two units of this crystal; it is not possible to draw a clear line to demarcate the elements and their divisions and sub-divisions so much so that each unit of this matrix is indistinguishable from the other as they subtly merge into one another to give a homogenous nature to the entire structure. This crystal-lattice like arrangement of the various components of creation ensures that there is one primary and supreme entity at the center of the entire structure, and it is called Brahm or pure cosmic Consciousness. Around this central core there is a complex structure of various manifestations of this single Brahm which in simple terms would mean the same Brahm appearing in different forms depending upon the spiritual perspective from which it is viewed. It is like seeing the same crystal from different angles.

We can view this creation as a vast empire divided into five primary states with almost independent Kings, and each of these states again sub-divided into several provinces and districts each with its own headquarters and chieftain, having certain degree of operating independence. But inspite of this hierarchy and structured feature, all the units owe their allegiance the single Emperor and are deemed to be ruled over by him; they must obey his orders and proclamations. They are all under

the overall command and supervision of the Emperor. It is this Emperor who is central to the administrative hierarchy resembling a pentagon with five subordinates under him, here called the five primary Gods, who guard the five cardinal points of the empire, here symbolising the entire creation. All these Gods are actually operating on behalf of Brahm, and are deemed to have unquestioned authority over the realm under their domain. From metaphysical view point, Brahm had revealed himself into five primary elements, and as creation evolved and progressed, these elements representing Brahm had assumed various levels of grossness or subtlety, and had acquired various names, external features, special characteristics and defining attributes depending upon the needs of the situation and circumstance. But they are nevertheless the same non-dual Brahm revealed in each of these forms, they are all the same Brahm playing different roles—this is the essence of the philosophy of Advaita Vedanta, the doctrine of ‘non-duality’.

Now according to this Upanishad, Brahm had first revealed itself into the five principal Gods, and then each of them had metamorphosed into more forms which formed the basis of evolution of the complex creation as we know it to be. The five primary manifestations of Brahm are as follows—Saddyojat, Aghor, Vamdeo, Tat-purush and Ishan (verse no. 1). The different forms into which they metamorphosed have been described in detail in verse nos. 5-23.

The five forms are only a matter of perception, for basically they are the same non-dual supreme Divinity revealed in all these forms. An enlightened and wise spiritual aspirant should visualise all these five forms in his own self as the pure consciousness known as the Atma, because the Atma is also a personification of that Divinity, and thereby be rest assured that his ‘self’ is a personification of all these five forms of Brahm.

The fact that there are basically five elements in creation and all of them have any relevance and importance because of the one cosmic universal Consciousness known as Brahm that is present in all of them and which binds them together into a living world that is very vivid, lively, dynamic and vibrant entity is behind the naming of this Upanishad as ‘Panch Brahm’—i.e. the five forms of Brahm. Everything that exists has this five-faced Brahm at its core, as its essence, as its heart, as its soul or Atma. Each face or aspect of this world is actually one of the other face or aspect of Brahm; without this Brahm, the entire structure would be simply non-existent.

Iconographically, this Panch Brahm is depicted as the five-faced Shiva, called ‘Panchaanan’, symbolising the composite authority and powers of the Supreme Being at one place. The face that is turned towards the zenith is called ‘Ishan’; the one facing north is called ‘Vamdeo’; the one to the east is ‘Tat-purush’; the south facing face stands for ‘Aghor’; and the one to the west side is known as ‘Saddyojat’. This image of Panchaanan Shiva has ten arms, fifteen eyes, is seated on a bull, wears an elephant hide around the waist and the tiger skin on the upper part of the body, has matted hairs and a tall crown. His weapons are Shakti (thunderbolt), Khatvanga (a magical wand) and a Trident. He also holds an Akshmalā (the prayer rosary), a fruit (symbolising his power to grant boons and blessings), a snake (indicating his fearless and venomous nature that would tolerate no nuisance), a Damaru (the hand held drum indicative of the cosmic Naad, the cosmic primordial sound that existed at the beginning of creation as well as the thunder and rumble of dooms day), and the Utpalā flower (a blue species of lotus; *nymphaea cerulean*). The other remaining hands are held in Abhaya Mudra (the posture giving fearlessness to his devotees) and Vara Mudra (the posture that grants boons and blessings).

The Upanishad has 43 verses and concludes with honouring this divine entity known as the Atma as a personification of the Supreme Being known as Brahm, and then goes on to enumerate the spiritual benefits obtained by studying this Upanishad. Like many other Upanishads of the Krishna Yajur Veda tradition, this Upanishad is also dedicated to Lord Shiva.

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of this Shanti Paath.

1. Once, when asked by sage Shaakalya¹ ‘what was created first in the beginning of creation’, sage Pippalaad² replied—‘The first revelation of Brahm was called ‘Saddyajat’—meaning the ‘first born’.

Shaakalya asked—‘Is there any other form in which this divine entity (Brahm) revealed itself?’

Pippalaada answered—‘Yes, there is, and it was called ‘Aghor’—literally meaning ‘one who is formidable and awe-inspiring’.

Shaakalya asked again—‘Is there any other form of this revelation?’

Pippalaada replied—‘Yes, it was named ‘Vamdeo’—which is one of the eleven names or forms of Lord Shiva, and which literally means one who is unconventional in all respects, one who is at odds with the established norms and traditions’.

Shaakalya persisted—‘Is there still other forms in which this Divinity revealed itself?’

Pippalaada said—‘Yes, and it was called ‘Tat-purush’—literally meaning ‘that Purush’, or ‘it is that same Purush’, referring to the Viraat Purush or the macrocosmic gross body of Brahm’. [Here it means that all the forms of the revealed cosmic Divinity are nothing but the same Supreme Being in all these manifestations. The Viraat Purush is considered as the invisible, almighty, supreme, all-pervading, all-encompassing and all-incorporating vast and macrocosmic revelation of Brahm. It is from this Viraat Purush that the rest of this creation has evolved.]’.

Finally Shaakalya asked once again—‘Is there any more form of this divine entity?’

Pippalaada replied—‘Yes. There is one more form which is the one that inspires all these other forms of the Gods; or is the cause of all these forms coming into being. That form is called ‘Ishan’—literally meaning an ‘insignia, an emblem and a symbol’, and which is one of the various names of Shiva. [Here it means that all these forms are governed and inspired by the same Supreme Being who is the Lord not only of these divine entities created at the time of creation but also of all and every individual unit of creation that would come into being from these initial revelations from that time onwards. Since the Gods are supposed to rule over this entire creation and control all its functions, it follows that this first-born God, i.e. the Viraat Purush or the Tat-purush, is the de facto supreme Authority that is the deemed Lord of creation. This revelation of Tat-purush embodies all the stupendous powers and magnificent overriding authority of the cosmic Consciousness called Brahm from which all the different units of creation have emerged. This first born image of Brahm had all the authority, majesty and powers of Brahm inherently present in it; it was a symbol of Brahm’s supremacy, authority, divine powers and cosmic might.]’

This form of Brahm is the lord and ruler of the entire creation—the past as well as the future. It is the almighty Lord God of all in existence³ (1).

[Note--¹Sage *Shaakalya*—He was called Shaakalya Vidagdha. The appendage ‘Vidagdha’ means one who is arrogant and haughty. He was so arrogant that he enjoyed breaking the words of the Sanhitas (i.e. the collection of Vedic hymns) of the Rig Vedas as mentioned in Nirukta-6/28. Hence he was also known as ‘Padapaathkaar’—one who relishes breaking or unnecessarily finding faults with Vedic Sanhitas. Therefore he must have been an expert grammarian. His arrogance and haughtiness proved to be his undoing because this is the precise reason why he was killed as a result of a curse of sage Yagyavalkya in the court of king Janak when Shaakalya tried in vain to defeat Yagyavalkya in metaphysical debate as mentioned in Brihad Aranyak Upanishad, Canto 3, Brahmin 9, verse no. 26 of the Shukla Yajur Veda tradition. Yagyavalkya’s annoyance with him is evident in the preceding verses—3/9/18, 25. This establishes the time of this great sage as being in the Treta Yuga, the second era of the Hindu 4-era celestial cycle. It was the era when Lord Vishnu had incarnated as Lord Ram who married Sita, the daughter of the enlightened king Janak referred to in the above cited Upanishad.

Notwithstanding this negative trait in his character, it is nevertheless true that Shaakalya was a sincere student of the Upanishads and one of the most respected sages of his time. He never hesitated in approaching other contemporary sages and seers to quench his thirst for knowledge as is proved in the present Panch Brahma Upanishad which revolves around the answer which Shaakalya got when he approached sage Pippalaada and asked him the question regarding one of the greatest mysteries of existence—‘What came into existence in the beginning of creation?’

²Sage *Pippalaada*—This sage perhaps got his name as he might have been used to eating a lot of Pipal, the fruit of the Pipal tree (the Indian Fig—*ficus religiosa*) or a kind of long pepper called by this name. He was a great teacher of metaphysics, a master of the doctrine of the Upanishads, and one of the greatest exponents of their philosophy. He has taught many sages and seers of the period, such as Shaakalya in the present case, wherein he describes the fundamental unity of creation and affirms that the five forms in which the Divinity exists are basically the revelation of the same Lord, and to the six sages Sukeshya, Shaibya and others in the Prashna Upanishad of Athara Veda tradition wherein he answers their six questions to their satisfaction. He was taught about the spiritual wisdom pertaining to the life after death by Nachiketa who had himself got this knowledge from Yam, the God of death, as narrated in Katha Upanishad of Krishna Yajur Veda. Pippalaada was present on the bed of arrows on which Bhishma, the legendary patriarch of the epic Mahabharat period, lay prior to his death when he had taught wisdom to Yudhisthir. [Refer Mahabharat, Shanti Parva, 47/9.] This shows that Pippalaada was a contemporary sage of the Mahabharat period.

When the two facts—one, that the Panch Brahm Upanishad was preached by him to Shaakalya who had died in the court of king Janak, the great scholarly king of the Treta era of Hindus, during a debate with the great sage Yagyavalkya when the latter cursed him for being arrogant and haughty of his knowledge as well as for showing irreverence and impertinence as narrated in Brihad Aranyak Upanishad, Canto 3, Brahmin 9 of the Shukla Yajur Veda tradition, and second, that Pippalaada was present in the Mahabharat war period that occurred in the later half of the third era called Dwapar, the era of Lord Krishna, it is easy to conclude that this sage had a very long life, easily straddling at least two eras, i.e. the Treta (Ram’s era) and Dwapar (Krishna’s era) if not three, i.e. Sat Yuga which was the first era, till Dwapar Yuga which was the third era.

It is believed that he was the son of Dadhichi and his wife Suvarka. The wife of Pippalaada was called Padmavati. His son was known after him as Pippalaadi, and he was taught by the great sage Jabal which forms the text of the Jabal Upanishad of the

Sam Veda tradition. It is a mythological legend that he had ordained Shani, the malefic God who casts evil eye, to spare children below 12 years.

The Padma Puran describes another sage with this name who had become very arrogant because of special powers that he had acquired due to Tapa (severe austerity and penance), but later he was chastised by the creator Brahma. (Refer Padma Puran, Chapters 60-62.)

³Basically, this Upanishad, like all of them without exception, espouse the doctrine of one non-dual Brahm, the cosmic Consciousness which is the only single point source, the fountainhead from which all that exists, whether visible or invisible, whether small or colossus, whether consequential or inconsequential, have come into being, and into which they would collapse to dissolve and merge once and for all, leaving no trace, at the time of conclusion. All the forms of Divinity mentioned in this verse are but one or the other form of this singular Brahm. If the five words used to name them are studied carefully, we come to the conclusion that they are simply epithets to describe one or the other aspects of this single cosmic divine entity. For example, 'Saddyojat' means the 'first born' and as such would refer to the Hiranyagarbha which preceded the Viraat Purush. This Hiranyagarbha is the subtle body of the supreme Brahm at the macro level of creation, and it is from this that the Viraat Purush representing the gross body of Brahm at the macro level of creation was born. The word 'Tat-purush' on the other hand refers to 'that Purush', 'that Supreme Being' who is envisioned as a cosmic Male, the Viraat Purush, who, according to Vedanta, is the macrocosmic gross body of Brahm. This Viraat Purush is known by different names, for instance as Vishnu, and various other names. Since the rest of the creation has emerged from this single Viraat Purush, it follows that even the Gods have emerged from him—a matter of fact as even Brahma, the creator, had emerged from the navel of Vishnu atop a divine lotus sprouting out of it, and it is this Brahma who had created everything else that exists in this world.

In essence, the idea is to understand the basic tenets and doctrines enshrined in the philosophy of the Upanishads and decipher their hidden spiritual and metaphysical meaning in the correct perspective, in the correct context, and with the correct wisdom, not allowing oneself to get bogged down getting too confused by the perplexities created by numerous versions of the same eternal Truth as espoused by various philosophers who had interpreted and explained it in different ways, or as presented by the various Purans and later day interpretations of the primary scriptures. For instance, according to the various versions in the Purans, the single Hiranyagarbha (the cosmic subtle body of Brahm) is known by different names—such as Brahma the creator, or as Vishnu the sustainer, and even as Shiva the concluder. Then there are instances in the Krishna Yajur Veda Upanishads themselves when Lord Shiva is treated as the Supreme Being himself, and the other two Gods of the Trinity, i.e. Brahm and Vishnu, as manifestations of Shiva. There are instances when the Viraat is sometimes called Brahma and at other times as Vishnu, leading to a lot of confusions. The word 'Purush' literally refers to a 'male', and hence all the primary Gods of creation who are deemed to be revelations of the Supreme Being known as Brahm are in male form. The basic idea is that there is no basic difference between any of these forms of Brahm; these different forms are just a way adopted by the same Supreme Being to delineate his own authority into separate segments so that the working of the creation can be carried on in a clock-work like precision without overlapping of functions and clash of authority. For example, Brahm in his manifestation as Brahma the creator performed the task of creation, as Vishnu oversaw the proper upkeep of what had come into existence, and as Shiva ensured that things remained in check and old order paved the way for new by ending the old, or causing its death, so that space can be made for the newer, brighter and more developed forms of creation to come into existence and have adequate place to establish it. This is why we say that the creation 'evolves' and 'develops' and 'grows' because the older order gives rise to newer, better, more developed and more

adoptable generation. This progression is at the core of the theory of 'evolution of species'.

Now, let us analyse the significance of each of these names. The first revelation of Brahm is known as *Saddyojat*—the 'first one'. Now, at the macrocosmic level of creation from the Vedantic view this would refer to the Hiranyagarbha, the subtle body of Brahm, and from the Puranic view as Brahma the creator from whom the rest of creation was created. In physical terms it would be represented by the 'earth' element because whatever was created first needed a base to stand upon and be established. Therefore, *Saddyojat* refers to the powers of Brahm to create and make a beginning. Iconographically, this form is represented by the face of Shiva facing west. This form has been described in verse nos. 5-6 of this Upanishad.

The second form of Brahm is called *Aghor*, the formidable and awe inspiring one. He symbolises the power of the water element and rules over it—i.e. he is the Lord who is not only responsible for preservation and nourishment of the creation just like water which also shows this grand virtue of sustenance, preservation, nourishment and protection of life, but the irony is that the same water can be ferocious, devastating and uncompromising when it decides so. This fearful and unforgiving nature of water is evident when one considers the severity of damage caused by severe ocean tsunamis, floods and storms like those that would occur during the time of the dooms day, or like the ones that have already been witnessed in recent years when they have wiped out entire towns and villages and caused widespread havoc. In other words, the Aghor Brahm symbolises the preservative forces of Nature represented by the water element on the one hand, and at the same time reserves the power and authority to conclude its own creation mercilessly should it decide to do so. Iconographically, Aghor Brahm's face points towards the south because in the context of the Indian land mass the vast Indian Ocean is to the south of the country. This form has been described in verse nos. 7-9 of this Upanishad.

The third form is known as *Vamdeo*—basically because Lord Shiva's general demeanours are unconventional and at odds with the way the world normally likes to live. He is a renunciate par-excellence and lives completely submerged in perpetual meditation, not at all bothered by the formalities, the niceties and the attractions of this material world. This life style would be treated as unconventional and odd by the less-enlightened creatures of the world who remain submerged, neck-deep, in enjoying the material comforts and pleasures of this world. So it is natural they would call him 'Vamdeo'—the odd, weird, strange, unconventional and an anomalous form of God. This would be very evident if Shiva is compared with Vishnu and Brahma, the other two Gods of the Trinity. Vishnu is very much involved in the upkeep of this world because it is part of his duties—as he is the protector, sustainer, preserver and nourisher of this creation. Brahma also remains neck-deep involved in this creation—because had it not been so he would never have explored means to create creatures who would copulate to propagate themselves. It is only Shiva who remains aloof from this swamp. Further, the word 'Shiva' itself means 'one who is auspicious, beautiful, truthful, enlightened and eternal'. Iconographically, the face of Shiva pointing to the North is called Vamdeo. This form of Brahm is a symbol of the fire element and stands for the power to purify, to clean, to absorb, to embrace everything that comes in contact with it and to burn all their impurities just like the fire that burns all impurities and brings out the inherent natural shine in an entity besides accepting everything that is offered to it, whether it is pure or impure. This ability of the fire to purify and clean things is made evident when impure gold is heated before its impurities can be removed. In the philosophy of Yoga, the heat generated by various exercises is able burn all the impurities present in the body that impede its normal functioning, thereby making the body healthy and robust. When a spiritual aspirant does Tapa, i.e. when he observes severe penances and austerities, the heat generated by this practice also helps to burn all his spiritual garbage and clean his 'self', his soul, and prepares the way for his salvation and emancipation. This form of

divine Brahm is said to rule over the fire element, and has been described in verse nos. 10-14 of this Upanishad.

The fourth form is called *Tat-purush*—literally ‘that Purush’, the cosmic Male form of Brahm known as the Viraat Purush at the macro level of creation. At the physical level, it is represented by the air element because the Viraat Purush is all-pervading, all-encompassing, omnipresent and omnipotent like the air element which also possesses these virtues. Iconographically, he is depicted as facing east—primarily because the wind blowing from east to west across the plains of India, phenomenon known as the Monsoon in the Indian sub-continent, which sucks in the moisture-laden rain clouds from the ocean and transforms them into life-sustaining rains in the context of the Indian land mass. This rain is like the divine ‘sperm’ provided by the Supreme Being to infuse life and vitality on earth and is a synonym for rejuvenation and vibrant life forms. This form of Brahm is described in verse nos. 15-18 of this Upanishad.

Finally, the fifth form of Brahm is the best and the most exalted form known as *Ishan*—literally the form which is symbolically the flag bearer, the symbol and emblem of Brahm’s supreme sway over the entire creation as well as a mark of Brahm’s unequivocal, irrefutable and unalienable power and authority over it. The only God who has been called ‘Maha Dev’—the Great Lord—in the scriptures is Shiva; even Vishnu and Brahma do not have the privilege to be honoured by this title. Therefore it follows logically that this supreme Authority is Shiva. *Ishan*—which is Shiva’s one name—is also called *Sadaa Shiva*, the eternal, auspicious and truthful Being; he is the one who gives liberation and deliverance to the creature and lives high in the citadel of the Zenith where the legendary heaven is said to be situated. At the micro level of creation, this form of Brahm refers to the sky element which harbours each single unit of creation that exists, as nothing lives outside ‘space’. This face of Shiva has been depicted iconographically in images as facing upwards—towards the Zenith, signifying the highest level of spiritual quest and the most exalted nature of this form of Brahm. The allusion to the sky element also symbolises this citadel along with the fact that one who lives high up in the sky is the senior most God who rules over and controls the entire creation from his high abode, i.e. the Zenith or heaven. Further, the sky is regarded as the subtlest of the five elements of creation and the nearest analogue to Brahm. This form of Brahm is described in verse nos. 19-23 of this Upanishad.

The reader is advised to refer also to Kalagni Rudra Upanishad, verse no. 3 of Krishna Yajur Veda. This is Chapter 10 of this volume.

It would be interesting to note that the five elements mentioned here are listed in the increasing order of subtlety—e.g. the ‘earth’ element is the grossest and so is at the bottom of the pile, while the ‘sky’ is the subtlest and at the top. The other three elements such as ‘water’, ‘fire’ and ‘air’ are in between them with the grossest of the three, i.e. the ‘water’, being closest to earth, followed by the less gross and more subtle ‘fire’ element which leaps up towards the sky when lighted indicating its natural propensity to go higher towards the sky indicating its subtler and lighter nature as compared to that of the water element. Finally there is the ‘air’ element which is so subtle that it fills the entire space of the sky, almost having the same degree of subtlety as the sky element. It would be noted here that water too has a tendency to go up and higher in the sky, but only in its lighter form as steam and water vapour, and not as a liquid that is earth-bound in rivers, oceans and wells etc. The water that the clouds carry is moisture, and it goes up not on its own account but because it is whipped and pushed up by its companion called the wind element when it lashes the surface of the oceans and seas. Since the earth is the grossest there is nothing below it, and since sky is the subtlest there is nothing beyond it, nothing transcends it!

The Saddyojat form of Brahm is related to the earth element because it is the earth that harbours life in all its vibrant forms; it is the ‘mother’ of all creation; it is

the symbolic 'creator' of the gross visible world. The earth harbours the secrets of life in its vast bowls, it fosters and nourishes life, and everything living in this world would ultimately die and merge into this earth. This is a metaphoric way of saying that everything originates in Brahm, is nourished and sustained by Brahm, and would finally collapse into and coalesce into Brahm.

Next comes the water element. Earth could not have produced anything without the aid of the miraculous ability of water to initiate, and then sustain and nourish life. Prior to appearance of plant and animal kingdoms on the surface of earth there was only water; water came before life came. This stupendous and miraculous ability of water is represented by Brahm in his Aghor form—the formidable and awe-inspiring power to create, sustain and conclude, all rolled into one supreme Authority.

The third form of Brahm is Vamdeo and it is represented by the fire element. The word 'Vam' has a negative connotation in Sanskrit and it generally refers to an entity that is opposing in nature, that is at odds with the usual temptations and worldly charms that are part of Nature's attempt of keeping the wheel of creation and destruction rotating endlessly. Brahm is 'Vamdeo' because as the fire element he is uncompromising and unforgiving by nature. He is opposed to all forms of inauspiciousness, unrighteousness and evil, and punishes those who are evil and sinful. These virtues of Brahm are reflected in the fire element because on the one hand the fire spares none, it would burn everything that comes in contact with it without a second thought as to its worthiness or unworthiness, but on the other hand there is a subtle positive side or aspect to this negative tendency of the fire to burn relentlessly and indiscriminately—it purifies an entity and burns its impurities as proved by the fact that gold is purified by putting it into fire. In ancient tradition, a man's truthfulness was proved if he could subject himself to the rigorous 'fire test' as was done by Sita, the honourable wife of Lord Ram, at the end of his war with the demon king Ravana in the epic story of Ramayan. So, the fire element exhibits both these characteristics of Brahm—to be indiscriminating and uncompromising in its punishment on the one hand, and purifying and cleaning on the other hand. This is in addition to the universal fact that the fire element is the most revered and pure form of creation, and the deity representing the fire, the Fire God, is also the most feared, most powerful and the most holy amongst the pantheon of Gods.

The fourth element is the air or wind element representing Brahm as the Viraat. The word 'Viraat' means vast, colossus, infinite and large. It refers to a macrocosmic entity that fills everything in creation and from which every imaginable form of life has emerged. The Upanishads and Purans dealing with the process of genesis of creation describe how the creation has evolved from this Viraat which is nothing but the macrocosmic gross body of the supreme transcendental Brahm. Now, the other name of the air element is 'Pran', literally meaning the vital spark of life. It is the Pran or the vital winds present inside the body of the living being that keep the otherwise dead body alive and active. The creature's body is a microcosm of the cosmos; it is visible revelation of the Viraat Purush (Aiteriyo Upanishad of the Rig Veda tradition). Since the cosmos is filled with space known as the sky element, and since the air element fills the entire space of the sky, it follows that the vital winds or Pran present inside the body of the individual creature is actually a microcosmic picture of what prevails at the cosmic level. Again since Pran is synonymous with life and is another term used for the air element which fills the vast space of the sky, it is also synonymous with the Viraat Purush because the latter is the all-encompassing and all-pervading gross body of Brahm. Just like the Viraat Purush the air element is central to all forms of life in creation; it pervades everywhere and nothing that lives is outside the purview of the air element. The importance of Pran vis-à-vis other elements of creation has been explained in Chandogya Upanishad of the Sam Veda tradition in its Canto 5, section 1, and in Brihad Aranyaka Upanishad of Shukla Yajur Veda tradition in its Canto 6, Brahman 1. The air element can be regarded as the

Viraat personified to signify the fact that all forms of life sustained by the air element are a visible manifestation of the Tat-purush, 'that Purush'.

The fifth and the last element is the sky—the subtlest of the five. The supreme Brahm has everything implanted in his own self; he bears every single unit of creation; nothing exists outside the parameter of Brahm just like nothing exists outside the boundary of the sky. The sky encompasses and encloses everything in existence just like Brahm, because nothing exists outside of Brahm; every unit of creation is a revelation of Brahm. Since Brahm harbours the entire creation in its own bosom and the sky harbours everything that exists in its space, the analogy is most apt and very evident. This form of Brahm is known as Ishan as it stands for the overriding authority and supremacy of the cosmic Divinity known as Brahm. This sky element is an emblem and insignia of Brahm, and wherever there is sky the presence of Brahm is deemed. This Ishan form of Brahm has his realm spread into infinity because the sky stretches into infinity. Nothing transcends or supersedes Brahm much like the fact that nothing is found beyond the reach of the sky.

The case of one Brahm revealing in so many forms and assuming as many names can be understood if we take a simple everyday example of the 'water' assuming so many forms and names—viz. ocean, river, rivulet, stream, brook, lake, pond, puddle, well, rain, cloud, ice, glacier, vapour, moisture, steam, mist, dew, nectar etc. Then we have the water which is cold, hot, warm, boiling, frigid; water in a cup and a pitcher; water that is salty, sweet, clean, dirty, murky; water that flows in a river, that is static in a pot, that heaves as huge ocean waves, that is boiling in a pan, that is solid as ice and floats as huge glaciers, that is raining from the sky, that is swirling in a whirlpool etc. Taken fundamentally, all of them are nothing but molecules of water consisting of two atoms of hydrogen and one atom of oxygen. This basic truth about water would not change inspite of assigning numerous names and epithets to it.]

2. How many classes or sections does it have? How many parts or divisions does it have? How many Shaktis (power, strength and authority) does it have or displays? All these things are very mysterious and esoteric, and therefore they ought to be kept secret. [That is, they should not be revealed to unauthorized persons—i.e. it should not be taught to those who are not competent intellectually and lack the required mental abilities and aptitude to comprehend them. This is because such knowledge must be put in the correct hands, for it might prove catastrophic if given to wrong persons just like the secrets of the atom bomb must not be given to an ordinary person, or every Tom, Dick and Harry cannot be taught the intricacies of the medical science—for a scalpel in the wrong hands would be no less lethal than a knife in the hands of a murderer.] (2).

3. Salutations to that Great Lord (Maha Deva) named 'Maha Rudra' (Lord Shiva) (3).

4. Lord Mahesh—the great God—had first taught this eclectic knowledge (to Pippalaad) (4).

5-6. [These two verses describes the first form of Brahm—Saddyojat.]

Oh Shaakalya! Listen about the most mysterious, enigmatic and esoteric entity that exists in this world—listen carefully. It is known as 'Saddyojat' Brahm.

Every sort of mystical powers and authority that exist in this creation, each single unit of creation, each single factor that make up the pieces of the mosaic that complete the composite picture that is acknowledged as this 'world', is a manifestation of the multifaceted and astoundingly varied personality of the majestic, the stupendous and the supreme cosmic Authority known as the Saddyojat Brahm.

Some of these majestic manifestations of this single Brahm are the following—the Mahi (earth—one of the five elements of creation, the grossest and most evident of the elements; the one which acts as the foundation and base of everything that lives), Pusha (one of the twelve names of Aditya, the Sun God; here symbolising the source of light, heat and energy that injects, fosters and sustains life on earth), Rama (Goddess Laxmi standing for all material wealth in existence), Brahma (the creator of this physical world as well as of the knowledge that exists as he had also created the Vedas which are repositories of all knowledge), Trivit (the triad or triumvirate of creation; the three symbolic corners that enclose the entire creation like the three corners of the triangle—the Trinity Gods such as Brahma, Vishnu and Shiva, the three Gunas such as Sata, Raja and Tama, etc.)¹, the Swars (notes of sound which form the basis of the spoken word and which are represented by the vowels and nasal sounds of the Sanskrit language), the Rig Veda², the Grihapatya fire (the holy fire lit in each household and is one of the three divine fires)³, the various Mantras (mystical spiritual formulas consisting of syllables, letters, words or phrases having divine powers), the seven Swars (notes of classical Indian music which are used to recite the hymns of the scriptures—viz. Sa, Re, Ga, Ma, Pa, Dha, Ni), the Varnas (classes in society) such as those who are yellow-complexioned or fair-complexioned⁴, all the activities in this world—called Kriya, as well as the strength, the vitality, the stamina and the ability to carry out these activities—called Shakti symbolising dynamism of Brahm* (5-6).

[Note—¹The *triad or triumvirate* of creation has many connotations as follows—(a) Creation, sustenance and conclusion.

(b) The Trinity Gods—Brahma the creator, Vishnu the sustainer, and Shiva the concluder.

(c) The three worlds called Triloki—terrestrial, subterranean and celestial; also the Bhu Loka or the earth where we live, the Bhuvha Loka or the sky immediately above the earth where those creatures which fly live, such as the birds, as well as where the spirits live, and Swaha Loka or the far away heaven where the Gods live.

(d) The three Yugs or Eras —Sat Yug or the age when righteousness and virtuousness was at its zenith, Treta Yug when Lord Ram had made his manifestation, and Dwapar Yug when Lord Krishna came.

(e) The three chief human pursuits —love, wealth and duty.

(f) The three qualities that a creature possesses and which determine his temperament and behavioural pattern —‘Sata’ which is the most auspicious noble and righteous of the three qualities, ‘Raja’ where worldly passion and desire are predominant factors, and ‘Tama’ where lowly qualities marked by perversion, evil and sins are the dominant feature.

(g) The three chief tribes or classes into which the human race was divided by the ancients —the Brahmins who were the learned class, the Kshatriyas who were the warrior class assigned the task of giving protection to the society, and the Vaishyas who did commerce and took care of the societies material needs.

(h) The three primary colours —black, red and yellow.

(i) The three primary scriptures —the Rig Veda, the Sam Veda, and the Yajur Veda.

(j) The Trivrikram— the word ‘Tri’ is a prefix meaning ‘three’, and ‘Vikram’ means ‘brave, courageous, bold, heroic, powerful, valorous, valiant, strong, best and excellent’. It also refers to Vishnu because he has all these qualities. According to the Puranic concept, Trivikram refers to Lord Vishnu in his manifestation as the dwarf mendicant called Vaaman who had begged the demon king Baali for land measuring three steps as charity. When Baali had agreed, Vaaman revealed his true identity as Vishnu, who was the Viraat Purush who encompassed the

whole creation in his own body. So, in one foot Vishnu measured the whole earth, in the second, the whole sky, and in the third the king's head was measured, symbolically defeating and subjugating him. So, Trivikram refers to the Viraat Purush or Lord Vishnu from whose navel even the creator Brahma was produced aloft a divine lotus with a long stem, and the holy river Ganges emerged from the toe nails of his divine feet. According to Vedas, this Viraat Purush is a manifestation of the supreme, transcendental, attributeless, all-pervading and all-encompassing authority of the universe, known as Brahm. Rig Veda, 10/90/4, states that this Brahm has three legs (Tri) established in the heavens. The macrocosmic male, called Purush, is its first manifestation; from this Purush came into being this creation consisting of 'those who eat food' (the living creatures of the zoological realm) and 'those who do not eat' (the plants and vegetables of the botanical realm). These three — the Viraat Purush, the living creatures and the non-living things — formed the three legs of Brahm.

(k) The three Divine Shaktis-- The three cosmic energies referred here pertain to the three forms that the supreme Brahm had taken for the purpose of creation. 'Brahmi' is the energy with which Brahma creates, and its relevant subtle counterpart here is the power to wish and aspire for and expect something. 'Rudrani' is the cosmic energy by which Shiva/Rudra ends this creation, or brings to a conclusion the creation which Brahma had made possible. 'Vaishanvi' is the cosmic energy by which Vishnu sustains and nourishes the creation, and its subtle counterpart is taking actions and doing deeds because without actions and deeds, the creation cannot be sustained. For all these activities—creation, sustenance and conclusion, knowledge, wisdom and intelligence are needed because success in any of these requires the requisite expertise and the ability to use and apply it judiciously.

In other words, Brahma makes this creation possible by wishing to do so in his mind. If the creation is righteous and virtuous, it is sustained and nourished by Vishnu, but if it goes wayward and starts committing evil and sins, Rudra takes charge and uses his energy called 'Rudrani' to destroy that evil part of the creation. Extending this logic further, we deduce that when the evil tendencies in the world will almost eclipse or outweigh the good qualities, Rudra would completely annihilate the creation, but the remnants of good elements left behind will help Brahma to re-start the cycle of creation once again.

The 'triad of powers and strengths' called the Trishaktis that a man possesses are the following—(a) the power to wish and have determination, called 'Ichha-Shakti', because it is only when one wishes to do anything and has the determination to do so that he actually does anything at all and strives hard to get success in it; (b) the power, strength and empowerment obtained as a result of acquisition of knowledge, wisdom, erudition, enlightenment, sagacity, scholarship and expertise. This is called 'Gyan Shakti', simply because merely wish and determination wouldn't suffice if a person does not have the required knowledge and skill, the expertise and wisdom to accomplish his objectives successfully, and (c) the actual ability to carryout his plans to their successful completion, i.e. the ability to do deeds and perform, to take actions and enter into enterprise, called the 'Kriya Shakti', because simply sitting and procrastinating endlessly wouldn't give success unless there is assiduous activity and diligent effort, no matter how wise a man is and how determined he might be. Besides these three, the following are also called Trishakti or the potential powers present in a man— (a) to

have influence, impact, affect and sway upon others, (b) to have enthusiasm, zeal, flourish, drive and courage, and (c) to have a good advise in this world as well as the support of divine intercession or intervention of Gods who should be benign and favorably inclined towards him. Further, the three Goddesses— Kali (the black complexioned goddess of war), Tara, and Tripura also known as Tripur Sundari, are also called the Trishaktis, or the divine cosmic energy which has revealed itself in the form of these three divine Goddesses. These Goddesses are the various manifestation of Parvati, the divine consort of Lord Shiva. Parvati is usually referred to by one single epithet— Shakti—which literally means energy, vitality, strength and powers.

(l) The 'Trividya' or the triad of knowledge pertaining to creation has many hues or shades of meanings as follows— (i) It refers to the legendary rewards of righteousness— 'Artha' or material well being and prosperity, 'Dharma' or possessing righteous qualities, being virtuous and noble, and 'Kaam' or being successful in fulfilling all desires; (ii) the creation, sustenance and annihilation of creation; (iii) the three qualities called 'Sata' or noble, 'Raja' or mundane, and 'Tama' or mean and base; (iv) the three classes of society —viz. Brahmin or the learned class who are generally teachers and priests, Kshatriyas or the warrior class, and Vaishyas or the trading and farming class; (v) the three periods of time —the past, the present and the future; (vi) the three states of existence of pure consciousness —the waking state called 'Jagrat', the dreaming state called 'Swapna', and the deep sleep state of existence called 'Sushupta' of the creature; (vii) the three types of bodies of a creature— (a) the gross body consisting of the five organs of perception, e.g. eyes, nose, tongue, ears and skin, as well as the five organs of action, e.g. the hand, the leg, the mouth, the anus, and the excretory organs, (b) the subtle body consisting of the mind intellect complex, and (c) the causal body consisting of the pure conscious Atma. (viii) The 'Trividya' is that knowledge which is enshrined in the three Vedas— the Rig, the Sam and the Yajur. This Trividya has been dealt widely in the different Upanishads.

(m) According to the revered sage Adi Shankaracharya's commentary on Shwetashwatar Upanishad of Krishna Yajur Veda, Canto 1, verse no. 7, the *three fundamental aspects of the world* which give the latter three distinct characteristic forms are (1) 'Bhokta' or the one who enjoys or suffers, or the consumer who finds pleasure in the objects of this material world as well as the one who has to suffer the consequences of his actions, i.e. the living creature, (2) 'Bhogyā' or that which is enjoyed or suffered from, or consumed in one form or the other, i.e. the material objects of this consumable world, and (3) 'Niyantā' or the one who controls and rules over the other two, i.e. the Supreme Being.

(n) The Triad of Ishwar or the supreme Lord of all that exists, Jiva or the living being or the creature, and Prakriti or Nature—these also form the apex of the triangle which is called the world. [Refer verse no. 9, canto 1 of Shwetashwatar Upanishad.]

(o) According to Dhyān Bindu Upanishad, verse no. 36, of Krishna Yajur Veda tradition, the Supreme Being (Brahm) resides in the Triad of creation. Let us see what this verse says in this connection—"36. A person who is aware of the presence of the supreme transcendental Being, the Supreme Being, in all the three places¹, the three paths², the three forms of Brahm³, the three Akchars or letters⁴, the three Matras⁵, as well as in the 'Ardha Matra' or the half-syllable⁶, is the one who is deemed to be truthfully wise, erudite and enlightened about the fundamental tenets of the Vedas and the essence of their teachings (in the form of the great sayings called the Mahavakyas and other maxims and axioms of the scriptures)." {¹The *three places* where Brahm resides are the three states in which consciousness exists, viz. the

waking state, the dreaming state, and the deep sleep states of consciousness. The three places also refer to the three worlds called Triloki—viz. the terrestrial world represented by the word ‘Bhu’, the sky above the earth represented by the word ‘Bhuvaha’, and the heavens represented by the word ‘Swaha’. Besides these interpretations, the three places refer to the three planes of time—viz. the past, the present and the future. ²The *three paths* are the following—the two extreme paths, one that leads to his pomp, reputation, glory and fame, and the other that causes just the opposite to happen, leading to his ill-fame, ignominy and degradation, and the third path is the median one of moderation marked by detachment, dispassion and non-involvement. According to some versions, these three paths are represented by the three aspects of the fire sacrifice by which the Supreme Being is worshipped, viz. ‘Dhum’ or the aspect of the fire sacrifice when there is smoke and much sputtering and crackling of the firewood before it catches fire properly, ‘Archi’ or the aspect of the fire sacrifice when the flames are burning brightly and brilliantly, and ‘Agati’ or the concluding part of the sacrifice when some firewood or other offerings remain half-burnt or incompletely burnt, leading to either smoldering pieces of leftovers or the residue of the extinguished fire. ³The three forms of Brahm are the following—the ‘Vishwa’ representing the gross form of the visible world in which the individual creature lives in his waking state of consciousness, the ‘Viraat Purush’ representing the gross form of the invisible cosmic parent body in its cosmic plane of waking state from which all the individual creatures of this world have come into being, and ‘Brahm or Ishwar’ which that entity from which even this Viraat has evolved. Another interpretation of these three forms of Brahm is its manifestation as the Trinity Gods consisting of Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder. ⁴The *three letters* are the three letters of OM, i.e. A, U and M. These three letters cover in their ambit the entire gamut of creation, viz. ‘A’ covers birth, ‘U’ covers growth and development, and ‘M’ indicated death or conclusion.

⁵The *three Matras* of Brahm are represented by the three phases in which this creation has evolved as a fraction of Brahm. These are called ‘Hrasva’ or the small beginning indicating the primary forms of life such as algae and fungi, the ‘Dirgha’ or the most evolved and wide spread form such higher animals and humans, and ‘Plut’ symbolising the rudimentary forms left after the creation come to the end, or the conclusion of the creation itself. If these are applied to the divine word OM standing for Brahm, then the letter ‘A’ stands for Hrasva, the letter ‘U’ for Dirgha, and the letter ‘M’ for Plut.

⁶The *half-syllable* stands for the incomplete sound of M pronounced at the fag end of saying OM when the mouth is closed, thereby denying the letter ‘M’ to be pronounced with its full glory with an open mouth as in ‘mouth’.

²There are four Vedas—the Rig is said to be the first, followed by Sam, Yajur and Atharva.

³The *holy fires* are the said to three in number and they are the following—(a) ‘Garhyapatya’—the fire of the household hearth; the main fire of the formal fire sacrifice; the fire that every householder is supposed to keep alive and worship regularly and from which the first spark is taken for the rituals associated with religious ceremonies, (b) ‘Dakshinagni’—the fire used as a witness to making charities or any other religious festivity; the fire lit at the site of a sacrificial fire ritual, near its south end, (c) ‘Ahawaniya’—the fire lit to invoke the Gods during a ritualistic sacrifice. The three aspects of fire are said to be the following—the terrestrial fire that sustains life on the earth, the fire of the heavens which is used by the Gods, and the fire of the nether worlds or hell which is used to punish sinners. Worship of the three important fires have been described in *Chandogya Upanishad*, canto 2, section 24, while canto 5, sections 4-10, 19-24 explain their great symbolic metaphysical significance.

⁴The *Varnas* in the society are the following—The Hindu society has been divided into four sections or classes by ancient sages to regulate its functioning by delegation of authority and clearly specifying the jobs each section is supposed to do to maintain order and system in the world, to prevent overlapping of functions and avoid anarchy and chaos. These four sections are—(a) Brahmins¹—the learned and teaching class; a wise one well-versed in the knowledge of the ultimate Truth about the supernatural Being called Brahm. They also presided over religious functions as priests, because these functions were central to life in the Vedic period; (b) Kshatriyas—they were the warrior, fighting, kingly class. They were assigned the job of giving protection to the society, dispensing justice and maintaining general law and order. (c) Vaishyas—they were the trading and farming class responsible for commerce and wealth generation. They provided for the necessities for a comfortable life. And finally (d) the Shudras —the service class of people whose main function was to free the other three classes from the humdrums of daily chores and concentrate their energies to the particular jobs assigned to those classes to which they belonged. {¹The salient features of Brahmins are the following—they should possess these noble qualities—(1) ‘Riju’-be expert in the Rig and the Yajur Vedas, (2) ‘Tapa’-should be involved in doing penances, observing austerities and enduring sufferings for the welfare of the soul and the society, (3) ‘Santosh’-be contented and satisfied, (4) ‘Kshamaa’-to be forgiving and tolerant, (5) ‘Sheel’-to have such virtues as good character, dignity, decorum and virtuousness, (6) ‘Jitendriya’-to have self control over the sense organs, (7) ‘Data’-to be a giver, one who sacrifices his own interests for the benefit of others, (8) ‘Gyani’-one who is well learned, wise, enlightened and erudite, (9) ‘Dayaalu’-to be merciful and compassionate. [Shatpath Brahmin.] An entire Upanishad called Vajra-shuchiko-panishad, belonging to the Sam Veda tradition is devoted to the subject. The eclectic virtues of Brahmins have been expounded in Brihad Aranyaka Upanishad, Canto 3, Brahmin 5 as well as in Canto 3, Brahmin 8, verse no. 10.]

These four classes of the human race were created from the single father, the Viraat or Brahma. Their origins are indicative of the different jobs that they were assigned so as to enable the creator perform the task of governance just like a king assigns separate jobs to his different ministers. But it must be clearly understood here that each class of the human race was like a part of the body of the Supreme Being, and even as a man feels disfigured and handicapped as well as feels the pain equally if his leg is cut off from the rest of his body as he feels when his arm or head is severed, the Lord feels betrayed and hurt when even one of his sons is subjected to humiliation and pain. The four classes had specific jobs cut for them so that the society could function smoothly.

The Brahmins have their origin from the mouth of Brahma the creator. Since the mouth is used to give advice and teach others, the primary job of the Brahmins was to act as moral guide to their brethrens. The four Vedas, which are repository of all knowledge that exist, were also created from the mouth of Brahma; hence these Brahmins were considered most wise and learned. The arms are metaphors for strength and powers; they are used to protect and help others. Hence, the Kshatriyas, who were created from the arms of Brahma, were those sons of his who would give the needed protection and security to their other brethrens. In order to feed his creation, Brahma had to toil and labour to provide for the maintenance and financial and material well being of the society for merely teaching and protecting would not suffice without some one to take care of the other necessities of life. So he created the Vaishyas from his thighs, symbolising labour, to pick up the mantle of mundane affairs of life. But there must be someone who would do the daily chores, such as tilling the fields, doing the harvesting, washing and cleaning, and all other such odd jobs. This was assigned to the Shudras created from Brahma’s feet symbolising service.

The reasons for classification has been laid out in Niralambo-panishad of Shukla Yajur Veda, in its verse no. 10, which states that—“The skin, blood, flesh, bones and the Atma/soul have no caste, creed, colour or race. These have been conceived as a practical measure to regulate and control our day to day behaviours and interactions with each other.”

The Subalo-panishad of Shukla Yajur Veda tradition, in its Canto 1, verse 6, and Canto 2, verse 1 describes the origin of these four classes in society.

The Paingalo-panishad of the same Veda, in its Canto 1, verse no. 7 and Canto 2, verse nos. 3, describes how the three basic Gunas of Sata, Raja and Tama were used by the supreme Brahm to create different types of creatures in this creation.

None of these classes were meant to be inferior or superior to one another; they were all parts of the body of the same Brahm. See also Brihad Aranyak Upanishad, 1/4/11-15 which describes their origin in graphic details, and also Aetereyo-panishad, 1/1/4.

Colour of the skin—It ought to be noted here that the genesis of creation as outlined by the Upanishads describe the colour of the skin of the creatures that came into being. The colour of the skin was used symbolically to indicate the dominance of one or the other of the three basic Gunas, the Sata, the Raja and the Tama, in a particular individual that determines to which class of society he belongs, and which formed the basis of this classification which depend heavily on the quality displayed by an individual to become eligible to belong to one or the other class. The Gunas displayed by him holds a greater importance than his mere birth in a particular section.

For example, in Mantriko-panishad, verse no. 5 of Shukla Yajur Veda tradition it is said that Maya, which has created this entire world by its delusion creating powers, has the following three colours—white (fair; grey; all the light shades), dark (brown, black, yellowish and all shades of colours that are not essentially white) and blood red (or copper colour). Since the offspring gets the colour of the skin of the parent because the colour often is indicative of the race to which a particular species belongs, there would therefore be creatures having these three basic colours in varying hues and shades. Now what is the significance of these three colours? These *three colours* represent the three basic qualities, called Gunas, present in all the creatures. Even as an offspring gets the colour of the skin of the race to which it belongs, the inherent characters of all creatures are inherited from their mother, and this mother is Maya. The white colour stands for the best category of qualities called Sata Guna, the red colour stands for the second and medium quality called Raja, and the dark colour stands for the meanest quality called Tama. The word Tam itself means ‘dark’ and it stands for the worst type of qualities leading to sinful and pervert nature in a man which makes his life hellish; the word ‘red’ is a metaphor for anger, vehemence, vengeance, agitations, restlessness, short temper, strife, hatred, envy, jealousy and the other such negative worldly characteristics in a person; the colour ‘white’ stands for peace, tranquility, prosperity, happiness and wisdom, all of which are the characters of noble and gentlemanly persons. Refer also Shewata-shwatar Upanishad, Canto 4, verse 4-5; Paingalo-panishad, Canto 1, verse no. 3; Mantriko-panishad, verse no. 5 in this context.

*It would be noted that all the entities listed in these verses pertain to the life on earth. The sun, material wealth, the three Gunas, Brahma the forefather of creation represented by the man, the Rig Veda which was primarily used to do the rituals of the fire sacrifice, the Garhyapatya Agni or the household fire, the Mantra used for rituals etc.—all of them without exception. That is, this form of Brahm, the Saddyojat Brahm, relates to that aspect of Brahm that creates.

See note to verse no. 1.]

7-9. [These three verses describe the second form of Brahm—the Aghor.]

The next form of Brahm is known as ‘Aghor Brahm’. It assumes these forms—Salil (water—the second gross element after earth; the nectar which preserves

and fosters life), Chandra (the moon), Gauri (the divine consort of Shiva; the cosmic Mother), the Yajur Veda which is the second Veda, and the Dakshinagni (the fire lit as a witness to making charities and other offerings at the time of conclusion of a fire sacrifice)¹.

Further, this Aghor form of Brahm is dark in complexion and hence honoured by the epithet 'Nirdhava' (literally meaning the dark colour like that of the dark rain-bearing cloud). [That is why the Yajur Veda that is being referred to here is the Krishna Yajur Veda which is translated as the dark Yajur Veda.] This Brahm has revealed itself as 'Swar' (here meaning the short vowel sounds of the Sanskrit language, such as the letters 'A' as in *son* or *sun*, the letter 'E' as in 'if', the letter 'O' or 'U' as in *full* or *wool*, the letter 'Ey' or 'Ay' as in *may* or *day*). This aspect of Brahm is called 'Sandram' (literally something which is smooth and lubricating; an entity that shows the grand virtues of affection, warmth and friendliness). [In other words, though Brahm depicts dark characteristics as implied by the word 'Aghor', it is nevertheless mild and soothing as indicated by the pleasant sounds of the lower vowels as well as the eclectic qualities of being Sandram.] [7].

Besides this, the entire living world which has a certain name and definite attributes, the world with all its characteristic qualities and special features that help to identity and delineate one individual unit of creation from the other, are symbolically encrypted in the fifty alphabets of the Sanskrit language (including the vowels and consonants). Nothing exists with a name and attribute that does not come within the ambit of these alphabets. All the activities of this world also come within the ambit of the alphabets. [Since the alphabets are the building blocks of the language, everything that can be defined and described must come within this periphery. The visible and mortal world that is describable and definable by words is founded upon single units called the five elements at the physical level of existence, and the alphabets at the subtle intellectual level. Without the alphabets there would be no words, and without words it would be impossible to describe the world meaningfully and intelligently, as well as to classify it into various segments for the purpose of study and analysis. This entire world which is 'visible, known, living, describable and definable by words based on alphabets', the world whose deeds and activities, whose characteristic qualities and virtues can be described and known by the use of words, all the auspicious as well as the inauspicious things in existence that can be clearly explained and cited for future reference—they are all manifestations of Brahm. Since this world is a 'formidable and awe inspiring' proposition, it is indeed the 'Aghor' Brahm revealed in this form. All the Vedas are based on alphabets, and so all knowledge that they represent are also founded on alphabets. Since knowledge can be taught and learned through the medium of the spoken and written words which itself is based on alphabets, it follows that the entire intelligent creation is founded on the alphabets; the latter is central to all forms of erudition, knowledge, wisdom and general expertise that helps to regulate the functioning of this colossal world of immense diversity and variations. It is language that helps a man to share his knowledge and experience with others, it is the intelligible use of words and effective use of any language that distinguishes a man from an animal, and all languages are founded on alphabets. Hence the importance of 'alphabets' as a base of culture, knowledge and intelligent existence cannot ever be over-emphasised.]

This Aghor Brahm is possessed with the stupendous powers to preserve and give protection to those who take his shelter, those who are tormented and seek solace by taking refuge with him. [This form of Brahm has alphabets and water as its manifestation because of two simple reasons. One, good advice and words of wisdom

are given by the medium of words which in turn need alphabets and the expertise with language and expression. The spiritual path to liberation and deliverance is shown by the exalted Vedas which are also based on alphabets and words formed out of them. Second, water is a life sustaining and nourishing element, and its association with Brahm as one of its many manifestations is to highlight Brahm's ability to sustain, nourish, preserve and protect all forms of life in this world.]

This Aghor Brahm is able to eliminate all sorts of miseries and fears. He can destroy all evil and malignant forces. He can bestow all the glories and fortunes in the world to the creatures. [This is because a wise man who speaks auspicious words is like a beacon of good hope for the society—removing its miseries, giving solace, helping it to overcome evil and malignant forces, guiding it on the correct path of morality, ethical conduct and good behaviour, as well as generally spreading happiness, a sense of well being and natural goodwill all around.] [8-9]. (7-9).

[Note—¹All these elements of creation and the virtues that they stand for are manifestations of the same cosmic Authority known as Brahm, the Supreme Being. Since the creation has both the good and the bad as its integral part, it follows that on the one hand Brahm is said to be bright as the sun, and on the other hand dark as the darkened disc of the moon. Now let us analyse each of the epithets used to describe Brahm, the supreme transcendental Being, in these verses.

The word *Aghor* means someone who is formidable, fearsome and awe inspiring. All the revelations listed above have an element of 'darkness' inherent in them—the moon has a dark side, the Krishna Yajur Veda is known as the dark (Krishna) Veda, Gauri represents the 'other half', the 'dark half' of Lord Shiva because she represents Maya or the Lord's delusion creating powers, and the lower vowels are a bit muffled sounds as compared to their opposite higher notes or the vowels with a long sound implying that they are not as lively and vibrant as the latter. All these revelations of Brahm are dark in nature in a symbolic way.

Water is known as *Salil*. It is most fearsome and awe inspiring when one sees its ferocious and ruthless form in a deep ocean during severe storms when huge waves rise forebodingly like a wall of death and destruction, or during floods and severe rain-storms on land when water can wipe out entire villages and towns. The dark clouds that thunder, rumble and vent their anger in the form of bolts of lightening are visible manifestations of the darker side of Nature, the quality called *Nirdhava* that Brahm possesses. On the other hand the same water is the well-known nectar of life—soothing, lubricating and rejuvenating, or possessed of the quality of *Sandra* so unique to Brahm. The same thing can be the cause of life in one instance, and the cause of death in another instance. This is the great mystery about Brahm—i.e. it is dark as well as light at the same time. Brahm represents all sorts of forces in existence, both the benevolent ones as well as the malevolent ones. This is because everything that exists is Brahm, and nothing but Brahm.

The *Chandra* (moon) is beautiful to look at, but the same full moon is the harbinger of tides and evil spirits; it is the time when vampires and evil messengers of the night go out on prowl. The dark disc of the moon causes chill in the spine when, for example, one has to cross a dangerous country in the night. Thieves are active during dark nights. No one can rely on the moon for showing direction in the night because not only it changes shape but also its location in the sky—shifting in position every night and even changing its shape and the time of its rising and setting.

The goddess *Gauri*, as the name suggests, is fair complexioned, most affectionate and docile in appearance, but her formidable and merciless nature cannot be underestimated—it was she who had revealed as the most potent of the pantheon of goddesses in her manifestation as goddesses Kaali and Durga, the ferocious slayers of demons in the battle-field. Besides this, Gauri, who represents the 'other half' of Lord Shiva, is Maya or delusions personified, and Maya symbolises darkness. This is the

negative aspect of Gauri. On the other hand the same Gauri is regarded as personified Mother Nature in all her glorious splendour and magnificence, the goddess who is the divine Mother from whom the entire creation has took birth, which is definitely a positive aspect of Gauri.

The Yajur Veda has two versions—the dark and the light, called the ‘Krishna’ and the ‘Shukla’ respectively. Since our present Upanishad belongs to the Krishna Yajur Veda tradition, the Yajur Veda referred to here is deemed to be the *Krishna Yajur Veda*. This Veda is more prevalent in the south of India, and this fact is subtly implied in the second type of fire referred to in this verse, i.e. the ‘Dakshinagni Fire’. The prefix ‘Dakshin’ literally means ‘south’ in Sanskrit. Further, Lord Shiva has an Upanishad dedicated to him by this name, viz. the Dakshinamurti Upanishad, which also belongs to the Krishna Yajur Veda tradition. The worship of Lord Shiva is more dominant in the south of India as compared to the north of the country where Lord Vishnu, in his various incarnations, is the more popularly worshipped. This fact that the presiding deity of all the traditions that trace their roots to the south of India is Shiva is exemplified by the mention of the *moon* in the above verses because iconographically a crescent moon is shown to adorn the forehead of Lord Shiva. In fact this entire Upanishad is dedicated to Lord Shiva and his various divine forms.

The *Dakshinagni* is the sacred fire usually lit at the end of a ritual to bear witness while charities, donations or alms are given at the end of religious ceremony. Hence, this fire is not only revered as a holy witness to a noble deed but also feared because as a witness to these noble deeds its testimony is absolutely vital to the ultimate reward for the entire fire sacrifice as any good deed stands fast in the court of law if the witnesses to the deed testify that they were indeed done in their presence. So more than the deed it is the witness that has to be kept in good humour. It is associated with the term ‘Aghor’ and ‘Nirdhav’ because, one, it is a feared witness to charities made at the end of fire sacrifices, and second, it is lit in the last stages or concluding stage of a fire sacrifice when the main fire of the sacrificial pit is dying out.]

10-14. [These five verses describe the third form of Brahm called ‘Vamdeo’.]

The form of Brahm as ‘Vamdeo’ has the following grand virtues—he is a bestower of great knowledge, wisdom, erudition and enlightenment; he is like fire personified (i.e. he has the astounding potential and vigour as possessed by the fire element; he is as powerful and potent as fire, as purifying and rejuvenating as the fire which is the third element of creation after earth and water).

He is illuminated with the light that is a metaphor for knowledge and wisdom. This makes him as brilliant and splendorous as millions of suns (signifying the magnificent as well as the stupendous power of knowledge, wisdom and enlightenment that he possesses) [10].

He is a personification of the virtues of Anand (extreme sense of bliss, happiness and joys, of ecstasy and exhilaration, of beatitude and felicity). The Sam Veda with all its melodious connotations and singing patterns is the revealed form of spiritual bliss and ecstasy. [The Sam Veda is usually sung melodiously, set to beautiful music with all its captivating charm, as opposed to other Vedas which are chanted or recited in unison or even read quietly in seclusion, and therefore it fits in well with the observation that this form of Brahm is a personification of Anand—for music is indeed exhilarating and uplifting for the soul. Music provides spiritual peace and tranquility to the tormented soul. Only a man who is internally at peace with himself can sing like a lark; for others it is difficult to hum a tune as it is rare for a burdened heart to be able to sing cheerfully though a song can act as an antidote to depression and dejection of spirits. Music has a profound soothing and rejuvenating effect on the mind and nerves, and is often used for therapeutic usage.]

Since singing obliges one to have a soothing and melodious voice, a voice which is sweet and pleasant, is mellowed and mellifluous, and which can endure sustained notes and fine tunes while singing, this form of Brahm is a personification of these eclectic and grand virtues. [The word used in the verse is 'Dheer Swar' which refers to the longer sounds or *Swars* of the Sanskrit vowels as opposed to the short sounds as mentioned in verse no. 7 previously. These long vowel sounds are the following—'Ee' as in *feel* or *keel*; 'Oo' as in *boot* or *soot*; 'Aye' as in *my* or *dye*; 'Aou' or 'Ow' as in *now* or *cow*. The word *Dheer* means steady, courageous, resilient, persistent, tenacious and sustainable. So the basic sounds of music that are represented by its various notes and tones and which can be sustained over a period of time are called 'Dheer Swar' in the context of the Sam Veda chanting because this particular Veda is based on music forms for its rendition. A melodious, pleasant, welcoming and sweet voice is the best gift that a man possesses; it endears him to everyone and at all places and time. Further, singing of the Sam Veda requires special skills, and all these qualities would distinguish a man from the rest. In other words, Brahm is not an ordinary God, but it is the sweetest, the most skilled, and the wisest entity in creation. The long vowel sounds indicate the ability of Brahm to sustain this creation over long periods of time along with the fact that, like the long-drawn breath and notes of music, the creation can be stretched and elongated as far as Brahm wishes it to expand. Song also implies that Brahm has infused an element of sweetness and pleasantness in a world that is otherwise a bitter and miserable place to live.]

He is revealed in the form of the Ahavaniya holy fire, the best of the fires. [This fire is lit at the beginning to invoke the Gods and welcome them, hence it is like the Herald of good and auspicious intentions in creation.] [11].

Since Gyan is a personified form of this Brahm, it is very potent and powerful in slaying one's enemies (represented by ignorance and delusions). It is empowered with great authority, strength and potentials in this respect.

This Brahm is 'Avyaya', i.e. it is imperishable, undiminished and infinite; it cannot be delineated and done away with. At the same time, it is a personification of unmatched dynamic powers of creation known as 'Shakti', i.e. it is a fount of divine cosmic energy having stupendous strength, great powers and astounding potentials.

His complexion is Shukla (white) in colour. [This word is indicative of, one, semen which is a metaphor for vitality, potency and stamina, symbolising its ability to create and propagate the creation, and second, the Sata Guna which is the best, the most auspicious and noblest virtue in creation. This word 'Shukla' also refers to the Shukla Yajur Veda. Compare this stanza with verse no. 7 above.]

In spite of the fact that he is such an exalted entity, he has the low quality called Tama in him. [This is because if we are expected to take it for granted that everything in existence is Brahm personified, then it obviously includes the darker side of creation along with the brighter side. The darker side is symbolised by the word 'Tama'—meaning dark, while the brighter side is symbolised by the word 'Shukla'—meaning white. In other words, Vamdeo Brahm possesses the unique and often paradoxical qualities that defy understanding. It is not without reason that Brahm has not been able to be defined even by the Vedas, and they threw up the towel to surrender, saying 'Neti Neti'—not this not this, or neither this nor that. In other words, the Vedas tried their best to and attempted every means to describe what Brahm is, but failed miserably in their attempt. When they almost declared a certain form of Brahm as the authentic form and the final description of Brahm, they were confronted with another form which was equally truthful form of Brahm, and this was

an infinite cycle. So they concluded that it is impossible to have any specific definition of Brahm, that it was impossible to assign any definite attribute to Brahm and fix it as the latter's characteristic quality. They discovered that Brahm encompasses every conceivable description and would fit into every imaginable epithet. So while it is true that Brahm is revealed in the form of the knowledge contained in the Krishna Yajur Veda for example, then it is equally true that Brahm is also revealed in the form of the Shukla Yajur Veda. Similarly, Brahm is both Aghor as well as Vamdeo. Brahm is represented in equal measure by the Tama Guna symbolised by the dark colour as much as the Sata Guna represented by the white colour.]

He (Vamdeo Brahm) is completely enlightened, wise and realised. No knowledge escapes him. He is a personification of these auspicious virtues [12].

He (Vamdeo Brahm) is not only the regulator and controller of the three worlds, but also has revealed himself in the form of these three worlds. [The three worlds are the ones revealed in the form of the three words uttered by the creator at the time of creation—viz. 'Bhu' referring to the terrestrial world, 'Bhuvaha' to the world above the earth, i.e. the sky, and 'Swaha' meaning the heavens where the Gods live. These three worlds also symbolically refer to the three states in which the consciousness exists—viz. the Jagrat or waking state, the Swapna or the dreaming state, and Sushupta or the deep sleep state which correspond to the Vishwa, Taijas and Pragya forms of existence.]

He is a bestower of all good fortunes and auspiciousness to all the creatures in creation. He gives the rewards to all according to the deeds done by them [13].

He is honoured by the eight 'Akchars'. [That is, he is praised by a Mantra having eight letters or syllables. This Mantra is 'OM Namoha Mahadevaye'.] It also means that he has revealed himself as the eight elements¹ of creation that are 'imperishable, eternal and infinite' by nature—i.e. they are 'Akchar'.

This supreme Divinity lives in the heart that is symbolically like a divine lotus with eight petals. [This vision of the heart as a lotus of eight petals is expounded in the Upanishads dealing with Yoga and Tantra.] [14]. (10-14).

[Note--¹According to the definition of Prakriti as described in the standard Sanskrit-English Dictionary of Sir Monier Monier-Williams, M.A., K.C.I.E., the *eight* fundamental Elements or Tattwas are the following—one Avyakta (that supreme entity that is un-manifest and untangible but nevertheless at the basis of everything that exist) + one Buddhi (intellect) + one Ahankar (the inherent nature of having ego and pride) + and five Tanmatras or the subtle bodies consisting of the five sense perceptions, such as the faculties of seeing, hearing, touching, smelling and tasting. These are also called the Prakriti or nature of an individual creature at the micro level as well as of the creation at the macro level.

According to the philosophy of Vedanta, these *eight* fundamental Elements or Tattwas in creation are the following—earth, water, fire, wind and sky constituting the gross body of the creature, and the two other subtle elements consisting of the Mana (mind and intellect) and 'Ahankar' (ego, pride) which constitute the subtle body of the creature.

See also note to verse no. 1.]

15-18. [These five verses describe the fourth form of Brahm called 'Tat-purush'.]

The form of Brahm that has been described as 'Tat-purush'—literally 'that Purush'—is manifested in the form of the air element; the latter is the symbolic body of Brahm. [The 'Purush' here refers to the Viraat Purush who is the macrocosmic gross body of Brahm. Refer verse no. 17 in this context. He is all-pervading and all-

encompassing, all-powerful and omnipresent like the air or wind element. At the same time, this Purush is invisible and imperceptible but nonetheless all-important like the air element without which life is impossible to imagine. The air is the second subtlest element in existence after the sky element, and therefore occupies the second place away from Brahm—just like the Viraat Purush who represents the macrocosmic gross body of Brahm and who is two steps away from Brahm, the first place being occupied by Hiranyagarbha which is the subtle body of Brahm.]

This form of Brahm (i.e. as the air), in association with the five forms¹ of the subtle fire element, controls the effectiveness of the various Mantras and infuses these Mantras with their stupendous mystical and dynamic powers. [The Mantras are basically letters or words that are injected with astounding powers that represent cosmic dynamic forces of Nature in coded form, which when decoded and harnessed can produce magnificent and magical results—both in terms of obtaining spiritual benefit as well as to gain temporal rewards. The Mantras need the force of the vital winds present inside the body, called the Pran, in order to be empowered and activated. They are said to embody the five fire elements because they are ‘very hot, powerful, potent, unrelenting, unforgiving and effective like the fire element’ when employed for any purpose. The Mantras have to be ‘said’—uttered, chanted, recited or spoken aloud—to make them effective in a religious ceremony, such as the fire sacrifice. Speaking and hearing needs air, either as the breath which creates sound in the throat and empowers the man to chant the Mantras, or as the medium through which sound travels in space. Therefore, the Mantras are said to be wearing the air element, or that the air element forms the body that carries the Mantra much like the gross body of the creature which carries its soul or Atma.] [15].

This form of Brahm is revealed in the form of all the fifty letters of the Sanskrit language—inclusive of the vowels and consonants. The Atharva Veda is also its manifestations. [Every form of Veda needs words to be expressed and preached, and therefore the need for letters. Since the Vedas are repositories of all knowledge, they are embodiments of Brahm, who is the eclectic virtues of wisdom, erudition, sagacity, knowledge, enlightenment, expertise and skill personified. The Atharva Veda is the fourth Veda.]

He is the Lord of all living beings, and the entire world is his body [16].

His countenance/complexion is red like blood. [‘Blood’ is a symbol of life and its vibrant energy. The colour ‘red’ is regarded as the auspicious colour in Hinduism, and along with yellow and green form the metaphoric colour for auspiciousness, vitality, virility, vibrancy and potency. That is why it is used as a dot worn on the forehead by married women as well as Brahmins and other noble classes in Hinduism. It is a sign of their higher status—not caste-wise but in practical terms to indicate that they are religious people and believers who follow the tenets of good living as laid down in the scriptural canons.]

He is the fulfiller of all wishes and aspirations; he is the eliminator of all torments and miseries. He is the only cause that is behind the coming into existence of this creation, is responsible for its sustenance and protection, and is the one cause of its final dissolution.

He is the bearer of all Shaktis, all the dynamic forces of Nature, visible or invisible [17].

He is established in and symbolises the fourth state of existence of consciousness, called the Turiya state, which goes beyond the other three states (called Jagrat—the waking state, Swapna—the dreaming state, and Sushupta—the

deep sleep state of existence). That is why he is honoured and lauded by the grand and majestic epithet of 'Brahm'.

He is the one who creates everything in existence so much so that he is the one who is served and praised by such exalted Gods as Brahma the creator, and Vishnu the sustainer and protector of creation [18] (15-18).

[Note—¹The five forms of the divine fires are the following-- The *five holy fires* have been elaborately described in *Chandogya Upanishad*, canto 4, section 10 to 13. There are five formal divine fires—(a) 'Garhyapatya'—the fire of the household hearth; the main fire of the formal fire sacrifice; the fire that every householder is supposed to keep alive and worship regularly and from which the first spark is taken for the rituals associated with religious ceremonies, (b) 'Dakshinagni'—the fire used as a witness to making charities or any other religious festivity; the fire lit at the site of a sacrificial fire ritual, near its south end, (c) 'Ahawaniya'—the fire lit to invoke the Gods during a ritualistic sacrifice, (d) 'Sabhya'—the fire of the Vedic period which was continuously lit, and (e) 'Awasathya'—the fire of the later Smriti period.]

19-23. [These five verses describe the fifth form of Brahm called 'Ishan'.]

The fifth form of the supreme transcendental Brahm known as Ishan should be regarded as the one who inspires the greatest of wisdom and enlightenment in the creature. He is the Lord who is personified as 'Buddhi'—the higher level of the mind, the 'intellect and intelligent thinking' (that distinguishes an ordinary man from an enlightened, wise and erudite one who is analytical and balanced in his approach to the problems of life, and who would rather ponder and peep deep into things to unravel the secret truth hidden behind their external façade which might be very misleading if the mind is not applied to external appearances).

He is merely a witness to what is happening around him. [That is, the supreme Brahm is dispassionate towards everything. He would not take sides with anyone, and would judge the creature and determine his destiny in a cool fashion according to the latter's deeds and actions. In his manifestation as the intellect of the creature, he remains neutral and disassociated with the deeds and actions of the body and what happens in the surrounding world so that the information collected by the mind can be dispassionately analysed by it and a well-considered judgment be given. The intellect is supposed to be unbiased and uninvolved like a judge in a court of law to ensure that the decisions and deductions that a man makes are up to the mark, free from any bias and pre-conceived ideas.]

He is manifested in the form of the sky element; is as invisible and without any specific attributes as the sky. [The sky is the subtlest of the five elements that came into existence, and is the nearest analogue to Brahm. Brahm has all the qualities typical of the sky—viz. the sky is vast, fathomless, infinite, colourless, taintless, all-pervading, all-enclosing, omnipresent, attributeless, indefinable, and beyond reach. Everything that exists is within the boundary of the sky, for there is nothing beyond the space of the sky. All these qualities are applicable to Brahm.]

He is revealed in the form of the cosmic all-pervading ethereal background sound called Omkar or Pranav that permeates throughout the space of the sky; the sky is pregnant with it. This Omkar was the seed from which all forms of Swars (sounds and languages, the power to speak and the faculty of the mind that governs speech) were born. That is, Brahm is revealed in the form of the sound element that originates in the space of the sky and then spreads out in it to completely fill it and gradually fade away into the vast bowls of the sky, leaving no trace behind whatsoever¹. [The implication is this—If everything that exists is within the periphery of the sky representing Brahm, then it must have a point source of origin just like the sound

which originates from one given source, spreads out to cover the entire space available to it, dissipates its energy and then fades into oblivion or disappears into the same space of the sky from which it originated, without leaving a trace. No one can hear that sound any more. Likewise, the world originates from this Brahm, evolves and develops into its present and future forms that covers the entire space of the sky, and then collapses and merges into this singular Brahm represented by the open space of the sky when it (the world; the creation) has run its full course and dissipated all its energy. It is like a line drawn on a piece of paper. It starts with a dot or point, is stretched to whatever length one wishes it to elongate, and then re-traces itself back to its root or point of origin to the 'dot' where the tip of the pencil or pen had first touched the paper.] [19].

He embodies all the divine forces of creation called Gods—or conversely, all the Gods are his manifestations. He is calm and quiet, tranquil and serene—in fact, he not only epitomizes these virtues but transcends them. [This is because he is present in the period when the creation has ended and before the new wave of creation starts. This is the period of silence and peace that cannot be achieved once the process of creation starts. Life is characterised by hustle and bustle, by sound, activity and movements. So the only time when complete peace and non-activity is obtained is the intervening period between the end of this creation and the beginning of the new creation when there is no activity whatsoever. The three basic sounds of OM, i.e. 'A', 'U' and 'M' stand for the three primary stages of creation—emergence, development and conclusion respectively. When the Mantra OM is pronounced, the mouth closes, and it remains closed till one pronounces again. This therefore would indicate the period of complete rest and peace. This is why emphasis is laid on silent repetition of this Mantra, i.e. repeating it without loudly pronouncing the letters, because that ensures a permanent closure of the mouth which in turn would mean a perpetual state of rest and peace. This is metaphoric way of saying that after realising the truth of creation a wise person becomes silent and remains quiet. This is another way of saying that upon self-realisation or Brahm-realisation, an enlightened man becomes rested and peaceful. He no longer thirsts for knowledge and peace as he has accessed both.]

He is manifested in the form of the first signs of life represented by the first alphabet of the Sanskrit language, i.e. the letter 'A' as in the words 'son or done'. [There is another connotation of this—the letter A is the first syllable of the word OM representing the ethereal cosmic sound called Pranav. To pronounce this letter, one has to open one's mouth, which is a metaphoric way of saying that the creation of the world has just took off.]

Similarly, he is manifested as the sky which forms his body, and therefore is as vast and colossus, as measureless and fathomless, as eternal, infinite and imperishable, as taintless and attributeless, as all-pervading, all-encompassing and omnipresent, and as majestic and grand as the sky. Nothing exists that is beyond Brahm in the form of the endless and infinite sky element. Besides this, he is as subtle and indefinable as the sky element. He survives this creation and precedes it like the sky which remains in place even after this world comes to an end, and it is from this sky that it re-emerges in the next phase of creation [20].

He is the controller of this creation having five aspects, facades or facets. In fact, all these five are symbolic faces of the same cosmic all-pervading Brahm who is supreme and transcendental². In other words, the entire creation is a manifestation of this all-incorporating and all-encompassing Brahm [21].

This supreme 'Panch Brahm' concludes his own creation revealed in his own likeness and which is his own body, both at the macrocosmic level of creation as well

as at the microcosmic level, by withdrawing it into his own self (like the octopus withdrawing its arms or a snail drawing in its tentacles). He concludes the expansion of his own Maya (which is the delusion-creating power of Brahm and revealed as Prakriti or Nature) and remains perpetually established in his eternal self [22].

The primary form of Brahm, i.e. Ishan, is supreme. It transcends all the other manifestations in which he has revealed himself, first as the five-faced or five-faceted Panch Brahm, and then expanded his own self to form the five-folded or five-faceted creation resembling a three-dimensional pentagon².

He shines with his own light (like the sun); he requires no extraneous source of light to shine. The radiance and splendour that emanates from him is self generated and effervescent. It comes out uniformly from all parts of his divine body in equal intensity—whether it is the periphery or the center. That is why he is called the self-illuminated and self-created Supreme Being [23]. (19-23).

[Note--¹The first evidence of life was represented by the sound that was produced due to vibrations created in the cosmic ether present in the primordial space. The energy generated by these vibrations was the first spark that set off a chain reaction. Since sound needs a medium to travel, this space was deemed to be filled by the cosmic fluid, the ether, that metamorphosed into the primordial jelly as time progressed, which in turn transformed into the cosmic embryo, the Hiranyagarbha, lodged in the cosmic womb represented by the vast bowls of the sky. That is why the infant born from it was called Viraat—one that is vast and colossus like its parent. Silence is the opposite of life that is vibrant and boisterous; silence is eerie and tantamount to death—that is why we have the phrase ‘the silence of death’. So therefore, Omkar or Pranav marks the presence of a vibrant and robust life full of vibe and energy—which are metaphors for the creative and energetic aspects of Brahm.

²The creation has been visualised as a pentagon, with the overall structure resembling a shrine—with the two vertical lines of the pentagon as its walls, the base as the floor, and the two slanting lines meeting at the top as the sloping roof of the shrine. The apex point of the pentagon is like the top of the shrine, the pinnacle of the structure where usually a flag or cupola is placed. This point is represented by Ishan Brahm, the form of Brahm that acts as the flag or insignia atop this shrine, thereby symbolically establishing its supremacy and authority over the entire structure known as creation.

From the philosophical point of view of Vedanta and metaphysics, the five faces of Brahm represent the five aspects, facades or facets of creation and are symbolisms of the entire gamut that is known as this creation, with all its glories and warts. We shall now have a bird’s eye-view of what these ‘five symbolic aspects of Brahm’ stand for.

(1) Panch Maha Yagya (the five great sacrifices)—The entire life of a religious and pious spiritual aspirant is regarded as one big wholesome fire sacrifice, and thus it is ordained that he must diligently perform the five *Panch Maha Yagyas* as the components that would complete this holistic sacrifice in its entirety. They consist of five great noble deeds that a householder is ordained and expected to do that have the same sanctity and holiness as doing a formal fire sacrifice. They are the following—(a) Brahma Yagya—study and teaching of the Vedas and other scriptures that enlighten the man about the ultimate Truth known as Brahm, (b) Deva Yagya—the performance of fire sacrifices in which offerings are given to the sacred fire which are meant for the divine Gods and are done to honour them, (c) Pitri Yagya—paying homage to the spirit of dead ancestors, offering oblations to them and doing religious activities for the peace of their souls, (d) Service to mankind called ‘Jiva Yagya’, and (e) Bhut Yagya—service to all the creatures including animals, insects, plants etc., such as giving them food, shelter and protection, i.e. taking general care of them. These five sacrifices have been described in *Ashramo-panishad*, verse no. 3.

(2) The five sacraments—They are the five deemed sacred sacrifices as follows--(a) doing *Japa* which is repeating/chanting/reciting of the divine Mantra called the Gayatri Mantra which is especially prescribed for renunciate ascetics (see verse no. 14 below), (b) doing *Yoga* or meditation and contemplation upon divinity, (c) doing *Tapa* or observing austerities, doing penances, suffering hardships for spiritual enhancement, having noble thoughts and following virtuous path inspite of all the hurdles and inconveniences, (d) doing *Swadhyaya* or self study which entails the deep study of the scriptures and contemplating upon their teachings as well as meditating upon the Atma which is pure consciousness and the pure self, and (e) endeavouring to acquire *Gyan* which is the truthful knowledge about the ultimate Truth and Reality in the creation, a knowledge that would help to dispel the dark veil of ignorance and delusions that surrounds the creature from all the sides, almost suffocating and pinning him down.

(3) According to another version, these Panch Brahms are the five manifestation of the Supreme Being, and they are Sun God, Vishnu the sustainer and protector, Shiva the concluder and annihilator, Ganesh the most revered deity in the Hindu pantheon who is invoked at the beginning of any auspicious effort, and Shakti or the divine Goddess personifying the stupendous energy in Nature.

(4) Again, since everything in existence has been created from the five basic elements, it follows that Panch Brahm also refers to the *five sheaths or Koshas* that surround the pure conscious Atma which is the truthful identity of the creature. These five Koshas are the following--‘Annamaye Kosh’ or the food sheath, ‘Pranmaye Kosh’ or the vital wind sheath, ‘Manomaye Kosh’ or the mental sheath, ‘Vigyanmaye Kosh’ or the intellect sheath, and ‘Anandmaye Kosh’ or the bliss sheath. These sheaths cover the Atma or pure conscious self like various coverings or shrouds wrapping any object. They are also called the five Kalaas of Man.

The *Annamaye Kosh* is that which was created by the intake of food, was nourished and developed by food, and at the end it finally disintegrates into the basic ingredients that constitutes food and merges with the earth element from where the food has derived its original ingredients. This forms the gross body of the creature.

The *Pranmaye Kosh* consists of the five vital winds (Pran, Apaana, Vyan, Udaan, and Samaana) along with the five organs of action (hands, legs, mouth, excretory and reproductive).

The *Manomaye Kosh* consists of the mind and the five organs of perceptions (ears, eyes, nose, tongue and skin), while the *Vigyanmaye Kosh* consists of the combined apparatus made of the intellect and these five organs of perception.

A combination of these three sheaths, i.e. Pranmaye Kosh (vital wind sheath), Manomaye Kosh (the mental sheath) and Vigyanmaye Kosh (the intellect sheath) is what is known as the ‘Ling Deha’ of a creature, or the ethereal form of the corporeal body. This is the subtle body of the creature.

The sheath in which the pure conscious self is not aware of the ‘Ling Deha’ is called *Anandmaye Kosh*. This forms the causal body of the creature”.

These five sheaths are called the ‘Panch Kosha’.

(5) Life in this creation is sustained by the wind or air element, as is evident from the fact that it is possible to survive for a reasonable time without water and food but one immediately suffocates to death if there is no air. These vital winds or air element takes five principal forms, called the *Panch Prans* which are personifications of the magnificent abilities of the supreme Brahm to sustain life in a quiet and subtle manner. These primary and principal vital wind called *Pran* lives in a subtle form in the subtle space of the heart (and keeps this organ functioning); the vital wind called *Apaana* lives in the region of the anus (and is responsible for excretion of the residue from the intestines); the *Samaana* wind is found in the navel region (because it is from here that all the nerves and veins in the body radiate out from the nerve center or core called the ‘Nabhi Kand’, and ensure that nutrients and other essential supplies are equally distributed in the body); the *Udaan* wind lives in the region of the throat

(because this wind is synonymous with the notion of 'getting up' or 'rising', so it symbolises the creature's state of wakefulness when he speaks out, and at the same time it helps it to 'raise' and spit out cough present in the lungs); and *Vyan* spreads through the body (as it helps in maintaining equilibrium). These vital winds have been described in Amrit Naad Upanishad, verse no. 35-38 of Krishna Yajur Veda. These five manifestations of the wind or air element are also called the five 'Kalaas of Pran'.

(6) *Panch Varga* consists of the following group of subtle elements that constitutes the body of all living beings—viz. (a) the Mana or mind along with its other companions (i.e. the mind, the intellect, the Ahankar or the sense of ego, pride and self righteousness), (b) the Pran or vital winds that sustain life in the body and its various forms (such as Apan, Vyan, Samaan, Udaan etc.), (c) the ability of the creature to have Ichha or to have desires, wishes, passions and aspirations, along with their astounding powers and potentials, (d) the three Gunas or qualities that are inherent to all the living beings and which determine the character and behaviour of the individual, such as the quality called Sata (which is the best of the three qualities and gives rise to noble aspirations and makes the creature righteous and upright), Raja (which is the medium quality creating worldly passions and the tendency to delve into things worldly) and Tama (which is the lowest quality creating a sinful tendency and a predominance of inertia and indolence), and (e) the various deeds broadly classified into those that are righteous, noble and auspicious, and those that are the opposite.

The Sarwasaaro-panishad, verse no. 7 of the Krishna Yajur Veda tradition describes them.

(7) They are the five Gods worshipped by Hindus. They are Brahma the creator, Vishnu the sustainer and protector, Shiva the concluder, Aditya the Sun God, and Ganesh the son of Shiva and the God who is worshipped before all other Gods in the Hindu pantheon of Gods.

(8) The five elements called the Panch Bhuts—earth, water, fire, air and sky. The Yogtattva Upanishad of Krishna Yajur Veda tradition verse nos. 85-99 describe the various elements, their location in the body and their patron deities. Refer also Sharrirako-panishad of Krishna Yajur Veda, verse no. 1-2. The Mantras pertaining to these elements are mentioned in Kalagni-rudra Upanishad of Krishna Yajur Veda tradition, verse no. 3. They are the following--'Agniriti Bhasm' for the fire element, 'Vayuriti Bhasm' for the air or wind element, 'Jalmiti Bhasm' for the water element, 'Sthalmity Bhasm' for the earth element, and 'Vyomriti Bhasm' for the sky element.

(9) The five sense organs of perceptions—ears, nose, eyes, tongue and skin.

(10) The five sense perceptions, called Tanmatras—hearing, smelling, seeing, tasting and feeling.

(11) The five organs of action—hands, legs, mouth, anus and genitals.

(12) The five states of existence of the consciousness—Jagrat or waking, Swapna or dreaming, Sushupta or deep sleeping, Turiya or post deep sleep, and Turiyateet or the transcendental state beyond Turiya which corresponds to ultimate enlightened state of perpetual Samadhi.

(13) The five auspicious times, called Panchaanga, when fire sacrifices could be held. The word literally means 'the five limbs' and these five limbs are the following—Vaara or the day of the week—the solar day, Tithi or the lunar day, Nakshatra or the lunar mansion, Karana or half of Tithi, and Yoga or the time when all auspicious signs are in conjunction, or when the sun and the moon together accomplish 13 degrees and 20 minutes of space.

(14) The Panch Bhedas or the doctrine of five-fold differences which pertain to the branch of Vedanta philosophy called the 'Dvaitya Vedanta' whose strongest exponent was Madhavacharya (1238-1317 A.D.). According to this theory, Brahm is different from the Jiva, the living being, as well as the Prakriti or Nature. All the Jivas are different from one another and from the Prakriti. All the objects that evolve out of

Prakriti (Nature) are also different from one another. It therefore recognises five aspects of creation—(i) Brahm or the Supreme Being who is also known as Vishnu the sustainer and protector of creation as well as its concluder and creator, (ii) Maya which is the indescribable and inconceivable cosmic power that Brahm employs to create delusions and which has revealed as Laxmi, the divine consort of Vishnu, who presides over all worldly assets, (iii) Prakriti or Nature in its all-encompassing connotations, (iv) Jiva or the individual soul or the individual creature, and (v) the inanimate world of non-living things.

(15) The five types or kinds of living beings (people)—These term has many variations. In the Rig Veda, 10/53/4, the five types of creatures that the Hota priest appeals to accept his offerings—The Devtas (Gods), Manushya (human beings), Pitras (spirits of dead ancestors), Pashus (animals) and Pakshis (birds).

According to another interpretation, they are the four Varnas or classes in the society and the sub-class, viz. Brahmins, Kshatriyas, Vaishyas, Shudras and Nishads (boatman and hunters).

(16) The Mantra of five syllables—(a) The five syllable Mantra dedicated to the Lord Shiva in his form as ‘Panch Brahm’ is the following—‘OM Namaha Shivaye’. [Na + Maha + Shi + Vaa + Ye = 5; the word OM is used as a salutation only.] (b) The five syllable Mantra dedicated to Vishnu is the following—‘OM Vishnave Namaha’. [Vi + Shna + Ve + Na + Maha = 5; the word OM is used as a salutation.]

(17) The five cardinal rules of political conduct—Mitrabheda or breaking of friendship, Mitralaabh or making of friendship, Kaakolukiye or to the attempt to forge friendship between two natural enemies, Labdha-prashmanam or to lose something that was acquired with difficulty, and Aparikshikt-karitam or the results of inconsiderate and reckless action.

(18) The five modes of offering worship to the deity—offering of Gandha or sandalwood paste or fragrance, offering Pushpa or flowers, offering of Dhupa or incense, offering of Dipa or lighted lamp, and offering of Naivedya or sweet foods.

(19) The five holy fires--(a) ‘Garhyapatya’—the fire of the household hearth; the main fire of the formal fire sacrifice; the fire that every householder is supposed to keep alive and worship regularly and from which the first spark is taken for the rituals associated with religious ceremonies), (b) ‘Dakshinagni’—the fire used as a witness to making charities or any other religious festivity; the fire lit at the site of a sacrificial fire ritual, near its south end), (c) ‘Ahawaniya’—the fire lit to invoke the Gods during a ritualistic sacrifice), (d) ‘Sabhya’—the fire of the Vedic period which was continuously lit) and (e) ‘Awasathya’—the fire of the later Smriti period).

(20) The five Tormentors--The five ‘tormenters’ are the following— (a) Avidya (ignorance); (b) Asmita (vanity, ego, pride, arrogance, hypocrisy and haughtiness; according to the philosophy of non-duality, to regard the Atma and the subtle body consisting of mind-intellect complex as one); (c) Raag (attachment, infatuation, desire etc.); (d) Dwesh (ill-will, enmity, malice, hatred, confrontationist attitude etc.) and (e) Abhinivesh (fear of death)—अविद्या, अस्मिता, राग, द्वेष, अभिनिवेश. Refer Adhyatma Ramayan of sage Veda Vyas, Lanka Kanda, canto 10, verse no.61.]

(21) The five Vikaars or faults or shortcomings or imperfections of the body—According to *Mandal Brahmin Upanishad* of Shukla Yajur Veda tradition, Brahmin 1, section 2, verse nos.1, there are following—viz. (1) Kaam (worldly lust, desires, passions and yearnings), (2) Krodh (anger, indignation, wrathfulness), (3) Asthma or obstruction of breath, (4) Bhaya (fear of physical harm), and (5) Nidra (sleep, lethargy, indolence, drowsiness, sluggishness and lack of alertness especially when doing some important or dangerous work requiring concentration of mind, vigilance and alertness of the faculties) (verse no. 1).

(22) The five phases through which the creation passes—conception, creation, expansion and development, existence and sustenance, and conclusion or end.

(23) Panchak—The combination of Daan (giving of alms, making of charities and donation), Laabh (gain or profit or reward), Bhog (enjoyment and sufferance),

Upbhog (consumption) and Virya (semen and potency; virility, stamina, strength and vigour).

(24) Panch Kaval—The five mouthfuls of food that are set aside before one begins to eat, and are meant for the dog, some lowly person, a leprosy patient, a sick man, and a crow. This has a symbolic importance—it teaches the man to take care of the downtrodden and the underdogs of society as much as he takes care of himself because the same Brahm that resides in the body of the person who has sat down to eat a gourmet meal also resides in the lowest of the lowly in this creation.

(25) Panch Ganga—The five holy rivers of India, viz. Ganges, Yamuna, Saraswati, Kirnaa, and Dhutpaapaa.

(26) Panch Nad—The five rivers that flow into the Arabian ocean—viz. Satlaj, Vyas, Ravi, Chenav and Jhelam.

(27) Panch Gabya—The five things regarded as sanctified and used during fire sacrifices and other religious ceremonies—milk, curd, clarified butter called Ghee, cow's dung and cow urine.

(28) Panchaamrit—A concoction made of five things considered as holy and auspicious as nectar, and hence the name 'Panch Amrit' which is prepared by mixing the following five—milk, curd, clarified butter, sugar/treacle and honey.

(29) Panch Kanya—The five women mentioned in the Purans who are regarded as eternally chaste, and therefore called 'Kanya', literally 'a virgin girl'—Ahilya, Draupadi, Kunti, Tara and Mandodari.

(30) Panch Gaur—The five sub-castes amongst the Brahmins who inhabited the area north of the Vindhya Mountains—Saaraswat, Kaanyakunj, Gaur, Maithil and Utkal.

(31) Panch Dravid—The five sub-castes of Brahmins who lived south of the Vindhya Mountains—Maharashtra, Tailang, Karnaat, Gurjur and Dravid.

(32) Panch Jan—The following five categories of creatures—Gandharva (a semi-god), Pittar (spirit of dead ancestor), Deva (higher Gods; the creatures with auspicious nature), Asur (non-Gods; the demons; creatures with inauspicious nature) and Rakshas (flesh eating demons; the ogres and cannibals; those who are cruel and merciless).

(33) Panch Tikta—The five bitter herbs used for their medicinal properties—viz. (i) Kantakir (a prickly plant; the silk cotton tree; *solanum jacquint*), (ii) Saunth (dried ginger), (iii) Kuta in all its three forms (e.g. one called Kutaj—meaning the medicinal plant with the name *echites unitedysenterica*; the second called White Kutaki—meaning the plant called Helle Bore or *picrorhiza kurrrooa*; and the third called Black Kutaki—meaning the plant black Helle Bore or *hellborus niger*), (iv) Chiraayataa (wormwood plant; *gentiana cheratta*), and (v) Giloya or Guruch (a medicinal creeper that grows around the Neem tree—the *margosa* tree).

(34) Panch Naath—The five holy pilgrim sites where five forms of Lord Vishnu are established—Badrinath in the northern Himalayan mountain range, Dwarkanath on the west coast, Jagganath on the eastern coast, Rangnath in the south of India, and Srinath in the western part of India (in the state of Rajasthan).

(35) Panch Pallav—The leave of the following trees which are regarded as sanctified and used in religious ceremonies—'Aam' or mango, 'Jamun' or the rose apple tree which is a kind of black plum, the two types of the wood apple tree—viz. 'Bel' or *aegle marmelos* and 'Kaith' or *feronia elephantum*, and 'Bijaura Nimbu' or lime, especially the variety called *citrus medica typica*.

(36) Panch Paatak—The five great sins are the following—killing a Brahmin, getting intoxicated by drinking wine, theft, sex with a teacher's wife, and company of such people.

(37) Panch Maha Vrat—These are the five great vows, e.g. non-violence and no-killing; truth and non-pretension; not stealing or even eyeing other's property; celibacy, abstinence and self control in all matters; and non-acceptance as well as non-expectation.

(38) Panch Ratna—The five gems such as gold, diamond, blue sapphire, ruby and pearl.

(39) Panch Shabda—The five types of sounds—that made while chanting or reciting the hymns of the Vedas, that made by heralds, that made at the time of cheering victory or applauding any success, that made by blowing the conch shell, and that made by the musical instrument called Nisan, i.e. the kettle drum.

Thus we see that the term Panch Brahm would include a wide swathe of various hues of existential life in this world. The fact that these five forms of Brahm known as 'Panch Brahm' are nothing but one single Brahm revealed in these forms to carry out the complexities of the varied tasks associated with the governing of creation is clearly laid out in verse no. 26-27 below.]

24. Remaining stunned and under the magical spell cast by the Great God Shambhu's (Shiva's) Maya (delusion creating powers), even the exalted Gods and other learned creatures are unable to have any idea who that Great God is. They are unable to know anything about him or get acquainted with the reality of this Great God who is the universal Guru (moral preceptor, wise and learned teacher and expert spiritual guide) for the entire living world.

These Gods are not able to fathom or know any truth about this Great Lord who is the cause of all that exists, including these Gods themselves, and is the Supreme Being of creation.

The truthful cosmic and divine form of that supreme Lord called the Viraat Purush, the macrocosmic all-pervading but most subtle and sublime form of the Supreme Being known as Brahm, who is the Lord of everything in existence, cannot be seen or perceived in the ordinary way inspite of the fact that he is self-illuminated and omnipresent everywhere. [That is, though something that gives out its own light, for example an electric bulb, can be seen from a distance even in dark, this Viraat Purush is not visible to the naked eye because he has no physical attributes and characteristic features.]

But no, it would be wrong to say that the supreme Lord is not visible, for wise ones see him in his universal and omnipresent form as revealed in the shape of this visible creation! (24).

25. That Brahm who illuminates or lights up this creation, i.e. the Brahm from whom this creation has emerged and who has ensured that it becomes clearly visible to even an ordinary creature not an expert of metaphysics or spiritualism, and in whom this creation would finally collapse and dissolve at the time of its conclusion, is most tranquil, serene and peaceful. That Brahm is indeed an embodiment of tranquility, peace, serenity and calmness. That Brahm is the ultimate citadel of creation, the highest point of all spiritual endeavours, and the so-called final frontier! (25).

26. That which is known by the five names such as Saddyojat etc. as narrated previously in this Upanishad is nothing else but this same Brahm who is also known as 'Panch Brahm' because of this fact that it is five-faceted or has five aspects to its holy and exalted existence. In other words, it is the same indivisible, immutable, uniform, universal and non-dual Supreme Being who has manifested in five forms (as enumerated in this Upanishad) in order to perform distinct functions of creation and carry on with the process of initiation, sustenance, propagation and conclusion of creation in an orderly manner. But essentially all these five forms of Brahm are one—they are the five ways by which the same

entity is viewed or understood. The same Divinity is understood to have five forms according to the needs of the situation, and therefore there is no trace of distinction or dichotomy between them. Any argument against this universal and irrefutable truth about Brahm is untenable and a revelation of the pervert tendency of the mind.

So therefore, whatever is seen and heard in this vast creation is an expansion of this one Brahm in five forms. In other words, everything seen and heard comes within the ambit of the term 'Panch Brahm' which represents one single Divinity known as Brahm, the Supreme Being. This Panch Brahm is the transcendental Supreme Being known as Brahm himself (26).

27. Established in five symbolic forms known by five different names (such as Saddyojat etc. as listed in verse no. 1 above), it is the same Brahm who has assumed these (and their other derivative and auxiliary) forms (as listed in verse nos. 5-23) in order to carry out the complex task of governing this colossus, unimaginably varied and multifaceted creation in an orderly and smooth fashion. [It is like the case of the same person assuming different roles in a drama, and then playing his each role to perfection every time.]

When one understands the secret of this philosophy it is only then that he is able to know not only the present creation as a manifestation of Brahm but also the truth behind the five forms of Brahm called Panch Brahm¹.

That is, such a wise person is able to see and know about 'Ishan', he is able to have access to 'Ishan', the insignia or the emblem that marks the place where the Emperor of creation, the Supreme Being is present. In other words, a wise and enlightened man is able to know the truth about the supreme transcendental Brahm in all his manifestations if he understands the esoteric meaning of the enigmatic term 'Panch Brahm' (27).

[Note—¹As has been laid out in note to verse nos. 19-23 and in the 2nd part of the introduction to this Upanishad, this world is visualised as a metaphoric pentagon, and everything that exists and all tasks that are done in this world fall within its boundary. The pentagon has five corners, symbolising the five turrets of this castle, or the five towers built at five outer fringes of a city which are like five check points where five chieftains or commanders reside to control the area within. These five corners are also comparable to the five cardinal points of a temple where five consecrated deities are placed for formal worship. All these five points are equally important and vital, for if one is breached or dishonoured or defiled, the entire aura of holiness around the edifice of the temple falls apart. The same thing is applicable here—all these five forms of Brahm perform some specific duty and have an important place in the cosmic scheme of creation. They are like the five angels overlooking the smooth and proper functioning of things. All have to be kept in equally good humour and equally respected because they wield equal powers that are vested in them by the supreme Authority of creation known as Brahm on whose behalf they function.]

28. Hence, if a wise, erudite and enlightened man is able to decipher the basic secret behind the enigmatic form of Brahm known as 'Panch Brahm', he determines that this vast creation is quintessentially a uniform manifestation of this single universal cosmic Divinity known as Brahm who is non-dual, supreme and transcendental. Therefore he concludes that his own body consisting of the five elements is also like the Panch Brahm, and his 'self' that resides in this physical body as the pure conscious Atma, is Brahm personified.

[The gross body of the creature is constituted of the five primary elements—viz. earth, water, fire, air and sky. Since each of these elements are manifestations of the single Brahm, it is natural to deduce that anything made from these elements would also be a revelation of Brahm. Therefore, the gross body is the external form of Brahm. The Upanishads describing the genesis of creation describe how the gross body of the creature is a microcosmic form of the macrocosmic Supreme Being—refer Aiteriyo Upanishad of the Rig Veda tradition. The pure consciousness that resides in this body is the counterpart of the cosmic Consciousness called the supreme Atma, the ‘Parmatma’, and therefore the former is called the Atma, the microcosmic counterpart of the cosmic Parmatma.]

That is, he is convinced about the truth of the spiritual doctrine taught by the scriptures, which is ‘So-a-ham’—i.e. ‘that is me’, or ‘it is I’¹.

[In other words, an enlightened and self-realised man understands that his ‘true self’ known as the Atma is none but this Brahm. His body made up of five elements is but a manifestation of the Panch Brahm, whereas the essential thing in this body, i.e. the consciousness residing inside it, is the Brahm whose manifestations are each of these five elements that constitute his body and mark his physical worldly existence. This realisation is the climax of spiritual enlightenment.]

When he has attained this exalted state of wisdom and understanding, he is able to taste the nectar called Amrit that drips from Brahm—i.e. he is able to enjoy the spiritual bliss and ecstasy, the sense of beatitude and felicity that comes with attaining the highest eclectic state of Brahm-realisation (28).

[Note—¹The concept of ‘So-a-Ham’ has been elaborately described in (i) Sam Veda = Yogchudani Upanishad, verse no. 83. (ii) Krishna Yajur Veda = Brahm Vidya Upanishad, verse no. 34, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-133.]

29. A person who gets to understand and know the truthful divine and sublime form of Brahm in a holistic manner is able to obtain spiritual liberation and deliverance; he obtains emancipation and salvation. There is no doubt about it (29).

30. Lord Shambhu (Shiva) has a Mantra of five syllables¹, and he is a personification of the transcendental supreme Brahm. This Mantra has the Sanskrit alphabet ‘Na’ in the beginning and the letter ‘Ye’ at the end. This Mantra should be repeated to please and worship the supreme transcendental Divinity known as Brahm (30).

[Note—¹The five syllable Mantra of Shiva is ‘Namaha Shivaye’= Na + Maha + Shi + Va + Ye = 5. Here it implies that each of these syllables stands for one or the other five aspects of creation that the Panch Brahm represents. The Mantra means ‘I bow most reverentially to Lord Shiva’.]

31. Everything in existence should be regarded as a manifestation of Panch Brahm and given due respect. One should have a divine and holistic view of creation, and be wise and enlightened enough to universally and uniformly see this Panch Brahm in each unit of creation without exception (because it is the same entity assuming different roles, different characteristics, different attributes, virtues and colours to meet the varying demands of the situation and the ever-changing dynamism of the continuously evolving creation that never remains the same in any two given points of time) (31).

32. A person who studies this scripture espousing and extolling the divine and holy spiritual virtues of Panch Brahm with full devotion and faith is able to become a

living embodiment of Panch Brahm himself. He becomes one like Panch Brahm and attains nearness to this divine Being.

[This is because once he is convinced of the truth that whatever exists around him is Brahm personified in that particular form, he would be seeing, hearing and interacting with Brahm each single moment of his life. What more, since he would be convinced that his own 'self' is also Brahm he would no longer see Brahm in the outside world or in some distant heaven or in some far away pilgrim site, but here in his own bosom. He need not go to a temple to worship Brahm, he need not please the external world to honour Brahm, for his own 'self' is Brahm personified! Thus this Upanishad is amongst the great ones espousing the philosophy of 'Advaitya Vedanta', the eclectic philosophy of non-duality.] (32).

33. This divine knowledge was most graciously imparted to sage called Gaalav by the Emperor of creation and the most benevolent and munificent Lord Shiva himself. After that, the Lord vanished from sight as he dissolved and merged imperceptibly in the Atma (the universal Soul, the cosmic Consciousness) (33).

34. [Continuing his discourse, sage Pippalaada said—] Oh Shaakalya! This knowledge is so comprehensive and potent that by hearing, learning and understanding it one hears, learns and understands everything worth hearing, learning and understanding. By becoming learned in this knowledge and acquiring this spiritual wisdom, one is able to know everything that is known in this world as well as everything else that is not yet known by anyone.

[That is, he acquires transcendental powers that enable him to know things beyond the realm of the physical world, things pertaining to the world beyond the gross and even the subtle world known to human beings. He obtains the so-called 'third eye of transcendental wisdom' whereby he can see things not visible to the physical eye of the gross body.] (34).

35. Oh Gautam (i.e. Shaakalya—because he belonged to the lineage of sage Gautam)! Even as by seeing the rounded lump of kneaded clay one comes to understand and realise the irrefutable fundamental truth and the undeniable reality behind all types of toys, pans and pots etc. made of clay which apparently have no physical external resemblance to their primary source, and appear so distinct and very different from their basic ingredient known as 'clay', one can similarly know about everything else in existence once one comes to know the real truth about Panch Brahm and his essential form as one single non-dual supreme Divinity known as Brahm.

[Here, Brahm is like the clay, the basic ingredient of all things made out of it. Brahm is the basic entity that is used to weave this fabric known as creation, and it completely soaks it from all sides much like sponge put in water or salt dissolved in water. Another example is ornaments made of gold or silver—notwithstanding the intricate design and external shape these ornaments have acquired, their intrinsic value and basic importance is the quality and quantity of gold and silver that is used to make them. If a silver ornament is gold plated, it would still remain silver and not become gold! This is exactly what is meant here. The myriad world seen in all its vibrant colours and fascinating contours is nothing but one Brahm in all these forms. All exteriors and names are misnomers and misleading; they divert the attention of the mind from the reality of the hidden truth.] (35).

36. Taking another example, one can see a rounded piece of iron and learn about its properties. Once done, he would be able to know about the basic properties of all things made of iron. Similarly, by closely observing the nail-cutter one would know how all sharp-edged weapons are able to cut anything into two. [He also understands that all sharp-edged instruments that can cut anything are the same piece of iron known by different names, be it as a nail-cutter, or an iron-saw that cuts wood, or even a knife that cuts fruits etc, or an axe that chops off the thick trunk of a tree.] (36).

37. Once one comes to know about the properties of the basic ingredient used to make anything, he would be able to know and predict the fundamental properties of all other things made of the same ingredient—though all of them are greatly different from one another. Similarly, the action taken by a person in response to any given cause or circumstance at a particular point of time and place would be predictive of how he would react under the same circumstance or when the same cause arises in the future. In other words, it is not possible to separate the reaction or response from the cause; they are correlated (37).

[Note—For example, if one becomes angry when he is disobeyed, he would invariably become angry whenever he is disobeyed. So, it can be safely deduced that to make a man angry he must be disobeyed. Or there must have been someone who disobeyed a man if he is angry, though the direct cause of his anger is not always known and clearly visible.]

38. If anything is treated in its fundamental form and recognised as such, then this treatment and recognition would stand the test of reality and truthfulness. Calling it by another name would be an erroneous and untruthful statement.

[For example, if we call a bangle made of gold as ‘golden’, it would be a perfect truth. But calling it by any other name and describing it in terms of beauty, market price, design and shape would not be saying the full truth about this golden bangle as it would now create an aura of artificiality about its true nature, its essential quality and its intrinsic value.]

Similarly, all things in this world have one root cause (which is Brahm) and to regard them as being separate or distinct from this one root is a fallacious consideration. [For example, the huge tree with its multicoloured flowers, fruits of various sizes and colours, leaves and branches of all sizes and shapes, and roots spreading out in the ground come from one seed which now not visible, but which decides the genetic name of this tree. A mango tree of all sizes and shapes, no matter where it is located, will always be known as a ‘mango tree’, and no other tree. Therefore, this creation having its ‘seed’ in Brahm would be always known as ‘Brahm personified’, and nothing else.] (38).

39. The perception of differences, separation, dichotomy or distinctions that appear between any given two entities in this world are due to errors of perception, flawed knowledge and mistaken identity. This gives rise to perplexities, confusions and doubts. It is not a holistic, right and auspicious way of looking at things; it’s a lop-sided and distorted view. Hence, the cause and essence of this entire world, both the animate as well as the inanimate, is one, and it is pure Consciousness (known as the truthful Brahm). All the rest of the views are false, distorted and erroneous (39).

[Note—A pertinent question arises here—it is alright to accept that all animate world is consciousness personified. But how can inanimate things be so? Well, the answer is simple—we recognise anything as being ‘animate’ or ‘inanimate’ only till the time we have life in our own body, till we are conscious and alive and have the properly

working mind-intellect that has the wisdom and erudition to see and analyse any given two entities and then distinguish between them as one being animate and the other being inanimate. Dead bodies, ignorant and stupid people or those who are insane cannot see any difference between them and therefore cannot distinguish between them. For a dead man or a man who has not the slightest idea of what he is seeing the snake and the rope are the same thing. So we conclude that the basic entity that makes a person aware of the presence of either an animate or the inanimate thing in this world is not the thing itself but the 'consciousness' that is present inside him. It is the consciousness that makes him aware of the presence of the world itself in the first place.]

40. Oh sage! The divine abode of this supreme Brahm is in the body itself, in the heart which is regarded as lotus-shaped¹. There is a subtle space in this heart, called the Hridaya Akash. The heart is like the doorway leading to Brahm residing in this subtle sky.

[The entity that lives in this subtle space is called the pure consciousness or the Atma. The word 'Atma' means something that is the essence and soul of anything, the heart of anything, the core and fundamental nature of anything, the essence of anything. So, since consciousness is the entity that injects life in the body, since without it the body would be as good as a piece of lifeless log of wood, it forms the 'Atma', the central Authority of the body. It is the Atma that is the 'Ishan' as far as the body of the aspirant is concerned.]

Spiritual aspirant desirous of liberation and deliverance for themselves, those who seek emancipation and salvation of their soul, should seek Shiva—as Brahm personified—in this heart. Shiva is 'Sat-Chit-Anand' personified². [Sat = truth; Chit = consciousness; Anand = bliss and joys infinite, beatitude and felicity unbound.] (40).

[Note—¹Refer verse no. 14 also. Refer also to the Krishna Yajur Veda's Dakshin Murti Upanishad, verse no. 25, and Dhyana Bindu Upanishad, verse nos. 93/1-93/15, as well as the Chandogya Upanishad, Canto 8, section 1, verse no. 1 of the Sam Veda which describe the heart as a lotus where the Atma resides.

²The concept of 'Sat-Chit-Anand' has been elaborately described in Krishna Yajur Veda's Rudra Hridaya Upanishad, verse nos. 26-27, and Varaaha Upanishad, Canto 2, verse no. 6.]

41. Shiva, as Sat-Chit-Anand personified, always lives in the heart. He is a constant witness of all that is happening. That is why the heart is regarded as the doorway to liberation and deliverance from the traps that have been laid out by this delusory and cunning world of artificiality to ensnare the creature in its tentacles.

Verily, this is the teaching of this Upanishad; this is what this Upanishad says and affirms. Amen! (41).

-----Shanti Paath-----

-----*****-----*****-----

Chapter 29

Pran Agnihotra Upanishad/Pranagnihotro-panishad

The name of this Upanishad has two components—Pran and Agnihotra. The second word ‘Agnihotra’ refers to the offering of oblations to the consecrated sacred fire, while the first word ‘Pran’ refers to the vital and primary life giving and life sustaining forces of Nature present in the individual’s body. Therefore, this name assumes two connotations—one, to offer oblations to the sacred fire to pay obeisance to and honour the all-important Pran and Fire which are deified forms of the vital life giving and life sustaining forces in Nature, both at the cosmic level as well as at the individual level of creation (verse nos. 6-14), and two, to honour the Supreme Being, who is the Lord of the entire creation including the Pran and Fire, and who has empowered Pran with its stupendous and magical ability to inject life even in the inherently inert and dead entities such as the gross body of the mortal creature, by offering this Pran itself as an oblation to him. At the macro level of creation, this Supreme Being is called Viraat or Vaishwanar, and at the micro level he is called the Atma (verse nos. 15-18).

Verse nos. 21-22 especially are very explicit in describing how the human body can replace the venue and other fine details of the fire sacrifice done in the external world; they draw a parallel between the human body and the pit where the sacred fire for the fire sacrifice is lit. They describe this similarity in great detail by incorporating various components of a fire sacrifice, explaining how the human body perfectly fits in the scheme of things and seamlessly replaces the venue and other details of the physical fire sacrifice done in the external world—complete with the worship altar, the implements and other things needed to perform the various rituals, making of offerings, oblations and libations, the participants such as the different priests, the attendants, the patron and his family members, the post, the rope and the sacrificial animal et al. This Upanishad is a sort of an anti-thesis to the practice of holding elaborate fire sacrifices involving large amounts of wealth and outlay of time.

There is a Vedic Sukta (a hymn used for special prayer) called ‘Krishi Sukta’ which praises agriculture as a means of producing food which not only sustains life in this mortal world but even the Gods also by means of the offerings made during the fire sacrifice. Its relevance in the context of this Upanishad cannot be underestimated because the food eaten by the body is the only viable means of its sustenance as well as of the different Gods residing inside it. This Krishi Sukta is included in this volume as appendix no. 5.

This Upanishad presents an enlightened and philosophically evolved or matured view of the entire process of doing the fire sacrifice meant basically to honour the cosmic Divinity and the dynamic forces of Nature personified as benevolent and munificent deities, and to seek their blessings and intercession. Instead of doing this fire sacrifice externally with a lot of elaborate rites and rituals, this Upanishad propounds and espouses the eclectic and highly evolved doctrine of doing them internally, offering all the oblations and offerings to the supreme Lord residing in the body of the worshipper himself (verse no. 15). It is to honour the supreme Brahman who resides nowhere else but inside one’s own self as the truthful Atma, the pure conscious soul, that this sacrifice is done.

This is a most refined, holistic, convenient, practical, spiritually elevating and enlightened view of the fire sacrifice. This internal fire sacrifice leads to truthful and

meaningful spiritual liberation and deliverance as compared to the external formality of elaborate exercises which become more of a formality and is ridden with artificiality. Refer Brahm Vidya Upanishad, verse no. 52-110 which is Chapter 16 of this volume.

It incorporates all the components of a formal fire sacrifice—such as Mantras and Chants (verse nos. 3-6, 8-10, 14), offering of food and water and other oblations, (verse no. 10, 13, 16), and sprinkling of water for the purpose of purification and ablution (verse no. 11) and oblation (9-10, 12)—but these are now centered on the ‘self’ rather than the external world. The offerings are made to the eternal fire of consciousness burning inside rather than the physical fire of the fire pit; the latter is the body itself in this case. The oblations are first offered to the Pran as an honourable deity, and then to the superior Pran in the form of the Atma, the Lord of Pran. The aim or reward sought for doing is to obtain the blessing of the supreme Lord known as Brahm who incidentally resides secretly ensconced in the aspirant’s own heart.

A lot of symbolism is used in this Upanishad which teaches the spiritual aspirant to go nowhere else outside to search the supreme Brahm, but use his own body to do the fire sacrifice in order to obtain the Lord’s divine blessings, and freedom from all his worldly afflictions. The entire gamut of symbolisms involved in this internal fire sacrifice vis-à-vis its external form have been narrated in verse nos. 21-22.

This metaphysical and philosophical approach to the fire sacrifice helps to cleanse the mind and intellect of all forms of delusions that mire them, and prepare them to help the individual obtain the divine and eclectic knowledge of the ultimate Truth and Reality in creation, knows as Brahm, as well as about his own ‘self’ as a manifestation of this Brahm. This wisdom is called true enlightenment, and obtaining of what is known as ‘Brahm Gyan’.

It has been emphasised that self-realisation and Brahm-realisation is a matter of personal experience and obtained by rigorous self effort and self control of the body along with the cleansing of the instrument that enables it to happen, i.e. the mind and intellect complex, both at the grosser level of routing thinking as well as at the subtler level of the sub-conscious, and not merely by becoming an unchallenged expert in different philosophies such as Shankhya etc. In short, this is text eulogizing and espousing the philosophy of Vedanta which lays stress on self and Brahm realisation as the stepping stone for a person’s final liberation and deliverance from this body and world. It espouses the principle of the Upanishads that Truth can be searched by turning one’s attention inwards rather than outwards; this also implies inculcating correct wisdom, right thinking, painstaking research, analytical interpretation, diligent meditation and constant contemplation on the reality and truth, as well as being careful of delusions, pitfalls and distractions, and having the virtues of perseverance and steadfastness in order to reach one’s goal.

A point to note is that this Upanishad resembles the typical texture of the Vedas inasmuch as it is narrated primarily in the form of hymns to invoke the divine cosmic powers during elaborate fire sacrifices. Even the context is also the same—for here also the fire sacrifice is being done, albeit it is not any external sacrifice but an internal one.

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of this Shanti Paath.

1. Now the divine and eclectic metaphysical discussion about two important things related to life and creation, viz. ‘Anna Sukta’¹ (the hymns dedicated to worshipping the patron deity of food who personifies its inherent virtues and its intrinsic qualities) and ‘Sharir Yagya’² (using the body as a means of offering sacrifice internally to the consecrated sacred fire symbolically residing inside it), is being initiated. This knowledge and wisdom transcends all worldly knowledge and wisdom, and it represents the essence of the eclectic philosophy of the Upanishads and the basic spiritual doctrine as espoused by them.

This knowledge is so authoritative and potentially effective that by acquiring it one can attain Mukti from this mundane life and deluding world of artificiality—i.e. one can obtain freedom from the fetters of the inherently deluding and eternally entrapping world of spiritual horrors even without having to do external forms of elaborate formal fire sacrifices, or having to observe numerous religious sacraments, or having to learn and practice the esoteric philosophies of Sankhya³ etc. in order to achieve this spiritual Mukti (1).

[Note—¹The *Anna Sukta* has been described in verse nos. 2-7 below. There is another Sukta called the ‘Krishi Sukta’ which honours agriculture as a means of production of food. This is very relevant in the context of the Anna Sukta and therefore has been included as appendix no. 5 of this volume.

²In the context of the body as a means of doing the fire sacrifice, one should refer to the Sharirako-panishad which is Chapter 20 of this volume. It describes how the individual body of the man is a micro level representation of the cosmos. When the supreme Lord, the Viraat Purush or the creator Brahma decided to initiate the process of creation, he had offered his own body as the sacrifice done in the cosmic cauldron from which the entire creation eventually evolved as a consequence of this sacrifice. The fact that the success of a fire sacrifice revolves around the offering of a ‘sacrifice’ is universally accepted in the scriptures, but from the philosophical perspective of Vedanta, the real and truthful spiritual gain is obtained by sacrificing one’s own ‘self’ instead of using external offerings. The Brihad Aranyaka Upanishad of Shukla Yajur Veda elaborately describes how a horse’s body is used as a symbolic means of this offering in its Canto 1, Brahmin 1, and specifically narrates how the Supreme Being decided to offer his own body as a sacrifice in Canto 1, Brahmin 2, verse no. 7.

As we progress with the reading the present Upanishad we shall learn that the internal offerings made to the fire burning inside the body is done using one’s Pran, the vital winds that provide the vital spark of life inside the body. The Pran here refers to the breath that constantly comes and goes out of the body, and which keeps the fire of life burning incessantly inside the body. The deity that is worshipped through this form of internal fire sacrifice is the Atma, the personified form of Brahm, the Supreme Being, residing inside the heart of the individual creature as his ‘self’. Hence, it is called ‘Pran Agnihotra’—i.e. offering the Pran as an ultimate sacrifice to worship the Supreme Being residing in one’s own body as the ‘self’.

³*Sankhya Shastra*-- This is one of the six great schools of Indian philosophy. It was first propounded by sage Kapil as ‘Shankhya Sutras’. A detailed note on this philosophy of Sankhya Shastra is given as a note of Canto 6, verse no. 13 of Shwetashwatar Upanishad which is Chapter no. 5 of this volume.]

2. The food that is to be worshipped, honoured and consecrated should be respectfully placed on the altar erected on the ground for the purpose of this worship, and the following three Mantras and two Richas should be said.

(a) The three Mantras are the following—‘Ya Aushadhi’, ‘Ya Phalnirya’ and ‘Jivalaa Naghaarishayam’. [These Mantras are given below in verse nos. 3-5.]

(b) The two Richas (a hymn or incantation of the Vedas) are the following—‘Anna-pateya-annasya’ and ‘Ydanna-magnir-bahuda’. [These Richas are given in verse nos. 6-7 below.] (2).

[Note—The food is honoured and shown great respect because it harbours life inside it in a latent form. It is the food that creates the outer sheath of the body, called the Anna Maye Kosh, the food sheath, without which the Atma, the pure conscious ‘self’ of the creature, would have no abode to live in this physical world. Food has the eclectic virtue of being able to first infuse life into an otherwise lifeless gross body, and then sustain, nourish and protect it. It is not the gross aspects of the food that is being honoured here but its inherent subtle and sublime quality of sustaining life that is worthy of respect, because this grand virtue elevates food to the level of Brahm, the eternal source of life and its sustenance. This aspect of food makes it equivalent to the Atma because both sustain life in a gross and fundamentally lifeless body. In this context, the basic life-infusing and life-sustaining virtues of food that are latently present in it in a hidden form are identical to the pure conscious Atma that also lies hidden from view inside the external gross form of the body. Even as a body sans the Atma is worthless, any food which does not have nutritional value is equally worthless. It is the divine power of the food eaten to foster life that is important rather than its external gross form or features because the latter is excreted as stool after the vital forces of life and the life-energy trapped inside the food have been extracted by the creature when he eats that food to sustain his ‘self’.

When a man eats food with the holistic approach of doing a fire sacrifice, he is actually offering each morsel of food eaten as an offering to the Supreme Being residing inside his body as his Atma much like the offerings made to a formal sacred fire during fire sacrifices. During such fire sacrifices, all the food offered to the fire pit are meant for the deity to be worshipped and the fire is only a means of transferring this offering to the deity. In the case of internal fire sacrifice as espoused in the present Upanishad, the food is offered to the Pran, the vital life sustaining forces of life representing Brahm that are present inside the body. This Pran thus becomes the worshipped deity. But even as all Gods and deities are shown due respect as representatives of the Supreme Being known as Brahm, and not for their own sake par-se, this Pran is worshipped on behalf of the Atma, the pure consciousness residing inside the body as Brahm personified. So, the ultimate Authority that is worshipped is the Atma, and the medium of doing this is the Pran. Therefore, the Pran is also offered as an offering during this symbolic fire sacrifice—thereby giving this Upanishad its name ‘Pran Agnihotra’.

Since the food that is eaten is not to satisfy one’s hunger or gratify the senses of taste and pleasure but is a holy offering to the deity, it is first cleaned and duly consecrated by saying of Mantras as done during formal forms of fire sacrifices.]

3. [Verse nos. 3-5 are in honour of herbs and their disease-eliminating qualities which makes life enjoyable, pleasant and comfortable for the man.]

‘Lord Som is the patron deity of all medicinal herbs. [That is, Som is the personification of all the good virtues that are present in herbs which benefit mankind. He embodies all the benefits that are derived from the use of medicinal plants. Soma is the name of a medicinal herb that is used in all religious ceremonies; its extract is used as a consecrated and sanctified drink during fire sacrifices.]

He is the chief amongst those who have a long life of hundred years and retain their potent, strength, vigour, vitality, vibe and stamina throughout their long life.

He is powerful enough to destroy all sorts of numerous diseases from their roots. These diseases metaphorically resemble a huge tree, with hundreds of branches.

[The main disease produces many offshoots and chain of symptoms. If one is cured, the other crops up as if from nowhere much like the case when cutting of one branch of the tree produces another shoot somewhere else, and even at the place where the original branch was chopped off. The best way of cutting the tree is to cut it from its roots instead of from its branches. Likewise, the best way of curing a disease is to find the root of its cause and then taking care of it. From the spiritual perspective, it means that a wise person should first find out the cause of his torments and miseries, the reason why he is trapped in this endless cycle of birth and death and its attendant horrors, the root cause of all delusions and perplexities that have swamped him and trapped him in their web-like tentacles. Once he comes to grips with the cause of all his spiritual problems, he should then endeavour to find the proper remedy for his spiritual maladies so that he can find permanent solution for them. This would be like cutting the tree from its roots.]

All these medicinal herbs having superb powers and potentials to cure incurable diseases have been prepared (created) by Brihaspati, the Guru of Gods.

Let these medicinal herbs grant us freedom from all sins and their evil effects that have revealed themselves in the form of various diseases afflicting us (3).

4. All forms, species and categories of herbs that have been produced (or created) by Brihaspati, whether they bear fruits or not, whether they have flowers or not, let them all give us freedom from the torments and miseries that are inflicted upon us as a consequence of the sins done by us. In other words, our evil deeds and sinful demeanors have manifested themselves in the form of numerous spiritual and other diseases that afflict us (4).

5. All forms of herbs that remain perennially green and vibrant are being accepted by me. Let them protect us from all the elements that cause decay in age and shorten life (5)'.

[Note—The importance of food has been elaborately explained in Chandogya Upanishad of the Sam Veda tradition, e.g. in 5/2/1, 6/7, 7/9 amongst other parts. These verses are a strong appeal to all spiritual aspirants to turn vegetarians in our eating habits and shun all sorts of food that are not based on plants.]

6. [Verse nos. 6-7 are in honour of the fire element inherently present in the food and which makes what is eaten by the creature usable by him.]

'Oh the Fire God! You are the Lord of Anna (food). [This is because fire is needed to cook and digest food. Fire in its basic role as a provider of energy and heat is the inherent vital quality present in the food that is honoured in these verses. This 'fire element' present inside the food as its latent eclectic virtue not only provides energy, heat and vigour to the person who eats this food but also helps the food to be digested and absorbed in the body so that it can be of any use to the latter. That is why cold and stale food is harmful for the body and becomes difficult to digest.]

Please arrange food for us that can give us a healthy life and proper nourishment.

Bless those people who give a lot of food as alms and are charitable in its distribution. [That is, bless those who give food to those who are less lucky to obtain it themselves. In other words, be benevolent, munificent, kind and merciful to those charitable persons who feed others free of cost and operate free food outlets for the poor and downtrodden. One of the best forms of charity is to feed those who are hungry and unfortunate.]

Arrange sufficient food for our dependents such as sons and grandsons, as well as our livestock. [Let none of my dependants suffer from lack of food; let none starve for want of food.] (6).

7. That part of food which is stored away from the prying evil eyes of Rudras and Pishachs¹ (i.e. those who are pervert, evil-minded and have a wicked tendency to either destroy the food or forcefully usurp food belonging to others by use of threat and violence), and which is meant for the subjects (i.e. to feed those who are dependent on us for providing them with food, such as family members, kith and kin, friends, compatriots, guests, servants, livestock et al.)—we offer it to the supreme Lord called Ishan² who is requested to graciously accept this offering and extend his benevolent patronage to the food so that it is protected (from these cruel Rudras and Pishachas) and used for the purpose for which it is meant (i.e. to feed the subjects of the realm who are depend upon stored food for their life, its sustenance and nourishment).

Hence, this offering is submitted to the great Lord Shiva in his form as Ishan’.

Saying this, the word ‘Swaha³’ is pronounced and offering made upon the worship altar (7).

[Note—¹The evil spirits and cruel demonic forces in this world are represented here by *Rudra* which is a very ruthless form of Shiva, and by *Pisacha* who are cruel blood-thirsty ogres and evil spirits. They are metaphors for those people who are inconsiderate, selfish, cruel and merciless, who would not earn food for themselves but thrive by stealing from others either stealthily or by the use of brute force. They are virtual social parasites, being selfish, cruel and uncompassionate to the core. Food is to be protected from thieves and thugs, from marauding armies and vagabonds, from wild animals, insects and birds who destroy food without rhyme and reason. They might not use the food for themselves or get any material benefit by destroying and plundering granaries and fields but do so to satisfy their sadistic nature of deriving pleasure at other’s sufferings; they enjoy when other die of hunger and beg for food when their harvests, granaries, warehouses and larders are destroyed.

²The Panch Brahm Upanishad describes that *Ishan* is not merely one of the eleven forms of Shiva but is the supreme Brahm himself. So this offering is made to the supreme Lord. This Upanishad also goes on to say that Shiva is the supreme transcendental Brahm himself. There are a number of Upanishads which affirm this fact—e.g. the Rudra Hridaya, Dakshin Murti, Rudra etc. all of which are part of this volume.

³*Swaha* is the word pronounced at the time of making offering to the sacred consecrated fire during a fire sacrifice.

The importance of the ‘fire’ has been elaborately dealt with in Chandogya Upanishad of the Sam Veda tradition, and is known as ‘Agni Vidya’—5/4-9. The offerings made to this fire are described in 4/17/4-6, and 4/10-13. The entire Canto 5 of this Upanishad is dedicated to the importance of Pran, the vital spark of life present inside the body as breath and other vital winds, and Fire that provides the much needed warmth and heat and energy that gives strength, vitality and stamina to the creature’s body and helps it to carry on with its normal functions; it is the fire that keeps the spark of life alive and active inside the otherwise inane and lifeless body.]

8. [This verse is to honour Ishan, the supreme Lord who is being invoked and offered food as oblation. This Lord lives inside the inner being of the creature as his Atma, his true ‘self’ which is nothing but pure consciousness and a microcosmic counterpart of the all-pervading and universal cosmic Consciousness known as the Parmatma.]

You are the one who lives in the heart of all living beings as their individual Atma (the pure consciousness or soul) on the one hand, and on the other hand you uniformly pervade throughout the creation and expand infinitely to reach the farthest corners of it. [That is, on the one hand you have an atomic form as the individual Atma, and on the other hand you are as vast and colossal as the cosmos, stretching out from one of its corners to its other remote corner in a uniform manner like an open canvas upon which everything in existence has been painted.]

You personify Yagya (fire sacrifice), Brahma (the creator), Rudra (one of the forms of Shiva, the concluder), Vishnu (the sustainer and protector), Vashatkaar (the special fire sacrifices meant to honour specific Gods and provide them with nourishment from the offering made to the sacred fire), Aapo (water), Jyoti (light symbolising visual illumination as well as the light of knowledge, wisdom and enlightenment), Rasa (essence and juice; it is a metaphor for the most auspicious aspect of anything, the best extract of anything and everything in creation), Amrit (the elixir of life and eternity, of beatitude and felicity), Brahm (the invisible cosmic Consciousness and the supreme transcendental Being), Bhu (the terrestrial world; the earth inhabited by mortal living beings), Bhuvaha (the world of the sky where those who fly live, such as the birds and insects as well as the Spirits), and Swaha (the heaven where the exalted Gods have their abode).

I bow most reverentially before you and pay my sincere obeisance to you (8).

9. [This verse is dedicated to the water element in its personified form as the Water God. It also treats earth in its personified form as the son of Brahm because earth is so kind, graceful and merciful that it sustains all forms of life without complaining inspite of grave provocation and selfish abuse it is constantly being subjected to ever since humans began their reckless and mindless journey of random exploitation of it.]

Oh Apaha! Please clean the earth and remove all impurities from it. Then let this cleaned and purified earth bless me with auspiciousness and well-beings of all kinds. [That is, be kind to first purge this earth of all evil and corrupted influences and then grant it to me as your benedictory gift so that I can enjoy it and the fruits that it has to offer. Water is the only element that helps in cleaning and washing dirt and all types of filth without subjecting the object to any inconvenience. Fire also cleanses and purifies, but its process is very harsh and ruthless on the subject as compared to the water which is soothing and affable by nature. So, here the patron deity of water, Aapo, is being requested to keep the earth clean by washing off garbage and other wastes besides keeping the land properly irrigated and productive so that it is fertile and abundant crops and livestock can flourish on earth, and general life can consequentially be made happy, pleasurable and comfortable for the man. A fertile land would harbour abundant plant and animal life, a healthy environment would foster healthy and vibrant life, and a healthy and well-nourished population can enjoy the fruits of life better than a people battling to survive in harsh conditions. The washing and cleaning alluded to in this stanza has a metaphoric meaning—it is not so much the external cleaning of the body with water that has any spiritual importance as the internal cleaning of the mind and intellect that can lift the ‘self’ to higher level of the spiritual attainment. Even as the wind can lift the water molecules of the water from the surface of the ocean and take them aloft to the sky to form the rain which pours down upon earth as the elixir of life in its new incarnation, the ‘spirit’ of wise men are taken higher to the level of self-realisation and Brahm-realisation from the mundane existence by the vital winds called Pran during the process of Yoga and other methods of spiritual practices. This exalted ‘spirit’ of the enlightened and wise

man that has broken free from its fetters that tie ordinary men to the body and the mundane world than shines like the sun in the sky, showing other less fortunate ones the truthful way of liberation and deliverance. If and when this 'spirit' ever decides to come down on earth as incarnations or manifestations, it is akin to the rain coming down on earth as an elixir of life and eternity in as much as they live amongst the people and show them the path by their own example. So by 'washing and cleaning' it is the internal purging of all sorts of perversions and sinful tendencies of the mind and intellect that is being referred to here. When a man is advised to wash himself to worship the deity he adores, it is a metaphoric way of instructing him to first clean his inner self as a preparatory step to worship the Lord. Further, it is also to teach him that the Lord whom he wishes to worship is not to be found outside but inside his own self—the espousing of the philosophy for which this present Upanishad was conceptualized in the first place. What good is ablutions and scrubbing of the external body if the inner being of the aspirant is full of evil and pervert thoughts, full of filth and muck? How can he ever expect to get spiritual benefit by external cleaning if his inner self is not cleansed?]

Let the Earth who is the son of Brahm ('Brahm Poot') provide me with auspiciousness and cleanliness. [The earth is called the son of Brahm, the Supreme Being, because it has emerged from Brahm as one of the primary elements, called the Bhuts (the others being water, fire, air and sky) at the time of creation. Even as the son bears the father's genes and is assigned the task of carrying forward the family lineage by the path of reproduction, the earth too carries forward this divine mandate of the supreme Father by helping to create and sustain new forms of life from its bowels ever since its inception. Again as the son ensures that his off springs are well provided for and well looked after, earth also ensures that all the creatures are well taken care of and all their material needs are fully met. This is the reason why the earth never complains even after being subjected to random exploitation by men—because it willingly wishes that its off springs, the creatures born out of its own 'soil', are happy and contented even if it has to suffer in the process. This is also why earth is honoured by the grand and respected title of a 'mother' who is very loving and caring for her children, and never curses them inspite of being abused herself by them. The earth carries forward the legacy of Brahm, the supreme creator. Like Brahm who conceives, produces, sustains and finally concludes everything in this creation, earth too conceives everything in its bosom because all forms of life, whether animal or plant, are born out of the soil of earth. The earth sustains them, nourishes them, provides food, shelter and all material needs for them, and looks after them. Finally when the plant or the living being dies, they merge in the earth itself; they fall on the surface and decay into soil, they are cremated and turn into ash which is a form of soil, or are buried in the earth and becomes one with it. Every living entity is born on earth, is sustained by earth, and collapses back into earth and disappears into it to become one with it. Hence, earth exhibits the same characteristics of conception, creation, sustenance, nourishment, development, growth and conclusion as shown by Brahm, the cosmic Creator. Therefore, earth deserves to be shown the same reverence and honour as reserved for Brahm.

Whatever traces of shortcomings and evils such as impertinence, indiscipline, perversions, rudeness, intolerance, arrogance, ignorance and other unacceptable, faulty and negative character traits that may be present in me which are like blemishes tarnishing my inner self and tainting my primarily clean and immaculate self, let the Water God wash them all away from me, purge them from my inner self so as to

make me spiritually clean, washed, refreshed, refined, shining, radiant, untarnished, uncorrupted and untainted.

For this purpose I am offering this oblation to you’.

Making this prayer, the worshipper should say the word ‘Swaha’ and make the requisite offering (9).

10. Having said the above Mantras, the worshipper should sprinkle some water two times on the altar and on the food placed on it for the invited deities. Then the altar is touched by the left hand, fresh water is taken up with the right hand, and the following Mantra is said—‘Amrit-masya-mrito-pastar-ranamasi’. [This Mantra means—‘Oh water! You are an image of Amrit, the nectar of life eternal. You are cloaked and soaked in Amrit’.]

The water is then sipped, and then the following Mantra is said—‘Amritam Praane Juhomya-maashishyaanto-asi’. [The meaning of this Mantra is—‘The thing which is equivalent to nectar and most suitable for making an oblation to the sacred fire has been accepted’. That is, this life-giving sanctified water has been accepted by the Divinity residing in me.]

Saying of this Mantra should be accompanied by the thought that the water sipped (or drunk) is like an oblation made to the sacred fire burning inside the body in the form of the Pran and other vital winds. [The ‘Pran’ is a common term used to describe all the vital winds present inside the body of the creature that keep his body alive, active and functioning properly. It is a metaphor for the vital spark of life present in the body. Usually the term ‘Pran’ is used to mean the breath because life depends upon this single vital wind more than it does on other winds; if a man stops breathing no other winds can keep his body alive and functioning. Thus breath as Pran is the superior vital wind, and therefore is the de facto Lord of the creature’s body. The exalted stature of Pran and its overriding importance vis-à-vis other elements of the body is clearly stressed in Sam Veda’s Chandogya Upanishad, Canto 5, section 1, verse nos. 6-15, and Shukla Yajur Veda’s Brihad Aranyaka Upanishad, Canto 6, Brahman 1, verse no. 7-14.]

Therefore, the following Mantras are said in succession when water is sprinkled (after first sipping it as described above) as a symbolic offering to the Pran.

The first oblation is ‘OM Pranaye Swaha’—I offer this oblation to the main vital wind called Pran (breath).

The second oblation is ‘OM Apanaye Swaha’—I offer this oblation to the second vital wind called Apan Pran (the wind that moves down in the intestines).

The third oblation is ‘OM Vyanaye Swaha’—I offer this oblation to the third vital wind called Vyan (the wind that helps in maintaining equilibrium and pressure within the body).

The fourth oblation is ‘OM Udanaye Swaha’—I offer this oblation to the fourth vital wind called Udaan (the wind that helps the body to rise and move about, it also helps the body to expel toxic waste gases through the nostrils and mouth in the form of exhalation and cough).

The fifth oblation is ‘OM Samanye Swaha’—I offer this oblation to the fifth vital wind called Samaan (the wind that helps equal distribution of nourishment throughout the body by maintaining proper circulation of blood).

The sixth oblation is ‘OM Brahma Swaha’—I offer this sixth oblation to the Brahma the creator.

The seventh and final oblation is ‘OM Brahm Swaha’—I offer this oblation to the supreme transcendental Brahm.

Let my Atma, my pure self, obtain the nectar-like bliss, happiness, contentment, felicity and beatitude that comes with Brahm realisation' (10).

11. [This verse describes how the sprinkling of sanctified water mentioned in verse no. 10 is to be done.]

The oblations offered to the Pran (by way of sprinkling of water) are done in the following sequence—the thumb and the little finger are used to sprinkle water meant as an oblation offered to the Pran wind, the thumb and the third finger for the Apaana wind, the thumb and the middle finger for the Vyan wind, the thumb and index finger for the Udan wind, and the thumb and all the other four fingers together for the Samaana wind (11).

[Note—It would be noted here that each finger is linked directly to a particular wind. This assumes great significance in the field of Yoga practice where various Mudras are adopted to control the different vital functions of the body along with the harnessing of the vital winds and their inherent energy and strength to obtain success in one's spiritual endeavours. During Mudras, which are the various poses of the hand and body while doing meditation, the thumb is pressed at specific points on one or the other finger, singly or collectively. This pressure of the thumb against a finger helps to exert control over the specific wind that is related to that finger, and the point on the finger determines the location of the body where this wind needs to be controlled or concentrated or manipulated for the purpose of Yoga. This is akin to the technique of acupressure wherein pressure is applied on specific points on the body to help alleviate pains and other bodily ailments. So for example, if the need is to control the Pran wind, pressure is to be exerted by the thumb against the little finger as this finger is directly related to this particular wind. This principal is applicable to all other winds as described in this verse. It is a well organized and scientific method to cure one's self of all ailments that have their origin in disturbed vital winds in the body, which in Indian medical system is called 'Vayu Dosh', the fault of the wind. The pressure of the thumb against the relevant finger helps to modify the functioning of the wind and the part or organ of the body that is controlled by this wind.

According to *Trishikhi Brahmin Upanishad*, Canto 2, verse nos. 77-87 of Shukla Yajur Veda tradition, the ten Prans and their functions are as follows—

“Verse no. 77-78 = Pran, Apaana, Samaana, Udaan, Vyan, Nag, Kurma, Krikar, Devdutta and Dhananjay—these are the ten vital winds which move in the Naadis (the veins and nerves) of the body. Out of these, the first five (Pran, Apaana, Samaana, Udaan and Uyan) are more important, and even amongst them the first two (Pran and Apaana) are considered most important [77-78].

“Verse no. 79-80 = It is the Pran (the first wind) that bears life for the creature, i.e. it is the Pran which enables the creature to move and show other signs of life. Oh exalted sage! This Pran is said to have five subtle habitats or sites where it locates itself. These are—mouth, nostrils, heart, navel and the big toe of the feet. The Apaana wind has the following locations—anus, lower part of the abdomen, upper part of thighs and the knees. [79-80].

“Verse no. 81 = The Samaana wind pervades in the whole body uniformly, the Udaan wind is present in the hands, legs and all the joints of the body [81].

“Verse no. 82 = The Vyan wind stays in the ears, thighs, waist region, heels, shoulders and throat. The other five winds such as the Nag etc. are found in the skin, bones and other parts [82].

“Verse no. 83 = The Pran Vayu (wind) collects the food, water and digestive juices in the stomach and mixes them to form a paste. Thereafter, this paste is separated into different forms once again—the fiber part of the food forms the stool, the water content forms the urine, while the digestive juices form the important fluids of the body such as blood and semen etc. [83].

“Verse no. 84 = The Pran Vayu does all this independently or literally standing all by itself and seeking no help from any other wind. The Apaana Vayu helps in excretion of stool and urine from the body [84].

“Verse no. 85 = The efforts made by the Pran Vayu, the Apaana Vayu and others to accomplish their assigned tasks is aided and complimented by the Vyan Vayu. The Udaan Vayu present in the body helps the latter to rise up or get up from a sitting or reclining position. (This ‘rising’ is a metaphor for spiritual enhancement also.)[85].

“Verse no. 86 = The nourishment and sustenance of the body is done by the Samaana Vayu because it helps in circulation of the blood. Passing of the wind upwards, such as during belching, is done by the Nag Vayu, while opening of the eyes is done by the Kurma Vayu [86].

“Verse no. 87 = The Krikar Vayu creates hunger, the Devdutta Vayu creates sleep etc., while the Dhananjay Vayu prevents the body from getting deformed immediately after death and delays decay of it for sometime [87].]

12. Then the five sacred fires are offered oblations by silently¹ remembering the five Mantras meant for the five types of vital winds, one by one. [This is an important verse because it establishes the link between the five types of Prans, the vital winds, and the five sacred fires.]

So, the first oblation is offered to the first fire represented by the main vital wind called Pran² (breath) by mutely humming the first Mantra (meant for the Pran wind—OM Pranaye Swaha).

The second oblation is offered to the second fire called ‘Ahawaniya³’ by mutely humming the second Mantra (meant for the Apaana wind—OM Apanaye Swaha).

The third oblation is offered to the third fire called ‘Dakshinagni⁴’ by mutely humming the third Mantra (meant for the Vyan wind—OM Vyanaye Swaha).

The fourth oblation is offered to the fourth fire called ‘Garhapatya⁵’ by mutely saying the fourth Mantra (meant for the Udaan wind—OM Udanaye Swaha).

The fifth and final oblation is offered to the fifth fire called ‘Sarwa-Praschitya⁶’ by mutely saying the fifth Mantra (meant for the Samaana wind—OM Samanaye Swaha) (12).

[Note—¹The Mantras are said in a silent manner or mutely hummed as the worshipper is honouring these sacred fires present symbolically in his own body and not outside in the fire pit of the formal fire sacrifice. These internal fires are symbolically kept burning by the means of the five vital winds which are present inside the body. The Garbho-panishad, paragraph 5 of Krishna Yajur Veda tradition, also asserts that the body of the living organism is called ‘Deha’ or body *because* it harbours the Fire element in it. The body is like the ‘fire pit’ of a formal fire sacrifice, and the Lord that is worshipped by offering oblations to this fire pit would then obviously be the Atma residing inside this body. This Atma is Brahm personified at the micro level of creation.

The Agni Vidya pertains to the metaphysical knowledge of the various facets of the eternal fire element which is at the root of creation—because any form of life necessitates the unavoidable presence of energy, heat and light which are the grand and unique virtues possessed intrinsically only by the fire element. No life on earth is tenable and even imaginable without the involvement of the quintessential fire element. The divine fires have been described to Nachiketa by the God of death, Yam, in Kathavalli or Katho-panishad, 1/1/1-20 of Krishna Yajur Veda. They have also been elaborately described in Chandogya Upanishad, canto 4, section 10 to 13 of Sam Veda tradition.

The five holy fires mentioned in this Upanishad are the following—(i) ²Pran or breath. This is considered as the ‘fire’ from the practical point of view also as it is to

be observed that any fire can be ignited and kept burning only if there is an adequate amount of fresh air; otherwise it would be extinguished and life that depends upon air is suffocated to extinction. It is to be remembered that it is the breath that pumps in air in the body, and if a man is not able to breathe then all the other winds would automatically lose their importance and relevance because no life is sustainable and tenable without fresh air which is here referred to as the 'Pran', and therefore death would ensue. So, the breath, the Pran wind, is the most important aspect of life, and as such is a metaphor for 'fire' inasmuch as it keeps the body alive, energised, charged and ventilated besides keeping it well oxidised and detoxified. (ii) ³*Ahawaniya* is the fire lit to invoke the Gods and invite them to come and accept the offerings during a ritualistic sacrifice. (iii) ⁴*Dakshinagni* is the fire used as a witness to making charities or any other religious festivity; the fire lit at the site of a sacrificial fire ritual, near its south end. (iv) ⁵*Garhyapatya* is the fire of the household hearth; the main fire of the formal fire sacrifice; the fire that every householder is supposed to keep alive and worship regularly and from which the first spark is taken for the rituals associated with religious ceremonies. And (v) ⁶*Sarwa-praschitya* Agni—which is the fire standing as a witness to one doing penitence, atonement, expiation and amends for his past errors, misdeeds and sins. This is symbolic way of burning all past sins along with their results, and thereby becoming purified and cleansed.

See verse no. 19 below for a more comprehensive view of these divine fires.]

13. Having offered these five oblations to the fire in a symbolic manner, the worshipper should eat some food as prescribed. He should visualise that when he touches that food item on its exterior, he is actually touching the divine entity that has no form but is the essence of vibrant life and its accompanying vibe, energy, strength and vigour that is hidden inside that food. That is why food is compared to the Amrit—the elixir that gives eternity and joy. (13).

[Note—He should concentrate not on the exterior looks or taste or texture of the food but peer deep inside it to see the presence of the vital spark of life that is invisibly present inside the food eaten and which gives the food its primary worth. A wise man should realise the importance of food eaten as a provider of nutrition, energy, vitality, vigour, stamina and strength to the body and the Atma that this body carries. The food helps the creature to sustain and foster a healthy life inside the body. He must understand that without food, even the Pran would lose its sheen and importance. Food is a holy entity not to be treated like other material things of the material world meant for physical enjoyment and for deriving pleasure from. It is a sanctified offering made to the Supreme Being known as Brahm while it is offered as oblation to the external sacred fire as done during formal fire sacrifices, and to the Atma residing inside the creature's own body as a representative of this Brahm when food is eaten by the creature.

That is, while eating the worshipper should remember that he is not eating to quench his hunger or satisfy his yearning for gratifying his taste buds and pamper his body, but to accept the essential benefits that the food has to offer to him in terms of its nutritional value as well as in terms of purity of thoughts, all round auspiciousness, and the exhilaration of the spirit that the righteously acquired and sanctified food offers. The importance of food and its importance and metaphoric value as Amrit have been very cleverly explained in Chandogya Upanishad, Canto 6, section 7 of Sam Veda tradition.]

14. After eating, some water¹ is taken in the cupped palm of the left hand and held against the chest near the heart. The worshipper should do Japa (repetition of the Mantras pertaining to the five winds collectively called the Panch Prans², and their

Lord, the chief Pran whom they all serve inside the body, called the Atma) while meditating in this posture.

[Now, the meaning of the various Mantras mentioned in verse nos. 14-18 by which Japa is done is being explained in the following verses one by one.]

‘The chief Pran, the vital spark of life inside the body which represents the vital life forces of Nature, is an image of the Supreme Being known as Parmatma, the Great Atma or the cosmic Soul or the cosmic Consciousness. [This ‘chief Pran’ refers to the Atma of the worshipper, his ‘true self’, his consciousness.] It is surrounded or cloaked in five sheaths called the Panch Vayus (the five vital winds—Pran, Apaana, Vyan, Udaan and Samaan). Let this exalted and revered chief Pran provide me with fearlessness from all the creatures. I may no longer be afraid of anyone. [In other words, let the supreme Brahm give me all round protection, because the Atma is a manifestation of Brahm and the Lord of the body along with the five Prans. The Atma, i.e. the worshipper’s own ‘truthful self’, is a counterpart of the cosmic Self known as Brahm. The Atma lives in the gross body of the individual as a representative of this Brahm whose body is the entire creation at the macro level of creation. This Atma is protected by the five vital winds called the Panch Prans—which are Pran, Apaana, Vyan, Udaan and Samaan. This protective ring of the five Prans around the Atma is like the Emperor being protected by a close inner ring of his bodyguards. Amongst the guards there is a chief guard, the head of the security apparatus, and this ‘head’ is the Pran, the breath, in the case of the vital winds that protect the Atma in the present case.] (14).

[Note—¹The importance of water is emphasised in many other Upanishads, such as Chandogya of Sam Veda tradition—2/4, 5/16, 6/5/2, 6/6/3, 6/8/6, 7/10 etc., and in Brihad Aranyak of Shukla Yajur Veda tradition—2/1/8, 2/5/2, 3/7/4, 3/9/16 etc.

The importance of water and its relationship with food and Tej or energy and heat has been elucidated in Taittiriyo-panishad of Krishna Yajur Veda tradition in its Valli 3, Anuvak 8.

²The metaphysical aspect of the wind element is the subject matter of discussion of the entire Canto 5 of the Chandogya Upanishad of the Sam Veda tradition. Other parts of this Upanishad relevant to Pran are, inter alia, 1/2/7-9, 1/11/5, 2/4/9, 2/6/1. The Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 4, Brahman 1, verse no. 3 asserts that the Pran is a personification of Brahm.

The Mantras of the five vital winds, the Panch Prans, have been narrated in Chandogya Upanishad, Canto 5, sections 19-23.]

15. Oh the chief Pran! You are an embodiment of the entire universe. [That is, whatever type of life forms that exist in this world are nothing but your manifestations. No life is imaginable without you; you are synonymous with life in all its vibrant hues.]

That is why you are honoured by the epithet ‘Vaishwanar’—the image of the entire world. It is you who has assumed the form known as the Viraat Purush who incorporates the entire creation in his own self. It is the Viraat who stands for the entire creation as it were his own self; the whole creation is in fact a revelation of Viraat Purush. This is the picture at the macrocosmic level of creation. [The Viraat Purush is the all-encompassing, infinitely vast, attributeless and invisible cosmic gross body of the supreme Brahm that exists at the macrocosmic level of creation. It is from this Viraat that the rest of the creation has emerged. Therefore, the creation is an image of the Viraat just like the child is an image of its parents. The word ‘Vaishwanar’ refers to the entire world, the whole creation when viewed from the macrocosmic perspective. Since nothing can survive without Pran (air), it is indeed

the supreme Authority upon which the survival of the whole edifice of creation rests. Say, of what use is a world which has no life—no ‘Pran’—in it?]

At the microcosmic level of existence, that Vaishwanar or Viraat is present in the body of each living being (in the form of the pure consciousness called the Atma as well as the vital Prans that inhabit the body of all living creatures—without both of which the creature would simply not survive).

You are an embodiment of Amrit (the essence, basis and fundamental aspect of anything; the elixir of life and eternity marked by extreme and infinite beatitude and felicity) that is regarded as being synonymous with Brahm¹.

This world that has emerged from you would finally disappear into you at the time of conclusion just like the final offering made to the consecrated fire disappears into it. In terms of metaphysics it can be said that the various Prans present inside the body as representative of this Vaishwanar would disappear into the cosmic Pran at the time of the Turiya state of consciousness² (15).

[Note—¹That is, the most important thing worth identifying in the body is the presence of this Viraat inside it. This all-inclusive holistic concept of treating the individual person’s body as an image of the cosmic Viraat Purush’s body and a microcosm of the colossal macrocosm is discussed in Shaarirako Upanishad which is Chapter 20 of this volume. When a wise person has successfully inculcated this holistic view of the universe, he is deemed to have accessed the elixir of eternal life full of spiritual bliss. That is, he has experienced the presence of the cosmic all-pervading pure conscious known as the Atma inside his own self, the individual’s own Atma which is nothing but the cosmic Parmatma or the supreme Atma known as Brahm personified. The importance of Atma in the context of the cosmic Viraat has been dealt with in great detail in Chandogya Upanishad, Canto 6 of the Sam Veda tradition.

²That is, when the spiritual aspirant rises higher in his spiritual practices and transcends the first three states of Jagrat or waking, Swapna or dreaming, and Sushupta or deep sleep state of consciousness to reach the state of Turiya—meaning the state which has crossed the other states to give liberation and deliverance to the creature, he virtually dissolves his independent identity as a man who has a body and who would wake up from his blissful sleep to suffer from the existential horrors of the external world. Instead, he remains perpetually submerged in the bliss obtained by being a non-entity that has no physical body that suffers. It is the physical body that sleeps or wakes up, it is the physical body that finds rest and peace while asleep, or remains active and gets tired when awake. The Atma is a distinct entity that neither sleeps nor wakes up, and therefore it neither has to find rest nor does it get tired due to physical activity. This can only happen when the wise and self-realised aspirant has realised his true self as the pure conscious Atma which is a fountainhead of bliss and happiness. Such an enlightened man is called Brahm-realised and self-realised.

This is a metaphoric way of saying that all the artificial distinctions between the different types of Prans and Fires are removed, and they all coalesce and merge into one single entity known as the Viraat or Vaishwanar from where they had emerged and then assumed their independent identities at the time of their creation.

The concept of Viraat and Vaishwanar has been elaborately described in Chandogya Upanishad, entire Cantos 5 and 7, as well as in Canto 3, section 13, verse nos. 1-6, Canto 3, section 14, verse nos. 1-3, and Canto 8, section 1.]

16. The consciousness and life giving vital forces in the body are so uniformly distributed in it that they are even present in the tip of the big toe of the foot which is considered as the remotest part of the body.

In order to derive the nectar of life from the food that is eaten (i.e. to derive the full benefit of food in the form of the nourishment and all the essential elements

present in it that are needed to sustain a healthy body and happy life), I offer water to you at the end (i.e. I drink water in gulps or sip it as an oblation to the Pran at the conclusion of its worship)¹ (16).

[Note--¹It is this reason why water is needed to be drunk at the end of meals. It is a common thing and obvious thing to do. The reason is that without water, food is not digested, and it is the water that helps to dissolve its vital nutrients and then take them to the tissues of the body for absorption and use by the body. It is the water that then helps to eliminate waste and toxic matters in the form of urine which helps to get rid of liquid toxins and to soften solid waste so that it can be eliminated as stool. Refer Chandogya Upanishad, 5/2/2, 6/8, 7/10.]

17. The Viraat Purush or the supreme Brahm in the form of the Atma (i.e. as the pure consciousness residing in the body of the aspirant as his true self) has special divine attributes that are characteristic of it. It makes such rare efforts that only it can make. Those who have a worldly view of things cannot even think or imagine of how the Atma works or behaves¹.

A wise and enlightened man who has become self-realised and has understood the esoteric secrets of this Atma (that it is not an ordinary entity but the Supreme Being himself residing in the body, and that the body is not the truthful identity of the spiritual aspirant but it is this Atma which is pure consciousness) does the fire sacrifice in a symbolic manner daily by offering oblations to the Supreme Being with his Prans. This form of constant and regular fire sacrifice is called 'Pran Agnihotra'². [That is, he offers his each breath as an offering to the sacred, divine Being residing in his inner self as the Atma much like one offers oblations to the worshipped deity while doing a formal fire sacrifice. His breathing process assumes the form of a continuous offering to this Lord. Even each morsel of food that he eats or each gulp of water that he drinks is a form of oblation in this symbolic fire sacrifice. These offerings are made to the supreme Brahm residing in the heart of the worshipper as his Atma. The body is merely a carrier of this Atma; it is a medium by which this Atma is worshipped. Since the body harbours all the five principle elements of creation, such as the earth, water, fire, air and sky, it is a microcosm of the cosmos that has evolved from these elements. The Atma in this context would be the counterpart of the cosmic Ishwar or Ishan (verse no. 8) who rules over the entire world. Since the body also harbours all the five forms of the vital winds that sustain life in this creation (verse no. 14) along with the sacred fires (verse no. 10), all that is eaten and drunk are like sacred offerings made to the fire pit of the formal external fire sacrifice done in order to honour the Lord of creation. In the case of the internal form of the fire sacrifice, the deity to be worshipped is the 'self'. One should very closely follow the hidden meaning of this verse and not get confused. The performer of this fire sacrifice is the 'self', the deity to be worshipped is also the 'self', the fire pit is the body, the sacred fire is the fire burning inside the body that keeps it alive and active, i.e. the Pran, the offering to the sacred fire is the food eaten, and the oblation or libation offered to the deity is the water drunk by the worshipper. The 'self' is the Atma which is the true identity of the worshipper, and hence it is the one who performs this fire sacrifice. Since this Atma is the Parmatma personified, it is the deity worshipped by this process, and hence it is the 'self' that is worshipped! The different patron Gods of a formal fire sacrifice are Indra (the King of Gods), Varun (the Water God), Marut (the Wind God), Agni (the Fire God), Aditya (the Sun God), Chandra (the Moon God) etc., and all of them are represented by the various organs of the body that are sustained as a result of the food eaten and water drunk with the holistic view of doing a fire sacrifice because all these Gods had taken up residence in various

organs at the time of creation (refer Aiteriyo Upanishad of Rig Veda). The body of the creature is a microcosmic representative of the Viraat Purush (refer Aiteriyo Upanishad). This is very holistic, all-inclusive, spiritually enlightened and philosophically highly evolved way of doing a fire sacrifice.]

Since the individual forms of Pran have their origin in the cosmic Pran known as the Vaishwanar or the Viraat Purush or the Parmatma (see verse no. 15), it follows that they are his off springs. A wise and enlightened person makes the sacrificial offerings with this eclectic and holistic view. [That is, he would be symbolically offering his own sons as the sacrifice if he would just realise that his Prans have the same importance as the son has for him. This is the highest and ultimate form of sacrifice that a man can make.] (17).

[Note--¹Worldly people eat and make merry; they eat to keep the body healthy so that they can enjoy the comforts and pleasures that the body derives from this world through its organs of perception and action; they eat to gratify their taste buds and their natural urge to enjoy food and its taste. So they can not think of the vital winds, the consciousness and other subtle elements of creation that constitute this body. It is beyond their sphere of comprehension to understand the working of the Pran and how they are differentiated into different types and then merge into one indivisible unit. They eat and drink not for the purpose of sustaining the Spirit in their body, or harnessing the energy and strength of food and drink to make efforts to break free from the fetters of this body and find liberation and deliverance from it. In short, they ridicule the idea of worshipping water and food as embodiments of the supreme God. They forget that the term 'God' is not limited to some awe inspiring deity living high up in the heaven to wield the baton of fear and punishment for disobedience from high up there in order to make his flock obey him. But the supreme Lord is very much present inside the body of the worshipper, and it is to this resident deity that this food and water is being offered. So when the food eaten and the water drunk are shown respect, it is not a nonsensical rite but a very wise act on the part of the enlightened man. This act of his would also ensure that he shows due respect to food and water, and not waste them or cause any form of misuse of them.

²As long as the man is alive, he continues to breathe silently. All other winds also continue to do their respective duties silently, without any fuss and raising a hue and cry. If a man is enlightened enough and fully conversant with the philosophy of the fire sacrifice meant for the supreme Brahm as propounded in this Upanishad, he would be unconsciously even doing a constant fire sacrifice and offering a constant stream of oblations to the Lord while he breathes and while his vital winds continue to do their assigned functions. This is his silent prayer and silent fire sacrifice. He need not sit for a specified time in front of a physical fire to offer his oblations to the supreme Lord. And neither does he need to offer specially cooked food or specially procured drink to the supreme Lord by offering them to the fire pit, as whatever he eats and drinks becomes his offering to the eternally burning Vaishwanar fire present inside his own body. This is the holistic approach to the fire sacrifice.

The term Agnihotra literally means offering oblations to the sacred fire. It is usually of two types—one that is done daily and completed in a month's time every year, and the other that is done throughout one's life. These are related to the external forms of fire sacrifices and the deity that is worshipped is the Fire God. The first type of Agnihotra is done by a Brahmin in the month of Basant according to the Hindu calendar which corresponds to the Spring season, by Kshatriyas in the month of Grisma corresponding to the Summer season, and by Vaishyas in the month of Sharad corresponding to the Fall or Autumn season. The second type of Agnihotra is done twice a day—during early hours of the day at dawn, and in the evening hours around dusk.

The type of Agnihotra espoused by the present Upanishad is life-long one because here the Pran or breath is regarded as an offering to the Atma, and a man continuous to breathe as long as he lives.]

18. [Verse nos. 18-19 dealing with the 'fire' element in the body has a striking resemblance to Garbha Upanishad, Para 5 belonging to the Krishna Yajur Veda tradition. This is Chapter 6 of this volume.]

I symbolically do the fire sacrifice in my own body; I transfer all the external components of the fire sacrifice into my body'. [That is, with the holistic and philosophically enlightened view of doing the fire sacrifice as laid down in this Upanishad as a whole, the worshipper no longer depends upon external fire sacrifices to honour the Supreme Being. He is now comfortable with the same exercise done internally in a symbolic manner. It is not only very convenient for him but spiritually more uplifting and beneficial.]

The body is said to have four types of subtle fires¹. They are not burning or raging in physical terms or in a visible form—but only in a symbolic and subtle form (18).

[Note—¹The four types of fires present in the body are the following—Ahawaniya, Dakshinagni, Garhyapatya and Sarwa-praschitya Agni. They are described below in verse no. 19. It is to be noted here that the fifth fire is Pran as mentioned in verse no. 12, but since it is a form of the wind element and not directly related to the fire element except in a symbolic manner, it is excluded here. Besides this, Pran is being offered as an oblation to these fires as described in verse no. 17 above, and this is why it is not included in the list of the fires burning inside the body.]

19. [This verse describes how the cosmic fire resides in the individual body in different metaphoric forms, and what its five names are.]

(The *first* symbolic fire in the spiritual aspirant's body is this--) Out of these four divine Fires, one is called 'Suryagni' (or Surya Agni) which literally means the fire resembling the fierce fire burning inside the cauldron of the Sun, and which is treated as being equivalent to and synonymous with the Sun. It is astoundingly splendid, blindingly dazzling, very bright and most radiant like the Sun; it is as potential, as powerful, as bright, as splendid and as radiant as the Sun. It has thousands of scintillating and simmering rays radiating out from it in every direction to cover the entire area of the sky¹.

This subtle macrocosmic invisible form of the Fire symbolically resides in the head of the body of the spiritual aspirant (in the eye and the Agya Chakra), and is also called the 'Darshanaagni'².

(The *second* form of the fire element is mentioned now--) The subtle macrocosmic invisible form of the Fire lives in the mouth of the individual in the form of the 'Ahawaniya Agni'³.

(The *third* symbolic fire in the spiritual aspirant's body is this--) The fire that is inherent to the gross body of a living being, the fire that keeps the body uniformly warm and pervades throughout it is called the 'Sharir Agni'. It consumes the body as the latter ages, and is itself weakened as the body progresses in age. It devours the gross body just like the sacrificial fire devours the offerings put into it⁴.

(The *fourth* form of the fire is the following--) The fire that subtly lives in the heart of all mortal living beings is called the 'Dakshinaagni' or the sacred fire that is lit to witness the charities and donations made during formal fire sacrifices. It is compared to half disc of a moon which goes on declining as time progresses⁵.

(The *fifth* symbolic fire in the spiritual aspirant's body is this--) The fifth form of the sacred fire in the body is called the 'Koshtagni' or Kosta Agni. This refers to the fire burning in the intestines that create hunger and thirst, and help to properly digest whatever is eaten, licked, sucked or drunk. This fire is called 'Garhyapatya Agni' and it lives in the navel⁶ (19).

[Note—¹According to the Upanishads, the Sun has many connotations—it is a visible manifestation of Brahm, complete with its stupendity and astounding magnificence; it is the cosmic eye of Brahm that lights up the world for the latter in his manifestation as the Viraat Purush, the cosmic gross body of Brahm; it is a visible embodiment and a personification of the supreme Brahm's stupendous glory and divine magnificence. No life is possible on earth, which is deemed to be the base and center of all visible life in this creation, without the presence of the Sun; the Sun regulates life in this world by controlling the seasons, the day and the night, and by providing the world with light, heat and energy which are essential ingredients for even the primary forms of life to survive. The Sun is the cosmic cauldron in which the Viraat Purush had performed the first fire sacrifice in order to initiate the process of creation, and therefore it is the cosmic 'fire pit' where the eternal sacred fire is burning and to which the worshipper offers oblations during the fire sacrifice done on earth. The Sun is a personification Fire God as well, and this is an obvious fact given the Sun's vivid form and nature as an eternal ball of cosmic fire.

²The term 'Darshanaagni' assumes an important meaning here. The Sun God took up his abode in a man's eye at the time of creation according to the Genesis of Creation as described in Aiteriyo Upanishad of Rig Veda, Canto 2, verse no. 4. Sight has two connotations—one is the physical seeing of the material objects of the gross world that is the function of the gross organ of the eye, and the other is the ability to see deep into the reality and peep behind the exterior to see the reality that is hidden behind the visual apparent. The former is referred to as seeing from an ordinary man's point of view, while the latter is the actual way of seeing things as done by a wise and enlightened man. So, while the Sun lights up the physical gross world for an ordinary creature to see it, it also provides him the symbolic light of wisdom and insight into the actual truth and reality that is not seen by the external eye of the body. This ability to see the hidden truth is done by the so-called 'third eye of wisdom' also symbolised by the Sun and the light that it provides.

Darshanaagni literally means the fire that enables the creature to see this world and which is itself seen in a subtle form everywhere, or which makes something visible because of its inherent shine—which in this case would be the component of conscious life present in the entire living world. It also means the sublime philosophy that enables one to have this holistic and grand view of the Atma and the world around him.

Now, 'fire' is an element that has light, heat, warmth and energy as its intrinsic virtue. Light is a metaphor for knowledge, wisdom, erudition and enlightenment; heat, warmth and energy are closely related with life with all its vibrancy and vitality. So, the eclectic virtues the fire element that metaphorically keeps the mind and intellect alive and active, that keeps the Atma active, energized and empowered so as to think wisely, intelligently, analytically, discriminatingly and rationally, are symbolised by the fire element in its manifestation as the Darshanaagni, or the ability of the creature to see the world in its true form.

Since erudition, sagacity, wisdom and enlightenment are associated with this so-called third eye of wisdom located in the forehead, an enlightened, wise and Brahm-realised man is deemed to have developed a holistic non-dual view of creation and has realised the eclectic truth of the doctrine that his true self is the Atma which is self-illuminated, which is nothing but pure consciousness, and which is a personification of the cosmic Consciousness known as Brahm, the Supreme Being who pervades and permeates uniformly in the entire created world. It follows that

such a wise person sees his own Atma in all the other units of creation without exception. He sees no distinction between his own self and the other person standing in front of him. This is the classical non-dual or Advaitya philosophy of Vedanta.

This self-illuminated consciousness known as the Atma is evident everywhere in this life—and this is possible due to its inherent light that effuses out from it because of the eternal fire element present in a subtle form in the Atma. This fire resident in the Atma is called the ‘Darshanaagni’ or Darshan Agni because on the one hand its inherent light, energy and life-infusing abilities enables the Atma to live and interact with the world, and second it provides illumination to the external world as well as sufficient wisdom to the individual man so as to enable his Atma to see, interact and understand about this world. In fact, the inherent illumination and wisdom that is very characteristic of the self-illuminated Atma is known as the Darshanaagni present inside the latter because the term ‘Agni’ or ‘fire’ is associated with light, illumination, energy, dynamism and vibrancy related with all forms of life which are the hallmarks of the Atma. [It is the ‘fire’ that is inherently present in the Atma that enables it to live and shine in this world. The grand characteristic of the Atma as being ‘self-illuminated’ is also due to the presence of this fire element in it. The gross body of the creature is a lifeless entity, and the fact that this body shows signs of life is due to the presence of this Atma inside it. Much like the case of the moon showing light because it is able to reflect the light of the sun falling on its surface, the body of the creature shows life and activity as well as intelligent behaviour because of the presence of this eternal source of light and wisdom inside it as the Atma. The physical eyes of the body cannot see anything if it was not for the Atma which provides the quintessential spark of consciousness to the body as proved by the fact that the eye of a dead body does not see anything. Even the mind and the intellect see anything and make sense of it only as long as the Atma wishes them to do so as is evident from the fact that the same thing is interpreted in different ways by different people. This is because their Atma sees them differently depending upon the baggage of Vasanas and Vrittis (inherent passions and inclinations) that the Atma is burdened with due to its past involvement with this material world, as well as the level of erudition and wisdom that the Atma had developed over time. It is the ‘fire element’ present in the entity known as the Atma that provides the latter the required impetus and energy vital spark of life to remain conscious and alive. Like the body of the Sun God in the form of the visible disc of the celestial sun that shines dazzlingly because of the eternal fire burning inside it, the Atma of the creature also shines and gives light to the world because of the inherent presence of the fire element in its bosom. Even as it is impossible to imagine the sun without the fire present in it, it is equally incongruous to ever think of the Atma, the pure consciousness present inside the body of the individual, without the fire element that is inseparably associated with it. Again, just like the fire of the sun lights up the world for the Viraat Purush to see at the macro level of creation, it lights up the world for the Atma of the individual creature, which is the real identity of the latter, at the micro level of creation.]

Anything is seen in this world because it is lighted; no one can see anything and nothing is visible in the absence of light. The Sun is the cosmic candle that provides the world with sufficient light so that it is made visible to the Atma, the living entity present inside the individual’s body that actually sees anything.

It has been said elsewhere in the context of the genesis of creation that at the time of the world coming into being, the Sun God was created from the eyes of the Viraat Purush (ref. Aitareyo-panishad, Canto 1, verse no. 4) and subsequently took up residence in the eyes of the man’s body (ref. Aitareyo-panishad, Canto 2, verse no. 4). This is a clear reflection of what is being said here. This is also depicted in the presence of the divine all-penetrating and all-seeing ‘third eye of wisdom’ located in the center of the forehead in the Agya Chakra.

This fire symbolises the astounding powers of the mind and intellect that lights up the entire world for the creature. This fire enables the man to see, visualise,

imagine, research, ponder, contemplate, analyse, deduce and determine; it helps him to have foresight and hindsight; it makes him a visionary and a man who can predict something or some event based critical analysis; a person who can forecast based on his hunch and intuition. Such divine and mystical abilities come because of the presence of the Surya Agni in the head. As to the question why some can do this and some can't, the answer lies in the covering around this symbolic Sun just like the cloud in the sky covering the sun makes it shine brightly at one place and remain invisible at other place.

The word 'Darshan' means philosophy, view, idea, thinking and belief; it also refers to the art of seeing things not visible apparent, the ability to deeply contemplate and ponder. So, this fire is called Darshan Agni because it empowers the man to have these unique and divine abilities.

³The Ahawaniya fire is the fire that helps him to use his voice to invoke the Gods as well as welcome people. This is the fire that helps him to invite knowledge when he eagerly seeks the company of wise and enlightened men. In the context of the internal form of the fire sacrifice which is the subject matter of this Upanishad, it is the Fire God present inside the food eaten, water drunk and air breathed (verse nos. 6, 9-10, 12) who is being invited by the worshipper to take his exalted seat in his mouth. When the fire sacrifice is done, the Gods are invited using this Ahawaniya fire. The presence of this fire in the mouth distinguishes living creatures from those who are not alive. And this is the fire which enables one to speak and eat—because these are some of the functions of the Ahawaniya fire.

This is evident from the fact that during fire sacrifices the Mantras and hymns used to invoke the different deities are chanted or recited aloud, and not hummed silently. To speak, voice is needed, and for it sufficient energy and strength of the vocal cords are also necessary. Food is eaten by the mouth, and it is this food that provides energy and stamina to first learn and then chant the hymns.

The Ahawaniya fire is lit during the fire sacrifices to respectfully invoke Gods, and invite them to come and participate in the sacrifice and accept offerings made to them. The word 'Aavaahan' in Sanskrit means to invite, invoke, to pray respectfully with the intention of welcoming. Since one uses one's mouth for these purposes, the fire in the form of the strength, energy and vigour of the spoken word and the power of speech residing in the mouth is called Ahawaniya fire.

In ordinary life also, we welcome guests with welcoming words, i.e. we 'invite them' or make an 'Aavaahan', which are spoken by the mouth. It is like invocation of Gods during ceremonies. Similarly, to praise someone and laud his efforts we need to speak by the mouth. Further, it is the speech and the spoken word and the tenor in which these words are said that can rouse emotions and stoke passions, and these are some of the many instances which can be cited to establish that the Ahawaniya fire lives in the mouth.

It has been said elsewhere also in the context of the genesis of creation that at the time of the world coming into being, the Fire God was created from the mouth of the Viraat Purush (ref. Aitareyo-panishad, Canto 1, verse no. 4) and subsequently took up residence in the mouth of the man's body (ref. Aitareyo-panishad, Canto 2, verse no. 4).

⁴The Sharir Agni literally means the fire that resides in the body like the inherent fire element present inside the firewood in a latent form. It is equally distributed in all the parts and organs of the body, but remains imperceptible and latent.

Even as the fire latently present in the firewood gradually burns the wood from the inside though it is not lighted externally, and this is the reason why the firewood becomes dry, thick and hard as all its moisture content and soft pith are baked dry by the heat of its hidden fire. Likewise, the body becomes drier, thinner and weaker, the glaze of the outer surface of the skin gets progressively reduced and the body develops wrinkles and folds, and it presents a general picture associated with old age. That is why as a man becomes old, the heat, energy, stamina, vigour and strength of

his physical body declines. It should be noted that this slowing down or aging does not affect the other fires as narrated above. It is a normal thing to observe that older the man is the wiser and more prudent he becomes, he develops greater insight and intelligence, he is said to be more mature in mind and thought, he is deemed to be more experienced—indicating that his Darshan Agni is kicking and alive. Similarly, he speaks wiser words which are even respected by Gods, his invitations are seldom rejected, and he is usually invited to speak on special occasions as compared to young adults—implying that his Ahawaniya Agni is full of vibe and energy.

The instance of the firewood would help to illustrate how this fire imperceptibly burning inside the body consumes it. As the firewood gets older, it shrinks in size, loses its greenery, and becomes drier, harder and more solid. This is indicative of the fact that it is being burnt from the inside.

There is another interpretation of this stanza. Even as the fire latently present inside the firewood remains dormant till it is ignited, but once done it would reduce the wood to ash as compared to ordinary wood which might escape total annihilation if lighted because the fire would only burn its outer surface and the wood begins to emit smoke as it does not have an internal fire to support its burning, the body of a person who does Yoga and by which his internal fire has been ignited gradually becomes thinner as all his superfluous flesh is melted away and all the gross parts of the body get charred and reduced to ashes in a gradual manner so much so that the ignited internal fire would ultimately reduce his body to ashes, an aphorism for the body disintegrating into its five primary constituent elements such as the earth, water, fire, air and sky, so that his Atma, or his pure conscious 'self', and his Pran, or his vital forces of life, would easily escape from this disintegrated body without his making any effort to free himself from the fetters of this gross body. This would be his 'Kaivalya Mukti', the only kind of one-way liberation that would deliver his 'self' from the shackles that tie his Atma and Pran to this body, and consequentially he would also be freed from this mundane life and deluding world of material sense objects in which he was forced to live because it is the body that links the Atma to this world. On the other hand, ordinary wood begins to emit smoke soon after it is lighted and the fire would die out soon because this wood lacks the internal fire to support the external fire, leaving half-bunt and blackened piece of log that has lost its greenery and charms. Likewise, ordinary people become diseased and their bodies begin to show signs of decay and weakness, losing its sheen and charm as they progress in age. Such people have to suffer in old age due to the decrepit condition of the body which only helps to inflict torments upon the Atma instead of providing it with succour and solace.

In the context of the present Upanishad wherein emphasis is being laid on Pran Agnihotra, i.e. offering of the vital winds as symbolic offering to the sacred fire burning inside the body to pay obeisance to the Supreme Being residing inside the body as the Atma, this Sharir Agni and its ability to reduce the gross body to ashes assumes a great significance. Those who observe self restraint over the organs of the body, those wise ones who do Pran Agnihotra, i.e. those who offer their own life and their self as the ultimate sacrifice to the Lord in a holistic manner, those who are enlightened enough to understand the spiritual and metaphysical nuances of the eclectic philosophy of 'Pran Agnihotra' as espoused and enunciated in this Upanishad—their body is cleansed of all the world-related impurities because they are destroyed by burning in the severe of penance and austerity that the body is subjected to, its artificiality is burnt and reduced to ashes just like the case of the firewood when ignited. Nothing is left behind except the ashes; no vestiges of the earlier life are left behind to become a burden for the soul. This ensures that the Atma is permanently liberated from the prison of the body and the world in which this body forces the Atma to live, and since the body-like prison has been burnt down and reduced to ashes it symbolises permanent freedom because it is a metaphoric way of burning the bridge as one flees from the enemy so that he can never be caught!

⁵This Dakshinaagni fire is lit at the end of the fire sacrifice to bear witness to the charity made during the conclusion of the fire sacrifice. As old age catches up with the wise man, he begins to do auspicious deeds and gives charities; he involves himself in noble activities. Since all sorts of desires, whether noble or ignoble, whether auspicious or inauspicious have their seat in the person's heart, the Dakshinaagni is said to have its symbolic abode in his heart. It is the virtue of a compassionate and merciful heart to be benevolent, helpful and be graceful that inspires the Fire God in his manifestation as the Dakshinaagni to take up his symbolic abode in the noble man's heart. That is why cruel persons are called 'heartless'—not because they do not have a physical heart but because they lack these divine glorious virtues. It also implies that such noble acts are worth only when done with the involvement of the heart, and not to save government taxes!

Such auspicious deeds are usually done on special auspicious days decided by the lunar calendar, hence the reference to the moon's half disc. The half disc also symbolises the declining stage of the body when the man realises that it is high time for him to involve himself in nobler aspects of life, and the fact that life is fast ebbing away in his body and he must make the most out of it before it is finally removed from view as a living entity.

⁶The fifth form of the fire is the one that digests food and drink and thereby extracts nourishment from them for the use of the body. It is called Garhyapatya Agni because it resembles the householder's fire lit in the oven and hearth that he uses to cook food and keep himself warm. Since the navel is the center of the abdomen where the main organ of digestion, the intestine, is located, it is symbolically called the site of this fire. Besides this point, another fact is to be noted—the household hearth is usually located in the central part of the house so that the entire house can be kept warm during severe colds.

Another similarity is in the fact that the process of raising a family through the sexual method is employed by the householder and the organs related with this procedure are also located in the lower part of the abdomen around the region of the navel. So the resemblance of the fire present in the lower part of the body and the Garhyapatya fire is very obvious.]

20. Those who remain engrossed in procreation, sensual gratifications and other activities of the skewed and deluded mind are like the lowly quadruped animals. They should atone for their sins and misdeeds arising out of this crooked thinking and realise that their true nature is a much higher form which transcends the three states (of waking, dreaming and deep sleep) in which such lowly creatures exist.

Their true nature and form is like 'Himanshu'—the Moon God¹ (20).

[Note—¹This means that the true form of the man is the Atma which is self-illuminated and glows with the soothing and blissful light like the one emanating from the moon. As compared to the sun, the moon is very soothing and soulful. Its light softly illuminates the realm against the darkness of the night much like the light of enlightenment that illuminates the mind of a wise and self-realised man against the all-enveloping darkness of ignorance and delusions that covers the existential world around him. He no longer thinks merely in terms of waking and sleeping like an animal, but aims his sight on things higher in the spiritual realm. He is like the moon in the dark sky. His presence is soothing, reassuring, comforting, solace and succour providing, uplifting for the soul and the sagging spirit. He might not even speak a word but his mere presence is enough to remove darkness from the life of his followers much like the mere presence of the sun is enough to lift the veil of darkness from the world.]

21. [Verse nos. 21-22 now describe the symbolic components of this metaphoric fire sacrifice done inside the body with their parallels in the external form of the formal

fire sacrifice. These have a striking similarity to Para 5 of the Garbha Upanishad of Krishna Yajur Veda tradition which is Chapter 6 of this volume.]

In this symbolic fire sacrifice involving the spiritual aspirant's own body there is no Yup (the octagonal pillar or post raised at the venue of the fire sacrifice to which the sacrificial animal is tied) or the Rashanaa (the rope by which the sacrificial animal is tied to the Yup). Say, who is the Yajmaan of this fire sacrifice (i.e. who is the chief patron on whose behalf this sacrifice is being done)?

Who is the wife*, the Ritwij¹ (a priest) and the members who participate in a fire sacrifice? [*A fire sacrifice is done by the husband-wife duo, and it is incomplete if the wife does not accompany the chief patron, the husband.]

What is the sacrificial vessel? What is the Havi (articles used to make offerings and oblations)? What is the Vedi (the sacrificial alter where the Gods are worshipped)? What is the Antarvedika (the inner sanctum where the sacred fire is actually worshipped)? What is the Dron Kalash (the wooden pot or trough in which the juice of the Soma plant is kept)? What is the Rath (the ceremonial chariot)?

Who is the Pashu (the sacrificial animal)? Who is the Adhvaryu¹ (a priest)? Who is the Hota¹ (a priest)? Who is the Brahmanaanchi¹ (a priest)? Who is the Pratiprasthata¹ (a priest)? Who is the Prastota¹ (a priest)? Who is the Maitravarun (the friendly Water God)? Who is the Udgata¹ (a priest)? Who is the Dhara (the person who moves the fan and blows air in the fire pit)? Who is the Pota (the grandson)?

What is the Darbha (the Kush grass, *poa cynosuroides*, which is a dark green reed used during religious ceremonies)? What is the Sruvaa (the wooden sacrificial spoon or ladle)? What is the Aajyasthali (the pot to keep clarified butter to be offered to the fire)? What is the Arghaa (a vessel that tapers at the top and is used for making libations of water)? What is the Aajyasthali (the bronze vessel used to keep clarified butter) for the Aajyabhaag²?

Who is the Yaaj (the patron who actually sits through the elaborate exercise lasting for hours on the behalf of the main patron, the Yajman)? Who is the Anuyaaj (the younger or junior Yaaj)? What is Ida (left nostril; here referring to the various Mudras or postures of Pranayam adopted by the priests and patrons while muttering Mantras as part of the sacrificial ritual)? What is the Sukta-vak (incantations; the prayer hymns chanted during the fire sacrifice and while making offerings and oblations)? What is the Shan(g)yor-vaak (a special type of incantation composed according to the poetical style, a Chanda, called 'San(g)yog' which are chanted using the tongue and soft palate at the rear of the mouth)? What is the Ahinsa (the strict vows taken during the period of the fire sacrifice that no one would be harmed and no violence would be done)? What is the Patni Sanyaaj (the meaning of wife accompanying the husband in the fire sacrifice)?

What is the Yup (the wooden post or pillar)? What is the Rashnaa (the rope)? What is the Ishtkaa (the brick used to make the altar)? What is the Dakshina (the fees given to priests; the donations and charities made as part of the ritual)? What is the Avabhrit (the ritualistic bath taken at the conclusion of the fire sacrifice successfully)? (21).

[Note--¹There are four types of *Ritwiks* or *Ritwijis*, or priests who preside over an elaborate fire sacrifice— (i) Hota—he is the priest who offers oblation to the sacred fire; he uses the hymns of the Atharva Veda; (ii) Adhvaryu—this is the priest who chants the hymns of the Yajur Veda; (iii) Udgata—he is the priest who sings the hymns of the Sam Veda; and (iv) Brahma—he is the head and elder class of priest who is a representative of Brahma the creator; he uses the hymns of the Rig Veda.

Each of these chief priests has a hierarchy of assistants or juniors who would help them in the performance of the elaborate rituals associated with a fire sacrifice.

Depending upon their position in this strictly hierarchical setup, the donation received during a fire sacrifice was also divided between them.

There were four categories of priests called *Ritwij* who participated in a fire sacrifice. (a) The first category consists of the chief priests such as *Hota*, *Adhwaryu*, *Brahma* and *Udgata*. They were entitled to the largest portion of donation, and if the cows were to be donated, they had the largest share. (b) The second category of priests were junior to them, and they were called *Prastotaa*, *Pratiprasthaataa*, *Brahmanaanchasi* and *Maitraa-varun*. They worked under the chief priests in that order respectively. Their share of donation was half of what was given to the chief priests. (c) The third category of priests were called *Achaawaak*, *Neshtaa*, *Aagnidhra* and *Pratihartaa* respectively. They were junior to the second category and their share of donation was one-third of what the chief priests got. (d) And finally, the fourth category, i.e. the lowest helpers or the junior most priests who were probably only apprentices were also four types who worked under the instructions of the third category. They were called respectively *Graavastut*, *Unneta*, *Pota* and *Subrahmanya*. Their share of donation was equivalent to one-fourth of what the chief priests got.

The *Hota*—he is the priest who offers oblation to the sacred fire; he uses the hymns of the *Rig Veda*. The *Adhwaryu*—this is the priest who chants the hymns of the *Yajur Veda*. The *Brahma*—he is the head priest who is a representative of *Brahma* the creator; he uses the hymns of the *Atharva Veda*. The *Udgata*—he is the priest who sings the hymns of the *Sam Veda*.

Each of these chief priests has a hierarchy of assistants or juniors who would help them in the performance of the elaborate rituals associated with a fire sacrifice. Depending upon their position in this strictly hierarchical setup, the donation received during a fire sacrifice was also divided amongst them.

²*Aajyabhaag*—this is the name given to the two libations of *Aajya* or melted butter that is offered to the *Soma* (the Moon God) and *Agni* (the Fire God) preceding the principal oblation to the *Darsha* sacrifice or the lighted sacred fire.]

22. [This verse would now answer each of the above questions.]

In this symbolic fire sacrifice involving the spiritual aspirant's own body where there is no *Yup* (the octagonal pillar or post raised at the venue of the fire sacrifice to which the sacrificial animal is tied) or the *Rasanaa* (the rope by the sacrificial animal it tied to the *Yup*), the *Yajman* (i.e. the chief patron on whose behalf this sacrifice is being done) is the person's own *Atma* (his pure consciousness, his soul).

His *Buddhi* (intellect) is his wife (who must accompany him to successfully complete it). The *Ritwij* (priest) is the *Vedas* themselves. The *Ahankar* (ego, pride, arrogance and haughtiness) in him is the *Adharvayu* (priest). The *Chitta* (sub-conscious mind) is the *Hota* (priest). The *Pran* (breath) is the *Brahmanaanchi* (priest). The *Apaan* wind is the *Pratisthata* (priest). The *Vyan* wind is the *Prostota* (priest). The *Udaan* wind is the *Udgata* (priest). The *Samaan* wind is the *Mitravarun* (Water God). The body is the *Vedi* (altar). The nostrils are the *Antahavedi* (inner sanctum). The head is the *Drona Kalash* (pot for keeping clarified butter). The legs are the *Rath* (chariot). The right hand is the *Sruva* (wooden spoon or ladle). The left hand is the *Aajyasthali* (the pot for clarified butter). The ears are the *Arghaa* (a tapering vessel used for making libations of water). The eyes are the *Aajyasthali* (the bronze vessel used to keep clarified butter) for the *Aajyabhaag* (the two libations of *Aajya* or melted butter that is offered to the *Soma* or the Moon God, and *Agni* or the Fire God preceding the principal oblation to the sacred fire). The neck is the *Dhara* (the person who moves the fan and blows air in the fire pit) and the *Pota* (the grandson). The *Tanmatras* (the five sense perceptions—seeing, hearing, tasting, smelling and feeling

anything touch) are the close members of the family who attend the fire sacrifice. The Panch Maha Bhuts (the five elements—earth, water, fire, air and sky) are the Prayaj (members of the extended family who participate). The other persons who participate are like the various qualities and virtues possessed by the aspirant.

The tongue is the Ida (incantations done through left nostril by closing the right nostril along with certain Mudras or postures adopted while chanting Mantras). The row of teeth and the lips are the Sukta Vak (special hymns of the Vedas because incantations of the Vedic hymns or Mantras are done through the mouth). The palate is the Shan(g)yor-vaak (a special type of incantation composed according to the poetical style, a Chanda, called 'Shan(g)yog' which are chanted using the tongue and soft palate at the rear of the mouth).

Mercy, graciousness and compassion as well as peace, serenity and tranquility are equivalent to Ahinsa (non-violence) and Patni Sanyaj (company of the wife because a person finds peace and comfort in the company of his wife).

OM (the ethereal Mantra representing divinity and Brahm) is the Yup (pillar to which the Yajman or the Atma is tied). Asha (hopes and expectations) is Rashanaa (rope).

The Mana (mind) is the Rath (chariot). Kaam (worldly passions, lust, yearnings and desires) is the Pashu (animal that is to be sacrificed). The hairs on the body are the Kush grass. The organs of perceptions are the various pots used to keep different offerings of the fire sacrifice. The organs of action are the Havi (things meant to be offered to the fire as offering). Ahinsa (the vow of non-violence) is the Ishtkaa (the brick used to make the altar). Tyag (renunciation, disinheritance, non-involvement, non-wanting, giving away even the most dearest of possessions in a dispassionate manner, and total dispossession) is the symbolic Dakshina (obligatory donation, charity, alms and the fees of the fire sacrifice). Mrityu (death) is the final rite called Avabhrit (the final bath).

It is only when the fire sacrifice is done with this holistic and enlightened view and mindset that the fire sacrifice is deemed to be successful and fully rewarded, while the Gods are really pleased and they bless the worshipper by taking up their seats in the body to make it holy and sanctified (22).

23. Just like the certainty of obtaining Moksha (final liberation and deliverance of the soul so that it does not have to take birth again; emancipation and salvation of the soul) if one dies in the holy pilgrim city of Varanasi¹, if this Upanishad is read by any Brahmin (or any noble person who is enlightened) he too obtains the same benefit. This Upanishad has the potential to cleanse the mind and intellect, and is certain to provide him with Moksha.

This is a certainty. This is what this Upanishad is about. This is its profound tenet. Amen! (23).

-----*****-----

Chapter 30

Varaaha Upanishad/Varaaho-panishad

The Varaaha Upanishad/Varaaho-panishad has been taught by Lord Varaaha, the Boar incarnation of Lord Vishnu who is the sustainer and protector of creation and the Supreme Being, to sage Ribhu. Hence, it is one of those Upanishads that were revealed by the Lord himself. It espouses and expounds upon the eclectic philosophy of 'Advaitya Vedanta', i.e. the doctrine of 'non-duality and uniformity' in creation which presents a unified and uniform vision of the world rather than a fractured view. It can be broadly classified into two components—the first half is dedicated to an elaborate discussion of this philosophy and how this changes the world view of the enlightened man (Canto 1-3) as preached directly by the Lord, while the second half is an exposition of the same philosophy by sage Ribhu for the benefit of another sage Nidagh on how this enlightened view can be actually realised and practiced by inculcating divine values in life (Canto 4) and by doing Yoga (Canto 5).

Canto 1 narrates that Lord Varaaha was pleased by severe Tapa (austerity and penance) done by sage Ribhu, and when the sage requested the Lord for Brahm Vidya (the divine knowledge of the Truth personified as the supreme Brahm, knowledge that is liberating and delivering for the creature's soul) the Lord lists the long chain of ninety six Tattvas (fundamental principles of creation) and finally concludes that inspite of gaining access to the highest level of metaphysical and theological knowledge the best path of obtaining liberation and deliverance is Bhakti or devotion to God.

Canto 2 deals with the four preliminary disciplines called 'Saadhna Chatushtaya'—viz. the true nature of the Atma as the true 'self', pure consciousness and bliss, how the self-realised person becomes one with the Parmatma, the Supreme Being, how this lead to freedom from the fetters of Karma (deeds and actions), and how meditation leads to dissolution and overcoming of the mind etc. Brahm is the universal Absolute, the unequivocal Truth, and the only Reality in creation. It is the cosmic Spirit and Consciousness of creation that is present uniformly in each single unit of creation, from the single celled one right up to the most complex and colossal one, including the inner being of the spiritual seeker as his 'true self', as his Atma. It has no specific form, shape or colour; it is attributeless and invisible. But at the same time it has revealed itself in the form of the visible world complete with its stupendous variety and astounding diversity as a proof not only of its existence but also of its supernatural powers and qualities.

A wise and enlightened person who can see this Brahm inside his own self as well as in the rest of the creation, who has this grand and cosmic view of Brahm and is convinced of its truth obtains freedom from all ignorance arising out of a distorted and limited view of the supreme transcendental Brahm who is beyond definition and comprehension.

Canto 3 is an extension of Canto 2 and describes the Parmatma or the Supreme Soul as an embodiment of Sat-Chit-Anand (truth, consciousness and bliss). It is stressed here that the best and most effective way of attaining him is Bhakti or devotion.

Canto 4 is divided into two sections like the Vedas—the first section is the Mantras, and the second is the Brahman. There are in all 42 Mantras in section 1 which list the seven Bhumikas (stages of development of wisdom), while the second

section consisting of 43 verses are like the Brahman which give a detailed description of all the stages. It, inter alia, describes the concept of Jivan Mukti, and cites the examples of sage Shuka and Vamdeo as epitomes of this type of Mukti. As for the various Bhūmikas, another Upanishad deals with them also, viz. the Akchi Upanishad which is Chapter 23 of this volume.

Finally, Canto 5 is exclusively dedicated to Yoga and its practice. It describes the various aspects and limbs of Yoga, such as Angas (limbs or branches), Bandhas (control of vital energy of the Pran), Chakras (subtle energy centers in the body), Naadis (nerves), OM and its use for Japa (repetition). This Canto winds up the Upanishad by outlining how the spiritual aspirant can obtain final liberation and deliverance by a judicious mix of the physical exercises of Yoga and the great tenets of metaphysics.

-----Shanti Paath-----

Please see appendix no. 1 for meaning of this Shanti Paath.

Canto 1

[This Canto lists the ninety six Tattvas, the fundamental elements or principles of creation.]

1. OM Salutations! The great sage named Ribhu did severe Tapa (penance and austerity) for twelve long years measured according to the days of the Gods¹. At the end this period, pleased by his Tapa, Lord Varaaha² appeared before him and asked him to ask for some boon—‘Oh Ribhu! Wake up and ask for some boon’.

The sage got up from his meditative trance and respectfully bowed to the Lord, and submitted, ‘Oh Lord! I do not harbour any worldly or material desires or have any sort of wishes that are needed to be fulfilled in this world. I have no worldly passions and yearn for nothing like those persons who are passionate about the world, are overwhelmed by its material charms, and long for its pleasures and comforts. [That is, I do not wish to ask for any worldly boons to be granted to me. I am fully contented, and have no worldly yearnings or material needs.]

All the Vedas, the Shastras (scriptures), the Itihas (ancient traditional histories), the Purans (ancient mythological histories), and all other voluminous texts that give knowledge of everything in existence, along with Brahma the creator and other Gods—all of them assert that true Mukti (liberation and deliverance for the creature and emancipation and salvation of his soul) is obtained by only one method, and that is to have knowledge of and devotion for your true divine form. Hence, please elaborately elucidate for me that eclectic knowledge which would enable me to get acquainted with this truthful divine and sublime form of yours for my spiritual benefit. This knowledge is known as ‘Brahm Vidya³’ because it would enlighten me about the knowledge that would provide me with true liberation and ensure my deliverance’.

Then Lord Varaaha blessed him, assuring him that it would be exactly as he wishes. ‘Alright, so be it. Let me begin to preach you.

This Brahm Vidya—the knowledge of the supreme, transcendental, quintessential and irrefutable Truth of creation that enlightens one about the divine

cosmic entity that is behind the existence of the entire creation, that is the root and the cause of everything that exists, and that is pure cosmic Consciousness known by the name of Brahm—is said by some to consist of twenty four Tattvas (essential elements, units or principles of creation), while some others are of the view that it has thirty six Tattvas, while there are still others who assert that it has ninety six elements (1).

[Note—¹1year of Gods = 36 human years. Therefore, 12 years of Gods for which Ribhu did Tapa would be $12 \times 36 = 432$ human years.]

²Lord *Varaaha*—This is the third incarnation of Lord Vishnu as a boar in which he had killed the demon Hiranyaaksha and lifted the earth out of the flood waters in which it had been submerged. This is symbolic of the Lord's retrieving the world from the deep ocean of sins in which it was plunged over time. The *Varaaha Puran* is dedicated to him.

³The concept of *Brahm Vidya* is dealt with in a number of Upanishads, such as Kaivalya Upanishad, Brahm Upanishad, Panch Brahm Upanishad, Akchyu-panishad, Tejobindu Upanishad, and Brahm Vidya Upanishad of the Krishna Yajur Veda. Basically it means the most eclectic, the most esoteric and the profoundest of knowledge pertaining to supreme transcendental Divinity known as Brahm.]

2. I shall now narrate for you in a sequential form the various Tattvas (essential principles) of that eclectic Brahm Vidya (knowledge pertaining to Brahm). Listen carefully¹.

The Gyan Indris, i.e. the organs of perception, are five—viz. the one with which sound is heard, i.e. the ears; the one with which anything is felt, i.e. the skin; the one with which anything is seen, i.e. the eye etc. [The others being the one with which anything is smelt, i.e. the nose; and the one with which anything is tasted, i.e. the tongue.] (2).

[Note—¹Since the entire creation is a visible manifestation of Brahm, it follows that by understanding the basic Tattvas that constitute the fundamental units of the body of knowledge concerning Brahm, one would be able to get an idea of what really the creation is made up of, and what actually determines the overall character, nature and temperament of this creation as whole as well as of its individual units.]

3. Similarly, the organs of action are five in number—viz. the one related to speech (i.e. the mouth); the hand (which accepts and does deeds), the legs (which is concerned with movement) etc. [The other two are—anus concerned with excretion, and genitals that are concerned with procreation.]

The vital winds, called Vayu, are also five in number—such as Pran (breath), Apaana (wind that moves down in the intestines) etc. [The other three being Udaan responsible for lifting the body, Vyana responsible for maintaining equilibrium and pressure within the body, and Samaan responsible for equal distribution of nutrients and blood circulation.]

The Tanmatras (the subtle senses of perception) are also five in number—viz. hearing of words (as done by the ears); feeling anything touched (as done by the skin); seeing anything and perceiving its colours, shape, size and contours (as done by the eye); tasting anything (as done by the tongue); and smelling anything or perceiving anything by the virtue of its smell in all its variations—fragrances, scents, perfumes or even stinks etc. (as done by the nose) (3).

[Note—Refer Panch Brahm Upanishad of the Krishna Yajur Veda tradition.]

4. The next set of four Tattvas are the following—Mana (mind), Buddhi (intellect), Ahankar (sense of ego, pride, arrogance, haughtiness and vanity), and Chitta (sub-conscious mind; memory and conscience).

So the entities mentioned above are called the twenty four Tattvas by those who are well versed in the knowledge of Brahm (4).

[Note—The Tattvas counted are from verse nos. 2-4 as follows— $5 + 5 + 5 + 5 + 4 = 24$.]

5. There are five Maha Bhuts (the great primary elements of creation) also like these twenty four Tattvas. These five are the following—earth, water, fire or energy, wind or air, and sky or space (5).

6. The body of a creature has been divided into three principle types—viz. gross, subtle and causal. This fact is known by wise and expert persons.

Similarly, there are three principle states of existence—viz. Jagrat or waking state, Swapna or dreaming state, and Sushupta or deep sleep state (6).

[Note—Briefly, the three aspects of the body are the following—The gross body is the external part of the physical body consisting of the five organs of perception such as eyes, ears, nose, tongue and skin, and the five organs of action such as hands, legs, mouth, genitals and excretory. The subtle component of this body is the mind-intellect complex which plays an intermediary role between the creature and the external world. And finally there is the causal body which harbours the pure conscious Atma that is the 'cause' of the existence of the creature's life inside this body and the 'cause' of the existence of the world at large.

The three states of existence of this conscious Atma are the following—Jagrat state is the state of wakefulness when the creature remains physically active in this material world of sense objects, perceiving its inputs with the sense organs of perception as listed above, and reacting with the sense organs of action. The Swapna state is when the external gross body is asleep but the subtle body consisting of the sub-conscious mind is very much active; this is the period when one dreams. Finally, there is the state when even the sub-conscious mind goes to sleep, i.e. when there is no dream. This state of consciousness goes beyond the dreaming state and is called Sushupta literally meaning asleep in the true sense when the consciousness has no feelings or senses left in it.]

7. Oh wise sage! The above mentioned Tattvas come to a total of thirty five¹.

Their composite form (which has revealed itself as this creation) is the thirty sixth Tattva² (7).

[Note--¹The 35 Tattvas are arrived as follows—24 Tattvas (till verse no. 4) + 5 (verse no. 5) + 3 types of bodies + 3 states of conscious existence (verse no. 6) = 35.

²The product created by the interaction and numerous combinations of these thirty five Tattvas in various ratios and permutations is distinct from any one Tattva, more than one Tattvas or all the Tattvas taken together. There is no resemblance between the units that are used to build the structure and the final shape that it takes, though the structure would fundamentally be known on the basis of its constituent parts. This finished product, which is at variance from its constituent units, is in the nature of an independent Tattvas, hence it is the 36th Tattva.]

8. All those things that take a birth (and therefore die or perish, and hence are mortal and non-eternal and transitory) have six inherent faults or shortcomings of perception in them.

These faults are the following—(i) That there is an ‘Asti’—i.e. to be in existence. [This is a major fault because whatever that exists in this world is an illusion created by the mind just like the existence of water seen in a desert mirage, ghost in the dark, a serpent in the rope, change in the moon’s surface during the lunar cycle, two or more suns when seen as an image in more than one mirror, the sun or moon being devoured by some imaginary demon during eclipses, the rising or setting of the moon or the sun, etc. There is another interpretation of the term ‘existence’—it is the existence of ‘duality’, the conception that there are two independent entities such as the Jiva or the living creature and the Parmatma or the Supreme Being, or the conception of ‘you’ and ‘me’, or ‘this’ and ‘that’. This is against the fundamental tenet of Vedanta which lays stress on ‘non-duality’ of everything which briefly states that whatever that exists is but one single non-dual Brahm revealed in that form. Therefore, the concept of ‘Asti’ has an erroneous, a fallacious and ill-conceived foundation. Anything founded on errors of perception or misjudgment is bound to be faulty, distorted, and away from the reality and truth.]

(ii) That there is a ‘Jaati’—i.e. birth. This relates to the conception that there is a birth and that things are freshly born or reborn again. [This is a fault also because of two reasons. One, if anything does not exist as asserted by the first clause, then the question of its being born or dying does not arise. And two, even if we were to treat everything as Brahm personified—because it would be difficult to deny things physically seen and witnessed—then it is forgotten that Brahm does not take a birth, for it is eternal, infinite, imperishable and the ‘one without a birth’. Therefore this very conception of having a birth has no sound footing; it is faulty. It is an upshot of faulty perception of the reality of Brahm and Truth.]

(iii) That there is a ‘Vardhan’—i.e. there is increase, enhancement, expansion, growth. This relates to the conception that an entity increases, enhances, grows or develops. [This is a fault because for one, ‘truth’ never grows and develops, it is always constant, universal, uniform and never changing; and two, ‘Brahm’ also does not grow or enhance or develop or in any way change because it is the ultimate Truth in creation, and ‘Truth’ does not change.]

(iv) That there is a ‘Parinaam’—i.e. result or consequence or effect or sequel. This relates to the conception that there is a sequel, a consequence, an affect, an upshot, an outcome, a result, a follow up or a fruit of certain deed that was done in the past. [This arises out of the fundamental error that one is the doer of anything, that therefore there is a consequence, a result or sequel of that deed—either good or bad—which cannot be avoided and must be either enjoyed or suffered. This is a fundamental error of conception because one is not a doer of anything because all deeds are done by the physical body which is not the ‘self’ of the person, for this ‘self’ is the pure consciousness called the Atma that lives as a distinct entity inside the body as its resident. Further, since there is no truth in what is seen in this world, the question of there being a birth, development and an end does not arise, and consequentially the question of anything being a Parinaam of any deed done in the past life also does not arise.]

(v) That there is a ‘Kshaya/Kchaya’—i.e. decay and decline. This relates to the conception that there is a stage called the last stage when there is decay and decline. [This is an error arising out of the pervious errors because anything that is eternal, infinite, imperishable and truthful, for instance Brahm, never decays or declines, nor does anything that really does not exist, like this illusionary world, can ever decay or decline. It is all imaginary, delusory and false.]

(vi) That there is a 'Naash'—i.e. destruction and ruin. This relates to the conception that there is finally destruction or termination. [This fault is a derivative of the earlier faults.] (8).

[Note—This brings the tally of Tattvas to 42 as follows—36 Tattvas (counted till verse no. 7) + 6 Tattvas (verse no. 8) = 42.]

9. The six Urmis or faults of the body are the following—(i) 'Ashana' or hunger, the need to eat, and therefore the need for food (along with all the accompanying problems such as worrying about its production, safety, storage, procurement, cooking, proper digestion etc.); (ii) Pipaasa or thirst, and the desire to drink and therefore the need for liquids to quench the thirst (which create the same sort of problems that are associated with the need for food; (iii) Shoka or grief, distress and dismay (which have a profound negative impact on the overall mental, psychological and general metabolic health of the body); (iv) Moha or to have strong attractions or longing for anything or anyone, to be emotionally attached with anything, to be deluded, to be held under magical spell of anything or to be under its charm, to hallucinate as a result of these emotional faults (all of which makes a man a virtual serf of his emotions and tied down to the object of his adoration, thereby robbing him of his independence and peace, and more often than not becoming the cause of his interminable sufferings); (v) Jaraa or old age and its attendant decline of the body leading to its decrepit and weakened physical state when the body loses its strength, vigour and stamina, thereby becoming a burden on the person; and finally (vi) Mritu or death of the body. All these factors create an immense amount of discomfort and horrors to the person (i.e. to the Atma that is the true identity of the person) to whom this body belongs. [In other words, as long as the person continues to have the erroneous conception that this body is

Then there are six Koshas or coverings or structural features of the body. Now I shall tell you about them. (9).

[Note—This brings the tally of Tattvas to 54 as follows—42 Tattvas (as counted till verse no. 8) + 6 Urmis + 6 Koshas (of verse no. 9) = 54.]

10. The Koshas (mentioned in verse no. 9 above) are the following—skin, blood, flesh, stomach or abdomen, marrow and bones. [As would be evident, these are the components of the gross body of the creature.]

The other six Tattvas relate to the natural habits and temperaments of the creature—such as Kaam (lust, passions, desires and yearnings), Krodh (anger, indignation, wrathfulness, ill-temper), Lobh (greed, rapacity), Moha (attraction, infatuations, attachments, delusions and ignorance), Mada (arrogance, haughtiness, false pride, hypocrisy and ego) and Matsarya (envy, jealousy, malice and ill-will). These are the faults associated with his natural temperament and the state of his mind. (10).

[Note—This brings the tally of Tattvas to 60 as follows—54 Tattvas (as counted till verse no. 9) + 6 Tattvas (of verse no. 10) = 60.]

11. These six faults in a person's character (mentioned in verse no. 10) are called his natural Dushmans or enemies.

There are three types of worlds that the Jiva lives in. They pertain to the three states in which the consciousness exists in this world. They are (i) Vishwa (the gross world as the individual creature perceives it in its waking state of consciousness), (ii) Taijas (the gross world as the individual creature perceives it in its dreaming state of

consciousness), and (iii) Pragya (the gross world as the individual creature perceives it in its deep sleep state of consciousness).

Then there are three types of Gunas or characteristics qualities that are inherent in all living beings which decide his basic nature, temperament and personality traits. These are (i) Sata Guna (the best trait or virtue which is marked by auspicious values), (ii) Raja Guna (which is the medium quality marked by the worldly desires for enjoyment, development and growth), and (iii) Tama (which is the lowest and meanest quality marked by the propensity for being pervert, committing errors, making sins and doing mischief and misdeeds) (11).

[Note—This brings the tally of Tattvas to 66 as follows—60 Tattvas (as counted till verse no. 10) + 3 states of existence of the Jiva + 3 Gunas (of verse no. 11) = 66.]

12. There are said to be three types of Karma or deeds—(i) Praarabdha—deed that is obligatory because of the cumulative effects of one's past life and the latent desires, passions and temperaments that are brought forward from it, inspiring and compelling a person to behave in a certain way and do certain deeds and take actions which his own sibling would abhor; this compulsion is obtained as an inheritance from the past, and over which one has no or least control; (ii) Aagamya—deed that would be needed to be done in the future and about which no idea can be had at the present time, but it may or may not be as result of the present or the past; and (iii) Arjit—that which is done in the present at a given point of time, and which results in the creation and accumulation of effects that would have bearing on the future.

There are five more Tattvas as follows—(i) Vachan—to promise and make vows; (ii) Aadaan—to receive and accept, to come; (iii) Gaman—to go and give; (iv) Visarjan—to distribute and disperse, to dispense and expel, to eliminate and discharge; and (v) Anand—bliss, ecstasy, happiness and joy. [These five Tattvas are variations of the term Karma or deed because they all involve action that the body takes. It is the body of the creature that physically speaks, receives or gives, comes or goes anywhere, eliminates waste from inside it, or enjoys the pleasures and comforts of the sense objects of the material world. The main Principal called the Atma, the pure consciousness that is the truthful identity of the person, is neutral and a resident of this body, and therefore distinct from it. This Atma does not actually and physically do anything, but for all practical purposes it is deemed to be morally responsible and accountable for all the deeds done by the body because it is the 'Lord' of the whole setup. Besides this, it happens only till the time the person thinks that the body is his true identity, and therefore he is deemed to be responsible and accountable for what the body does. Should he disassociate himself from the body and treat his 'self' as the Atma, he is freed from unwarranted accusations of being a doer of deeds.] (12).

[Note—This brings the tally of Tattvas to 74 as follows—66 Tattvas (as counted till verse no. 11) + 3 deeds + 5 Tattvas (of verse no. 12) = 74.]

13. The next set of four Tattvas are the following—(i) Sankalps—to make aspirations, violations, determinations, promises and resolutions; (ii) Adhyavashya—incessant work and enterprise, to continue to do one's tasks and duties assiduously, to remain busy in doing one's work and deeds, and not shunning responsibilities, not being lazy and indolent; (iii) Avimaan—to have pride in one's deeds, abilities and qualities; and (iv) Avadhaarana—to have certainty of views, to determine and deduce firmly without having any doubt.

The next set of four Tattvas are the following—(i) Mudit—to be very glad, cheerful, joyous and happy; (ii) Karuna—to be kind, graceful, merciful and

compassionate, to have empathy and sympathy; (iii) Maitri—to have friendly disposition; and (iv) Upeksha—to neglect and be indifferent. [These set of four Tattvas are closely related to the Tattvas listed in verse nos. 12-13.] (13).

[Note—This brings the tally of Tattvas to 82 as follows—74 Tattvas (as counted till verse no. 12) + 4 + 4 Tattvas (of verse no. 13) = 82.]

14. The following are the divine Gods who constitute the next group of fourteen Tattvas—The patron Gods of various directions, Vayu (the Wind God), Surya (the Sun God), Pracheta (Prajapati—one of the ancient forefathers of creation), Ashwinikumars (the physicians of the Gods and the twins sons of the Son God), Agni (the Fire God), Indra (the king of Gods), Upendra (Vishnu), Mrityu (the Death God personified as Yam), Chandra (the Moon God), Brahma (the creator), Rudra (Shiva), Kshetragya (the different Gods of various realms of creation), and Ishwar (the Supreme Being; the Lord God) (14).

[Note—This brings the tally of Tattvas to 96 as follows—82 Tattvas (as counted till verse no. 13) + 14 Gods (of verse no. 14) = 96.]

15. These are the ninety six Tattvas or elementary units that together—in different permutations and combinations—result in the creation of this vast and multifarious world of immense diversities, and the moulding of its characteristic attributes, deciding its virtues and qualities, and determining the nature and temperament of its individual component.

All these Tattvas are unique in themselves; they are most esoteric, queer, uncommon, remarkable and exceptional. They are so wonderful, stupendous and fantastic that they are difficult to be easily imagined, let alone be comprehended and be analyzed.

They have no faults of their own in them inasmuch as they are 'primary elements' which are pure and free from any kind of tainting effects that are extraneous to their natural state, and are free from any kind of external influences to their primary form. But these individual elements appear to become tainted or effected—i.e. they begin to exhibit characteristics quite divergent from their natural state of existence and quite contrary to what one has learnt about them from the study of the scriptures—only when they combine with other elements to form an entity that does not at all resemble any of these individual elements or Tattvas from which it is built. In other words, the end result of the mixing together of the Tattvas creates an entity that has not the slightest of semblance with the character of its ingredients, but its characters are falsely imposed upon the Tattvas in the belief that the finished product would exhibit the characters of its ingredients. Though this maxim is correct in the general term, but it does not apply when anything is scrutinized closely and analytically.

Therefore, if one tries to deduce the nature and inherent virtues of any given Tattva based on the characteristics of the finished product—the result of the combination of two or more Tattvas—he is bound to make wrong deductions¹ (15).

[Note--¹This is because the product of this combination would vary from the principal ingredients, giving a wrong impression about the fundamental form and nature of these primary elements. The simple example of water would suffice—water molecules consist of atoms of two primary elements, viz. Hydrogen and Oxygen which are primarily in gas forms, but the water as we know it is has no resemblance to either of them because it is liquid. So when one is told that water consists of these two primary elements, one gets a wrong impression about the primary nature and properties of both Hydrogen and Oxygen which are gases in their natural form and

not liquid like water. Besides this, water exists in various physical forms—liquid, solid, vapour, moisture, steam etc., some of which are visible and some not. For instance, one can see water as liquid, solid in the form of ice, and vapour in the form of steam, but can anyone see Hydrogen and Oxygen in their natural form as gases?]

16. Those who worship and have sincere devotion for me and my divine sublime form as Varaaha (i.e. my subtle and sublime primary form as Vishnu, the sustainer and protector, who had assumed this unusual and queer form of a boar for the larger welfare of creation), those who meditate upon and remember this form with devotion and respect—they are freed of all ignorance and delusions. They become Jivan Mukta—i.e. they obtain liberation and deliverance for their souls even while alive in this world (16).

17. Those who are wise, erudite and enlightened enough to know the mystery behind creation with these primary ninety six Tattvas as revelations of one single non-dual Brahm are deemed to be liberated and delivered from the fetters of ignorance and its accompanying delusions (about this world and everything in it) no matter to which Ashram they belong—i.e. it does not matter which school of philosophy they subscribe to or the way of life they prefer to lead. Therefore, it does not matter if they live like a Jati (an ascetic or hermit who keeps long matted hair on the head, and leads a life of austerity and penance), or as a Mundi (one who shaves off the hair and keeps a bald head like a monk or a renunciate Sanyasi), or as a Brahmachari who keeps a Shikha (a householder or student in his pre-household days when he studying the scriptures under the aegis of a wise teacher, or anyone else who sports the tuft of hair on the top of the head; this tuft is worn as a religious sign by all initiated Hindus).

There is no doubt about it. [In other words, erudition, wisdom and enlightenment are a state of the mind, the state of the person's internal being, rather than his external appearances or the physical state of his gross body. The evolved spiritual state of an individual cannot be judged based on his outer appearances, for more often than not the latter is misleading and hides some different truth. A pervert monster can be disguised as a monk, and vice versa. For a truly self and Brahm realised person, the physical appearance and state of the gross body is of no consequence. It is the state of his mind that sets him apart from the herd.] (17).

Canto 2

[Brahm is the universal Absolute, the unequivocal Truth, and the only Reality in creation. It is the cosmic Spirit and Consciousness of creation that is present uniformly in each single unit of creation, from the single-celled organism right up to the most complex and colossal one, including the inner being of the spiritual seeker as his 'true self', as his Atma. It has no specific form, shape or colour; it is attributeless and invisible. But at the same time it has revealed itself in the form of the visible world complete with its stupendous variations and astounding diversity as a proof not only of its quintessential universal existence but also of its supernatural powers and magical qualities.

A wise and enlightened person who can see this Brahm inside his own self as well as in the rest of the creation, who has this grand and cosmic view of Brahm and is convinced of its truth, obtains freedom from all ignorance and their attendant

delusions arising out of a distorted and limited view of the supreme transcendental Brahm who is beyond definition, imagination and comprehension.]

1. The great sage Ribhu said to Ramapati (Lord Vishnu) who had incarnated as Lord Varaaha (Boar), ‘Oh Lord! Please preach me the grand knowledge of Brahm which is known as the ‘Brahm Vidya’.

When requested by Ribhu as above, the merciful Lord who eliminates all the distresses and problems of his devotees, replied—(1).

[Note—Other Upanishads of the Krishna Yajur Veda tradition having a direct correlation with the concept of Brahm Vidya are Brahm Upanishad which is Chapter 3, Brahm Bindu Upanishad, Chapter 8, and Brahm Vidya Upanishad, Chapter 16 of this volume.]

2. There are four known mainstream aids or paths¹ by which this great knowledge called Brahm Vidya that you seek can be obtained. This knowledge helps the spiritual aspirant in his pursuit of the eclectic knowledge pertaining to the universal Divinity known as the supreme transcendental Brahm. In the process it also enlightens him about himself and his true identity known as the Atma.

These paths are the following—(a) To have profound Vairagya—i.e. to have great renunciation, total detachment, complete dispassion and absolute non-involvement with anything pertaining to this material world of sense objects, anything that is not eternal and imperishable, anything that is not the truth and real in the spiritual perspective. [This concept has been described in verse nos. 4 and 37 below of this Canto 2].

(b) To strictly adhere to the laws and diligently follow the tenets as laid down in the scriptures and established by tradition that describe how this Brahm Vidya can be accessed. It also entails following and believing in the principles and paths as shown by ancient tradition because they are time-tested and advised by those who had treaded on this path earlier, and therefore are based on real time experience. This also ensures that all the pitfalls and problems that the aspirant can expect to encounter are made known to him in advance along with the precautionary steps that he ought to take or the way to overcome them should he encounter them on the way. The ancient scriptures and traditions have clearly laid down codes to be followed by various Varnas or sections of society, and they have also determined how easily one can obtain an exalted stature in life by honestly following them. Like the more mundane example of a ‘doctor knowing what is best for his patient’, these ancient scriptures and traditions are the best guides one should rely on if one wishes to attain the knowledge of the ultimate Truth, a knowledge that is known as Brahm Vidya, without much effort and confusion.

(c) To do Tapa—that is, by doing hard practice that might involve a lot of sufferance undertaken for a noble cause, observing sincere austerity and doing steady penance, being steadfast and unrelenting in one’s noble pursuit inspite of the greatest of hardships that are encountered, making great sacrifices and forsaking pleasures and comforts in order to ensure that one can reach one’s goal in life. This path of Tapa is indispensable if one wishes to succeed in any venture, be it related to the world or the spiritual. [Even an ordinary student knows how much sacrifices he has had to make to excel in his studies; every householder knows how much he sacrifices for the welfare of his family.]

(d) To serve one’s Guru (a moral teacher, preceptor and spiritual guide) with great sincerity and diligence. This service would naturally please the Guru and he

would be inspired and willing to divulge the greatest of secrets and to teach his trusted and devoted disciple the most esoteric aspects of the body of knowledge in which he is an expert. He would do so out of his love and affection for the disciple, and he would not hesitate to explain the intricacies of the body of knowledge to the best of his abilities. [A wise Guru would have a natural affinity for the student who is obedient and helpful and devoted to him as well as is committed to his studies as compared to those whom he feels are not up to the mark, are insincere in studies, are disobedient and wayward, and therefore the effort needed for teaching them is not the worth. His love and affection for the former type of disciple or student might be even greater than for his own off spring, and he would prefer to pass on his legacy to such an accomplished student instead of to his own son.]

Brahm Vidya is available to an aspirant as a reward of following these spiritual paths or taking the helps of these aids in his spiritual pursuit. These paths are not excluding but inclusive; they are to be followed simultaneously and with due diligence in order to be successful in a comprehensive manner (2).

[Note—¹The four well established and known paths to being acquainted with Brahm Vidya which relates to the divine Principal of creation known as the supreme transcendental Brahm, and which enables the spiritual aspirant to successfully understand the underlying eclectic principles of this Divinity, are the following—(i) Vairagya which broadly means renunciation, dispassion and total detachment from anything that is related to the gross world and its material sense objects, anything that is not eternal and imperishable, anything that is not the truth and real in the spiritual perspective—refer all the Upanishads that deal with the concept of Sanyas, specifically such as the Avadhut Upanishad, verse no. 6. (ii) Control of the Mana (mind)—refer Brahm Bindu Upanishad, verse no. 5. (iii) Doing internal form of fire sacrifice—refer Brahm Vidya Upanishad, verse no. 53, and Pran Agnihotra Upanishad. (iv) Meditation and contemplation—refer Brahm Vidya Upanishad, verse nos. 78-110.]

3. A true and sincere seeker of this eclectic and divine knowledge known as Brahm Vidya that pertains to the supreme transcendental Brahm is expected to inculcate certain eclectic values in life and have a noble and auspicious mindset in order to succeed. He should abandon the notion that there is a world called 'this world' where he lives at present, and a world called 'that world' where he would like to go after death or the place where Gods etc. live. There is no such thing as this 'mortal world' or 'perishable world' and that 'immortal world' or 'imperishable world'. [Refer Brahm Bindu Upanishad, verse nos. 6-10; Brahm Upanishad, verse nos. 2-3.]

A person desirous of obtaining Moksha (emancipation and salvation; liberation and deliverance) should endeavour to cultivate the six grand virtues such as Sham and Dam¹ etc. (3).

[Note—¹The six grand virtues which are like assets are the following--(i) Sham—having self restraint and control; having peace, tranquility, serenity and quietness; being able to suppress desires, yearnings and natural instincts and impulses); Dam—tolerance, forbearance, fortitude); (iii) Upriti—renunciation, detachment, dispassion, indifference and non-involvement); (iv) Titksha—endurance, patience, fortitude, sufferance, equanimity); (v) Samadhan—solution, answer, lack of confusion or doubts, clarity of thoughts and conception); and (vi) Shraddha—having faith, belief, conviction, reverence and devotion).]

4. He should abandon all kind of attractions, attachments, infatuations, longings or a sense of belonging that he might have for anything—i.e. he should develop profound

degree of renunciation as mentioned earlier in verse no. 2 above. He should learn to exercise the greatest of restraint on his self and the organs of the gross body.

Instead, he should be firmly of the view that his true 'self' is nothing else but pure consciousness which is a mere neutral witness of everything, without getting emotionally attached with anything. That is, he should develop the noble and auspicious view that 'I am that pure immaculate cosmic Consciousness which is a neutral witness to everything in this world.' [A witness is supposed to be neutral, unemotional, detached and uninvolved in the happening. This helps him to observe things in the correct perspective and his version is regarded as authentic as opposed to biased witnesses who would see things from a pre-conceived angle and develop a tainted view of the same event. If a witness to an event is not dispassionate and neutral, then he is not worth relying; he is not a true and honest witness. Therefore, a sincere seeker of the knowledge of Brahm should, and is expected to, inculcate the great virtues of complete dispassion for, detachment with and non-involvement in the world and its affairs.] (4).

5. This creation or the visible world created by Manu¹ (i.e. the creator and the forefather of all living beings, including the human race) is a very strange, rare, mysterious, fascinating, magnificent and incomprehensible proposition. Its magnitude and expanse is so astounding that it defies definition and comprehension. [In a way this is expected and natural because the parent from whom this world is born is the supreme transcendental Lord known as Brahm, and the world is a visible manifestation of this Brahm. This fact has untiringly been asserted by all the scriptures in an unequivocal term. Since this Brahm is beyond definition and comprehension, it follows that its manifestation would also be beyond definition and comprehension.]

In this magnificent and colossus world of such astounding diversity and unimaginable variations, the human body is the rarest of rare acquisition. Having had the great privilege of being able to acquire the human body which is considered as the holiest amongst all the forms in which life exists in this world, the Jiva (the living being) should not fritter away this golden and rarest of rare opportunity. He should instead make the best of it by acquiring the best of knowledge pertaining to the great Lord Vishnu (the Supreme Being) through the study and hearing of the Vedas and other scriptures². That is, he should strive to obtain true 'Gyan' as a means to overcome ignorance and delusions which have prevented him from finding a way to break free from the fetters that shackle his 'true sublime eternal self' to the gross and perishable body as well as the equally gross and perishable world of material sense objects in which the creature finds himself living. [Knowledge is empowering and enabling; it helps one to overcome oppression and break free from life-long bondage to ignorance and delusions, and their accompanying horrors. It helps one to obtain emancipation and salvation, freedom and deliverance. Knowledge of Brahm would spiritually liberate the aspirant from the bondage of spiritual ignorance of what constitutes the truth of creation and his own 'self'. He would then discover uniformity and universality of the 'truth' that defines his own 'self' as well as the rest of the conscious world. He would develop such a profound degree of such grand virtues as equanimity, fortitude, compassion, grace, love and universal brotherhood that he would not need to go to some distant heaven in order to find contentedness, peace, happiness and bliss because they would be available to him here in this life itself.]

This way, he should utilise this human body as a means of obtaining liberation and deliverance from the fetters that had been tying his soul for generations to the

cycle of birth and death—i.e. he should endeavour to find Mukti or Moksha; he should endeavour to find emancipation and salvation for his self in such a way that it becomes a permanent form of liberation and delivers him from all the horrors to which he was subjected to in his numerous lives in search for this elusive freedom (5).

[Note--¹ The 14 *Manus*—The fourteen Manus of mythology, who were the forefathers of the entire creation, are the following—(i) Swayambhu, (ii) Swayambhu, (iii) Uttam, (iv) Taamas, (v) Raiwat, (vi) Chaakshusha, (vii) Vaivaswat, (viii) Saavarni, (ix) Daksha Saavarni, (x) Brahm Saavarni, (xi) Dharma Saavarni, (xii) Rudra Saavarni, (xiii) Dev Saavarni, and (xiv) Bhaum (also known as Indra Saavarni).

‘Vaivasvat or Vaivaswat Manu’ is the 7th Manu and the legendary progenitor of the current living beings on this earth. The word ‘Vaivaswat’ means coming from the Sun or belonging to the Sun, or relating to or belonging to Yam (the God of death and a judge of a creature’s deeds done by it during the life time). It also means the planet Saturn as well as one of the Rudras. In the present context of this text, Sri Ram means the Vaivaswat Manu who is the forefather of the human race in general and Sri Ram’s ancestor in particular because he belongs to the Solar race.

The word ‘Swayambhu’ refers to the primal man represented by the creator Brahma as well as the Viraat Purush who were both born from the Lord called Narayan who is deemed to be their father. Swayambhu was the male aspect of creation, and his female counter part was Mother Nature. The word means ‘someone who was born out of his own free will’. So, Viraat Purush and Brahma are generally regarded as Swayambhu, because both were born out of their own free will as a manifestation of Brahm. ‘Swayambhu Manu’ was the first male born on earth and from him the rest of the creation was born.

The word ‘Swayambhu’ also means ‘self-existent’ and refers to Brahm, while ‘Swayambhu Manu’ is Brahma, the ‘self-begotten’ creator of the entire visible creation, called the ‘Prajapati’ who is the Lord and sustainer of the subjects of this creation; he is a representative of the Male aspect of creation, the Viraat Purush, and is primal male par excellence; he is the divine father of the human race. The name ‘Manu Swayambhu’ is especially applied, in the context of the Purans of which Ramayan is a part, to fourteen successive mythical progenitors and sovereigns of the earth and who create and sustain this world through successive long period of time called ‘Kalpas’. The first such mythical progenitor is known as ‘Manu Swayambhu’ as the one who sprung (created or manifested) from the self-existent Brahm. He is regarded as a secondary creator who commenced his work of creating by producing 10 Prajapatis, of whom the first was ‘Light’ called Marichi. To this Manu is ascribed the celebrated code of conduct called ‘Manu Smriti’ and two other ancient Sutra work on Kalpa and Grihya, i.e. the sacrificial and domestic rituals. He is also known as Hiranyagarbha and Prachetaa.

The other five Manus are called Swarochish, Uttam, Taamas, Raiwat and Chaakshush. The 7th Manu is called Vaivasvata Manu the son of the Sun God, and he is regarded as the progenitor of the present race of living beings. He is like the Noah of the Old Testament of the Holy Bible, is said to have been preserved by Vishnu or Brahm in the form of the legendary great fish from being drowned in the great deluge of the dooms day. This Manu is also called as one of the twelve Adityas, the author of Rig Veda, VIII, 27-31, as the brother of Yam (the God of death and a judge of a creature’s deeds done by it during the life time), as the founder and first king of Ayodhya, and as the father of Ila who married the son of the Moon-God named Budha. This makes two great dynasties —the solar and the lunar races to which Sri Ram and Krishna respectively belonged —related to each other. The 8th Manu, or the 1st of the future Manus according to Vayu Puran, III, 2, will be Saavarni, the 9th would be Daksha Saavarni, the 10th would be Brahm Saavarni, the 11th would be Dharma Saavarni the 12th would be Rudra Saavarni, the 13th would be Raviya or

Deva Saavarni, and the 14th would be Bhautya or Indra Saavarni. The life of one Manu is equivalent to roughly 311,040,000 years.

²The knowledge of the Vedas and other scriptures would ensure that a man becomes enlightened about the great and ultimate Truth of existence and becomes aware of the falsehood of everything around in the material world of sense objects. He would use this spiritual knowledge and awareness of the perishable nature of the human body as a stepping stone to liberation and deliverance, and as a medium for breaking free from the endless cycle of birth and death. It is imperative and obligatory for him to do this quick and soon, because if this human body is lost he would lose a golden opportunity which might not come his way for generations and generations to come. It is only as a human being that he can read, listen to, study, understand, implement and benefit from the eclectic teachings and the axiomatic doctrines of the scriptures—for animals and all other forms of life cannot do this.

Only a human can think intelligently and analytically; only a human can exercise the right and power to pick and choose, to accept and reject from the different options available to him; only he can do righteous and auspicious deeds and avoid those that are not; only he can meditate and contemplate and make conscious efforts to ensure that the soul can get certain deliverance from the shackles that it has found itself bound to; only he can lead others by his own example, and let others benefit from his own learning and experience; only he can obtain an extreme sense of bliss and ecstasy or derive extreme pleasure and a sense of immense satisfaction that is ethereal in nature and not restricted to the physical plane of existence that is related or limited to the gross world and the gross body, such as the bliss and ecstasy obtained during meditation, the elation experienced when one discovers the ‘truth’ about his self known as the Atma that is pure consciousness, the sense of great happiness and satisfaction obtained by doing charitable and noble deeds, the exhilaration obtained at making new discoveries and innovations—something that animals and other lower forms of life cannot do.

The human body is the highest rung in the evolutionary ladder. Beyond that, the Atma cannot expect to find a better abode for itself in its quest for a medium to either enjoy the material comforts of the world or for finding permanent liberation and deliverance from the endless cycle of birth and death. Both ways, the human body is a god-gifted opportunity for the soul. So it is up to the individual how he uses this golden opportunity—would he like to fritter it away in such mundane things as wasting it away in attempts to satisfy his senses, or would he employ it to achieve greater heights of wisdom and enlightenment that lead to his self realisation and ultimate Brahm realisation. While the former use would be tantamount to his renewing his bondage to this artificial world of delusions and spiritual torments, the latter would be liberating and delivering for his soul; it would lead to his finding emancipation and salvation.]

6. There is a sacred entity called ‘Sachidanand¹’ (one that is an embodiment of Sat or truth, Chit or consciousness, and Anand or bliss) which is more exalted, holy, auspicious, divine and sublime in nature, and it transcends the definition of goodness, holiness, auspiciousness and godliness as these terms are usually understood to mean by people belonging to the various Varnas and Ashrams which are the various classes of society and the phases in the life of a person respectively.

Therefore, such persons who believe that by merely following the rituals and observing the various sacraments as prescribed for the various Varnas and Ashrams in a mechanical and ritualistic way (without understanding their real intentions and meaning), or by becoming an expert in the different tenets of the scriptures and preaching about them to others without actually understanding and implementing them fully oneself one would be entitled to obtain Mukti or Moksha, then such

persons are living in a fool's paradise. They are indeed called 'Agyani' because they are ignorant of the truth and the reality. They are deluded and under false impression that they are being religious and are following the correct path that would lead to their Mukti or Moksha—i.e. that any of these paths would give them certain liberation and deliverance from the fetters of this world and provide their souls with the grand opportunity of obtaining emancipation and salvation².

It is difficult to say when such ignorant persons would find real Mukti or Moksha. [In other words, it is doubtful that they would ever find liberation and deliverance for themselves in the true spiritual sense; it is uncertain when their soul would find emancipation and salvation. In the context of what has been said earlier in verse no. 2 of this Canto 2 above, the following of the designated path as laid down for the people belonging to the different Varnas and Ashrams is only one of the ways to obtain Brahm Vidya, but not the ultimate way and not the ultimate aim of spiritual practices. The medium is not the aim. These paths help one to inculcate self discipline and practice an auspicious lifestyle as prescribed in the scriptures so that the creature can rise and lift himself from a low level of existence to an exalted state, but it is up to the practitioner to decide what rewards he wants for them. If he wishes worldly gains and fame, he gets them; if he wishes a better life and ascendance for himself, he would get it. But he must remember that all these wishes entail some form of expectation and involvement in deeds done in accordance with the tenets of the scriptures and the laws framed for the different Varnas and Ashrams. Since doing of deeds would produce a train of consequences, the Atma can never find true liberation and deliverance because such consequences would have to be suffered or enjoyed by it only with the aid of the gross body. And as long as there is the body, where can the Atma say that it has found liberation and deliverance because this gross body is the foremost millstone around its neck; it is shackled to this body. So, as long as the man thinks that he is doing something—though auspicious, righteous and strictly in accordance with the principles laid down for him by the laws of Varnas and Ashrams to which he belongs—he is still involved in doing deeds, and therefore cannot escape either the law of action and its reaction or the intervention of the body because deeds cannot be done without the body. Hence, true liberation and deliverance eludes him; he cannot expect to find emancipation and salvation for his Atma, which is his pure conscious 'self' and not the actual doer of any deeds, if he entangles and implicates this Atma in the vicious cycle of deeds and consequences, whether done in accordance with the guiding principles for various Varnas and Ashrams, or not.] (6).

[Note—¹*Sat-Chit-Anand*—that is, to be eternally truthful, eternally conscious, and eternally blissful, these are the auspicious virtues of the Atma. Refer also to Canto 2, verse no. 23 of the present Varaaha Upanishad as well as to Rudra Hridaya Upanishad, verse nos. 26-27; Panch Brahm Upanishad, verse no. 41 of the Krishna Yajur Veda tradition.

²There are four *Varnas* or classes, and four *Ashrams* or sections or phases of life in Hindu society—viz. Brahmins, Kshatriyas, Vaishyas and Shudras are the four Varnas, and Brahmacharya (the 1st phase of life as a celibate, or student life), Grihastya (the 2nd phase as a householder), Vanprastha (the 3rd phase when the person stops being active in worldly affairs and heads for pilgrimage or forest) and Sanyas (the 4th and last stage when he takes to complete renunciation and prepares to welcome death).

Each has a set of long elaborate laws and regulations that govern its working; each has its list of sanctioned duties, religious sacraments and ceremonies, deities and rituals, dos and don'ts. These are collectively called the Dharma of that particular Ashram and are used as yardsticks, benchmarks or gold standards to judge a person

and decide if he has led an auspicious and noble life or not, what rewards or punishments and the subsequent end he deserves, whether he goes to hell or heaven, whether he rises or falls, what new life forms he would get in his next birth, and whether he is able to please the Gods who preside over his Ashram or not. So an ordinary man is engrossed in fulfilling these long demands all his life so much so that he has no time to think beyond them and decide things for himself whether what he is doing is really worth the effort and would really and truthfully give him spiritual liberation, deliverance, emancipation and salvation, whether merely spending the entire life adhering to the Dharma of the Ashram would give him eternity and peace and bliss that he so assiduously and urgently seeks.

Usually people think that by merely following the numerous tenets and doctrines of the Ashram they belong to in a sincere and diligent manner they would find Mukti or Moksha for themselves which would provide them eternal bliss and happiness—but this is a fallacious thinking and a grave error of perception. They miss the intent of the main teaching of the scriptures and their hidden meaning; they simply go about their lives like a machine in a factory floor without realising that they are surreptitiously and unawares being chained to the cycle of deeds and their results. They forget that there is no such thing as a physical heaven or a better after-life where there is eternal peace and happiness and where one can aspire to go after having led an auspicious and righteous life strictly according to the tenets and doctrines of the Ashram they belong to. They do not realise that all deeds, no matter how auspicious, righteous and noble they are, have a chain of consequences that cannot be avoided. These consequences may be in the form of a good reward or as a punishment, but they have to borne nevertheless by the doer of deeds. If the deeds are good, the reward would translate into better birth in a higher clan, better life, and better facilities and opportunities for enjoying the material pleasures and comforts of the sense objects of the world in the new life. But this chain would continue endlessly, and it would never translate into ‘Mukti and Moksha’ because of the intervention of deeds, their results, the body and the world. The creature continues to oscillate between births and new births depending upon the nature of deeds done by him in a given birth. He might be suffering from torments in the current birth because of some bad deeds of the past, and he does good deeds now so as to get rid of his miseries. These auspicious deeds might mitigate his sufferings and he thinks that he has found Mukti or liberation from his miseries and torments, but this is only a temporary form of Mukti rather than a permanent one because these deeds have their own set of effects and the creature gets a new birth as the reward of these good deeds. It is this basic fault in their thinking that they continue to remain whirling in the cycle of birth and death. So we see that even good and auspicious deeds are no solution for the torments being suffered by the soul, and the true form of Mukti and Moksha is attained differently. The concept of deeds and their consequences have been dealt with in a number of Upanishads. A brief reference is as follows—

- (i) Rig Veda’s Kaushitaki Brahmin Upanishad, Canto 1.
- (ii) Sam Veda’s Chandogya Upanishad, Canto 5, Section 3-10; Canto 7, Section 21.
- (iii) Shukla Yajur Veda = Adhyatma Upanishad, verse nos. 49-60, 66; Niralambo-panishad, verse no. 11-12; Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 4/3/33, 4/3/36, 4/4/1, 5/10-5/11, 6/1/1-6, 6/2/2, 14-16, etc.; Trishikhi Brahmin Upanishad, Canto 2, verse nos. 23-26; Mandal Brahmin Upanishad, 2/4/2-3.
- (iv) Krishna Yajur Veda = Kathrudra Upanishad, verse no. 13, 20-26; Varaaha Upanishad, Canto 2, verse no. 12, 48, Canto 4, verse no. 35; Rudra Hridaya Upanishad, verse no. 35; Shwetashwatar Upanishad, Canto 4, verse no. 7, and Canto 6, verse no. 3; Sarwasaar Upanishad, verse no. 6; Taittiriya Upanishad, Valli 2, Anuvak 6; Katho-panishad, Canto 1, Valli 1, verse no. 20, and the whole of Canto 1, Valli 2 right up to Canto 2, Valli 3; Skanda Upanishad, verse no. 7.

True form of Mukti (liberation and deliverance) and Moksha (final emancipation and salvation for the soul) is obtained when the chain of deeds and their consequences is broken. This is possible only when the wise and enlightened man realises that his 'true self' is the pure conscious Atma and not the body, that the deeds are done by the body and not the Atma, that the Atma is a separate entity vis-à-vis the body, and that the body is limited by its physical grossness, is perishable and mortal as compared to the Atma which is ethereal, eternal, infinite and immortal. So, when he breaks free from delusions that had made him think on the contrary, when he overcomes ignorance about spiritual truths, when he becomes wisened regarding the great axiomatic maxims as espoused and expounded by the Upanishads, he becomes 'self-realised' in as much as he has come to be aware of the facts regarding what constitutes true Mukti and Moksha, and how to attain them.

Therefore, a wise and erudite man who has correctly applied his intellect to read, hear and interpret the Upanishads in the correct way and in the correct perspective comes to realise that attempts to seek peace and eternity by involving himself in doing deeds and seeking happiness and peace in the outside world, which unfortunately is perishable and a treasury of miseries itself, is hogwash and cheating one's own self. He must understand that true peace and eternity rests nowhere else but inside one's own self. There is no thing as a God somewhere in a distant heaven, there is no heaven in the first place, and there is no after-life and no better or worse life in the real sense. It is what one makes of one's life that it becomes better or worse as these are relative terms.

A careful reading and analysis of the scriptures makes him wisened to the eclectic truth about 'God' and he realises that the Divinity that he intends to worship and honour and please by doing so many rituals and observing so many sacraments and obeying rules of the Ashram or Varnas to which he belongs is to be found nowhere outside but in his own bosom as his pure conscious 'self' known as the Atma which is not only his true self but also the supreme Brahm, the Supreme Being, himself personified. He understands that this Atma does not do anything, and that whatever is done is done by the body with which the Atma is not related except for the fact that the body is its temporary habitat till the time of the Atma's final liberation from its shackles. He also understands that true Mukti or Moksha is obtained when this Atma leaves this body and does not enter another, i.e. when there is no transmigration, and this is possible only when the Atma completely disassociates itself from deeds that the body does according to the sanctions of the Ashram in which it lives. As a result, when the body is shed, the Atma does not carry over any baggage of the past life and simply merges to become one with the cosmic Consciousness that uniformly pervades throughout the creation.

But it must be remembered that this eclectic awareness and enlightenment can come only when one analytically and thoroughly studies and delves deep into the hidden meaning of the scriptures, and peels off the outer shell of words and phrases into the spirit of those words. This is where the importance of 'self study' comes in under the guidance of an expert teacher and led by the wise intellect. Refer Brahm Bindu Upanishad of Krishna Yajur Veda, verse nos. 13-22.

Therefore we conclude that true Moksha or Mukti for the creature is obtained when he rises above the limitations of these four Ashrams.

The concept of eternal Mukti and Moksha have been the subject matter of discussion of many a Upanishads. Moksha and Mukti—Basically there are said to be three types of Muktis—viz. Jivan, Videha and Kaivalya. The following list summarises the Upanishads that deal with these three varieties of Muktis.

(1) Jivan Mukti—(a) Krishna Yajur Veda tradition—Sarvasaar Upanishad, verse no. 2; Varaaha Upanishad, Canto 2, verse no. 6, 15, 42, Canto 4, verse no. 21-35, 18-33, 42-43, Canto 5, verse no. 56, 59, 75-76; Yog Kundali Upanishad, Canto 1, verse no. 79-80, and Canto 3, verse no. 33; Katho-panishad, Canto 2, Valli 2, verse no. 12-13, and Canto 2, Valli 3, verse no. 4, 6-15; Akchu-panishad, Canto 2, verse no. 32-39;

Tejobindu Upanishad, Canto 4, verse nos. 1-32; Brahm/Amrit Bindu Upanishad, verse no. 5; Yogshikha Upanishad, Canto 1, verse nos. 46-47, 144, 151, 161. (b) Shukla Yajur Veda tradition—Paingalo-panishad, canto 3, verse no. 5, and canto 3, verse no. 9-11; Mandal Brahmin Upanishad, 1/4/3-4; 2/3/6-7; 2/4/5-6; Adhyatma Upanishad, verse nos. 12 and 4-47; Muktiko-panishad, Canto 2. (c) Atharva Veda—Ram Rahasaya Upanishad, Canto 5, verse no. 11-17; Annapurna Upanishad, canto 2.

(2) Videha Mukti—(a) Krishna Yajur Veda tradition—Yog Kundali Upanishad, Canto 3, verse no. 34; Tejobindu Upanishad, Canto 4, verse nos. 33-81; Sarwasaropanishad, verse no. 2; Akchu Upanishad, Canto 2, verse nos. 32-40. (b) Shukla Yajur Veda tradition—Paingalo-panishad, canto 3, verse no. 12, and Canto 4, verse nos. 7 and 15; Mahopanishad, canto 2, verse nos. 36-73, and canto 5, verse nos. 23-41.

(3) Kaivalya Mukti—It has been described in (a) Shukla Yajur Veda's Paingalo-panishad, Canto 4, verse nos. 7 and 15; Muktiko-panishad; Subalo-panishad, Canto 13, verse no. 1, and Mandal Brahmin Upanishad, Brahman 2, section 3, verse no. 1. (b) Krishna Yajur Veda's Dhyani Bindu Upanishad, verse no. 93/15, 103-106; Yogtattva Upanishad, verse nos. 14-15, 17-18; Sarva-saar Upanishad, Tejobindu Upanishad, Canto 4; Skanda Upanishad, verse no. 15.

(4) The *three paths* of Mukti have been described in Advaita Tarak Upanishad of Shukla Yajur Veda tradition, in its verse nos. 4-13.

(5) The *relationship between Mukti and Gyan* has been succinctly described in Krishna Yajur Veda tradition's Brahm/Amrit Bindu Upanishad, verse no. 5; Yogtattva Upanishad, verse no. 14-18.]

7. Such an enlightened and wise man should develop this eclectic and highly evolved spiritual view about himself—'I am the only entity that is truly happy and blissful; I am happiness and bliss personified (in my fundamental form as the pure consciousness). Therefore, there is nothing besides me that is (i.e. that gives) happiness and bliss.

There is no one more dear to 'me' than this eclectic view of my divine 'self'. In fact, the concept of 'me' being different from my 'divine Atma' is not acceptable to me. [That is, I do not subscribe to the view that my body or anything else in this world is 'me' or 'mine' accept the Atma.] (7).

[Note—Refer also to (a) Krishna Yajur Veda's Tejo Bindu Upanishad, Canto 2-4 and Canto 6; Brahm Vidya Upanishad, verse nos. 81-110; (b) Shukla Yajur Veda's Adhyatma Upanishad, verse nos. 55, 61-71; (c) Rig Veda's Atma Bodh Upanishad, Canto 2, verse nos. 1-31.]

8. Oh great sage! 'I do not become infatuated with anyone or anything so much that I have to take a birth for him or her or it'. The one who has this great way of thinking and has developed wisdom of thought, the one who has this enlightened view of the self and creation—well, it is me. [This verse has another interpretation—Those who are wise and enlightened enough to understand that the Atma, which is their true 'self' and pure consciousness, has no one with which it is infatuated because it is inherently dispassionate and detached from this external world of artificiality, are an image of the Supreme Being himself. This is because the Atma is itself a manifestation of the supreme Consciousness called Brahm. Hence, the pronoun 'me' or 'I' applies to a person who has become truly 'self' and 'Brahm' realised; he is not addressing his gross body but his own true 'self', which is the Atma and not the gross body.] (8).

9. 'I am self-illuminated'—this eclectic statement refers to the divine light emanating from the pure consciousness which is different from and has no parallel with all the other types of illuminations and sources of light known in the physical world.

How can any other form of light which has no self-existence or which is not self-reliant (i.e. any kind of worldly light or physical form of illumination which has no permanence, which has no glow and radiance of its own but depends upon some other source, which itself is transient and temporary, to get its luminosity, and therefore cannot be permanent or have any reliability) ever dare to touch or compare itself with the divine, eternal and self-generated illumination emanating from the Atma? [In other words, the Atma is a unique self-illuminated divine entity which is pure consciousness personified. Its light is self-generated and not dependent upon some extraneous source for illumination; it is like the sun which is self-illuminated unlike the moon which depends upon the light of the sun for its illumination.] (9).

10. Those who are erudite and enlightened enough to know with unequivocal certainty about the divine and exalted entity that is self-illuminated, and which needs no support to keep its self illuminated, or any external prop to support and protect its existence—only such persons are endowed with true knowledge, erudition and wisdom.

This is my (i.e. Lord Varaaha's) firm belief and assertion. [This statement is being made by Varaaha because he is the one who is preaching this Upanishad.] (10).

11. The entities which are known as the mortal world as well as the immortal world and the cause that creates a confusion about them—i.e. the entities called a Jiva (living creature), an Ishwar (God) and Maya (the powerful dynamic delusion creating powers of the Lord which has created this illusion known as the world) respectively—are not separate from the Atma, do not have any existence that is distinct from the Atma, if one takes a holistic view of this divine entity known as the Atma in its entirety. Amongst them, 'I' have an exalted and most mysterious existence. [The 'Atma' referred here is the cosmic Consciousness known as Brahm. The entire creation in all its variations and consisting of each individual unit, such as the three entities Jiva, Ishwar and Maya mentioned here, are revealed from this one single non-dual cosmic Brahm or Consciousness. Vishnu is the Viraat Purush of Vedanta, i.e. he represents the macrocosmic gross body of Brahm from which the rest of the visible and invisible creation emerged. Hence Vishnu is unique and most exalted amongst all the manifestations of Brahm. Similarly, the pure conscious Atma is a manifestation of the cosmic Consciousness in the individual creature's body. Hence, it represents the cosmic all-pervading supreme Brahm. Therefore, if Brahm is unique then Atma is also unique. In this context, the term 'I' has two meanings—one, it would refer to the Lord who preaches this great Upanishad, and two, it would refer to the self-realised person who is being preached because upon realising who is actually is he proclaims that there is no difference between the Lord and himself. It is remarkable synergy of preaching and practicing—the Lord shows in practical terms what he means. He says, in effect, that what is 'me', i.e. the Lord, is also 'you', the disciple who is being taught this Upanishad. This is because the truthful 'me' of the preacher is the same as the Atma residing in the body of the person hearing this discourse, the person addressed as 'you' in conventional terms. Hence, there is no distinction between the 'I' of the preacher as well as the one who is being preached.] (11).

12. The concept of Dharma and Karma¹ etc. and the various dichotomies and debates created around them and by them in this world causes great deal of perplexities and consternations for those who are ignorant of their true meaning and intention. It is like a veil of darkness symbolising ignorance that wraps them like a shroud. Such people are unable to see the truth as if they have been blindfolded.

Such ignorant and deluded persons cannot have any contact or touch with the self-illuminated Atma (which is their 'true self' known as the pure consciousness). Therefore, they cannot have any contact with me, the cosmic Consciousness and the ultimate Truth of creation as well. [That is, the Supreme Being and the Absolute Truth is accessible only when all darkness of ignorance is removed, and not before. Attainment of the Lord and the Truth is equivalent to attainment of self-realisation, and vice versa.] (12).

[Note--¹The *Dharma* is the righteous, noble, proper and auspicious way of doing any *Karma* or deed. But the problem is that there are many schools of thought and many benchmarks to decide what Dharma is and what Karma is. This leads to endless debates and confusions. While the 'truth' can be only one and not two, such situations of uncertainty cause perplexity and a grave sense of fear in the person. Having doubts and not being able to arrive at one irrefutable conclusion of what is the 'real and truthful' thing is a metaphor for ignorance and delusion. This is what is meant here—the very concept of having different interpretations of Dharma and Karma show that they are all misleading and erroneous to the core because there cannot be two interpretations or aspects of the same truth and reality because it is absolute and not subjected to fractionalization.]

13. This divine Atma (the pure consciousness residing in the bosom of all individuals) is a neutral witness of and for all. [That is, it stands as a mute and neutral witness to what the creature does, both with his external gross body as well as with his internal subtle organ of the mind and intellect. In other words, it is wrong to think that one can deceive the Lord (Vishnu) by being cunning enough to be able to hide from him and do things on the sly because the Lord does not reside outside but inside the very bosom of the person as his own 'self' known as the Atma. So if one tells a lie to deceive the world, he cannot cheat with the Lord residing as his Atma, and therefore the liar cannot escape punishment.]

The Atma transcends the limitations and bindings imposed by the rules and regulations designed to govern the functioning of the four Varnas and Ashrams (as described earlier in verse no. 6). It is free from all such fetters. They do not apply to the Atma. [Such limitations and rules as the ones prescribed for Varnas and Ashrams apply to the physical body and not to the Atma because it is already ethereal, taintless, exalted, eternal and sublime, and therefore it does not need to be freed from any sin or do anything good and auspicious so that its stature is further enhanced or improved from what it is at present. It is wisdom and enlightenment personified, and so does not ever behave unscrupulously, irresponsibly or irrationally so external laws and codes of conduct meant for regularizing one's behaviour and conduct need not be followed by it and do not apply to it. An entity that is inherently self-regulated and restrained needs no external means to teach these virtues to it; it does not need the bridle of the law to keep it under leash.]

Since this Atma has such eclectic, divine, sublime, glorious and magnificent virtues, anyone who understands that this Atma is a personification of Brahm, the supreme transcendental Consciousness, becomes an image of Brahm himself. [Refer verse no. 21 of this Canto 2 also. Such a person becomes one like Brahm in the sense that as no one can see Brahm in his original form but only in the form of the visible

world he has created in his image, this enlightened person's Atma is the Brahm which has revealed itself in the physical body in which this Atma lives and which is known in the external world as the concerned person's persona. An enlightened and self-realised person's behaviour, demeanours and thoughts would reflect his highly evolved spiritual state of realisation which would set him apart from others. He would be like a 'lighted candle' in a dark room, thereby personifying the light of the Sun (representing Brahm) that removes the darkness from the vast expanse of the realm. The light of his self-illuminated Atma has managed to shine through because the spiritual aspirant has been able to remove the dark veil of ignorance and delusions that surround other not-so-fortunate creatures, thereby forcing their Atma to remain mired in darkness. Thus, self-realised and enlightened men are like the lighted candle for the rest of humanity.] (13).

14. A person who has developed the inner sight of wisdom and enlightenment which enables him to carefully weigh, finely scrutinize, intelligently analyse and then convincingly determine the real 'truth' about everything visible in the form of this world based on the knowledge and benchmarks set for such purpose by Vedanta (Upanishads) is able to have a deep insight and peer behind the external façade of this visible world to see the subtle and universal existence of the 'Param Pad'¹ in it.

Such wise, erudite, sagacious and enlightened persons find liberation and deliverance from the fetters caused by ignorance and delusions pertaining to the reality of existence, and consequentially they are able to free themselves from such shackles and finally obtain emancipation and salvation for themselves—i.e. their souls² (14).

[Note--¹The *Param Pad* is the Absolute state of being, the Absolute state of existence. It is the supreme state of existence of consciousness which is regarded as being synonymous with the ultimate state in which anything can ever hope to exist, the state of perfection, truth and absoluteness. This Utopian state is the stature occupied by the only non-dual Truth in existence which the Upanishad prefer to call 'Brahm Pad', the stature of the truthful transcendental Supreme Being known as Brahm, the cosmic Truth and Consciousness.

It is a stature in which a creature reaches the supreme Lord and merges his own individual Atma with the Atma of the Supreme Being. The word 'Param' means the most exalted, supreme, greatest and the ultimate, while 'Pad' means feet, state, stature, honour, title etc. That is, the creature is honoured with the highest title obtainable in this creation in the form of salvation and emancipation of his soul. It also refers to achieving the goal of being near to his Lord. Param Pad is equivalent to spiritual utopia.

This destination is the supreme state which a spiritual aspirant aspires to achieve. It is not any physical place known as 'heaven' as such, but it is a symbolic destination whereby the soul of the individual creature reaches the citadel of spiritualism where the soul becomes one with its primary source, the supreme cosmic Soul, by merging with it. This is its final destination, and is called emancipation and salvation. The devotee reaches the destination which he aspires for. For example, devotees of Vishnu find an abode where that Lord resides, and that abode is called Vaikunth. Those who worship Viraat Purush reach Brahma Loka. Those who worship Brahm also reach Brahma Loka, but this abode is a symbolic heaven, for the worshippers of Brahm, there is no return to this mundane world as they would have merged their souls with the cosmic Soul known as Brahm.

In the realm of Upanishadic philosophy, this *Param Pad* refers to the ultimate citadel of spiritual achievement that any aspirant strives for. This is the culmination of his spiritual quest and the end of his spiritual journey. Briefly, when he has reached

this state of existence, he is deemed to have removed and eliminated all distinctions and artificial demarcations that are supposed to exist for an ordinary creature between the 'self' and the supreme Brahm. He has merged his Atma, which is his pure and truthful 'self', with the cosmic Truth known as Brahm. He has realised that 'consciousness and truth' are always and indisputably 'one' and non-dual, and therefore there cannot be any distinction between himself and Brahm. Since the entire existence has its origin in this Brahm, and since his own 'self' is Brahm personified, it follows that there is no distinction between his own self and the rest of the creatures in this creation. This mystical, eclectic and divine realisation of the ultimate paramount spiritual truth of existence removes all causes of consternations, perplexities and vexations in him that confound all the creatures in this world. Such an enlightened and truly realised person becomes calm, quiet, peaceful, tranquil and serene, for he has found the elixir of eternal beatitude and felicity which leaves nothing more to be sought. That is, he has reached the citadel of spiritual realisation which makes him liberated and delivered from the fetters of ignorance-based delusions that shackle all his other brethren to this world of artificiality and perpetual restlessness. All creatures strive to reach some 'Pad' or acquire some good designation, honour, fame and name for themselves, and this 'Param Pad' is the highest of any designations and honours that is attainable by a creature because it provides him with eternal happiness and peace.

Refer Tejobindu Upanishad, 6/43; Mandal Brahmin Upanishad, 5/1/8; Paingal Upanishad, 4/27.

²A truly wise person is one who is not swept off his feet by external appearances but understands the reality behind each instance coming his way and then determines how to deal with it. In the realm of spiritualism and metaphysics, a wise and enlightenment man would be he who understands the truth that whatever is seen or unseen are all revelation of one supreme source of existence known as Brahm. This Brahm is the origin of all that exists so much so that each unit of this creation, from the minutest to the most colossal, is a manifestation of this single entity. For instance, gold can be moulded into innumerable variety of ornaments, but a truly wise man would see the universal presence of gold in all of them and determine their value on the fact of how much gold each unit contains rather than its outer look. The external look and design of a golden ornament can be very misleading; it can be changed and the ornament given a completely new look if it is melted down and re-moulded. What does not change in it is of course the 'gold' content. Moreover, suppose the same design and shape is moulded from some other metal such as iron or copper or even brass having almost the same external glaze and shine as gold, would the buyer pay the same price for them? Definitely not, simply because there is no 'gold' in it.

Likewise, a wise and enlightened man realises that everything he sees in this world is essentially one Brahm revealed in all these forms—and nothing else. The world has any value only because there is conscious life in it, and this life is intelligent life. So, when a wise man sees and interacts with the world, he is actually seeing and interacting with the supreme Lord of creation who is sought to be worshipped by fools and ignorant people alike by doing elaborate religious rituals, fire sacrifices, repeating of endless Mantras, going on pilgrimages, doing so many exclusive auspicious deeds such as making charity, giving alms and donations, visiting shrines and serving holy men etc. when they forget in the whole exercise that they need not indulge in separate enterprises to please and worship the Lord when the latter can be very easily and conveniently served in the routine course of daily life by merely fine-tuning one's view of the world and the self—which is to see the Lord in every single unit of creation as well as inside his own self as the pure conscious Atma. With this world-view, each single deed and action would be an offering as well as service to the all-knowing, omniscient, omnipresent and all-pervading Lord, and no special efforts are needed to be made separately to please and worship him. This is the holistic view of Brahm and his worship. This highly evolved state of the mind and

intellect is called reaching the 'Param Pad'. This exalted stature is not somewhere in the sky or in a castle somewhere, but is here and now in our midst. What are needed are the vision and the sight to see this Param Pad, the exalted and divine abode where the supreme transcendental Lord dwells. Going by the timeless adage that one can reach one's target only when he sets his sight on it, a man who sets his sight on this Param Pad is the one who would ultimately reach it.

The view that this world is separate from the Supreme Being known as Brahm, that the other living being is distinct from my own 'true self', and that Brahm is to be worshipped as a holy and divine Being detached from this existence and 'me' is out of ignorance and delusions created by misconceptions about the 'truth'. Once one overcomes this ignorance, all delusions vanish, and the light of Truth and Reality shines through.]

15. The eclectic view that the gross body is a separate entity from the sublime Atma (pure consciousness) is a highly evolved and enlightened way of spiritual thinking, and it shows that the person having this view is truly wise, learned, enlightened and self-realised.

Therefore, a person who is aware of only one Truth, and that it is in the form of the Atma and not the body (i.e. who recognises the Atma as the only eternal Truth and rest as un-truth), is the person who is deemed to have obtained Mukti (liberation and deliverance from the fetters of ignorance and delusions pertaining to reality and truth of existence and life as well as about his body and his true 'self') almost involuntarily, even without his making any special effort to obtain it. Besides this, the feather in the cap is that this Mukti is available to him even while he is alive—a form of exalted existence called 'Jivan Mukti' (15).

[Note—Jivan Mukti is that eclectic state of existence in this world when a wise, erudite and enlightened man has freed himself from the fetters of ignorance about what is his truthful self as well as the world in which he lives. He realises that everything in this world is an illusionary creation of the mind and exists only as long as the mind wishes it to do so, that the 'truth' is not this material gross world or the gross body but his 'self', that his 'self' is not the body but the pure consciousness residing inside this body and that they are separate entities, that the deeds are done by the body and not the Atma, that the supreme Brahm is an all-pervading entity that is present universally in the entire creation but it is too sublime and subtle so as to be invisible to the organs of sight, called the eye, in the ordinary sense, that all deeds, though done by the body, are meant to be an offering to this Brahm that resides in the world and who controls each single action and movement of the creature in the form of the consciousness that resides in his own body, and so on and so forth. As a result, such a wise man completely disassociates himself from the deeds done by the body in this world as well as allowing himself in getting involved in the affairs of the world. He lives in this world in a dispassionate and unconcerned manner, totally oblivious of his surroundings. In short, he is as good as not living in the material world of sense objects. Therefore, he has obtained Mukti or freedom from the entanglements and endless miseries associated with humdrum life in this mundane world. He is not at all perturbed and disturbed by anything or any event; he is always happy and cheerful, contented and blissful, whether or not he even gets his daily necessities of life or his body is looked after.]

16. The supreme transcendental Divinity known as Brahm is a sublime entity which is an embodiment of such magnificent and grand virtues as, inter alia, Satya (absolute truth), Gyan (absolute knowledge and enlightenment) and Anand (absolute bliss). Brahm is beyond the reach and purview of darkness symbolising Agyan (the opposite of Gyan, i.e. ignorance and delusions).

A wise, realised, erudite and enlightened person who tastes this divine nectar effusing from the knowledge of Brahm on a constant basis—say, how can he be ever tied to deeds and their consequences? (16).

[Note—The main purpose why a man gets involved in some enterprise is to derive some gain from it, some betterment for himself and improvement in his present state. He does anything for his own comfort and pleasure, for his own good, and with the expectation that the deed he is doing would give him peace and bliss; he acquires things because those things would give him joy and happiness. He would never do things that give him pain and discomfort. But all such acquisitions are transient and temporary and so are the benefits or rewards of comfort, pleasure, happiness, joy, bliss, peace and calmness etc. derived from them for the simple reason that the material world in which they are acquired and to which they relate is itself transient, artificial, temporary and perishable. So what's the use, the man begins to wander. On the contrary, if he tastes the nectar of eternal bliss and profound peace effusing from the honeycomb of the Param Pad which he is fortunate to have accessed by self-realisation and its accompanying Brahm-realisation, he would shun the false nectar presented by the illusionary flowers of this artificial world, and therefore would no longer need to get involved in deeds which had earlier enabled him to obtain these false sources of peace and bliss. Once he has tasted nectar that has eternal value, he would shun that is temporary.]

17. You should realise how basically and inherently exalted and divine your true self is. Your 'self' is known by the phrase 'So-a-ham'¹—i.e. 'that is me'. The 'that' in this statement refers to the divine entity which is a witness for and to all the three worlds (the past, the present and the future), is characterised by the glorious virtues of Satya (absolute truth), Gyan (absolute knowledge and enlightenment), and Anand (absolute bliss) etc. (as described in verse no. 16). [In other words, the term 'So' or 'that' refers to the supreme transcendental Brahm, the cosmic Consciousness, the divine entity that possesses the three glorious virtues of truthfulness, knowledge and bliss. In a similar vein, the term 'Ham' or 'me/I' refers to the Atma which is a microcosmic representative and an image of the cosmic Consciousness that resides in the bosom of the aspirant as the 'self', and therefore possesses the same divine virtues as possessed by its parent. In fact and essence, there is no difference between them.]

Hence, you must realise the greatness of your 'true self' which has these eclectic and magnificent virtues in it. You are therefore free from all faults, taints, corruptions and shortcomings (associated with ignorant fools who aren't aware of the reality and the truth about their own selves) (17).

[Note—¹There are a number of Upanishads that deal with this spiritual concept of *So-a-Ham*—viz. (i) Sam Veda = Yogchudani Upanishad, verse no. 83. (ii) Krishna Yajur Veda = Braham Vidya Upanishad, verse no. 34, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-133; Panch Brahm Upanishad, verse no. 28.]

18. The pure, immaculate and sublime Atma that is consciousness personified is inherent to all living beings. It can be observed only by the subtle eye of wisdom and enlightenment (and not by either the physical eyes of the body or by the analytical abilities of the logical mind that wishes to have material proof of anything to be convinced that it is truthful), and not otherwise. That eternally conscious and divine Atma cannot be perceived (understood, realised, known and seen) by the eyes which are perpetually veiled by a dark shroud of ignorance and delusions.

Even as a blind man cannot see the brilliantly splendid sun although the latter is very evident and requires no proof for its existence, a man who is ignorant and deluded cannot see that sublime, self-illuminated and radiant Atma that invariably

resides in a very subtle and invisible form in the entire manifested world, being diffused in it uniformly and in a universal manner (18).

19. That which is known as 'Pragyan', or the most excellent form of truthful knowledge and wisdom, is manifested as Brahm, and the latter is recognised by the eclectic virtue and characteristic of being 'Satya Paragyan', or an entity that is marked by the highest degree of the eclectic virtues of absolute truthfulness, absolute knowledge, absolute wisdom and absolute enlightenment.

In this way by having 'Parigyan' of Brahm, i.e. by having a complete, comprehensive, all-inclusive and holistic knowledge of the absolute Brahm as described above, a mortal person becomes immortal. [This is because he would have realised that his 'true self' is not the body which is perishable and mortal but the Atma which is pure consciousness personified, and is an entity that is eternal, infinite, imperishable and indefinable. Naturally therefore a wise and self-realised man can never consider himself as mortal. He considers himself rather as Brahm personified, as the eternal Truth personified, as the cosmic Consciousness personified. Modern physical science searches for the 'truth' in material terms in this world, and when it is verified by experiments it is declared as a fact of science. Similarly, in the field of spiritualism and metaphysics, meditation and contemplation are used as tools to search for the profound 'truth' of creation, and when it is discovered the practitioner is said to be self realised. This is because such discoveries about the ultimate 'truth' are to be made by him as a solo effort, the effort of the 'self'. He is also called Brahm realised because this 'truth' is called Brahm, the supreme transcendental Truth that is absolute, unequivocal and irrefutable.] (19).

20. That Brahm which is an embodiment of eternal and infinite bliss and ecstasy, which is a fount of unbound beatitude and felicity, is indeed free from the concept of duality (which creates a lot of futile and unnecessary debates, doubts, confusions and perplexities).

Brahm is 'Nirguna', i.e. it has no attributes and physical characteristics. It is a treasury of Sat and Chit, i.e. it is an eternal fount of Truth and Consciousness.

When a self-realised person comes to know that these divine and magnificently glorious virtues of Brahm are also his own truthful virtues because his true nature, form and identity is the Atma which is truth and consciousness personified—or Brahm personified, he becomes fearless. [That is, he no longer fears from death, or being trapped by illusions and ignorance. An entity that is 'true' never changes, and an entity that is 'eternal and imperishable' never dies a physical death. He is freed from the fetters of ignorance because this fearlessness comes when he has realised that the Atma is separate from the gross body which is mortal and finite. He overcomes illusions because wisdom would teach him to look for the 'real truth' that is hidden behind the façade of misleading charms of the material world of sense objects. He realises that the Atma is the same divine entity as Brahm, and is the only truthful reality in this otherwise delusory world of misconceptions.] (20).

21. That which is pure and immaculate consciousness, that which is all-pervading, omnipresent and inherently present in all living beings as their integral part, that which is constant, steady, eternal in all phases of time, that which is absolute, wholesome, complete and lacking in nothing, that which is an embodiment of all imaginable happiness and joys as well as comforts and pleasures, that which is non-dual, single entity that is irrefutably immutable and eternally indivisible—the divine

entity which possesses such majestic and glorious virtues and magnificent characteristic is the supreme transcendental Brahm as described previously.

Those who are Brahm-realised, those who are well-versed in the true essence of the supreme divinity known as Brahm, perpetually live in a state which characterizes this realisation. [That is, once the enlightened man acquires a high stature of enlightenment bestowed upon him by becoming acquainted with the Emperor of the creation, i.e. with Brahm, he would like to live in this exalted position rather than revert back to a lowly stature from which he has risen to this exalted position after great effort. When one has got something better and superior, he would naturally not like to retrace his steps to his bad old days. So, when a man has spiritually risen to the high state of Brahm-realisation, a state which is the culmination of all spiritual endeavours because it makes the aspirant come face to face with the objective of all his spiritual efforts, he would prefer to remain there for eternity. This is what is meant here. Once a wise man has come to realise the glorious virtues of Brahm and the fact that this Brahm is his own Atma which is his 'true self', he is overcome with such a great sense of spiritual achievement and relief at having attained the goal of his eternal pursuit of truth as a means of finding liberation and deliverance for his soul that he plunges head on in the ocean of bliss and ecstasy that accompanies this realisation. Refer verse no. 13 of the present Canto 2.]

A person who knows what is being said here, who has experienced it and who has understood the real meaning of it—such a person becomes an image of Brahm; he becomes one with Brahm; he is Brahm personified. He is indeed nothing but Brahm (21).

22. For those persons who are called 'Agyanis', i.e. those who are ignorant of the reality and truth, this world is nothing but an ocean of miseries, grieving, torments and distresses. On the other hand, for those who are categorised as 'Gyani', i.e. those who are well versed with the reality and truth, the same world is in the form of happiness and joy. [That is, those who are ignorant tend to have a general negative outlook of life and the world, expecting too much from this world which itself is hollow and imaginary like the distant mirage in the desert. They hope to get some real thing, some permanent result, and some kind of sustainable reward in a world which is artificial in itself. It's like trying to reach the horizon which moves further away by every step the man takes towards it. On the contrary, a wise man knows these things before hand, so his expectations are in accordance with this wisdom and enlightened view of the reality. He knows what the real truth is and the apparent truth is, and therefore never tries to find water in the desert mirage or attempt to touch the horizon. He realises that it is simply a waste of time, energy and effort in pursuing mirages and things that are simply illusions created out of ignorance of the truth and reality. He enjoys the world like a spectator enjoys a magic show—he laughs and participates in a general way but knows that everything is an illusion. So he remains unperturbed, unaffected and unruffled by anything that happens around him.]

Similarly, for those who are blind, this world is a dark, colourless and blind alley to be in, but for those who have eyes this world is full of radiant light, vibrant colours, myriad forms and generally a brilliant and charming place to live in. [In other words, for ignorant people who lack the eye of wisdom this world is a fearsome place to live in, a place full of agonies and miseries. But for enlightened people this same world is a colourful display of Brahm's astoundingly varied contours and magical powers of vivid display. They marvel at their Lord's astounding maverick skills and instead of fretting and fuming at the deceitful nature of the things around him they

enjoy the spectacle with keen interest, remaining all the time aware that it is just that—a spectacle to be enjoyed but not to be taken for a ride by. Such a man might appear to be unconventional in his behaviour, preaching renunciation, detachment and dispassion on the one hand, and enjoying the world and appearing to be engrossed in it with full vigour. But this is only his outer façade, because internally he is completely detached and non-involved, and is enjoying the world as a spectator enjoys an interactive magic show in which he is asked to participate by the magician. For ordinary people, he is either lying or is mad.] (22).

23. A wise and enlightened man who is of the firm conviction and faith that my (Vishnu's) form as Varaaha is a divine manifestation of the Supreme Being's eternal, infinite, non-dual form that is characterised by the eclectic and sublime virtues of Sata (absolute truth), Chit (absolute pure consciousness) and Anand (absolute bliss and ecstasy; absolute beatitude and felicity)—for such a person there is no such concept as 'Bandhan', i.e. fetters and shackle that tie a man to something, or 'Mukti', i.e. liberation and deliverance from such fetters and shackles¹. [That is, they are eternally free and need not make special efforts to obtain it. This happens because such persons are able to see behind the Lord's physical form as a 'Boar' and realise that it is the supreme Lord Vishnu in this form. This is the path of true devotion and submission for the supreme Lord which paves the way for their liberation and deliverance from being perpetually remaining entrapped in this cycle of birth and death. It would also mean that they have developed the insight and the ability to peer behind the external façade of things which are apparent but not the real thing, not the whole 'truth', as in this particular case when Lord Vishnu appears to be like a boar, but actually this external appearance is not the truth about the Lord because he is the supreme Lord of creation who has no specific form of any kind let alone as a boar; the Lord is obviously not an ordinary animal such as a boar! In fact, this form of boar is one of Vishnu's countless visible manifestations, as the entire creation is an image of the Viraat Purush, the sublime, macrocosmic, all-pervading and invisible form of the Lord. It is the Viraat Purush who has revealed himself in the form of the entire visible world and all its inhabitant creatures in his own image. Therefore, all the Gods of the Trinity, such as Vishnu the protector and sustainer of creation, Brahma the creator of this visible creation, and Shiva the concluder of this creation, are manifestations of this single universal Divinity known as the Viraat Purush. This Viraat Purush is himself the gross body of the Supreme Being, the supreme transcendental Brahm who, in his desire to initiate this creation, had gradually assumed bodies that became grosser by degrees until Brahm was able to realise his wish of creating this visible world. So, Viraat Purush was the first step, followed by Vishnu and the other Gods, and finally the creature with a gross body.] (23).

[Note—¹There is another metaphysical interpretation of this verse. By saying that the physical form of the boar is not the latter's true identity, it clearly implies that a person who thinks that he has known the truth and reality by seeing only the external features and characters of world has not known the reality and the truth about it. On the other hand, a man who realises that the boar is not an ordinary animal but the Lord of creation revealed in that form, he has actually understood the truth that the Upanishads try hard to preach and emphasise. In other words, a person who realises that the pure consciousness that resides in the body of a living being, whether it is a boar or a human being, is the same divine entity that is known as the cosmic Consciousness which is universal and uniform in the entire creation, is the one who has really understood the meaning and essence of the teachings of the Upanishads, for they teach about the non-duality and universality of the Atma, also called the

universal soul. This is because this Atma is the ultimate spiritual 'truth', and truth is always one and not two if it is to remain 'true'. Such a 'truth' is called the 'Absolute Truth', and in the realm of metaphysics it is called Brahm at the macro level of creation, and Atma at the micro level. Since the gross world shows signs of conscious life because of an esoteric factor hidden deep inside it without which there would be no such thing as 'life', this 'consciousness' is synonymous with life. And since life is very much in evidence and verifiable, this consciousness is also synonymous with 'truth'.

But it is very important not to confuse issues here. This consciousness needs a gross physical body to reveal itself because it is ethereal, subtle and invisible by nature. At the same time, the gross body is merely a reflection of this consciousness residing inside it; the body is an image of the 'truth' like one sees an image in a mirror. This image is reflective of some grand and irrefutable truth, but it is not this truth itself. So, a wise man is one who ascertains the 'truth' through the medium of the external appearance of this truth. In other words, he has developed sufficient degree of wisdom and erudition that enables him to see that the physical body of the 'boar' hides the supreme soul of creation known as Brahm. This Brahm has manifested himself first as the Viraat Purush, and then as Vishnu who assumed a grosser form of the Boar so that he can physically do certain things that is not possible to do in an ethereal form.

But this knowledge must not be extended to ridiculous proportions—one should not go and embrace a boar saying that this ferocious animal is his Lord! All things made of iron are 'iron' in the true sense, but that does not mean that one calls a kitchen knife made of iron as a sword or saw because they are also made of iron. That would be height of nonsense and stupidity.]

24. It is a wise thing to regard one's true form and identity as ethereal and sublime, being an embodiment of nothing but pure consciousness. This is the unequivocal tenet, an irrefutable axiomatic maxim to be followed by all those who have a gross and physical body. [That is, one should always remember that the body is not one's true self, but it is the Atma that is the truth and the self.]

The position of the Atma vis-à-vis the body is like the sky (space) that is enclosed by the body of a mud pitcher. The Atma is the same in all the creatures irrespective of the body it assumes¹. So a wise man is he who does not impose upon this universal and uniform Atma the limiting and gross features so typical of the body. [That is, the Atma has no relevance to the body except the fact that it lives in the latter during the time it passes through this life. Once the time to leave this world comes, which ignorant people prefer to call 'death', the Atma—the real and truthful 'self' of the person—just flies off the body like a bird leaving its perch on a tree and flying off into the vast fathomless space of the sky.] (24).

[Note--¹The sky enclosed by the outer body of the clay pitcher is called 'Ghatakash'—the Akash or sky or space within the Ghat or pitcher. But when this pitcher is broken, this sky merges seamlessly with the 'Mahaakash' or the vast and infinite sky or space present outside the pitcher. In actual fact, there is no distinction between the two types of skies, i.e. the space within the pitcher and the one outside of it. The names are artificially given hypothetically to this undivided space for the purpose of study, understanding and explaining the two planes in which the sky exists. For example, there might be a breeze blowing in the sky outside the body of the pitcher but it does not affect the air inside the pitcher as is proved by the fact that a lighted candle continuously flickers in the open air or even be blown out by the gust of wind, but its flame remains steady and erect when the candle is placed inside the pitcher.

Again, even as the air inside the pitcher assumes the shape of the pitcher though essentially the air element has no shape, and the fact that the same air is given two names based on the fact whether we are talking about the space inside the pitcher (the Ghatakash) or the one outside it (Mahakash), the same universal and indivisible Atma is known by numerous names according to the physical gross body in which it lives. That is, the same Atma is known as a man or a woman, a boy or a girl, or even an old man and a young man. It is the same Atma that lives in the body of a human being that also lives in the body of all other members of the zoological kingdom.

A wise man knows for certain the universality, the uniformity, the sameness and oneness of the two types of airs in relation with the clay pitcher. So he also sees the same pure consciousness known as the Atma as being universally and uniformly present in all the creatures irrespective of the physical form of the gross body in which it lives. For instance, even amongst the same human beings we have uncountable classes, sub-classes, castes, sub-castes, races, tribes, ethnic groups, nationalities, colours of skin, religious dispensations, some distinctions based on natural geographical demarcations and others based on man-made demarcations such as districts, areas, states, countries and continents etc. But as is evident here, all are 'human beings', and one man is not a 'man' because he is rich and possesses more worldly wherewithals, while his brother a 'non-man' because he is poor and lack resources. All these external features are like the body of the pitcher; the air inside all the pitchers is the same—whatever the shape, size and colour of the pitcher, this air would always be called a Ghatakash, and not a yellow or red or small or big or rounded or square Ghatakash. Likewise, the pure consciousness is the same in all the living beings no matter what external features the body exhibits.]

25. A wise and truly enlightened man is he who treats this world, both the movable and the immovable world which is physically separate and distinctly different from his own body, as an image of his own 'self' because the outer living world has the same Atma in it that resides in the bosom of the wise man himself. In other words, the physical gross form that the world has is like the man's own gross body, and its essential principal called the Atma is the same as the Atma that lives in the body of the man viewing this world. [This happens because the world, including the man who views this world, is a manifestation of the universal Brahm, and since Brahm is one and not two, it follows that all the forms that it takes are but different forms of the same divine entity. These forms may vary externally, but internally they harbour the same Atma. It is like the case of the gold ornaments—they may vary in size, shape, design and weight, but inherently they are all the same because they all have the same element of gold in them. Even amongst the human beings, there are huge variations in physical features, colour of skin, mentality, temperament, behaviour etc. but all are classified as humans.]

This holistic view makes a wise, erudite and enlightened man think of this world in the terms of 'it is me'¹. [That is, he understands that the world that he sees outside along with all its creature is but a revelation of the Viraat Purush, the macrocosmic gross body of the Supreme Being known as Brahm. At the same time he also is aware of the fact that he himself is a manifestation of Brahm. Therefore he concludes that the world is nothing but another form of his true self—i.e. the supreme 'consciousness' that has given the man his independent identity is the one that has also given this world its independent identity. Even as the gross body of the man is not his truthful identity but only a carrier of his true 'self' which is however known as the Atma, the pure consciousness, the external world too is the carrier of the cosmic Atma hidden inside it as its truthful identity and essence. Shorn of this universal Atma, both the body of the individual and the external gross form of the world would

lose their importance, worth and relevance. A wise, enlightened and self-realised man must develop a very broad and holistic perspective of existence; one must not treat other creatures with contempt and disdain, because the same pure consciousness resides uniformly and universally in all the living beings. In other words, all have the same gene and the same blood flowing through them like siblings do. All living beings have the same Father who is none other than Brahm known by as many names as there are tongues! Refer verse no. 27 of this Canto 2 also.] (25).

[Note--¹Obviously, if we develop this grand view of creation then all the causes of strife and discord in it would vanish in a jiffy. One would immensely appreciate the grand and magnificent approach of the ancient sages and seers who envisaged this world as one unified home, and had endeavored to spread the message of universal peace and universal brotherhood. That they have been relegated to the pages of unread texts is a matter of great misfortune for the entire humankind.

The term 'movable world' pertains to all the living beings that show movement, such as animals, and the term 'immovable world' would mean all creatures that do not move but are nevertheless as living as their mobile counterparts, such as lower forms of members of the animal kingdom and all the member of the plant kingdom. Even amongst the humans, a sleeping man shows no physical movement, i.e. he is 'immovable', but this does not mean that he is not alive.]

26. A truly realised person regards himself as the universal consumer and enjoyer of everything worth consuming and enjoying because he is a personification of the ubiquitous, all-pervading, all-encompassing and omnipresent Brahm who is the cosmic consumer and enjoyer of all things that he had created all by himself. [Since there is no one other than Brahm in this world, it naturally follows that he is the 'only' consumer and enjoyer of everything. But there is a queer twist to this—and it is that whatever that is consumed or enjoyed is also a manifestation of Brahm because of the universal doctrine that 'everything in existence is Brahm'. So we come to a very unique and paradoxical proposition—that Brahm is both the consumer and enjoyer as well the entity that is consumed and enjoyed! That is why Brahm is an incomprehensible entity beyond the grasp of the mind.]

This eclectic view and outlook of creation that there is indeed some divine and inexplicable entity which has this apparently paradoxical but unique and mystical quality about itself (as narrated above) which cannot be explained or understood but is nevertheless true and a matter of reality is an acknowledgement of the presence of this indefinable Divinity known as Brahm. The conviction that 'whatever there is, is nothing but Brahm' is the exalted state of being in a Brahm-realised state of existence (26).

27. A wise and enlightened man who has become firmly convinced of and has an unwavering faith in the undisputed fact that this world is a manifestation or revelation of the ubiquitous, all-pervading, all-encompassing and omnipresent Brahm, and nothing else—for such a man, this world has no distinct and separate existence from either Brahm or his own 'self' though it apparently appears to be so. [Refer verse no. 25 of this Canto 2. The physical world appears to exhibit so many characteristics that do not fit at all with the highly exalted, most glorious divine virtues and eclectic nature of the magnificent Brahm. So how do we reconcile this obvious disparity? The answer is that Brahm has the complete array of qualities in him—right from the best called the Sata Guna through the medium Raja Guna to the lowest and meanest Tama Guna. So, in essence, Brahm encompasses everything in existence, not only the good and the best but even all that lies in between the two extremes. Even the worst is

within the definition of existence as much as is the best and therefore within the ambit of being called a revelation of Brahm. It is like the case of the water element having the same pure molecule consisting of two atoms of Hydrogen and one atom of Oxygen whether it takes up the form of water found in the ocean, the river, the well, the cloud or the dirty drain. It is the external features that surround the basic water element that makes it appear to be salty, sweet, polluted, murky or filthy. Further, since the Atma is indistinguishable from Brahm, since both are the same entity albeit existent on different planes—the Atma is at the micro level of existence while Brahm is at the macro level—it follows that if one sees everything as Brahm personified then he must also be seeing everything as Atma personified!]

Hence, a wisened and enlightened man sees the same universality, uniformity and oneness in this otherwise astoundingly diverse, varied and multifaceted world. [This is the grand philosophy of non-duality or Advaitya Vedanta that is being espoused, expounded and preached here.] (27).

28. By regarding my form (i.e. Lord Vishnu's who is preaching this Upanishad in his incarnation of Varaaha or the legendary Boar) as a manifestation of the supreme transcendental Brahm, a devotee remains free from all fetters that bind him to deeds and their consequences. [This is because this supposes that as an ardent devotee he would surrender all his deeds and their results to the Lord who is the Divine Being. Therefore the question his suffering from the consequences of deeds does not arise at all.] (28).

29. Only a wise and enlightened person who regards Brahm as having no gross body and its accompanying organs etc. and treats this ubiquitous and universal Divinity known as Brahm as being an ethereal and sublime entity that is merely a neutral witness for and of all that exists and happens in this world, only such a man can understand that this unique and most inexplicable Brahm is realizable by spiritual practices, as well as by inculcating wisdom, erudition and enlightenment. This Brahm has the eclectic virtues of being an embodiment of spiritual solace, comfort, happiness and joys. This Brahm is self-illuminated and in the form of the self-illuminated Atma (the pure consciousness) (29).

30. A person who has developed the eclectic and highly evolved universal view of creation after thorough research and having had a first hand experience of the truth of the doctrine that states that everything and everyone in this world is an image of the Atma which is also one's own true self—such a person is regarded as being a man of steady mind and intellect as he remains unfazed, unruffled and unmoved by the apparent dichotomy and disparities that are visible in the external forms of the world. [This is because he knows that these differences are only external appearances which have no truth and pith in them, and that they do not reflect the reality hidden under this external façade.]

He is regarded as a man who is most wise and learned about the truth and reality; he has witnessed the veracity of the 'truth' first hand, and he has also experienced the attendant sense of universality and uniformity first hand.

Oh Ribhu! Become wise and enlightened like this man (as described in the foregoing verses) and think in this term—'that Tattva (i.e. the essence, principle and elementary truth) is indeed me (i.e. the 'true self')'. Think that 'the essence that has been called Brahm and Atma, the fundamental principle in creation and the basic 'truth and reality' that is known as Brahm at the cosmic level and as the pure

conscious Atma at the micro level is none other than me'. [Here the word 'me' means the true 'self' of Ribhu and not his gross body. It can also mean the supreme Lord Vishnu who is preaching the sage these words of profound spiritual wisdom.] (30).

31. Hence, the notion that the world is a form of illusion and deceitful is not sustainable (because if we say that the world is a manifestation of the truthful Brahm and Atma, then it cannot be illusionary and deceitful, but ought to be real and truthful). On the contrary, the holistic and philosophically evolved view is that this world is a manifestation of the Atma (the pure consciousness)—this is a sustainable and philosophically high standard of thinking about the creation.

A person who has this eclectic and wholesome view of this world is deemed to have a holistic and all-inclusive view of it. He is neither under any bondage (of ignorance and delusions) and therefore need not find any freedom from it (31).

[Note—This verse has to be understood properly. When it is said that the 'world is an illusion' what is meant is that the external appearances are more often misleading and not the true thing. The external features by which one recognises a thing do not tell the entire reality of the actual truth about that thing; external perceptions are very deceptive and misleading. It has been repeatedly stressed in this Canto that the 'reality and truth' of this creation is Brahm and the Atma, both of which are ethereal and invisible entities. So to judge them and their nature by external visible features is hopefully inadequate and using the wrong methodology. So while the world is 'true' in as much as it is visible, verifiable and a manifestation of Brahm and the Atma, it is 'false' when one falls for its exteriors only. The obvious reason is that the outer features of the world have a multifarious and multifaceted personality wherein no two units are alike, the world is subject to changes and is perishable, whereas Brahm and the Atma are just the opposite—they are non-changeable, uniform, immutable and steady. Besides this, the world is visible, definable, has definitive attributes and a gross form, while Brahm and the Atma are invisible, indefinable, attributeless and sublime entities. Therefore, the world is not Brahm or Atma in the real sense, and hence is not the truth.

Now, if Brahm and the Atma are the 'truth', then they cannot have two forms since 'truth' can be one and never be two. Therefore, it follows that Brahm and Atma are the same truthful entity with two names depending upon the plane at which the universal Truth is perceived.

This is the reason why the same world acquires two distinct connotations for two types of people—viz. the Agyanis or those who are ignorant of the truth, and the Gyanis who are well-versed with the truth. Both of them call this world as 'true', but this word assumes separate meanings for them. Those who are Agyanis (of verse no. 22) call this world as true because they rely on its physical features that are visible and verifiable. Those who are Gyanis (of verse no. 22 again) call it as true because they see Brahm and Atma revealed in its form. While the Agyanis rely on the external features, the Gyanis rely on the hidden truth behind this external façade.

Similarly, the Agyani would call the world false and illusive because it is not able to fulfill his dreams of eternal happiness and physical pleasures, while the Gyani would call it false because it is the creation of the mind and also because it has none of the characteristic virtues associated with anything which is true—such as imperishability, eternity, infinity, stability, immutability, indivisibility, non-changeability etc.

Thus we observe that the same statement can have two completely opposite meanings which can create schism and confusion in the mind of an ordinary man.]

32. A wise, enlightened and self-realised person who discovers even for a fraction of a second, after due research and investigation, the truth that 'I' (Varaaha, the

incarnation of Vishnu, the Supreme Being) have revealed myself also in the form of his own true 'self' is so overwhelmed with euphoria that he begins to dance in ecstasy.

Such a person is sure to obtain freedom from all fetters that tie him down to the body and the world (32).

33. Such a person exclaims in extreme ecstasy of self-realisation—'I repeatedly bow to my true divine 'self' which is the eternally free pure consciousness that pervades throughout the creation, and lives uniformly and universally in all the creatures as their Atma' (33).

[Note—This verse can be read as follows:—Lord Varaaha said, 'One should repeatedly bow to my divine form which is eternal cosmic Consciousness which resides as the pure conscious Atma of all the living beings, including the spiritual aspirant himself, and it is the same cosmic Consciousness that pervades uniformly throughout the universe'.]

34. [Lord Varaaha said—] 'That (supreme transcendental ethereal Spirit known as Consciousness mentioned in verse no. 33) is you and it is me as well; it is in the form of the other Gods as much as it is the form of my own sublime and divine form. And therefore, what I am and what my other divine form as other Gods are, is also you. Indeed, there is no difference between you and me! You are eternal and I too am eternal, therefore there is no difference between two entities that are both eternal. [Since the same Consciousness prevails uniformly in all the units of creation, whether it is the immortal God or the mortal individual creature, it follows that the spiritual aspirant exults at the discovery of this eclectic universal truth declared by the Lord himself. These verses describe the non-dual aspect Brahm lauded and espoused by the Upanishads. This verse, as many others, espouses the philosophy of Advaitya Vedanta which expounds upon the eclectic spiritual philosophy of non-duality in creation, and the uniformity and universality of the pure consciousness known as the Atma.] (34).

35. Salutations to me (Varaaha) who am the Supreme Being, and salutations to you (Ribhu in the form of his Atma, his true 'self') that is personification of Shiva, the eternal and truthful Divine Being, the auspicious and beautiful One. [It is to be observed here that honour is being shown to both the preacher and the preached. This is meant to honour the Atma that is the same in both, and not their gross physical bodies.]

What do I do; where do I go; what do I accept or reject? [I need not do anything because nothing is left to be done. I go nowhere because there is no spot in creation where I am not present. I need not accept anything because I am already contented and fulfilled and have no desire or shortage of anything that needs to be fulfilled. I do not reject anything because all are equally dear to me and a part of my own self, and so it's impossible to reject one's own self. Therefore, I remain in a state of perpetual equanimity and uniformity, and I have a universal existence. I do not get carried away by anything. I am not like an ocean that gets filled by the rivers constantly pouring their million and million of gallons of water in it, nor does its water level ever drop during the severest of droughts. Since everything in existence is me and nothing but me, it follows that if I accept anything then I am accepting my own self, and if I do anything it would mean I do myself or go to my own self. All of these are incredulous propositions which are difficult to understand. Refer also to verse no. 26 of Canto 2 in this context.] (35).

36. Just like the whole world (earth) becomes one uniform body of water when it is submerged in the flood of doomsday at the end of the Kalpa (end of an era; end of one phase of creation), when the spiritual aspirant abandons the notion of having any kind of company or contact with this world—whether it is external (i.e. his interaction or contact with the outer world) or internal (i.e. his awareness of his own body as well as its happiness or sorrows, its comfort and pains)—it is only then he can expect to attain the uniformity and equanimity that comes with awareness of the ‘self’ as being the pure ethereal cosmic Consciousness and nothing else. Such a man is overwhelmed by the surging awareness of the universal Atma that removes all distinctions and barriers created by the concept of ‘this’ and ‘that’. He is able to attain me (the Supreme Being) as he has attained oneness with the Atma, the pure consciousness and the universal soul. There is no doubt in it (36).

[Note—The external features of the earth present an astounding variety of existence—there are huge mountains and hills on the one hand, and deep ravines, gorges and valleys on the other hand; there are deserts and marshy land; there are green verdant forests and barren stretches of icy glaciers; there are natural and artificial boundaries creating nations and states as well as natural ones delineated by rivers, mountains, valleys and the like; there is day in one part of the earth where people are engrossed in the cacophony of daily chores while there is night in the other part where there is no activity and people sleep. This state of affairs exist only till the time there is no deluge—because when this happens, everything gets submerged in one huge mass of water. Similarly, this world creates so many diverse emotions in a man—he is constantly being buffeted by numerous ideas and emotions, uncountable inputs from the external world, and all sorts of dilemmas and contradictory circumstances and evidences that a man faces in this world which leave him absolutely flummoxed and reeling in confusion and perplexity so much so that he is not able to decide what is the truth and what is not, what is to be done and what is to be avoided. He sees so many choices that instead of coming to a decision he gets all the more confused. The charms of the world are very enticing and hard to resist, and since they are like a desert mirage, the more a man runs behind them the farther away from him they recede.

Then there is the perpetual problem of his own body which makes its own share of demands—it needs comfort and pleasure, it has so many physical problems that constant vigil is to be maintained so as to keep it in good health and humour, for otherwise it would make life hell even for a renunciate monk.

To overcome all these upheavals the spiritual aspirant faces he is advised to remain absolutely calm and composed internally by detaching himself both from the external world of material sense objects as well as from the internal world revolving around his body. This is possible only when he begins to realise that his Atma which is his ‘true self’ is neither the gross body nor is subjected to any sufferings. This Atma does not die as it is an eternal and imperishable entity. At the same time he understands that the world has no relevance for him because it is the gross body that interacts with this world and creates so many relationships, and not the Atma. Therefore, all the restlessness and upheavals pertaining to the world are limited to the body and not his ‘self’. So why should he be worried and get perplexed?]

37. [This verse describes the chief characteristics of a truly renunciate person called a Vairagi. Refer also verse nos. 2, 4 of this Canto 2 in this context.]

A Vairagi (a renunciate and dispassionate person who has sacrificed his desires for worldly charms in order to attain spiritual emancipation and salvation) abandons all forms of contacts or companies with everything related to ‘grossness and untruth’ such as the world and the body just like a person running away from a snake

or throwing one if it is caught by mistake. [That is, he is terribly scared of this contact and treats it as dangerous as the snake. He might be entangled in it till he has not become aware of the Truth, but once this awareness comes he would not lose a single moment in discarding the world and the body.]

A Vairagi desirous of sacrificing the sensual attractions of worldly charms and the overwhelming urge for sense gratification, collectively called 'Kaam' (literally lust, yearnings, lasciviousness and passions; desire for sensual gratification and enjoyments of the material world and its juicy attractions) on the altar of nobler pursuits and higher goals of life should abandon contact with a beautiful woman just like the case when people shun a rotting corpse and go away from it at a distance because of the foul and loathsome stink emanating from it.

He abandons all the sense objects of this enchanting but entrapping and deluding material world like they were horrible poison though this world is very difficult to eliminate and shun. [That is, he would have to make conscious effort to renounce this material world. It is a difficult proposition and would require strong will and resolve.]

Such exalted persons are called 'Param Hans', literally one who is as pure and uncorrupted as the divine Swan¹, as they regard their own selves (i.e. their soul and true 'self') as an image of the supreme Lord known as Vasudeo (Vishnu the sustainer and protector of the creation, the Lord who had incarnated himself as Varaaha). With this eclectic and sublime concept of the 'self', they become spiritually enlightened and think in this term—'I am indeed Vasudeo'. [A wise and self-realised person understands that his true 'self' known as the Atma is none other than the supreme Atma of creation. It is indeed the microcosmic form of the cosmic Consciousness that pervades uniformly in all the units of creation, whether as the mortal individual living being or the immortal entities known as Gods. Refer verse nos. 34-35 of this Canto 2 above. Vasudeo is another name of Lord Vishnu, the personified Supreme Being. Hence a self-realised person develops the enlightened view that his Atma is as divine, ethereal and sublime as the cosmic Atma that lives in Lord Vishnu, i.e. there is no difference between the two. This is the great 'Advaitya' or non-dual philosophy propounded and espoused by the Upanishads.] (37).

[Note--¹The enlightened and realised person thinks of himself as a *Hans* or a Swan and feels exhilarated that he is not an ordinary man bogged down by worldly fetters, but an exalted soul that is like a Swan.

The bird Swan or Hans is considered the most pure, clean, wise, erudite and clever among the birds. It is said to eat pearls, which means it picks up and accepts only the best amid the variety of things available to it in the form of an assortment of various gems and jewels representing the dazzling charms of this world. It is also reputed to drink milk leaving aside the water content in it symbolising its ability to imbibe the essence and the best, and leave the rest aside. It is also the vehicle of Goddess Saraswati, the patron Goddess of knowledge, wisdom, intelligence, speech and learning, indicating that it bears these glorious virtues. Hence, the reference to a swan while describing a creature conscious of the vital wind or Pran passing through him means the basic, inherent and intrinsic tendency of that wisened and intelligent creature is to be the best, most pure and divine, wise, awakened and enlightened, adroit, clever and sagacious like the swan, and pick all the goodness and forsake all that is bad in this world. Saraswati rides on a swan, symbolising the creature's inborn enlightenment and excellence of his mental caliber. Symbolically, Saraswati resides in his Pran because it rides on the swan, i.e. in his heart, throat and mind—that is, his heart has purity of emotions, he speaks well of all, and his wise words are sought after by all as priceless gems of wisdom, and his mind is intelligent, discerning and

noble. A wise man is expected to pick the truth from amongst the basket of assorted charms present in this creation, and leave aside the non-truths.

The alphabet 'Ha' of the word 'Hans' is sounded by the vibration of the exhaled wind passing through the vocal cords present in the throat or the wind pipe which connects to the nose, while the alphabet 'Sa' is sounded by the root of the tongue which opens into the mouth when the breath is inhaled. Both the nose and the mouth open in the same cavity called the throat. Hence, the inter relationship between 'Ha' and 'Sa' is evident. The main objective of this Upanishad is to make the Yogi (a person who follows its tenets of meditation) aware that he is like the divine swan, but he was unaware of his own divinity and sublimity, his exalted and noble stature, till that was pointed out to him. So he must become one like a 'swan', remind himself constantly that he is like a swan, and he must not do anything or act in anyway which is not befitting his exalted and superior status which is equivalent to a wise swan.

During the twenty-four hour period covering a single day and night, a person inhales and exhales, or breathes, roughly twenty-one thousand times, because each cycle of inhalation and exhalation is equivalent to saying one Mantra 'Hans' consisting of the two syllables 'Ha and Sa' (refer Dhyānbindu Upanishad, verse no. 63).

The Dhyān Bindu Upanishad, verse no. 24 and 62-63, and the Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse nos. 131-132, Canto 2, verse nos. 9-11, and Canto 6, verse no. 20, 52-54 of the Krishna Yajur Veda; the Yogchudamani Upanishad, verse no. 82-83 of Sam Veda; the Param Hans and Hanso-panishad of Shukla Yajur Veda tradition are exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans.]

38. Such a person sees everything in this world as a manifestation of the eternal Truth. [That is, he sees the same universal and truthful Brahm in each unit of creation.]

Therefore, he accepts everything as true¹. This leads him to be convinced of the eclectic truth of the scriptural maxims and axioms that say 'I am true and truth personified', 'I am the supreme transcendental Brahm personified', and 'therefore there is nothing beyond me'. [Once he is convinced of the first eclectic statement, the other are natural corollaries. If he is 'true' then naturally he is 'truth personified' because there can be only one and not two Truths. Since Brahm is the only eternal Truth in creation, it follows that such a person must be 'Brahm personified'. And finally, since Brahm is all-pervading, all-encompassing and all-incorporating, since everything in creation had emerged from Brahm, and since Brahm forms the outer boundary of creation, it follows that nothing exists beyond Brahm, and therefore, 'beyond me', as I am Brahm personified!'] (38).

[Note--¹This observation made by a wise and enlightened man should not be confused with an identical statement made by an ignorant man who has no idea of what the 'real truth' is as he is under a thick veil of delusions. Such a man uses this particular statement made by a wise man that 'what is seen by me around myself in this world is true' as an escape route and a proof that he is not doing anything wrong by being indulgent and engrossed in pursuing this world. As is clear here, the wise man's assertion is quite the opposite of the ignorant man's—for while the wise man has developed the divine insight that enables him to penetrate and peer behind the external façade to see the subtle and sublime truth hidden imperceptibly inside, an ability that makes him see the truthful reality of this world and understand the truth of the fact that same cosmic Consciousness that resides in his own bosom as the Atma is also the Atma of the rest of the external world, and that this world is a manifestation of the Supreme Being because nothing exists that is not this Supreme Being, the ignorant man only takes the statement at its face value and finds an excuse in it to become indulgent and engrossed. This man sees only the external façade and treats it

as the much flaunted and lauded 'truth' without knowing that he is only cheating himself, that he is calling a shining piece of polished brass as gold by merely relying upon the external glaze and polish of the former that resembles that of the latter. He is a deluded man.]

39. Real 'Upvaas', literally meaning to 'fast', is the cohabitation of the individual Atma with the Parmatma¹. In this state of existence, the Atma of the individual man rises higher than its normal course in routine life and lives in an exalted state of self-realisation which brings it closer to its naturally divine, eclectic, sublime, holy and exalted form. This is the true meaning and intent of fasting, and not merely abstaining from food. [If one is not enlightened enough about the real intention and metaphysical meaning of fasting then it would only create more craving for food in him which would result in binge eating on the one hand and constant diversion of the mind to eatables even during the period of fasting. The man would be watching time so that he can grab food with the eagerness of fish taking to water. This is not the intention of fasting, and it is more harmful than being of any good. It is better to eat moderately than to fast and have the mind yearning for food.] (39).

[Note--¹The word for fasting is 'Upvaas' which has the word 'Vaas' as its component. Vaas means to dwell, to live, to reside. The first component 'Up' means 'additional, on, upper, near, close, with, by, vicinity, proximity'. Hence the composite word 'Upvaas' refers to the 'upper or higher' state of existence when the individual creature resides in close 'proximity or vicinity' of the supreme Brahm that is obtainable only upon self-realisation and self-awareness. This supreme Brahm resides not externally but inside one's own self, one's own being, one's own bosom as the Atma which has attained a higher level of wisdom and enlightenment.]

40. Those who are stupid and ignorant think that by merely making the body suffer and subjecting it to harsh rigours of a strict life they would be able to train and tame the Atma and help it to find liberation and deliverance¹. Does the snake living inside a hole in a mud-mound die if one beats the outer surface of this mound?² (40).

[Note—¹That is, some people think that the worldly tendencies of the 'self' can be controlled by putting restrictions on the body. They think that by depriving the body of its natural needs such as the need for food and drink, for sleep and work, for shelter and clothing and for such other basic comforts and needs that cannot be categorised as luxury and extravagant by any stretch of imagination they are doing some kind of great spiritual practice such as observance of austerity, doing penances, suffering for some noble cause and other such spiritually uplifting exercises—collectively called doing Tapa, then they are living in a fool's paradise. Forceful suppression of basic bodily needs and natural desires is tantamount to oppression if these desires and needs are not overcome naturally on their own by inculcating a profound degree of renunciation and detachment from getting involved in them. Such suppression is artificial Tapa and is equivalent to cheating one's own self, an exercise which leads one to no where. Rather, it would only stoke the pressure of desires and yearnings to such an extent that one day they would explode like a pressure cooker whose vent has been chocked. In their ignorance and stupidity they think that the means of spiritual liberation and deliverance is to torture the body such as by prolonged fasting and doing severe Tapa, i.e. by doing severe penance, keeping punishing vows, observing strict rules of austerity and other codes of religious laws that require prolonged sufferance of the physical body in general and causing misery for the body as a means of atonement for past sins in the hope that by inflicting pain and sufferance on the body the soul would be benefited. Nothing is further from the truth—for instead of finding peace and happiness such persons are only causing an insult to the Viraat Purush, the Supreme Being whose image this body is on the one hand, and who

resides at the same time as the immaculate and pure conscious Atma in this body. So, instead of any spiritual gain and coming closer to the Lord they actually move away from him and cause undue harassment to the 'self', the Atma, by disturbing the latter's peace and calmness. When the gross components of the body such as the organs of perception and action are agitated and uncomfortable, the subtle components such as the mind and intellect would also be agitated and in discomfort. Since the Atma lives in this body, it cannot be totally immune to all this trouble inflicted upon the body in which it lives just like the case when the house is on fire, its resident cannot sleep in peace. So the concept of making the body suffer as a means of spiritual practice is not the proper way of spiritual upliftment and liberation. On the contrary, it is counter-productive as it robs the resident Atma of its physical comfort and mental peace. This causes unwarranted diversion that distracts the Atma from its ultimate goal of finding eternal peace, happiness and bliss. It interferes in the Atma's natural state of being in a state of meditation, because physical discomfort is a great irritant during the earlier stages of spiritual practices.

²This does not happen; the snake would go deeper into the hole and retract its body to form a spiral, so no matter how much the external mound is thrashed the snake will not be harmed and would survive the beating. In fact, the thick layer of mud would act as a protective shield around it. Similarly, by torturing the body the inherent desires, aspirations, yearnings, traits, nature and temperaments of the man are not overcome; they are not at all affected. The dark veil of ignorance that has covered his mind-intellect and prevents the inherent light of wisdom and enlightenment emanating from his self-illuminated Atma from shining through is not eliminated by torturing the body. Indeed it is true that certain benefits are obtained by following this path of making the body suffer, such as doing Hath Yoga, but then when these benefits begin to bear fruits, the practitioner would be so much dazzled by his newly acquired mystical powers that instead of diverting them for his spiritual upliftment and rising to the next higher level in the path of final liberation and deliverance of his 'self' he would be swept off his feet by the fame and powers that come with any achievement, be it spiritual or worldly, and begins to enjoy the limelight of honour and praise in which he finds himself in; he begins to hallucinate and get diverted from his true path and goal in life. He would boast of his achievements and forget that he is missing the target of his painstaking efforts altogether.]

41. Those who are even certain of the axiomatic truth of the doctrine which says that 'Brahm is', i.e. that there is some unknown divine and unexplained entity which is supreme and transcendental in creation, have only a superficial knowledge of Brahm. On the contrary, those who make the honest statement 'I am Brahm' with truthful conviction and only after having actually experienced and verified the veracity of this axiomatic truth are indeed the ones who have the real and truthful knowledge of Brahm¹ (41).

[Note--¹It is crucial to understand this verse correctly and clearly. Those who have not experienced and witnessed first hand the presence of the supreme Brahm as the pure conscious Atma residing inside their own bosom have only a theoretical knowledge of Brahm. Anything that is learnt in theory but not practically verified is bound to create doubt and confusion as to its authenticity and reliability. So, even if one has learnt about the existence of some divine entity known as Brahm by study of the scriptures but has not been able to actually experience and witness Brahm's presence in practice has only a superficial and not-too certain knowledge of Brahm. Therefore, only those who have realised the truth of the axiomatic maxim by experiencing and witnessing this Brahm in their own 'self' as the Atma which is the cosmic Consciousness revealed in the gross body are the ones who can assertively and honestly claim 'I am Brahm'. Such people are firm in their conviction and faith

as compared to those who rely only on hearsay and literal texts. For the latter category of people, when they say 'I am Brahm', they are merely repeating the sayings of the scriptures like a parrot.

In other words, only those who have realised that their own 'self', the pure conscious Atma, is nothing but Brahm personified are the ones who have correct knowledge of Brahm. The rest only have a theoretical knowledge of Brahm that is not applied by them in practice. They can be thrown into a cesspool of doubts if by some remote chance some other theory comes their way which might be more convincing on the face of it. Such people are kept churning in the ocean represented by the voluminous scriptures in their search of the real 'truth'. On the contrary, when one has witnessed something first hand or experienced it directly then no matter how much others tell him about something else he would not believe it. So a man who has experienced the bliss of self-realisation first hand is more convinced of the fact that Brahm is bliss personified as compared to one who has just read about this axiomatic truth in some scriptural text.]

42. In the instant when the ascetic realises that his truthful Atma, i.e. his 'self' and pure consciousness, is the 'only thing that matters (the state of Kaivalya)', i.e. when he realises that there is nothing spiritually true and real and worthy of attention except the Atma, it is in that instant that he is deemed to have obtained 'Jivan Mukti', i.e. he has become free from all the fetters that had been shackling him to ignorance and delusions even while he lives like an ordinary person having a gross body that lives in, interacts with and is surrounded by the material world of sense objects (42).

43. When this concept that 'I am Brahm personified' is firmly established, when it is firmly ingrained in the conscience of the ascetic, when he is fully convinced of its veracity and authenticity, and when the knowledge of this axiomatic truth is firmly and irrefutably established in his mind beyond any iota of doubt, it is only then that this knowledge can become an instrument for obtaining Moksha (emancipation and salvation). [Otherwise the ascetic would doubt whether or not he is following the correct path.]

On the contrary, those people whose mind and intellect are mired by such deluding notions as 'this is mine' and 'that is not mine' are indeed ignorant of the reality and truth. [They are totally ignorant of the eclectic concept of non-duality and the metaphysical philosophy of oneness and uniformity of creation. Since the same Brahm has revealed himself as 'this' and 'that' as well as 'me' and 'you', then the question of an entity being 'that' and 'this' does not arise in the first place, and therefore the concept of 'this belongs to me' and 'that does not belong to me' has no locus standi.] (43).

44. 'This is mine' or 'this belongs to me'—this notion is the root cause of all forms of longing, attachments, attractions and infatuations with the material things of this world as well as all a progenitor of all forms of relationships that an aspirant develops with others in this world. This erroneous view causes all types of fetters that tie him down to this world; it is entrapping and shackling. On the contrary, 'nothing belongs to me'—this concept is a highly evolved way of thinking and it leads to indifference, detachment and renunciation. This eclectic and wise view leads to automatic breaking away of all fetters that shackle the spiritual aspirant to this world; it paves the way for his ultimate emancipation and salvation.

Therefore, the person who has achieved the exalted state of detachment and equanimity as mentioned herein above should not worry at all either about the

external objects of the material world or about the inner traits and temperaments that are inherently present inside him. [That is, he should not be disturbed at all by the enjoyments or pains coming his way from this external world as well as by his own nature and traits that constantly keep nagging at him. He should completely neglect them and not be perturbed by them; he should pay no attention to them. He should live in a state of exemplary equanimity and total indifference, accepting what comes naturally to him and dealing with things as and when they come his way, without getting upset if something expected is not received or something happens against expectations.]

Oh Ribhu! Discard all sorts of worries because it is an unnecessary and futile exercise; forget about having any kind of reservations, doubts, uncertainties and confusions about ‘this’ and ‘that’. Be cheerful, blissful, happy and healthy; be at peace with your exalted self (44).

45. This external world is there only because one makes a ‘Sankalp’ (literally meaning resolutions, volitions, determinations, promises, vows etc.) about it. It has its existence because the man is convinced that it is there; it is a determination of the mind which makes the man resolutely believe about the world’s existence. He has aspirations and yearnings, and then relentlessly pursues the world to fulfill them. He makes vows and promises, and then strives to keep them. He determines that there are certain things in this world that would give him happiness and comfort, and so endeavours to get them. He has expectations from this world, and when they are not fulfilled he is pained and aggrieved, he gets annoyed and excited and angry.

Hence, the world—complete with all its attractions, its captivating charms, its pains and agonies, its happiness and joys etc.—is witnessed and experienced only because one is determined to witness and experience its existence¹.

Hence, you should discard all ‘Sankalps’ which cause so much of consternation and perplexity for you, and instead find peace and stability by being firmly establishing my non-dual and truthful form in your heart² (45).

[Note—¹The term pain, sorrow, agony, happiness, joy, pleasure, comfort, contentedness, wants, desires, needs etc.—all of them are relative terms and do not have a standard bench-mark to decide what they constitute of and what their intensity is. For example, one feels the pain and grieves only because one is certain that a particular instance is the cause of pain and agony for him. The same situation might just be of no consequence to the other person. For instance, if there is a death in the family, one member is weeping uncontrollably and uncomfortably, while the other is not weeping at all, he is not affected at all. One is attracted to anything only because he thinks that it is worth having or enjoying. For instance, a sick man would loathe food which would make others salivate. A child yearns for toys which are useless for grown ups. Similarly, a man’s threshold level of tolerance would decide the severity of pain he feels, and whether he feels the pain at all or not. A given situation may upset a man, while another would take it in his stride or just overlook it and go on with his life as if nothing has happened. A particular material object might be indispensable for a man, while the other has no need at all for it. So we observe that everything related to this world has only a relative value and importance.

²That is, stop getting hallucinated and being tossed and flung around by so many Sankalps that you and your mind make about this artificial and deluding world. Instead, be steady on one ‘truth’ by abandoning all forms of ‘imaginary truths’. Avoid making futile determinations, resolutions and volitions that you have been making in relation to the world. You should rather focus your attention on my truthful form residing in your heart as the Atma, and you should be firm and unwavering in this spiritual conviction of yours. In other words, do not waste your precious time in

making Sankalps for finding bliss, peace, happiness and tranquility in the outside world, but turn inwards and find them inside your own self. Remember, your 'self' is an eternal fount of these glorious virtues, and since this fount is present within you, why do you search for it outside? Therefore, you should not even make a Sankalp to find Mukti and Moksha by involving yourself in the external world in the way of doing numerous religious exercises, reading of scriptures, doing deeds, keeping vows and fasts, going on pilgrims etc., or attempt to please the Supreme Being by such efforts. Remember that this Supreme Being is a resident of your own self as the pure conscious Atma that resides in the body itself, and hence you need not search for the Lord outside. Say, how can an entity that is present in your own bosom be found outside of your self? This verse has a profound practical import. It stresses that one should first attempt to improve himself before even hoping to find liberation and deliverance from the fetters created by negative traits and characteristics. The aspirant is expected to clean himself spiritually first before making a determined bid for emancipation and salvation, because otherwise he would be facing an uphill tread that would sag his spirits and act as a cumbersome drag on his soul. He should first improve himself and set his own house in order before attempting to improve the lot of the world.

Does this mean that he should not do good deeds or read the scriptures? No, this is not the intent here. The world is a formidably vast proposition of colossal proportions—there is no end of doing deeds and there is no limit of types of deeds one can do that come under the definition of being good, auspicious and righteous, there are so many scriptures and uncountable number of their interpretations. He would be spending a whole lifetime but not even scrap its surface so to say. The scriptures tell him that this world is a manifestation of the Supreme Being, so he goes on searching for the Lord in this world which is akin to searching for a needle in a vast ocean. As compared to this scene is the Atma or the pure conscious self of the aspirant. This Atma is the Supreme Being known as Brahm personified, and it can be very easily reached and experienced by a bit of faith, practice and resilience. So if the easy and attainable path of Mukti and Moksha is available close at hand, why should one go out to search for it in the vast and endless realm of the external world?]

46. Oh the wise one! Spend your time thinking of me (Vishnu, the Supreme Being), pondering on my words and understanding their deep import, and always remember this conversation which we are having now. Have firm faith in me and be steady in your convictions. Spend your time fruitfully in this life in this manner (46).

47. Be of the firm conviction that what is the absolute truth and existential reality here is the principle called 'consciousness'; it is nothing but consciousness, and it is wise and enlightened too.

That elementary principle called consciousness is 'me' (i.e. not my physical body but my Atma, my true self). Not only this, the entire world that I behold is also an embodiment of consciousness¹ (47).

[Note—¹When this direction of the Lord is read with verse no. 46 above, the meaning and implication becomes clear. The devotee is being advised to honour the divine principle of creation manifested as the Absolute Principal known as the 'cosmic Consciousness' when he is advised to worship Lord Vishnu. It is Lord Vishnu in his more subtle form known as the Viraat Purush who has revealed himself in the form of the vast world—both that is physically visible as well as that which is not physically seen but is nevertheless there in a subtle form. The Viraat Purush is actually the gross macrocosmic invisible body of Brahm from which the rest of the creation emerged. In

other words, the world is a metamorphosed form of the Viraat Purush, and therefore it is Brahm revealed in a physical form.

At the macrocosmic level of creation, it is the cosmic Consciousness known as Brahm that has first revealed itself as the Viraat Purush, and then assumed a slightly grosser form as Vishnu. The vast world at large is its grossest form. At the microcosmic level of creation, the same sequence is repeated in the form of the individual creature—the Atma is the consciousness known as Brahm, the gross body is the Viraat Purush or Vishnu in this form, and therefore the individual creature is a microcosm of the vast creation.

This happens as a symbolism indicative of the gradual and most imperceptible manner in which an entity that is most sublime and subtle metamorphoses into an entity that is as gross as the physical world. It is the same cosmic Consciousness called Brahm that has revealed itself in the form of each single unit of creation, and these units join together to form an immensely complex entity that is compositely known as the world. But when analyzed, the basic unit is the same consciousness that appears invariably in all the variations in which the world is known to exist.

Hence, since 'I' am an integral part of this creation as much as the rest of the creatures, my own 'self' as well as the rest of the world and all its creatures are nothing but this consciousness revealed in these individual forms. If this world appears to be 'true and real' it is because it invariably harbours this absolutely truthful, self-illuminated and self-evident consciousness at its core, and it is the latter's divine glow that is reflected in the outer transparent veil that is seen by the man in the shape of life in this external world. If the inner light of consciousness is removed, if this symbolic bulb is switched off, the world would be so dark that it won't be visible, and anything that is not visible is not treated as having any life and existence by the mind and intellect that relies on material proofs and tangible attributes or qualities to determine whether anything is true or false.]

48. There is a fallacious notion that there is a 'doer of deed' and there is some 'cause or reason why that deed is done'. This results in a situation where there is an existence of deeds¹. [When a man does anything, there must be a cause for doing it. The actual activity of doing certain thing arises out of this thinking—that certain thing must be done in order to fulfill some obligations. This presumes that it is 'me' who must do the deed in order to fulfill 'my' obligations, and that the deeds done would help 'me' to fulfill them. The man thinks that the deeds are being done by him because he expects some result or reward from these deeds. This is fundamentally erroneous because the 'doer' of deeds here is the gross physical body of the man and not his 'true self', the Atma, which is merely a neutral inhabitant of this body and a mute observer of the deeds done by the latter. Again, the cause arises because the man thinks that this world is true and real because the deeds are done in a physical world involving a physical body. He believes that the particular deed would help him reach his goal, and then he would enjoy its fruits. He forgets in the process that the world is an imaginary creation of the mind which has made so many imaginary 'Sankalps' relating to it (refer verse no. 45 in this context). The world has no substance in it just like the water in a mirage having no reality; it is imagined. The doer is not the 'self', the cause is imaginary, and the actual activity of doing the deed is also being implemented in an artificial world. So the entire chain consisting of doer of deed, the objective of doing the deed, the cause for which it is being done, and the medium in which it is being done is delusory and non-existent. Therefore, a wise and enlightened man does not allow himself to be unnecessarily dragged into a quagmire of deeds and their consequences because he realises that he is not the doer and therefore is not to be bothered by this chain.]

Therefore, you should develop total indifference towards the deeds—as they are being done by some entity which is distinct from ‘you’, because your true ‘self’ is the Atma and not the gross body that is actually doing any deed; the deed is being done in futility out of imaginary causes, and is being done in an equally imaginary world. This eclectic view would help you to cultivate total detachment and dispassion towards the deeds and everything associated with them (48).

[Note—The Niralambo-panishad of Shukla Yajur Veda, in its verse no. 11-12 describes the concept of Karma. The Trishikhi Brahmin Upanishad of Shukla Yajur Veda tradition, in its Canto 2, verse nos. 23-26 defines what constitutes of true ‘Karma Yoga’. The Mandal Brahmin Upanishad of Shukla Yajur Veda, 2/4/2-3 describes the philosophy of Deeds. The Adhyatma Upanishad of Shukla Yajur Veda tradition describes the concept of doing deeds and its effect on the spiritual liberation or bondage of the creature in fine detail in its verse nos. 49-60. The concept of Kriti or Karma has also been elaborately described in Chandogya Upanishad, canto 7, section 21 of Sam Veda tradition.

The concept of Karma Yoga has been described in detail in note to verse no. 35 of Canto 4 of this present Varaaha Upanishad.]

49. The lamp of enlightenment relating to the subject of the ‘Atma’ (i.e. the cosmic Consciousness and the absolute Truth behind the external façade of apparent truth) which has been lighted by a deep study of the Vedas, how can it be blown away so easily?

Discard the fallacious thinking or knowledge that this world ‘has an existence’ which is separate from the Atma. Become freed from all the delusions and tainting affects of ignorance in this regard. This will help you to become free from all confusions and doubts in this matter. [That is, the world has no separate existence from the Atma. As has been pointed out in verse no. 47 above, if the Atma were to be removed from this world, the latter would cease to have any existence. The world has any importance and relevance because it has the Atma present in it. Another example is this—a man’s body is useful only as long as there is life or consciousness in it, for as soon as the consciousness or vital life forces leave it, such as for example at the time of death, the body begins to decay and disintegrate on its own, emits a foul smell, and has to be disposed of immediately. The same body that had its existence for so many long decades, the body that built bridges and fought battles, has been rendered so incompetent and worthless now that it has to be carried by others even for disposal! What a paradox, and what more proof do one need of the importance of the Atma.] (49).

50. Be firmly convinced about the truthful existence of and be devoted to the only principle element called ‘consciousness’ in creation that resides honourably enthroned in your inner self (as your Atma, your ‘true self’). [This is because this Atma is Brahm personified; it is the Supreme Being revealed.]

Just like the two forms of hypothetical skies called ‘Ghataakash’ (the sky or space inside a hollow pitcher) and ‘Mathakash’ (the space within the walls of an abbey or monastery) are not distinct from the ‘Mahakash’ (the vast sky present everywhere outside the two enclosed spaces mentioned here), you should also discard artificial distinctions and imaginary separations that has been created about the universal ‘truth’ in this world, and instead become firmly and steadfastly established in this truthful consciousness residing in your own bosom because it represents this universal truth. [That is, you should not treat yourself as someone different from this consciousness; you must not be deluded into thinking that the term ‘you’ applies to

your body or anything else that is not the conscious Atma. By applying the logic of the three forms of skies mentioned herein above, you must be convinced that this not only applies to you but to everything else in this creation around you. In other words, the Atma that resides in your body is the same as the Atma that resides in the body of your neighbour, and therefore do not treat him as someone else who is either your friend or your enemy. You must develop the highest level of equanimity and evenness in your outlook towards this world. This will give you eternal stability and peace.] (50).

51. The existence of two units of creation—viz. the Jiva or the living being, and Parmatma or the Supreme Being, the Lord of the Jiva—have been artificially imagined in my eternal and infinite form that is like the ‘Chidakash’, the sky which is uniform, immutable, indivisible, eternal, always present everywhere, all-encompassing, all-inclusive, infinite, imperishable and truthful. [That is, as it is impossible to demarcate the sky into different segments separated by metes and bounds by making artificial boundaries and then imagining that one form of the sky enclosed by one boundary is different from the other sky present outside of this boundary or inside another enclosure like the case of the Ghatakash and the Mathakash, it is also similarly imagined that the Parmatma and Jiva are distinct entities. It is a fertile imagination of the mind that they are different and separate as much as it is an imagination that the inherently immutable and indivisible sky can be fractioned in the form of a Ghatakash, a Mathakash, and a Mahakash (refer verse no. 50).]

The Maya (delusion creating powers of the mind that arise out of ignorance of the truth) that makes one become aware of the existence of this ‘dual’ or multifaceted nature of things in creation (i.e. which creates a false sense that there are more than one forms of truthful existence, that all of them have separate existence, and that all of them are true) is quickly shaken off once true knowledge is acquired. [And how will one come to acquire true knowledge? Of course by studying the scriptures, such as the Vedas—refer verse no. 49, and by taking the advice of the wise teacher—refer verse no. 2 of this Canto 2. In other words, just like the case that till the time a man does not know the truth about anything he might be excused of his actions and behaviour, but as soon as he is told the truth it is expected of a wise man that he would immediately rectify himself and behave properly. A person might be excused if he is ignorant of who he actually is, what is his true identity, nature and form is, what is the real implication of the term ‘me’ and ‘self’ is. But once he is enlightened about it, there is no excuse for his indulgences in the body and the world, and pretensions of being ignorant or innocent for he is expected to become aware of the truth and reality, and change his views about himself and the world at large. Only as long as he is genuinely unaware of the spiritual truth about his ‘self’ and the reality of the gross world can he be excused of mistakes, but as soon as he is made privy to the eclectic metaphysical fact that there is no difference between his truthful self and the all-pervading consciousness that is the ultimate Truth of creation, he must abandon all pretensions of ignorance and innocence, and instead take strident steps to reach his destination of liberation and deliverance from the world of artificiality and delusions. He must grasp this golden opportunity with both hands like a sinking man clasps a buoy to reach the shore.]

So, in the present case, as soon as a wise spiritual aspirant is told the truth about the non-dual nature of existence, he would discard the perception of duality caused by the distorted version of the truth presented to him by the Maya that had

been holding his mind and intellect captive till now. He would immediately chuck off all fallacious perceptions of duality in this existence, and become an ardent follower of the universal 'truth' that is inherent in the eclectic spiritual concept of non-duality or Advaitya. He ought to realise the truth of the eclectic philosophy of the Upanishad that espouse the cause of non-duality and universality of the soul (51).

52. The existence of such delusory and fallacious perceptions as 'duality' (i.e. separate existence of the Jiva and Parmatma; the Ghatakash, the Mathakash and Mahakash as being separate from the Chidakash) are known to and recognised by only those exalted and wise ones who are experts in the Vedas and are well conversant with their divine knowledge.

They recognise the fact that everything that is done at the behest or instigation of Maya (delusions and artificial notion of truth) would automatically cease when the Maya itself is eliminated by acquisition of correct knowledge of the truth and reality. Then there would be no sense of duality, and consequentially there would be no such concept of a Jiva and Parmatma—i.e. there would be no sense of dual existence. [This is a very objective conclusion—it is a matter of common sense that 'truth' can be only one and not more than one. In the event that two things appear to be true and exist simultaneously than there must be something seriously wrong somewhere—for there cannot be two truths and therefore one is an imposter. This situation does not apply to 'falsehood', for this entity can have thousands of variations and all of them would be 'truly false'! The philosophy of the Upanishads espouse and expound that the Atma and the Parmatma are the same albeit viewed at different levels of existence, the former at the level of the individual creature while the latter is viewed at the level of the creation at large. This Atma in all the living beings is the same like the water molecules in all water bodies known by whatever names is the same. This world is a visible manifestation of the cosmic Atma known as Brahm which is nothing but Consciousness personified.] (52).

[Note—The concept of Maya has been described in note to verse no. 69 of Canto 2 of this Upanishad below. Refer also to verse nos. 53, 56, 71.]

53. When this enlightened state of existence is reached, one perceives only the eternal, truthful and non-dual 'consciousness' in its absolute and purest form. He is firmly established in this eternal truth and perceives his 'self' as this pure consciousness.

An enlightened and wise person develops the high level of thinking that makes him realise the truth of the fact that just like the sky or space cannot be fragmented into separate segments (such as Ghatakash, Mathakash, Mahakash etc.) because it is inherently immutable, indivisible, universal and uniform, so is the case with the pure consciousness revealed in the form of the 'self'. This eclectic knowledge makes him identify himself with the vast world around him, and he expands his world view to include the entire creation, and stops having a limited and selfish view concerning only his body and its vested interests.

He realises that just like the sky is assigned artificial names (such as Ghatakash and Mathakash etc. as in verse no. 50), the two names given to the Atma or consciousness as Jiva and Parmatma, or as the inanimate and animate world, are also artificial and not reflective of the truthful nature of things¹. These two states of existence or being are attributed to the Atma because of the interference of Maya. The latter creates a smokescreen that hides the truth. As soon as this smokescreen of Maya is removed, the truth comes to the fore. This 'truth' is the pure and only one certainty known as 'consciousness' (53).

[Note--¹The Jiva is referred to as 'inanimate' because it has a gross body which is inanimate and inert. On the contrary, the Parmatma is referred to as 'animate' because it has the word Atma—or consciousness—in it. This leads us to a very interesting deduction—the Jiva is alive only because it has the consciousness—or Parmatma—residing inside its body. Shorn of the 'animate' Parmatma, the Jiva would be 'inanimate'.]

54. The Isha (literally the 'Lord' of creation who is the aim of all spiritual practices, here referring to the Supreme Being) had created this creation because he visualised it and then gave this visualization effect by actually entering this imaginary world created by this vision, thereby lending it credence and truthfulness. [The world was first simply a conception, not even on the drawing board of the supreme Lord. Then he drew the plan and moulded the structure of the creation. But this lacked any signs of life and appeared to be an exercise in futility. So the Lord decided to enter it and give it an instant injection of consciousness and life. And behold what he created—the colourful canvas of this vast and multifaceted creation that is so magnificent, stupendous, magical and unique that no two units of it are exactly alike. This creation is so fascinating that even after endless frame of time that has elapsed since its inception, it is still in an evolving stage, it is still unfolding!]

Similarly, the Jiva (the living being; the creature) first uses the powers of imagination of the mind to create a world, and then begins to see it in the waking state of consciousness. This creates an attraction for the magnificent array of numerous charms proffered by the world and an accompanying desire to step into the world to actually enjoy it and get a feel of it first hand. Then the creature finds that he has landed in a quagmire from which he is unable to pull himself out. The result is that now he desires a way out of it—i.e. he yearns for ways that would give him liberation and deliverance from the fetters that has tied him down in this world and trapped him perpetually. But he forgets what actually is the cause of his entrapment—i.e. he remains oblivious of the fact that it is his own mind and the numerous Sankalps (refer verse nos. 45, 48) that it makes that is responsible and at the root of creation of this world and the desire to enjoy it or remain involved or engrossed in it (54).

55. The entire creation, right from the humble reed up to the colossal and complex world made up of various combinations of elements, is an illusion that has been created by the Supreme Being (by using the maverick powers of the Maya).

The entire expanse of the creation—both in its grosser manifestation as the visible world seen during the waking state of consciousness by the Jiva (creature) to the subtler form consisting of the principle elements as enumerated by the Sankhya Shastra (one of the six schools of Indian philosophy)¹, and ending in the state when the consciousness finds its final rest (i.e. the conclusion of creation)—all are my (Lord Varaaha's or Lord Vishnu's) revelations. [That is, everything in creation is some or the other form of the supreme Brahm who had first revealed himself as the Viraat Purush at the macro level of creation, and the rest of the creation was revealed from this Viraat Purush. In fact, this creation is a visible metamorphosis of the all-pervading and all-inclusive invisible Viraat Purush. Since Vishnu is another name given to this Viraat Purush by the Purans, and since Vishnu has incarnated as Lord Varaaha who is preaching this Upanishad, it follows that the term 'me or my form' refers to the Supreme Being himself. Nothing exists that is beyond the purview of the Supreme Being.] (55).

[Note—¹*Sankhya Shastra*-- This is one of the six great schools of Indian philosophy. It was first propounded by sage Kapil as 'Shankhya Sutras'. A detailed

note on this philosophy is given as note of verse no. 13, Canto 6 of Swetashwatar Upanishad which is Chapter no. 5 of this volume.]

56. Therefore those who seek emancipation and salvation of their soul are wisely advised that they should not allow themselves to get sucked in the bog of confusions created by the concept of duality which creates a dichotomy between the Jiva and the Parmatma. Instead, they should become steady and fix their mind on the principle of non-duality which relates to the one supreme transcendental Divinity and Truth known as Brahm (56).

57. The essential principle of Brahm is 'non-duality', and this is a unique proposition which is characteristic of it. Those who do not know Brahm in this primarily non-dual form are under great delusions. How can they ever expect to find Mukti—or liberation and deliverance—from the delusions and the numerous other traps created by ignorance of the truth? How can they ever expect to find peace and happiness when they are torn between doubts and run hither and thither in utter confusion?¹ (57).

[Note—¹This is the reason why such confused and deluded people would remain churning between this world and the other world like an oscillating pendulum. They would do some good and apparently auspicious deed in the hope of pleasing the Lord but inadvertently and unknowingly get entangled in the web of deeds and their consequences as a result, something that they cannot avoid. The deed, no matter how auspicious and noble, would have its own set of results which would in turn be the cause of other set of deeds and their results. This chain continues till the last moment of the person's life, and when he dies the soul carries over this baggage into its new life. In this new life, the creature would do more deeds, either due to the prevailing circumstances or due to the cumulative effects of his past deeds done in the previous life that has moulded his natural traits and inherent temperament, tendencies, habits and thought processes that characterise his overall personality. So he would be endlessly churning and whirling in the whirlpool of deeds and consequences. He would never find liberation and deliverance from this trap unless he breaks free from this cycle. This is possible when he de-links himself, i.e. his soul which is his truthful 'self', from the activity of doing any deed at all.

Deluded people who aren't aware of the reality and the truth remain skeptical about the concept of 'non-duality' because they can see a clear distinction between two entities in the physical world. They see two separate bodies of water—for example, one is called a well and the other a pond or a river. How they can be one, they argue. But they see only the exterior forms and not the underlying inherent truth in these separate bodies of water—and the underlying truth in all these examples is the presence of 'water' in these entities, and not the external form in which this water appears as a well, a pond or a river. So, the universal truth in all living beings is the presence of pure consciousness, and no matter what exterior form it assumes this fundamental elementary truth about them would remain constant. In other words, there is no basic difference between any two given living beings, which means that they are 'non-dual', that they are 'one in essence'. This 'non-dual essence' is the same in the other person as it is in the aspirant.

Therefore, such people who do not realise that the Absolute Truth that they have been searching in the outside world, the supreme Brahm that they attempt to find in the outside world in numerous pilgrim sites, various religious and auspicious deeds, and in endless volumes of scriptural texts is not to be found there as it is secretly ensconced in his own bosom as the pure consciousness known as his Atma, should never hope to find this Truth or Brahm. They are like those stupid ones who are searching the gem in the haystack while it is here inside their own pocket—for the

supreme Brahm resides in their own self as their Atma and they endlessly and fruitlessly search for him in the world outside.]

58. This notion about the world that this is high or this is low, this is good or this is bad—say how does this matter really? [It does not matter at all.] It is like the case when a person sees a dream and becomes a king or a beggar in his dream, and when he wakes up he begins to search for his kingdom, wondering where it is, or searches for the alms that he had collected during his begging trips undertaken while he was dreaming. [This is a case of hallucination when one sees or hears or thinks or remembers of something that does not exist. What was seen in the dream was imaginary and it vanished with the dream. If a man begins to search for it in real life then it is a height of his foolishness. Likewise, a foolish man would distinguish between two situations or events or things or entities in this world because he forgets their primary and fundamental nature as being the same universal Brahm revealed in all these myriad of forms, and hence there is no real cause for distinguishing between them.] (58).

59. Those who are wise and erudite call the situation when the Buddhi, i.e. the intelligent and analytical mind (that helps to intelligently analyse anything and determine its truth while eliminating falsehoods) is submerged in or veiled by Agyan, i.e. when the Buddhi is engulfed in the darkness of ignorance and mired by and lost in the surging delusions that accompany it, as the state of existence called 'Nidra' or the metaphoric state of sleeping when a man is removed from reality and begins to dream.

When the same Buddhi is in the company of me (the Supreme Being manifested as Varaaha, the Boar incarnation of Lord Vishnu), i.e. when it is in the surroundings of light, knowledge and wisdom which I personify, say how can one be asleep in such a situation? [A man sleeps in darkness and not under the glare of the sun. And unless one sleeps, there is no question of dreaming and seeing imaginary things. Further, one does not see ghosts and other imaginary things during bright daylight; they are only seen in pitch darkness of the night. So, when a person stays in constant contact of Brahm—i.e. when he has inculcated the wisdom that the Supreme Being is omnipresent at all times under all circumstances, he would be under the so-called 'daylight' of consciousness and wisdom permanently. So there would be no darkness of ignorance and delusions surrounding him, and therefore no cause for misconceptions or distorted views of the reality to have any bearing on his thoughts. Such a man would not hallucinate and imagine things that do not have any pith and substance in them. A wise, erudite and intelligent man will not see ghosts and phantoms even in the darkness of night because he knows that they do not exist, so there is no question at all of his ever imagining them to be present in broad daylight! Likewise, an enlightened and self-realised man would never be taken for a ride by the delusions created by this artificial and illusionary world, and he would be at peace with himself upon realisation of the supreme spiritual Truth known as the pure and universal consciousness called the Atma at the micro level of creation, and its parent called the transcendental Brahm at the macro level of creation.] (59).

60. The state of exalted existence when the Buddhi, i.e. the state when the intelligent and analytical mind that helps to intelligently analyse anything and determine its truth and eliminate falsehoods is fully blooming and developed, is equivalent to the state of 'Jagrat' or the metaphoric state of being awake. [This is because a waking man does not dream and he sees things as they actually are. This 'waking state' is a metaphoric

way of saying that the creature is fully aware of the truth and reality, he is alert and vigilant, and the darkness created by ignorance and delusions do not exist.]

For me, the truthful state of 'being awake' is not the mere physical wakeful state of the body, but the state when the creature is free from all mental delusions that create numerous deformations and defects of the mind that cause all sorts of faults, errors of conception and perceptions, and other shortcomings that usually taint the creature's intellect even during the so-called wakeful state of the body. If this does not happen then for me (Lord Varaaha who is preaching this Upanishad) such a person is not 'awake' (60).

[Note—Refer Subal Upanishad of Shukla Yajur Veda tradition—9/12 and 14/1.]

61. When the Buddhi (the thinking mind which remembers and ponders and determines upon something or its different aspects relying upon the data collected and previously stored in the sub-conscious part of the brain) is freed from any external interference from the sense organs of the gross body as happens during the waking state of the latter, it is then relocated in the various Naadis (nerves of the body) and sustained by the consciousness flowing through them. It is in this state that the man dreams¹.

Therefore it naturally follows that when the mind, i.e. the subtle senses created by the sub-conscious stop flowing through the Naadis, i.e. when the sub-conscious along with all its subtle senses too goes into a hibernating state like external physical sense organ of the gross body (that need an active mind that is alert and outwardly awake, which actively receives inputs from the world and responds accordingly through these sense organs), the man would not dream² (61).

[Note--¹During the phase when the man is awake, the external organs of the body continue to receive an unbroken chain of sensory impulses from the external world, and pass them all to the brain through the network of Naadis (nerves). This data is collated and collected by the mind. Some require immediate action—such as the need for eating something when one sees something enticing or when one is hungry. There are other inputs from the world that the mind stores in the data bank or the sub-conscious that acts like a library for future referral. Some information needs intelligent analysis and is referred to the higher echelons of the brain, called the faculty of the intellect. The intellect either advises the mind with an option or reserves the order for consideration and implementation at a future date. All this continues in an ongoing process throughout the length of a man's life.

Now, when the man is asleep the external organs go on hibernation mode—they neither receive any input nor do they have to respond to any impulse. In such a state when the body is not involved and stops interfering with the working of the mind-intellect complex, the latter is freed from its cumbersome duties vis-à-vis the body and can now find the freedom and the time to act in its own world. So, during early stages of sleep when dreams occur, the mind and intellect remain very much active—but not on the physical gross plane relating to the outside world and the gross organs of perception and action of the body, but at a subtler level of the Naadis and the vital forces of life, called the Pran, moving through them. It is in this subtle state of existence of the consciousness that the sub-conscious has a greater role to play and a dominant say. This is because the mind is now freed from all the 'routine file work of the office' when the man was awake. Now the mind has the time to peep into its data bank and ponder over the collected information to think upon it. This is proved by the fact that it is very usual for a person to 'sleep over complicated matters and then come out with a surprisingly good answer or solution' that had defied all answers or solutions inspite of all his best of efforts during his waking time. Great discoveries, ideas, creative innovations and solutions to often times vexed problems of life have been made while a man had gone to sleep with them on his mind but suddenly

waking up from sleep with the answer. This is because the intelligent mind was working full time in association with the sub-conscious to come up with a solution or answer for something that had been bothering it all along.

This is also how dreams are seen. The sub-conscious plays out the things that the mind knew it is capable of doing but could not do because of the limitations imposed upon it by the gross body. During sleep, such physical restrictions are removed and the mind can fly at its will. That is why one can dream of things that he simply cannot even imagine while awake.

²The man dreams because the active mind is overtaken by its sub-conscious component while the man is physically asleep. This sub-conscious steps in when the conscious mind is dormant, and the man begins to live in a fantasy world created by the former. In this condition, the Pran or vital winds that regulate life and all activities of the body both at the gross level as well as the subtle level, continue to move subtly inside the Naadis or nerves and veins etc. The Pran would not create any movement in the gross body but it keeps the subtle body in an active state. This fact has been endorsed in Paingalo-panishad of Shukla Yajur Veda, Canto 2, verse no. 12 which says that when the creature is in a dreaming state of existence, i.e. when he is asleep, his Prans move along the various Naadis present in the body. This movement has also been described in the Dhyan Bindu Upanishad of Krishna Yajur Veda, in its verse nos. 58-60. The Brahm Vidya Upanishad of the Krishna Yajur Veda, verse no. 17 proclaims that the Prans and the Atma are synonymous with each other. Therefore, when it is said that the Prans remain active even during the sleeping stage of consciousness it is implied that the Atma is also active. So inspite of the external gross components of the body remaining inactive during the phase of physical sleeping, the internal subtle body does remains active and restless, creating what is known as the phase of dreams. In this state the man's Atma is as active as it was when the physical body was awake, the only difference is in the level in which this activity and restlessness takes place.]

62. The consciousness is freed from the buffeting effects of the restless mind during the Sushupta state, i.e. the state of 'deep sleep' when there are no dreams and the mind also goes into hibernation like the rest of the gross body. Therefore, in this state the consciousness does not see or remains aware of anything pertaining to the external world¹. It is at complete rest with itself. There is no interference of any kind that would disturb its poise and calm. It is in this state that the consciousness enjoys great bliss and happiness. [This is the reason why a man feels very refreshed and relaxed if he has a 'dream-less sleep' even for a short while as opposed to a night long sleep full of dreams.] (62).

[Note--¹This happens because during this state both the active mind and the sub-conscious mind are asleep or inactive. It is the mind that perceives this world; it is the mind that has imagined this world in the first place. During the waking state, this mind makes the consciousness 'see, hear, taste, smell and feel' things of this external world through the external organs of perception. During the dreaming state, the sub-conscious mind makes the consciousness repeat the same thing through the dream. Since the Atma or the 'true self' of the creature represented by the pure consciousness has to rely upon the mind for all these perceptions and sights of the world, when the mind retires the Atma finds its peace which it had lost due to this constant nagging and interference by its prime minister, the mind. So, if the wise man realises this fact and keep the mind permanently at bay or under tight leash, if he is successful in keeping this mischief-monger mind at a distance, he can be assured of eternal and everlasting peace even while he is awake just like the transient peace that is obtained while the body is sleeping in the deep sleep state which is beyond the dreaming state of sleep, but it is not permanent as it is short lived for soon the creature would wake

up in this world and then the peace found while he was in this deep sleep state is lost for good.]

63. A truly wise and enlightened man is he who realises that his true identity is the consciousness and therefore he sees everything like the pure consciousness sees them—i.e. he sees everything with total dispassion and in a neutral way as if they have no special qualities worth attracting his attention. He therefore treats or sees everything with stoic equanimity and a neutral disposition. He treats all equally and without any discrimination.

Such a man is indeed one like Shiva (the truthful, renunciate, auspicious, wise and enlightened Lord), Hari (Lord Vishnu, the personification of the supreme transcendental Brahm who is the Supreme Being) and Brahma (the creator). [These three Gods form the Trinity and the most senior ones in the pantheon of Gods. In other words, such a man is deemed to be most honourable and enlightened amongst all his peers and compatriots.] (63).

64. The dream that is long lasting is the cause of all hallucinations and delusory perceptions of the world. It takes a man away from the reality. Hence, a man who drags on his imaginary world of dreams shorn of any reality into the real world never finds happiness no matter how hard he tries. [For instance, if a man begins to 'day dream', if he does not get back to his routine daily life after waking up from sleep and continues to brood over things seen in the dream though he knows fully well that he is wasting his time by such thoughts as they were mere dreams and have no relevance in practical life, then such a man is deemed to be 'mentally ill'. He would never find peace because what he sees in practice has no relevance to what he saw in his dreams. For example, if a man dreams that he is a king rolling in worldly comforts and pleasures while actually he is manual labourer, and if he carries this dream into his practical life, it is clearly obvious that he will never find peace. He would be perpetually depressed and become a mental wreck. Besides this, the very fact that he saw a dream of being a king shows that he has harboured a hidden desire of being a king, because dreams are a replay of the sub-conscious mind. How can desires that are obviously impractical can ever be fulfilled or ever give peace? They would, on the contrary, snatch whatever peace the man had.]

Similarly, the material world of sense objects in which a man allows his mind to remain engrossed in for a prolonged period of time becomes the cause of all his miseries, pains and agonies (much like the case of carrying over the life and experiences of dreams into the practical life of a man).

So a wise, erudite and enlightened man should realise the benefits of the Sushupta state of existence when there is great peace and bliss, and endeavour to emulate this state even during the waking state of existence in this world. In other words, when he has woken up from the deep sleep state of consciousness into the waking state, he should remember only Brahm as the pure consciousness or the universal Truth or the one universal source of eternal peace and happiness that can give that calmness and tranquility which the man had experienced during the deep sleep state of existence known as Sushupta. [This is also called the 'Turiya state of consciousness'. This he can achieve by controlling the mind and preventing it from becoming engrossed in this world. He uses the mind in a routine manner and does not allow it to register anything in its sub-consciousness. This will pre-empt any dreams and mental aberrations.] (64).

65. Though it is well known and a established principle of metaphysics that this world is Brahm personified, but still calling it a 'world' (instead of Brahm) and dealing with this entity as a gross 'world' of material objects is not only a misstatement but a gravely fallacious and misrepresentation of the fact as well. [This is because by applying the term 'world' it is automatically assumed that there are typical attributes present in it, such as it being mortal, perishable, finite, limiting, gross, material, sensual, having duality of 'this' and 'that', good and bad, animate and inanimate, dark and light, inane and inert or lively and active etc. If it is Brahm personified, then these difference and numerous attributes cannot exist, as Brahm has none of them. So they are obviously some grave errors in perception and distortions in understanding of the world.]

It is tantamount to imposing certain characteristics and fractured views upon Brahm which the latter does not posses, and then imagining them to be real and characteristic of Brahm. So, the term 'this is a world' is artificiality which is imposed upon the basically immaculate, untainted, attributeless and unqualified entity that is universal and uniform. This divine eclectic and unique entity is known as Brahm. This Brahm is quite different from what is known as the world, and the difference would be obvious to anyone who compares the virtues of Brahm with that of the world¹.

Just like an elephant that crushes his enemy underfoot and then smells it with its trunk to be assured that the enemy is dead, when a wise and enlightened man crushes all his six enemies² which had been depriving him of his peace and stability, he is able to find steady calmness and bliss. The crushing of these enemies would only take place when he would have crushed the notion that this world exists. Once the world is eliminated, only 'one' entity is left—and that 'one' entity is known as Brahm.

Besides this point, the man also realises that although everything else in this world has been eliminated by properly controlling and fine-tuning the mind and intellect, 'he'—i.e. the man himself—is very much in existence here. No one can deny his own presence; no one can say that his 'self' is false. So he comes to the conclusion that 'he' or his 'self' is that 'one entity' which remains after the multifarious falsehoods and countless illusions created by the mind, which are collectively called the artificial world, are removed from the scene. And since the 'only one' entity that remains after the artificiality is removed is known as Brahm, it follows that the man himself is Brahm personified (65).

[Note—1The difference in the obvious virtues of Brahm and the world creates a lot of confusion in the mind of less wise and ignorant people when they are not able to reconcile between what the scriptures say and what they actually see. The scriptures assert that this world is a manifestation of Brahm, and that this Brahm is uniform, stable, unchangeable, indivisible, infinite, eternal and without any attributes. The world on the other hand depicts just the opposite characters. But this dichotomy occurs because one sees only the outer structure of the world and not the truth hidden behind this exterior. The interior and the hidden aspect of life is consciousness which might assume so many external forms according to the needs of the prevailing circumstances. This also reflects the theory of origin of species that suggests in a nutshell that over time the numerous species evolved as a result of varying and changing circumstances and the adaptation that they necessitated in the living being in order to help it survive in such situations. It would be easily understood if we take a simple example of water in different water bodies such as a well, pond, lake, river, stream, drain, ocean, cloud, ice, hail, steam, mist, vapour, moisture etc. It is obvious that all of them are essentially 'water', and the numerous names assigned to this singular element called 'water' is to distinguish one of its form from the other for practical purposes of day to day life. Likewise, the same Brahm has come to be

known by different names for practical purposes only, and there is no fundamental difference between any on these forms of Brahm.

²The six enemies of the man in his spiritual pursuit are the following—(1) problems associated with birth, (2) problems associated with growth, (3) problems associated with consequences of deeds done and actions taken by a creature in this world, (4) problems associated with gradual decay and decline of the body and its functions, (5) problems associated with old age and its attendant horrors, and (6) problems associated with the ultimate destruction and end of everything that relates to the creature. One will observe that the life of a creature is a continuous graph of sorrows, sufferings and pains of one or the other kind. It is only when the creature realises the truth of existence and who he really is that he begins to disassociate himself from the body and the world, and thus is able to break free from this seemingly interminable cycle of horrors. Refer Mudgal Upanishad, Canto 4, verse no. 6 of Rig Veda tradition as well as Adhyatma Ramayan of Veda Vyas, Lanka Kand, Canto 3, verse no. 29.

According to the Varaaha Upanishad, canto 1, verse no. 9 of the Krishna Yajur Veda tradition, there are six Urmis or faults associated with a creature. They are the following—Ashanaaye (hunger), Pipasa (thirst), Shoka (grief and sorrows), Moha (delusions), Jara (old age) and Mritu (death)—refer also Mudgal Upanishad, Canto 4, verse no. 7 of Rig Veda tradition.

There also other six faults that are considered as enemies of a man—Kaam (worldly passions, lust, desires and yearning), Krodh (anger, indignation and wrathfulness leading to spite and ill temper), Lobh (greed and rapacity), Moha (ignorance based delusions, worldly infatuations, attractions and attachments), Mada (egoism, arrogance, haughtiness and hypocrisy) and Matsarya (envy, jealousy, malice and ill-will)—refer Mudgal Upanishad, Canto 4, verse no. 4 of Rig Veda tradition.]

66. For a spiritually enlightened person who is steadfast in his truthful convictions and who has firmly established his mind in me (Lord Varaaha representing Brahm), i.e. who has fixed his attention on the Truth and remains unwavering in his faith in this Truth, it does not matter for him if the gross body is discarded now or it lasts as long as the moon and stars live. [This is because such a man knows that his ‘true self’ is not the body but the pure conscious Atma living inside it, and this Atma is eternal, imperishable, infinite and ethereal. So it really does not matter if the body is shed now or lasts for a long time.]

It is just like the case that the space of the ‘sky’ inside the clay pitcher would remain unaffected whether the pitcher is broken immediately or is kept intact for a long period of time. [This sky or space inside the clay pitcher is similar to the one present outside the body of the pitcher. So the sky element is not at all affected by this thin lining of the body of pitcher which separates the outer sky from the area trapped inside. Likewise, for a wise man, this body is only an artificial boundary between his individual ‘self’ and the cosmic ‘Self’. The principle called the ‘self’ is the same whether or not this body is present. This is a very reassuring idea which gives his mind eternal stability and peace.] (66).

67. The serpent’s cuticle that it has abandoned has no life in it; there is no snake in this cuticle whether the latter is seen outside a mud mound or inside it. Therefore, it would be highly incongruous and ridiculous to even think that there is a living snake when one sees a cuticle lying outside a mound or inside it (67).

68. Similarly, the two types of the bodies of the creature, viz. the gross external body consisting of the organs of action and perception, and the subtle inner body consisting

of the mind-intellect complex, are both like this cuticle of the snake as far as the Atma of the creature is concerned. [That is, the consciousness is a separate entity and distinct from either of the two bodies. The consciousness or Atma lives inside the body just like the snake lives inside the cuticle, but when it sheds this outer dead layer of skin it does not even look back at its former home.]

So sometimes what is apparent is very misleading. [The body shows all the unique characteristic features of life—viz. its gross part consisting of the organs of perception feels, sees, hears, tastes and smells; its organs of action make it go here and there, receive and give, reproduce and enjoy sensual pleasures, and expel waste from the body through the excretory organs; its subtle part consisting of the mind-intellect enables it to think, analyse, decide and remember etc. So for all practical purposes it appears to be the identity of the ‘living creature’, full of dynamic life and vive. This is the outwardly appearance. But is it the fact? The answer is ‘no’, for it is the Atma or consciousness residing in this outer dwelling that actually makes the body appear to exhibit all the signs of life just like the case that if a lighted lamp is covered by a translucent plastic sheet the light of the lamp would make the sheet uniformly illuminated and give the false impression that the sheet itself is aglow whereas the actual light is emanating from the flame of the lighted lamp which is concealed inside and hidden from view.]

Therefore, what you see and observe as ‘true’ in this world is actually ‘false’ and unreal, and you should discard the false impression of reality that you have had till now. This erroneous perception is due to Agyan (ignorance and false knowledge or misconceptions about anything). That is, you get a wrong impression of the reality of anything if you do not see it under the correct light of Gyan (truthful knowledge, erudition and wisdom that helps one to correctly interpret the given data).

So, when you see and analyse things under the light of correct metaphysical wisdom you would conclude that the body which you had so long believed to be ‘true’ and your ‘self’ is not so; it is false. If you analyse things properly and in the correct perspective, you would conclude that neither this gross body nor this subtle body is the ‘truth’ about yourself—i.e. you would see the truth of the scriptural maxim ‘Neti Neti’¹ (not this not this). [In other words, when you analyse things in the correct perspective you will see that what appears to be alive on the surface is not so; what appears as true is actually false. So, when you are asked to assertively say ‘yes’ to one thing as exclusively being the Atma as compared to the other thing when you know for sure that both the things are equally definable as the Atma as their essential nature is the same Atma in equal measure, then you would be constrained to say ‘no, no’, or reply ‘Neti Neti’ about the first thing as being the Atma exclusively. So, while it is true that this world is a manifestation of Brahm, but to positively assert that it is indeed Brahm would not be saying the full truth, and therefore you would be forced to say ‘Neti Neti’. This is why the scriptures, after dwelling on this subject in depth and for countless reams of paper finally declare that all definitions and criteria that one can apply on something extremely divine and holy would fail to define and characterise Brahm in entirety. Whatever is said and known about Brahm is only a ‘half truth’ which is not false but is neither the whole truth.] (68).

[Note—¹The concept of Neti Neti has been expounded upon in other Upanishads also—viz. (a) Shukla Yajur Veda’s Brihad Aranyaka Upanishad, 2/3/6, 4/2/4, 4/4/32. (b) Krishna Yajur Veda’s Tejobindu Upanishad, Cantos 4-5, and verse nos. 1-29 of Canto 6.]

69. If one does not develop the high level of wisdom and erudition that is expected of him by studying the scriptures then he would still be deluded and think that the all-pervading and omnipresent Brahm can be attained by doing certain specific auspicious deeds for the purpose (such as doing penance, observing austerities and religious vows, giving alms and donations or holding religious ceremonies, going on pilgrims and observing sacraments etc.). [That is, this person who has not understood the fundamental principle behind the concept of Brahm—that this is a unique invisible entity which is eternal, ever-present and divine that is present even inside his own self as his Atma or pure conscious soul—would try to obtain access to it by adopting so many methods as described in the numerous scriptures. Such persons forget in the process that they need not do anything external to find the ultimate fount of bliss and the source of spiritual liberation, but to search for it inside their own bosom and realise the fact that the object of their search is residing very much in their own self as their Atma, their ‘pure conscious self’. The same Brahm also resides outside their body in the entire creation in a uniform and universal way, without exception. In other words, such ignorant persons are deluded enough to treat an entity known as Brahm that is inherently divine, sublime, subtle, eternal, imperishable, infinite, all-pervading, omnipresent and ubiquitous as being subjected to the limiting effects of things that exist in this mortal and perishable material world that is gross, inane and inert under the false impression that the world depicts the true form and nature of Brahm. They do not understand that what they see is the half truth and not the whole truth. They see only the exterior of the world and think that it is Brahm; they do not have the depth of wisdom and erudition or the aptitude to see what lies behind the exterior. Hence they are deemed to be deluded and under the influence of Maya as described in verse nos. 52-53, 56 and 71 of this Canto 2 earlier.]

Proper study and understanding of the scriptures would help to overcome the lack of wisdom and erudition that has been carried down to this life from the past life as the man’s fate, destiny or lot—called ‘Praarabdh’. As result, when he develops proper level of erudition and wisdom he would be able to eliminate this illusionary and fallacious conception about Brahm, the body and the world that arises out of ignorance of the truth and reality.

In other words, he would be able to overcome Maya in all its three connotations¹ (69).

[Note--¹ *Maya* is a word which has two parts, Ma + Ya. The first half means a ‘mother; a progenitor; something that creates’, while the other half refers to the ‘notion of doubt, of either this or that; the notion marked by uncertainty’. The word ‘Ma’ also means ‘to measure, mark off, by any standard; to show, to exhibit, to display; to infer, to conclude; to be formed, built, made of’. Therefore, the composite word *Maya* refers to a situation which harbours or creates uncertainties, where it is uncertain whether what is said or understood or seen or witnessed or experienced is actually the truth or not. It is virtually the ‘mother of all confusions, doubts and perplexities’. It therefore refers to something or some situation which creates or produces perplexities, doubts and confusions, something that is not real; that which is deluding, illusionary, deceptive, mirage-like and deceitful, and is caused by the ignorance about its truth and reality; something that has no substance or pith; displays no certainty and leads to wrong inference. The term *Maya* is used to define all these complex phenomenon at once. Hence, *Maya* is a synonym used for all that is deceptive, faulty, false, deluding, ignorance-based, illusionary, imposturing, deceitful, invisible and super-natural in the sense that it defies all logic and understanding; all that which has no reality or substance inspite of appearing to be for real; all that is hollow and lacks gravity though appearing to be solid and dense. It creates hallucinations in a creature’s mind leading him to believe that what he sees is the

truth. It is the deluding and magical powers of the supreme transcendental Lord that hides the reality and creates an imaginary world of deceptions and misconceptions.

Maya is the indescribable and inconceivable cosmic power that Brahm employs to create delusions.

Maya has three basic constituent qualities. Hence it is called *Trigunmayi* (त्रिगुणमयि), i.e. one which has the three Gunas or qualities. These three Gunas or qualities are—Sata, Raja and Tama. ‘Sata’ is the most auspicious, virtuous and noblest quality in a man and raises him to a high moral and spiritual pedestal. It marks predominance of righteousness and the highest standards of spirituals and mental evolvement leading to high thoughts, noble actions and righteous behaviour. ‘Raja’ is the medium quality in a person, and it is marked by worldly passions, desires, yearnings and greed. It makes a man more worldly than spiritual. ‘Tama’ is the third and most lowly of the three qualities and is used has a synonym for darkness and evil. Obviously, ‘Tama’ means ignorance, delusions and all the forces or qualities that are evil, mean, lowly, miserly, wicked and base. They pull down a man from high pedestal and virtually dump him in the dust yard of creation to rust and decay.

These *three qualities* together, in various permutations and combinations, decide the innate nature of a man. The greater presence of ‘Sata’ makes a man nobler as compared to a high ratio of ‘Tama’ which makes him wicked, pervert and evil. Various proportions of these qualities will therefore produce innumerable varieties of creatures having different temperaments, thought processes, behaviours, demeanors and mental setup in this world.

When a man understands any ‘Truth’ after rigorously examining the ‘truthfulness’ of that truth, when he has established the veracity of facts, he believes in it more firmly and more convincingly. No matter what other people tell him about the truth being not the correct or the whole truth, he would not listen to them, simply because he has verified the facts for himself, he has witnessed the truth himself, he has logically eliminated all falsehoods to deduce that what he knows is the ‘truthful Truth’. His Truth is based on rigid and solid foundation; he is unwavering and steady in it. If he is steadfast and convinced in his knowledge, no matter how much ignorance and delusions (Maya) try to push him away from the absolute ‘Truth’, he will remain steadfast and unwavering in it. There will be no doubts and confusions in his mind.

The basic idea here is that Maya is like a transparent sheet which covers the supreme ‘truth’ in the creation. Since it is transparent, it assumes the attributes of the truth that it covers, because for all practical purposes an ordinary man is unable to see that veil because of its transparency. This is a simple way of understanding what is called ‘illusion and Maya vis-à-vis the Truth and Reality’. Maya nevertheless hides the truthfulness of the Truth, and instead lends its own attributes and characteristics to that Truth known as the ‘Nirgun Brahm’ by the Upanishads when the latter is observed through this veil, while at the same time assuming the glorious attributes of Brahm itself. So ignorant fools think that the Maya is the real thing, whereas they are actually seeing the ‘veiled truth’ as observed through this covering of Maya, because the actual ‘truth’ is hidden from view by this transparent sheet which has lend it its own colour and hue to it. As a result, that Nirgun appears to have some attributes, and it thereby becomes ‘Sagun’, or the one with attributes and characteristics, by the interference of Maya.

Mantriko-panishad of the Shukla Yajur Veda tradition, verse no. 3-8, describes Maya in substantial detail. This concept has been described elsewhere also—such as Krishna Yajur Veda’s Tejobindu Upanishad, verse no. 46 of Canto 3; verse no. 20 of Canto 4; and verse no. 12, 33 of Canto 5; Swetashwatar Upanishad, Canto 4, verse no. 10, and Sarwasaaro-panishad, verse no. 15; Paingalo-panishad of Shukla Yajur Veda tradition, in its Canto 1, verse no. 12; Maitrayanyu Upanishad, cantos 2-4 of the Sam Veda tradition.]

70. When one has realised the supreme truth of Brahm and its principle tenets, there is no difference left then between Brahm, the Lord of all and the Supreme Being, and the Jiva, the individual living being. When one has known that supreme Truth in its essential non-dual form, all sorts of Vasanas¹ are got rid of (70).

[Note—¹Refer also to Canto 4, verse no. 23.

Vasanas are the numerous attractions, desires, yearnings, infatuations and other natural inclinations of the creature that tie him to this world. Vasanas arise because a man thinks that one thing is better than the other and that he must get hold of the better choice.

Classification of Vasanas:--There are many ways to classify the Vasanas. Let us examine them one by one as follows.

(i) These *Vasanas* are of three types—viz. (a) *Lok Vasana*—this is the desire and greed for wealth, fame, sense objects of the material world, territorial gains, authority and powers, majesty, pomp and pelf etc. The Vasanas relating to the world are the various attractions and allurements that his apparently enchanting and captivating world presents to a person. It also refers to the various and endless responsibilities and obligations, real and imaginary, that a person has, or imagines he has towards this world.

Sometimes the Lok Vasanas overlaps the Deha Vasana as often they are interconnected. For example, one's 'Vasanas' pertaining to one's son, property, material wealth and other assets which a person has acquired by the efforts made by his body and which help him to get established in this world and enjoy enhanced comforts and pleasures as well as respect and honour that such acquisitions entitle him to in this physical world also come under this category of Vasanas. All such relationships that exist in this world, such as his relatives, his contacts, his friends, his peers and compatriots, along with his obligations, his contracts and his responsibilities related to them are called Lok Vasanas. It would also include all things done by him in this world to appease those who are related to him with this body.

(b) *Shashtra Vasana*—this is the desire and yearnings related to scriptures and ancient literature, such as a desire to become an expert in them and be recognised as such, the desire to study them more and more, acquiring scholarship and literal expertise in them with its accompanying fame, renown, glory, honour, respect and financial prosperity, become much sought after and acquire a wide followership based on these qualities and honours bestowed upon them by the world by the virtue of their unique abilities and expertise of the scriptures etc. But usually such knowledge is superficial, and the so-called expert of scriptures relies more on their letter rather than on their spirit, engrossing himself in endless discussions and debates leading to confusions and contradictions instead of solving them. The scriptures are vast and like a fathomless sea. Trying to realise the Supreme Truth by delving into the depths of the scriptures is like an attempt at extracting a single piece of pearl by churning the whole ocean. Though it is theoretically possible in thousand of years of continuous effort, but practically it is impossible and incredulous to even think of such a success; it is a too far-fetched notion. It is rare to find a truly wise and enlightened soul amongst worldly scholars and orators, for the latter's erudition is limited to gaining fame and name and nothing more.

(c) *Deha Vasana*—this is the insatiable desire and passion related to the gratification of the sense organs, such as becoming licentious, engrossing oneself in enjoyment of worldly sensual objects, and all other types of indulgences and gratifications. The 'Vasanas' pertaining to the body also relate to the attachments that one has with one's son, property and wealth which a person has acquired and enjoyed with his body, and the world around him—his relatives, his fame, his contacts, his friends, his obligation, contracts and responsibilities. It also means gratification of the

sense organs of the body as well as to appease those who are related to him with this body so that they continue to serve and help him and give comfort and pleasure to his body.

Now, when we talk of the Atma as pure consciousness or an embodiment of light, the question arises ‘how can we obtain the clearest perception of that reality?’ The greatest exponent of Vedanta philosophy, sage Adi Sankaracharya prescribes the following four paths — (i) discrimination between the eternal and truthful, and the non-eternal and non-truthful, (ii) renunciation of desires for sensual gratification and enjoyment of pleasures from this materialistic world, (iii) development of six divine eclectic wealth —self control, surrender, faith, forbearance, peace/tranquility and poise of the mind, and (iv) sincere desire for liberation and deliverance, because it is only then that the creature will try to find ways to achieve it.

(ii) Another classification is based on the proportion of bad or good qualities inherent in and integral to the nature of a man. Therefore, there are (a) Good Vasanas, and (b) Bad Vasanas. Now let us examine them in detail.

These qualities are called Gunas and they are three basic types as follows--(a) ‘Sat Guna or quality’ is the noble, virtuous, auspicious and good qualities present in a creature, (b) ‘Raj Guna or quality’ pertains to worldly passions, desires and ambition etc., while (c) ‘Tam Guna or quality’ is the lowest and meanest of the three qualities leading to various vices, evils, sins, perversions etc. The various permutations and combinations of these three qualities create a particular nature of an individual giving him his individuality and his special characters which are unique to him; they determine his temperament, behaviour, thought process et al. Two individuals having the same external form of the gross body —e.g. two men —might look very much alike but they vary immensely in their nature, habit, behaviour, thinking, outlook, action and deeds, wisdom and way of living. This is what is meant when it said that a creature has to roam in 84 Lakh wombs or forms of life; it is only a metaphor—it does not mean an actual, countable specific number that there are actually and physically 84 Lakh types of bodies of living beings; it only symbolically refers to the huge possibilities that are possible with these three ‘Gunās’ and their different combinations that can imaginably produce a myriad variety of creation that can be created with these three basic qualities and their various sub classes of qualities.

Satvic tendencies are the best tendencies amongst the three. They are positive qualities of service, benevolence, mercy, devotion, wisdom, holiness, piety etc. Rajsic tendencies are the second best quality which produces worldly desires, passions, selfishness, obsession, expansion etc. The Tamsic tendencies are the worst types leading to vices, perversion, delusions, deception, gloom, anger, ignorance et. al.

The *Satvic* quality or Guna is the veil covering the soul like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the Satvic desires; its removal requires the least effort. It is the foremost and the best amongst the three characteristics of a creature such as good and positive virtuous such as righteousness, creativity, noble deeds and thoughts, the positive qualities of service, benevolence, mercy, devotion, wisdom, holiness, piety etc.

The *Rajsic* quality or Guna can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with Satwic quality. Rajsic tendencies are the second best quality which produces worldly desires, ambitions, passions, selfishness, various obsessions, desire to sustain and expand etc.

The *Tamsic* quality or Guna covering the soul is like a foetus in the womb covered by the embryonic membrane—they cannot be removed easily and require diligence, effort, dedicated and careful handling requiring time and patience. It is the basest and the lowliest of the three characteristics, the worst type to possess, and is marked by such negative traits as sin, evil, perversions, immorality, vices, misdemeanors, anger, inertia, delusions, deception, gloom, ignorance et al.

The proportion of the three Gunas decides the nature, natural temperament, tendencies, habits and inclinations of the creature. For example, a person with a greater proportion of 'Satvic' (noble) characteristic will be considered nobler than a man with a greater proportion of 'Rajasic' or 'Tamsic' qualities. So we can say that sages, seers, prophets, scholars and generally enlightened persons have a high degree of 'Satvic' qualities in them; kings and householders who live a noble life are example of those with higher amount of 'Rajasic' quality in them; while sinners, killers, drunks, rowdy elements, cheats etc. are those people with higher 'Tamsic' quality in them. These Gunas have direct bearing on the personality of a man.

The first quality of Sattva is concerned with creation and enhancement of knowledge and wisdom. For this, one has to remain alert and vigilant like Brahma. The Jagrat state also corresponds to that state when the creature is awake and interacts physically with the external world, imbibes whatever knowledge and information that comes to it, gains experience, and physically reacts to that knowledge and information. Further, such people are regarded as seniors in society, and they are best depicted in the form of the old patriarch Brahma. They are awake to the harsh realities of existence and remain so engrossed in the world that they forget who they actually are, what is their true identity, and the very basic fact that what they are thinking as the real is actually not.

Next comes the Swapna state in which a man dreams, and it is a metaphor for imagination and visualization of things based on the experience and knowledge gained during the Jagrat state. In this state a man lives and does things in a virtual manner in a virtual world of dreams. He sustains and nourishes his imaginations, fantasies and conceptions in a world of dreams which is far away from the harsh realities of life in the physical world. He suffers and enjoys in his dreams, then when he wakes up, he sometimes forgets what that imaginary world was like, but at other times there have been incidents wherein he has got new insight and new inspiration while he was dreaming. This is how Vishnu sustains and nourishes the creation created by Brahma. For all practical purposes, a dreaming man appears to be in a state resembling the state of Samadhi, or a state when an aspirant is in deep meditation and engrossed in contemplation, because he remains aloof and oblivious to the external world, and remains absolutely motionless. But this state is temporary, because he would revert back or wake up to the Jagrat state. That is why Lord Vishnu, who represents this quality of Raj, is depicted as perpetually reclining contemplatively on the bed of the coiled legendary serpent floating on the celestial ocean of milk called Kshirsagar. Since without a vision and imagination one cannot grow, develop and rise, Vishnu is regarded as a maverick player of fantastic tricks in order to sustain and enhance his interests of looking after the creation. Out of these Trinity Gods, it is Vishnu who assumes so many forms and adopts so many tricks to do the needful.

The third quality of Tam is represented by Shiva, and that is why he shows certain traits which are so typical of this quality—viz. being short tempered, and destroying at the shortest notice; his external behaviour and attire also represents the excess of this lowest quality in him. The Sushupta state that he represents stands for being totally oblivious of the external world, and remaining in total bliss. This is exactly how Shiva has been depicted—he remains in a perpetual state of meditation, completely indifferent to the external world, unconcerned and detached from the attractions of the enchanting outside when he can find complete bliss inside his own bosom. The Tam quality marks the presence of ignorance in a greater ratio, and this is depicted by Shiva when he remains ignorant of the niceties of worldly behaviour, notwithstanding his exalted stature of being the greatest amongst the Gods.

The Atma subjects the *Bhoot Atma* to the 'radiation' of these 'Gunas'. These 'Gunas' are the three basic qualities present in all the creatures in different permutations and combinations. These 'Gunas' effect the 'Bhoot Atma' differently based on a number of factors—such as for example, the present status of the 'Bhoot Atma' vis-à-vis its past deeds, their cumulative affects, the caliber of its mind and

intellect, the position it occupies in the ladder of spiritual evolution, its willingness to change or subject itself to the effects of such radiation etc.

To understand how the three Gunas affect the Atma, let's take two examples—that of the red hot piece of iron glowing with heat, and the potter moulding various pots from the same clod of earth.

The concept can be understood differently also. A piece of iron, when heated, shows the heat as a 'red hot glow' which fully pervades the iron piece and becomes an integral part of it. The whole piece appears to be one whole mass of something which is red, hot and glowing. When beaten by a hammer, the iron piece bends and can be shaped into any shape. Each new shape, when heated, will show the same glow of red hot fire inside it. Similarly, the Atma provides consciousness to the creature, making it active and lively, subject to receptions of stimuli in the form of various perceptions originating in the external world and received through the organs of perception present in the gross body. The 'heated' body (i.e. the Bhoot Atma made active by the Atma) now becomes susceptible to change (from the impact of the three Gunas) much like the heated piece of iron being hammered by the hammer. The 'hammering' by the three 'Gunas' (the inherent qualities present in every creature) help to cast the individual creature into various moulds or shapes having different characteristics. Even as cold iron is not easily malleable, the creature without the infusion of life injected into it by the Atma is as good as dead and is the least malleable. Here, the allegory is simple—the creature is the iron, the glowing consciousness is the fire, the impinging 'Gunas' is the blow of the hammer, and the Atma is the iron smith.

The wheel of the potter moulds the clay into various shapes, but the driving force of the wheel is the potter. Similarly, the three 'Gunas' mould the characteristic of the creature, but the Atma is the authority, the potter in this allegory, who drives the three 'Gunas'. Just as the potter is not the wheel, the Atma is not affected by the three 'Gunas', it is just an instrument, an implement to shape the character of the creature. Again, even as a wheel is needed by a potter to give shape to a shapeless clod of clay, the Atma needs the three Gunas to mould the characters of the creatures that constitute this creation.

The concept of Gunas affecting the Atma has been elaborately dealt with in various Upanishads, especially Maitrayanyu Upanishad, cantos 2-4 of the Sam Veda tradition. Nearly all the Upanishads expound on the subject, and the chief amongst them, besides the above, are the Chandogya and Brihad Aranyaka Upanishads, an English version of which by this humble author has been published separately.

The concept that 'I', or the person's true identity, is the gross body and not the 'pure conscious soul' leads to ignorance-based ego and a sense of false pride called Ahanakar (अहंकार). When the creature is constantly under the deluding concept of 'I' being the gross body which interacts with this world, it inculcates a sense of possessiveness about the materialistic world in the creature. 'Pure consciousness' mired by ego becomes 'a conditioned consciousness' and fails to remain pure.

This is why ego and pride, called Ahankar, has been likened to a minister of the king; it directs and regulates the actions of the consciousness which, under its influence, loses its independence much like the king who depends upon his ministers for all his major decisions because it is the minister who advises and gives the basic feed back to the king to enable him to make a decision.

This 'conditioned consciousness'—working through the mind-intellect-ego combine is called, inter-alia, 'Chitta' (चित्त). The word also means 'attention and memory'. Hence, this memory acts as a referral library for the intellect. The latter falls back on it and rely on it whenever it is in doubt. The quality of books in the library guides the student; similarly, the quality of inherent tendencies stored in the library of Chitta directly affects the inputs of the intellect, and through it, the mind and successively down the hierarchy to the body and its organs of perception and action.

Although the soul has nothing to do with this command chain (i.e. paying of attention to various inputs and stimuli originating in the outside world, leading to the accumulation of data in the memory bank—the inherent and latent tendencies, passions and inclinations present in a creature (the creature's Vasanas) as well as its ego and a sense of pride (called the creature's Ahankar) that effect the thinking process of the mind and the intellect—the resultant orders issued by the intellect-mind apparatus to the body to take relevant action—the consequences and results of these action and deeds done by the body under the command of the mind and intellect—accumulation of more experience which is stored in the memory—and the chain continues), but for all practical purposes the Atma/soul, which is the true identity of a creature and pure consciousness, is deemed responsible for everything because of its sovereign nature even as a king is held responsible for all that happens in his kingdom, and he just cannot absolve himself of any and all misdeeds done by any of his subjects and subordinates on the plea that they personally should be held responsible for their actions; it is the duty of a righteous king to ensure that everything goes on right in his kingdom.

In Mukti-kopaniṣad, canto 2 of the Shukla Yajur Veda tradition, Lord Ram explains to his most ardent devotee, the wise and enlightened Hanuman the concept of Vasanas and how to purge and control them in order to attain emancipation and salvation. The Lord advises Hanuman here to delineate this conscious soul from the rest of the chain and break the nexus between them so as to allow the glory of the pure consciousness of the soul to shine through. The enlightened soul is akin to the lighted wick of a candle, while the layers of Vasanas are like the sheets of plastic—some black, some colourless and others colourful—surrounding the light emanating from the candle. So, removal of the Vasanas is like removing the various veils from around the candle so that its light can shine brilliantly through in all the directions and slice through the darkness of the room and illuminate all the corners of it.

Generally speaking, the drag of Vasanas and Vrittis (i.e. inherent tendencies, notions, innate habits, desires, yearnings etc.) of a creature, which create a hindrance in its contact with the pure self, can be overcome by the following four methods:- (i) Method of persuasion—the creature tries to convince itself through reasoning, discrimination, self analysis and gentle prodding that its true identity is not the body but the soul or Atma which is the real and truthful self. (ii) Method of purification—the creature loves itself so much that its mind is blocked from all other love. This can be purged by thinking of the wider world as the beautiful extension of the self. Thus, selfishness is gradually reduced and it is replaced by love, compassion and graciousness. (iii) Method of eradication of desires—this can be done by selfless action and removal of ego. (iv) Method of forceful confrontation—the seeker should confront its mind about its wayward behaviour and force it to overcome past habits and tendencies. Efforts should be made to control the mind's restlessness—diligently, courteously and persistently.

'All human actions have one or more of these 7 causes —chance, nature, compulsion, habit, passion and desire' —Aristotle.

'Do not ye yet understand that what so entereth the mouth goeth into the belly, and is cast out into the draught? But those things that proceed out of the mouth come forth from the heart (and the mind); and they defile the man for out of the heart (and the mind) proceed evil thought, murders, adulteries, fornications, thefts, false witness (lies), blasphemies. These are the things that defile a man' (Bible, St. Matthew, 15/17-20).]

71. When the 'Praarabdha' (i.e. one's destiny, fate and lot that he has inherited from his past and which has landed him in his present condition) is completely exhausted, the Jiva (living being) is able to shed his mortal coil (body) and free himself from its

fetters. All forms of Maya (worldly delusions and ignorance that had been shackling him for so long)—and even the knowledge that this Maya exists at all—arising out of the Praarabdha are also eliminated simultaneously¹.

It is only as long as this Maya exists that one perceives this deluding and artificial world of material sense objects. As soon as Maya is eliminated, the artificial world is eliminated as well. What remains is something that is not illusionary or deluding—i.e. Brahm, the ultimate Truth, the unequivocal Absolute and the undisputed Reality of creation. [Refer also to verse nos. 52-53, 56 and 69 of the present Canto 2 in the context of Maya.] (71).

[Note--¹The creature takes a new birth because his deeds of the past life have left a burden of unspent and accumulated effects that are yet to be suffered or enjoyed by him. Besides this, the unfulfilled desires and passions force him to take a new birth in the hope of completing his unfinished task in the new life. Then, during his new life, the Jiva indulges in fresher deeds and accumulates, even without his knowing, newer bagful of effects. The past dogs him to the present and tampers with his natural temperaments and thought processes; his mind and intellect become biased and prejudiced. It is like the case of a man who is already biased and mentally prejudiced sitting upon the judge's seat to decide a case—his judgment would naturally be partisan, biased, lop-sided, distorted and not objective. The prejudiced intellect and mind of the man, under the influence of his past—his Praarabdha—would not be able to act independently, and this would in turn distort his way of thinking, his present way of life and dealing with its complexities. He would not be able to 'think straight and analytically' because the mind and intellect are tainted and handicapped by pre-conceived ideas and convictions that have been firmly ingrained in them as a baggage brought forward from the past.

It is here that company of wise men and study of the scriptures come in handy. A man who is fortunate enough to have this privilege is able to know the reality, he would be able to see his own faults and shortcomings himself in the mirror of the teaching of the scriptures, and if he is indeed wise and sane he would realise his past follies and taking cue from the maxim that 'it is never too late to make a start' he would now strive hard to at least mend his future if he can't do anything about the past. So, he would try to dispassionately consume his past baggage of effects of deeds that he had inadvertently and in his utter ignorance allowed himself to be burdened with, a burden that has hitherto hindered his spiritual progress, and sincerely strive not to accumulate any new one further from now on. This is easily achieved by him by remaining mentally and emotionally detached from the deeds in the current life and understanding that the doer of deeds is the gross body which is not his 'self'. His 'self' is the Atma which is expected to neutrally observe all that the body does in a complete dispassionate and detached manner. So there is no question of the Atma being accused of doing any fresh or newer deed—for the doer is the body and not the Atma.

The Atma lets the gross body enjoy or suffer from the consequences of the deeds done by the latter while maintaining a safe distance from them. When the body dies, it is either cremated or buried, and with the body is burnt or buried all the deeds that were done by it. Since the body is out of the picture, since it is cremated or buried and gone, there is no question of the consequences of the deeds done by it remaining after its elimination. The indicted body is dead and gone, and the Atma, the 'true self' of the enlightened man which had remained aloof so far from this quagmire of deed and their consequences, is therefore absolved of all the misdoings and the mischief created by the body.

Since Maya is a metaphor for delusions created by a prejudiced and tainted mind-intellect, when true wisdom dawns upon the man it is natural that he would not be misled by Maya. Thus Maya is also dispensed with along with the Praarabdha. Refer also verse nos. 52-53, 56, 69 of this Canto 2 in this context.]

72. The world exists only as long as it is perceived to be there like the presence of water in the mirage formed on the hot desert sand. As soon as the truth of Brahm is known, as soon as one becomes wise and enlightened enough to realise that the only truth in this otherwise falsehood-ridden world is a non-dual and universally truthful entity known as Brahm, one begins to see the reality in this world just like the case when one begins to see only vast and endless stretches of sand in a desert once one becomes aware that the water seen in the distant is a mirage and completely illusory.

In this enlightened state of being, all the three dimensions in which the world is said to exist, viz. the one seen during the waking state, the one seen during the dreaming state and the one experienced during the deep sleep state, vanish and merge in only one uniform state—and this state is pure consciousness. [The three categories of world also refer to the three world as described in the Purans—viz. the terrestrial world where mortal creatures live, the celestial world where spirits etc. live, and the heaven where the exalted Gods live.] (72).

73. When Agyan (lack of true knowledge and wisdom; ignorance of the truth) has been completely eliminated, how can this world that had its existence because of this Agyan now have any existence at all? [Refer also verse no. 28 of Canto 3 of this Upanishad. Lack of knowledge about the truth led one to believe that the artificial world that he saw was for real. But once the basis of this awareness, i.e. 'lack of knowledge known as Agyan', is done away with, then how can he see the world as real? It is like seeing something with, say, a red viewing glass instead of a colourless glass. The view with the red glass will definitely not be the real thing; everything viewed would be tainted red. The same thing viewed with a colourless plain glass would appear completely different from its earlier version.]

The erroneous concept of this is a Jiva (living being) and that is an Ishwar (Supreme Being), and that they have separate existence, also vanishes with the elimination of Agyan (for basically they are the same consciousness).

Such a wise and enlightened man exclaims—'I, the Jivatma, am the complete and supreme Brahm which is the non-dual and eternal Consciousness in this creation'. With this firm spiritual conviction and faith, he remains serene and established in the only one truth called the universal 'consciousness'. He becomes eternally calm and poised (73).

74. When the moon is said to be devoured by the demon Rahu (the severed head of a demon) during the lunar eclipse, people start offering worship, making sacrifices, doing penances, taking purifying baths, giving alms and making charities, observing austerities etc. so that the Moon God is freed from the demon's curse, but all their deeds are a waste of effort and done in utter ignorance because there is no such event and the darkness on the moon's disc is actually a shadow of the earth falling upon it. This shadow would go away on its own when the time comes even if no such hue and cry is raised by worried worshippers. So it is a height of stupidity and profound ignorance to even think that the Moon God has been cursed or is being devoured, and by doing so many religious deeds it can be freed from its torments.

Likewise an ignorant man held in shackles by Maya does numerous auspicious rites and rituals and other religious deeds such as doing various sacrifices, sacraments, pilgrimages, purifying rites, offering of oblations and libations to Gods and Spirits etc. in the hope of getting liberation and deliverance from the fetters of Maya. All

such activities are futile because the Jiva, the ‘true self’ or the consciousness that is the true identity of the living being, is never held in shackles or fettered by anything in the first place. Therefore there is no question of the Jiva seeking or getting freedom from any kind of non-existent shackles or fetters; it is all imaginary and fictitious. [Refer verse no. 26 of Canto 3 also.] (74).

75. Just like a lump of salt placed in water gets dissolved in it and becomes indistinguishable from water, the merger of the Atma (the pure consciousness) and the Mana (the mind) is called the state of Samadhi (the trance-like transcendental state of existence when the man is unaware of his surroundings, including his own body) (75).

[Note—Refer also to Canto 5, verse no. 75.]

76. To sacrifice the comforts and pleasures presented by the numerous sense objects of the material world, to overcome their alluring attractions and remain aloof from the charms proffered by them is a very difficult proposition. Even more difficult is to have a first hand vision of the sublime and subtle ‘truth’ hidden behind the exterior façade of the world at large. [The sense objects and their allurements are like the smokescreen that hides the reality of the world. That is, one is so much swept off one’s feet by the apparent fascinations and enticements offered by the world that one forgets that all this is a mirage-like situation; the entire external façade of the setup is illusionary and quite the contrary from the actual truth. He forgets that the pleasures and comforts proffered by this world are like the bait thrown by the bird catcher to trap the bird. Once a man falls prey to this world, he would continue to remain in chains till the time he forcefully frees himself from it—but that would require a lot of effort. The few charms are the frontal façade for the mountain of miseries and torments hidden behind it. It is only when one discards this external façade that he is able to peer behind it and see the real nature of the world.]

Likewise, it is very difficult to experience and know about the natural state in which the Jivatma (the individual Atma of the living being) stays in close proximity with the Parmatma (the supreme Atma of the creation that pervades uniformly and universally everywhere) without the help and guidance of a wise, self-realised and experienced Guru (moral preceptor, spiritual teacher and guide). [This is because though the scriptures tell everything in detail, but there must be some one who is experienced and well-versed in the intricacies of this subject to explain them to the spiritual aspirant and remove all his doubts and practical hurdles. The Guru gives him practical tips and eggs him on when he falters and loses hope of attaining success in his spiritual endeavour.] (76).

77. An ascetic who has completed all his ordained deeds in totality and has nothing left to be done, only such ascetics are able to experience the emergence of profound spiritual energy and strength that sprouts within their self. This effulgence of spiritual energy and its inherent strength comes naturally to him; it becomes his natural and characteristic state of existence. [When there is no work left undone, the ascetic finds complete rest; he remains calm and peaceful with nothing to distract him and disturb his stability of mind and calmness of demeanours. He can spend more and more time in his spiritual pursuit, instead of spending the same energy and time in pursuing this world and fulfilling his obligations in it. With sufficient time to meditate and contemplate, his spiritual shine is brought to the fore, the shine which was hitherto covered in dust because of neglect.] (77).

78. Both the mind and water have one thing in common—they are both easily disturbed, are easily moulded in the form or shape the person wants them to be in, and they are constantly on the move and very restless. [The water in a lake appears to be calm and unmoving, but when looked at closely it is found that there are subtle movements on its surface as well as inside it at all times. The surface vibrates and is full of ripples caused by the slightest hint of breeze; the aquatic life such as fish and plants perpetually keep it in a state of internal flux. Even the water in a cup is shaken by the slightest movement of the hand. The water immediately assumes the shape of the container in which it poured or kept. Likewise, the mind immediately adapts to its surroundings, or assumes the contours of the situation in which it finds interest and charm. The mind spreads over the subject matter of its interest like the cloud spreading over the sky or the mist covering the surface on a cold and frosty morning. Both the water and the mind are never at ease or rested. The mind is very fickle and transient; it constantly keeps jumping from subject to subject. This situation is to be compared with the other aspect of water and the mind. If this water is in the form of solid ice, it would not exhibit such easy changeability. Ice has a fixed shape and it retains it even if taken out of the mould; ice does not change its shape according to the vessel in which it is kept. Similarly, the mind can be controlled and put under tight leash should the man wish to do so.]

So if a man acquires the ability to control the movement of the water and the mind he would be deemed to have got such stupendous abilities that nothing remains impossible for him on this earth. [This allusion to controlling the movement of the water is a metaphoric way of saying that if a man can acquire such great abilities that he can exercise control over natural tendencies and inherent nature of the mind, there is nothing that he cannot achieve or do. He would have mastered the art of ‘control’ in its entirety. This ability assumes significance in the context of what has been said in the next verse no. 79 below which states that his ability of successfully doing the Khechari Yoga would allow him to float in the air against the principles of gravity. This ‘floating in the air’ is a metaphoric way of saying that such an aspirant who has been able to control his mind successfully can lift himself from the mundane and rise higher to achieve greater heights of spiritualism.] (78).

79. When a person has fainted, he does not feel any physical pain or agonies or sufferings. Similarly, when a man dies and sheds his body, he has liberated his own Atma or soul from its clutches or bondage along with the endless miseries and innumerable pains that are natural accompaniments of the body.

He who has broken free from all bondages (of the body and the world) is able to rise high and obtain access to the supreme transcendental Brahman just like an ascetic is able to rise high and float in the air when he has successfully achieved expertise in doing the special Yoga practice known as Khechari Mudra¹ (79).

[Note--¹This refers to the special meditation process of Yoga employing what is known as the ‘Khechari Mudra’. This entire process has been elaborately described in Yoga Upanishads, especially the Yogchudamani Upanishad, verse nos. 51-59 of the Sam Veda tradition, and The Yogshikha Upanishad of Krishna Yajur Veda tradition, in its Canto 5, verse nos. 40-42 describe the Khechari Mudra. The entire Canto 2 of the Yog Kundalini Upanishad of the Krishna Yajur Veda tradition is dedicated to the explanation of the Khechari Mudra. Basically, during this Yoga practice, the vital wind forces of life inside the body are controlled and diverted upwards to reach the head. It is a long haul exercise, taking almost twelve years to achieve any tangible benefit from it. The word *Khechari* is derived from the root ‘Khe’ which stands for

the sky, and 'Chari' means to move, to wonder or to roam. Therefore the combined word 'Khechari' means one who can move in the sky.

During the Khechari Mudra, a practitioner of Yoga is supposed to lift himself from the ground and levitate in air. This is a metaphor for his spiritual upliftment and shedding of spiritual grossness that had earlier ties his Atma to the gross world. Remaining tethered to the ground and being unable to rise in the air is a metaphoric way of saying that the creature remains tied by worldly fetters and shackled to this body and the world. Only an entity that is light and subtle would be able to rise higher in this world of grossness and density. For instance, a piece of iron sinks in a pitcher of water while a ball is able to float on the surface. Again, an ordinary balloon remains on the ground while one filled with helium or hot air can rise and move upwards towards the sky. Hence, success in doing Khechari paves the symbolic path of attaining Mukti or Moksha; it symbolises the progress that the spiritual aspirant has made in his path towards obtaining liberation and deliverance from this gross world as well as obtaining emancipation and salvation for his soul.

Briefly, in this Mudra or the posture adopted during meditation, the tongue is inverted backwards and tucked inside the rear of the mouth at the back of the hind part of the upper palate, at the spot where the wind pipe, the food pipe and the mouth cavity converge in the throat. It is generally believed that it greatly helps in focusing attention. It also helps to conquer hunger, sleep, greed, unconsciousness or numbness of the sense organs, and keeps the practitioner alert and focused, etc.]

80. The organs of the body are controlled by the Mana (mind). The Mana is controlled by the Marut or Pran (the vital life forces in the body represented by the vital winds). And the various manifestations of Maruts (i.e. the many forms of the vital winds such as Pran, Apaana, Vyan, Samaan and Udaan etc.) can be controlled by unifying them or merging them and putting them under one command as done during the state of Samadhi¹. This is the mystical state of 'dissolution' when all independent units of existence merge with one another to become one single non-dual unified whole (80).

[Note--¹The winds are very restless and fidgety, and the slightest provocation or inspiration is enough to shift them and set them in motion. They are in fact more restless and edgy than the water as described in verse no. 78 above. Besides this, the winds tend to be playing against each other, causing a 'whirlwind' sort of situation. For example, the Pran wind is upwardly mobile while the Apaana wind is downwardly mobile—obviously both are at odds with each others and create an oscillating affect on the creature's body. Suppose these two winds are combined and their energy and strength are channeled into one direction, say upwards, then it is obvious that the result would be phenomenal. And just like the hot air balloon rises from the ground, their combined effort would lift the body in the air.

All the activities of the gross physical body, whether external or internal, are made possible due to the vital winds. External activities include the functioning of the organs of perception and the organs of action, while internal activities include digestion, distribution of nutrients, circulation, movement of denser excretory products down the body and gases to the upper part of the body to be eliminated by the lungs, maintenance of body pressure and texture of the skin, control of the muscles, nerves and veins, and so many other subtle functions that go on ceaselessly till the body lives. In other words, the winds do not allow the creature to actually rest in the true sense, whether he realises it or not.

By controlling the mind, these winds create dreams during sleep, and therefore ensure that even for the short period when the mind could rest when it is not receiving any external stimuli from the physically sleeping body it cannot do so. This would naturally leave the Atma which is the 'true self' of the creature, agitated and deprived of rest and peace.

All this is taken care of during Samadhi. The consciousness in this eclectic and exalted state of existence is totally detached from the subtle body, i.e. the mind-intellect complex, as well as the gross body, i.e. the organs. Therefore, it is not pricked on the side by either of them, and so it has got nothing to do with the organs, the mind and the winds. As a consequence, the Atma finds total peace and restfulness.]

81. When the ascetic has achieved the state of ‘dissolution’ or non-physical existence marked by grossness (as narrated in verse no. 80), he becomes absolutely steady and calmed. In this state there is no activity of any kind, whether discernible or indiscernible. He lives a life that has become faultless and taintless¹.

All sorts of Sankalps (volitions, desires, aspirations, promises, vows, determinations and resolutions) have no meaning for such an exalted ascetic; he never makes any. Since there are no Sankalps, there is no need to strive to accomplish them or fulfill them, and therefore no need to do anything or get involved in any activity.

This state of dissolution is very mystical and mysterious for it can not be known by words using the faculty of speech (i.e. it cannot be described or learnt by hearing) or reached by the Mana (i.e. the mind cannot imagine and fathom how it is made possible and how ecstatic and euphoric the ascetic feels in this state). It is so unique, profound and astounding state of existence that an ascetic who practices it or who exemplifies it himself becomes an object of research on the subject (81).

[Note--¹This is because any activity is done by the physical body and not by the Atma which is the true self of the ascetic. This ‘true self’ is engrossed in perpetual meditation and is oblivious of and unconcerned with what the body does. A person is deemed to be doing anything or is involved in any activity only if his mind-intellect is involved in this activity. If anything is done with the mind elsewhere, the person would not even remember what he has done or would not expect any rewards from such activity. It is the involvement of the mind-intellect complex that decides whether or not a man can be accused of doing anything. There are instance when great ascetics appear to live a normal life even while being in a perpetual state of Samadhi, then also they are not accused of any deeds just for this simple reason—that though their body is doing something their mind, both the sub-conscious as well as the conscious aspect of the mind, is engrossed in deep meditation, it is fixed elsewhere. Such ascetics remain completely oblivious of what happens around them and what they have done with their physical body. In such cases, the doer is the body and not the ascetic whose ‘self’ is the meditating Atma detached from the physical body. Since all activities would compulsorily produce a result, whether good or bad, it would appear normal to expect that the ascetic should also suffer from the consequences of the deeds done by him—but this maxim does not apply in his case for the basic reason that ‘he’, i.e. his ‘true self, the Atma’ is not involved in that activity. The entity that has done the deed or taken the action is the body and therefore let it suffer the consequences. An enlightened ascetic who has dissolved himself into a state of ‘nothingness’ or ‘virtual non-existence’, the state called Samadhi, does not do anything and therefore no results accrue for him.]

82. A truly wise and enlightened ascetic is he who remains firmly rooted in the thoughts of Brahm internally, while externally he is very careful in what he sees and applies his mind and intellect judiciously to interpret the thing seen. [This statement has two meanings. One is that he acts in a normal way but selects only what is good, auspicious, righteous and noble from the available options during his interactions with the world—he sees things around him in this material world, analyses them intelligently by applying his mind and intellect to what he sees, and then not only acts

intelligently and coherently according to circumstances but decides what is to be seen and registered in his sub-conscious mind and what is to be just neglected and forgotten. His actions and reactions are well thought out and rationale in nature, they are always auspicious and righteous to the hilt. He might be involved in this world but this belies his spiritually enlightened state of being totally non-involved in anything and remaining detached from everything as he is in a perpetual state of Samadhi. And the second interpretation is that he sees things not only on their face value but attempts to peep deep and find out if there is any substance and truth in what is seen. The word 'Brahm' in this context would mean 'absolute truth and reality' which he searches in everything he sees in this world. Such a wise ascetic does not take anything for granted, but analyses them himself to find out if there is Brahm—or any 'truth and reality'—in it before accepting or rejecting it.]

His level of concentration and devotion to Brahm is exemplified by a folk dancer who performs a special dance sequence with a clay pitcher on the head. She would go through all the different rhythms, beats and postures of dance and synchronize them perfectly with the accompanying music, but the pitcher never falls down from her head! [This is because her sub-conscious mind is alert and her attention is permanently fixed on balancing the pitcher on the head so that it does not fall down. All her intricate dance movements and postures cause no hurdle in this concentration and single purpose of balancing the pitcher. Similarly, a wise and realised ascetic would go about his routine life in the world in a normal way without for one moment diverting his attention from Brahm or the supreme Truth at which he targets his life.] (82).

[Note-- The Book of Ecclesiastes, 9/2-20 of the Old Testament of the Holy Bible expresses the same idea in these terms—

“2: All things come alike to all: there is one event to the righteous, and to the wicked; to the good and to the clean, and to the unclean; to him that sacrificeth, and to him that sacrificeth not: as is the good, so is the sinner; and he that sweareth, as he that feareth an oath.

3: This is an evil among all things that are done under the sun, that there is one event unto all: yea, also the heart of the sons of men is full of evil, and madness is in their heart while they live, and after that they go to the dead.

4: For to him that is joined to all the living there is hope: for a living dog is better than a dead lion.

5: For the living know that they shall die: but the dead know not any thing, neither have they any more a reward; for the memory of them is forgotten.

6: Also their love, and their hatred, and their envy, is now perished; neither have they any more a portion for ever in any thing that is done under the sun.

7: Go thy way, eat thy bread with joy, and drink thy wine with a merry heart; for God now accepteth thy works.

8: Let thy garments be always white; and let thy head lack no ointment.

9: Live joyfully with the wife whom thou lovest all the days of the life of thy vanity, which he hath given thee under the sun, all the days of thy vanity: for that is thy portion in this life, and in thy labour which thou takest under the sun.

10: Whatsoever thy hand findeth to do, do it with thy might; for there is no work, nor device, nor knowledge, nor wisdom, in the grave, whither thou goest.”]

83. An ascetic who abandons all worries and consternations, and instead wishes to remain in the blissful realm of Yoga, has only one subject to research on—and it is 'Naad', the cosmic all-pervading ethereal sound that resonates in his entire being. He tries to understand what gives rise to this sound, from where it comes, and then strives to reach the source. [This is because the resonance of Naad inside his being has given him immense and hitherto unknown and inexperienced sense of extreme bliss and

ecstasy. It kind of titillates him, and he is so enthused by it that he forgets everything else and focuses his attention on it.] (82).

Canto 3

[This entire Canto 3 is dedicated to the grand metaphysical philosophy of Advaitya or non-duality.]

1. An entity that is absolutely truthful is invariably and eternally in one, and not two or more, forms, i.e. it is unequivocally and irrefutably non-dual. Therefore, I¹ am immutable, indivisible, one and non-dual; there is nothing besides me¹. Whatever that exists is not separate from me. [In other words, the soul or pure consciousness is a truthful, non-dual and sublime entity.] (1).

[Note—¹The term ‘I’ and ‘me’ here applies to the preacher Lord Varaaaha as well as to the enlightened soul who has realised the true nature of his own ‘self’. It is such a self-realised aspirant who is being addressed here and is hereby advised to think in the terms as narrated above by the Lord.]

2. Whatever is heard or seen cannot be different, separate and distinct from Brahm. This Brahm is always eternal and uniform, transcending the definitions and limits of time and space. It is a pure, uncorrupt and immaculate divine entity. It is eternally free and emancipated. It is one, immutable and indivisible whole. It is an embodiment of bliss and happiness. It is a non-dual sublime entity.

It is a personification of Satya (Truth) and Gyan (truthful knowledge, erudition and wisdom). It is endless, measureless and fathomless.

Such an eclectic, majestic and sublime Divinity is none else but ‘me’ who am indeed the supreme transcendental Brahm. [Again, the term ‘me’ applies to the Atma which is an universal entity, being the same in the individual creature as well as in the supreme Brahm. This is the essential teaching and doctrine of the philosophy of Advaitya Vedanta which is being preached here. If one does not understand this basic idea, then the entire preaching would be wasted on him.] (2).

3. I am an embodiment of Anand (bliss and happiness). I am uniformly and eternally enlightened. I am the supreme and transcendental principle of creation, i.e. I am the ultimate Truth and the Absolute. I am a treasury from which the eternal light of the self-illuminated consciousness emanates (to illuminate everything around).

Just like the clouds which cannot touch and taint the sky though they live in the sky, I too am untouched by the numerous miseries and agonies that hallmark this deluding and artificial material world of sense objects. [The clouds are present in the sky but the sky is unaffected by them. This is proved when the clouds move away, get dispersed, or pour down as rain and get dissipated. The sky retains its original glory and untainted form. Similarly, the Atma of a realised person is not at all affected by its surroundings.] (3).

4. Only when all the miseries and agonies are removed can one hope to find real and unconditioned happiness, peace and bliss. Similarly, only when all sorts of falsehoods and deceptions are eliminated can one hope to find real Truth and the Absolute. And this ‘Truth and Absolute’ is indeed a reflection of the pure ethereal Consciousness

which personifies me. This form of mine is eternal, immutable and indivisible. [That is, my truthful form is the non-dual divine entity which is the ultimate Truth in creation, and it is Absolute and Wholesome. The only entity that possesses these qualities in this visible creation is the pure consciousness known as the Atma. Therefore, what is really 'true' in creation is the Atma.] (4).

5. There is no such thing as 'birth' or 'death'. There is not going anywhere or coming from anywhere. [Refer Canto 1, verse no. 3.] There is no concept of something being Vimal (free from any stain; to be clear and clean; to be spotless and immaculate; to be pure and beautiful; to be attractive and charming; to possess saintly and divine qualities) or some other thing being Mal (having the opposite characteristics of Vimal).

There is no such concept as 'Vedanam'—i.e. there is no separate scripture or a treasure of knowledge called the Vedas that teaches something different or better (from what is being taught here).

For an enlightened and self-realised ascetic, everything is clearly viewed as 'consciousness', and nothing else. [That is, an enlightened and wise ascetic will see the hidden truth in everything that he sees, and is never taken on a ride by its external façade of charms or sorrows. Therefore, he would remain unruffled and steady as the only thing that matters for him is 'the truthful consciousness' and nothing else. He would simply discard the rest as useless.] (5).

6. The Principle that is distinct from what is visible from the exterior is unique and very sublime and subtle. This Principle is marked by the following unique characteristics—it is Satya (truth); it is Chitta (consciousness); it is Akhand (un-fractioned, immutable and indivisible); it is Advaya (non-dual); it is invisible and without any visible attributes; and it is Niramaya (healthy and without any moral or physical ailments or tainting affects that are like a disease that might afflict a person's spiritual well being).

This Principle entity or the Absolute state of being is unique and untainted. It is called the Shiva principle—one that is truthful, eternal, untainted, detached from everything, auspicious and beautiful. [Refer also to Canto 4, verse no. 32.]

An enlightened and self-realised ascetic or any spiritual aspirant who is firmly convinced that 'this divine entity and unique Principle is none other than me in my truthful and essential form as my self or pure conscious Atma' becomes silent and calmed down. [This is because all his restlessness and agitations subside. He has nothing more to learn and achieve. All that his spirit had yearned for till now has been achieved by him. He has found the fount of eternal bliss and peace, so where is the need to be restless any more?] (6).

7. An enlightened and self-realised ascetic or any spiritual aspirant who has come to know the 'irrefutable truth and absolute reality' about himself, about the Atma, about the world at large, and about the supreme Brahm (as narrated above), acquires an exemplary sense of equanimity and fortitude. For him everything is the same—he discards the notion that there is something as birth or death, happiness or sorrow; he keeps a safe distance from getting entangled in dichotomies created by caste, creed, religion, lineage, ethnicity, etc.

He is convinced that these various perceptions of the world which are at odds with each other are all imaginary creations of the consciousness that is also his own self. [In other words, he is certain that he is the one who has wrongly created such

impressions about this world, they are his own creation, and therefore he is the only one who can get rid of them.]

With this conviction, he becomes silent. [Whom else should he blame for all his misconceptions and misgivings except his own self? Who else is to be blamed for his miseries and agonies except himself? So he becomes quiet.] (7).

8. That Absolute Principle is unique inasmuch as it possesses the following virtues—it is complete and wholesome; it is non-dual and one; it is un-fractioned, immutable and indivisible Consciousness; and it is free from the distortions and tainting affects created by this multifaceted and oddity-ridden world.

‘I am this unique sublime entity that is supreme, absolute, transcendental, truthful, conscious, formless and attributeless’. With this firm conviction, a wise and enlightened ascetic or spiritual aspirant becomes silent and calmed down (8).

9. When one has thus become enlightened and has acquired first-hand knowledge of the fundamental truth about the Absolute Principle, he cannot be led astray by delusions arising out of ignorance and made to believe that the ‘absolute truth’ is false.

He remains steady and uniform in all the three dimensions of time—the past, the present and the future. He is not tainted by any delusions and other faults associated with this artificial world.

The sublime and subtle form (of this universal principle known as Brahm as well as the Atma) that has the eclectic virtues of being eternal, steady, uniform, unchanging and omnipresent—verily, it is and has always been my true form (9).

10. My true form and nature is one which has no attributes and qualifications, which is eternal and infinite, and which transcends even the blissful state obtained during the Sushupta (deep sleep) state of existence¹.

Verily, this sublime and transcendental state is my true and eternal form and nature (10).

[Note--¹This Sushupta state is a transitory stage between two phases of sleep. When a man sleeps, he first passes through the dreaming state when his mind remains active, and then when his mind momentarily retires to go to sleep he enters the Sushupta stage. But soon he comes back to the dreaming stage or wakes up directly into the world in the waking state of consciousness. Wise and expert ascetics can practice to make this third stage, i.e. the Sushupta stage, a perpetual state of existence for their consciousness. Since in this stage the mind is asleep, therefore there is no perception of the world, and with the loss of all such perceptions, the world becomes non-existent. And with this defunct world subside all its charms or miseries. With nothing to disturb the tranquility of the consciousness, the latter lies in a perpetual state of eternal and profound bliss and contentedness. This state, if made perpetual and permanent, is called the Turiya state. In this state, even though the ascetic wakes up into this world, he still remains mentally ‘asleep’ and oblivious of this world. These four states of existence of the consciousness have been explained in this present Varaaha Upanishad in Canto 2, verse nos. 59-64, 72.

So essentially this verse proclaims that a truly realised ascetic or spiritual aspirant is one who remains permanently in a state of beatitude and felicity notwithstanding the physicality and grossness of his body or whether the body is awake or asleep.]

11. Even as the darkness of the night is instantaneously removed by the rays of the sunlight, the grave darkness represented by this world is dispelled only when the bright light emanating from the supreme Lord known as Hari shines upon it. [That is,

only when a man takes the shelter of the Lord God is he able to get rid of the horrendous darkness of delusions and misconceptions that has engulfed him from all sides in this world. Darkness has created the fear of imaginary ghosts and phantoms representing numerous miseries, agonies, torments, perplexities, confusions and doubts that are so natural and inherent to this world, but when the presence of the Lord is felt, all such fears and consternations are automatically dispelled. Therefore, a devotee of the Lord has virtually vanquished fears of all sorts in this world.] (11).

12. [Lord Varaaha said—] ‘A Jiva (living being) is freed from the darkness surrounding his inner-self if he has unwavering devotion and faith in me (the Supreme Being). This is achieved by worshipping my holy feet and remembering them at all times.

There is no other means by which one can be freed from the fear of death and its effects. [That is, having unfaltering faith in the Lord is the only means of attaining freedom from the fear of death and what would happen after it. For the devotee is certain that the Lord would take of all for his sake.] (12).

13. Even as a man desirous of receiving wealth from a wealthy person shows respect to him and praises him profusely in order to please him, who cannot get freedom from the fetters of this world by praising and honouring the gracious and benevolent Lord of this world? [When the Lord is pleased by the devotion of the person, he would certainly find ways to set him free from his bondage just like a wealthy man would shower his magnanimity on the seeker of wealth by giving him a huge largesse when he is pleased with him.] (13).

14. As soon as the Sun rises in the horizon, the entire world becomes active and begins to do something or the other. Similarly, when this world comes in my contact, it begins to show signs of life and activity. [Here the Lord is referring to the cosmic Consciousness and the vital life forces of Nature that inject life into this world. Without this infusion of the consciousness and spark of life, the world would have remained inert and dead.] (14).

15. Just as a man imagines that there is a silver foil inside the oyster shell because of the silvery glaze of its inner lining, this entire world, stretching from the great outer reaches of the creation at the cosmic level to the microcosmic form of the creation at the level of this mortal world and its resident individual creature, is imagined to be present in my form. That is, my universal immutable and uniform nature is imagined to be impregnated with so many diverse forms of the creation as one can imagine. This is due to Maya—i.e. my own dynamic illusion-creating ability that this mirage comes into being (15).

16. Remember, I (Lord Varaaha) do not have the numerous forms that are visible in this creation—such as the notion that this is a Chandal (an outcaste), this is an animal, this is a tree or this is an image of some God. I am one single and non-dual entity that uniformly pervades in this creation¹. There is no question of there being duality in my truthful form (16).

[Note--¹The individual entities appear to have separate and independent existence. They have their unique characteristic features and nature. No two units of this visible creation are exactly identical. This is the basis upon which this material world works; this the premise on which a person's unique identity is established. But this notion is

superficial and fundamentally flawed and erroneous; it is a distortion of the fact. The fact is that the same Brahm prevails in each and every unit of creation, and therefore there is no difference between them. This is the enlightened metaphysical and spiritual view. To cite an example we can take the case of the Ghatakash, Mathakash and Mahakash as cited in Canto 2, verse no. 50, or the instance of the mud pot or the golden ornament given in note to Canto 2, verse no. 14 of this Upanishad. It must be remembered that this Upanishad espouses and expounds upon the philosophy of Advaitya Vedanta which is the eclectic spiritual philosophy of non-duality and uniformity in creation.]

17. A person who has lost track of his whereabouts is confused about his bearings and does not have any idea where he is located or in which direction he should move because he has even lost his sense of direction. Such a person gets all the more confused when he sees new landmarks or milestones to determine his location and the direction where he is supposed to proceed, instead of consulting his compass and map in his attempt to find out where he is and where he is headed to. [A person who has lost his spiritual bearings is under delusions. He is as confused as man who is hallucinating. He confuses the directions given to him to go to a place for example, and each time he sees a new sight about which he is not previously aware he thinks that he has gone in the wrong direction. In other words, if a person is not certain of anything, he is bound to be easily misled and become perplexed by countless advises that he is given. If he is not sure about the real intent of the tenets of the scriptures, if he is now wise and erudite enough to judge what is good and what is not, he would be a fertile breeding ground for confusions and doubts caused by numerous interpretations of these tenets and various methods by which the basic philosophy of the scriptures have been explained. This man is no different from a drunken man who begins to hallucinate, who stumbles and falls on his path, and who is so numbed by the effect of alcohol that he loses sight of his destination and target.]

Similarly, for those whose true wisdom, erudition and intelligence have been decimated or eclipsed or mired by utter ignorance of the truth and its accompanying delusions, it is only for them that this delusory world of artificiality and confusions exist. But it does not exist for me (because I am wise, erudite, enlightened and intelligent; because I am not ignorant or deluded about my true identity; because I am the all-knowing and omniscient Consciousness known as the Atma) (17).

18. There is no such thing for me, the enlightened being in this creation, as the gross body and its organs, nor are there any independent entities such as Pran (vital winds), Mana (mind), Buddhi (intelligence), Ahankar (the notion of the self tinged with ego, arrogance and haughtiness), Chitta (sub-conscious and conscience), and Maya (delusions and illusions) at the micro level of existence as the individual creature, nor as the vast and fathomless Akash (sky) etc. at the macro level of existence¹. [That is, when one sees the true form of creation, he understands that all these numerous forms are basically one single Brahm revealed in all these forms. The enlightened man realises that his true 'self' is the pure consciousness known as the Atma, and that this Atma is none but Brahm personified. For such a wise man, the only thing that matters is the non-dual Brahm; he sees nothing else but this single divinity in each aspect of creation. So, all the various units of creation listed herein above are, in essence and truth, nothing but this Brahm revealed in their forms. Refer also to verse no. 16 above.] (18).

[Note—¹This verse can be read in another way also—"For an enlightened and self-realised man like me, the gross body and its component units such as the Pran, Mana,

Buddhi, Ahankar, Chitta and Maya have no relevance; they do not matter for me and I do not bother about them. At the same time, I do not distinguish between the sky at any level of existence—because for me there is no distinction between the sky at the micro level of existence, i.e. the sky present inside the body, and the sky present in the macro level of existence, i.e. the vast sky that is present outside the body. This is because I have come to know that the sky element is one, indivisible and immutable entity like my own ‘self’. Like the case of the same sky assuming different names such as being called a Ghatakash, Mathakash and Mahakash just for the practical purpose of understanding its different forms of existence, the body and its characteristic attributes along with its inseparable components such as Pran, Mana, Buddhi, Ahankar, Chitta and Maya are envisioned or conceptualized just to explain my worldly existence.

This is done as I am an ethereal entity like the sky element, and like the sky I too cannot be seen and be made a subject matter of various perceptions that the body uses to become aware of the gross world of material sense objects.”]

19. There is no doer of anything, no enjoyer or sufferer, and no one who can make others enjoy or suffer from anything. There is no one else except me (the Supreme Being) who is pure consciousness and blissful. And that is ‘me’. [Again, this word ‘me’ assumes two meanings—one, it refers to Lord Varaaha who is preaching this Upanishad, and two, it refers to the enlightened man who has realised the truth about himself.] (19).

20. Just like the case when the image of the sun when seen as a reflection in a water body which is not steady also appears to be shaking, simmering, distorted, fickle and unsteady, when the Atma (which is essentially uncorrupt and steady like the sun here) is associated with Ahankar (the negative notion of ego, pride, arrogance and haughtiness which are all vanities) it produces an ever-changing and distorted view of this world. For a man who perceives this world with the vision tainted with Ahankar, the truth eludes him and he would see a distorted version of the world shorn of reality¹ (20).

[Note--¹When the man sees this world with eyes of ego and selfishness, or ‘Ahankar’, when he thinks that ‘I’ has a distinct and independent existence than the rest of the world, he would see everything that he sees in the context of this ‘I’. This perception is different from the situation when the world is seen with the vision of ‘we’ instead of ‘I’. A vision of the world tinged with the selfish notion of ‘I’ is constantly changing—anything that appears to be beneficial to ‘me’ is acceptable and sought after even though it may cause harm to ‘them’. This self-centered and selfish vision of the world is due to the Atma seeing it through the prism of Ahankar, i.e. thorough the self-centric ego of ‘I’. In this process the creature forgets that this ‘I’ is not what he has made it out to be in his stupidity and ignorance. This ‘I’ is the pure conscious Atma which is supposed to be neutral and egoless. This Atma is a universal and uniform entity; it is present in all the creatures in equal measure. When this wisdom actually dawns upon him, he rejects this notion of Ahankar and disassociates his Atma from its tainting affects.]

21. Chitta (the sub-conscious mind; the ability of the mind to remember and think) is at the root cause of the world. Pay attention on this. It is a great wonder how you have relied upon this world which is the creation of the Chitta. [That is, if the mind wants, the world would cease to exist. This is also one of the main teachings of *Lord Buddha*—that it is the mind that has created the world, and to control the world one

ought to control his mind. Once the mind is controlled, and through it the world, the root cause of all miseries and sorrows would be eliminated.] (21).

22. Think deeply—where is the huge riches of mighty kings? Who is a Brahmin (and who is not)? Where is the world (you are so obsessed with)? Ancient traditions are man-made, and for a wise man they have no existence or significance or worth. For him, they have been destroyed or done away with. This huge and infinite world comes to a naught one day just like drops of nectar evaporate into nothingness. Millions of kings die, fall out of luck and grace, and vanish into the void of history; traditions are created, run their course, and finally get outdated and replaced with new ones that remain in vogue for some time only to be forgotten later. [Nothing is steady and permanent in this world. How can you believe in a certain thing that has no permanence; that is here today and gone tomorrow?] (22).

23. If a wise, erudite and enlightened man is proud of his spiritual knowledge and acumen, then this also comes under the category of vanity and self-pride, or Ahankar. Then such a man is deemed to be of a non-auspicious and non-holy nature; he is deemed to be non-godly and no better than the man who is actually ignorant and worse off than an ignorant man who knows that he is ignorant but is humbled by his ignorance and lack of knowledge.

All his knowledge goes in vain and he is regarded as a stupid man (23).

24. When worldly negative traits called the ‘Vikaars’¹ such as having ‘Raag’ (attachments, infatuations, attractions and strong yearnings for anything or anyone in this material world) etc. are first observed to be making their appearance, and a wise man uses his discrimination and intelligence to burn (eliminate) them in their infancy, there is no scope of their developing into full blown traits (which would then be most difficult for him to uproot and would become a cause of much dismay and agony for the man later on) (24).

[Note--¹*Vikaars* are the numerous faults, shortcomings, imperfections, drawbacks or errors and blemishes in the character of a creature that cast a shadow on the otherwise ideal, immaculate and perfect nature of the subject under consideration. These Vikaars are like the dark shadow of the earth that eclipses the bright disc of the beautiful moon during the lunar eclipse. In other words, they prevent the original beauty and shine of the subject to come to the fore by casting a dark veil of evil tendencies and traits over its surface like the case of the solar eclipse when the moon prevents the brilliant splendour of the sun from being viewed from earth by coming in between the sun and the earth during the solar eclipse.

There are a number of Upanishads listing the different Vikaars, such as the *Yogshikha Upanishad* of Krishna Yajur Veda, in its verse nos. 10-11, lists the nineteen Vikaars; the *Yogtattva Upanishad* of Krishna Yajur Veda, in its verse nos. 12-13, lists sixteen Vikaars; The *Shaarirako-panishad* of Krishna Yajur Veda, in its verse no. 17, lists eight Vikaars; the *Mudgal Upanishad*, Canto 4, verse no. 6 of Rig Veda tradition as well as *Adhyatma Ramayan* of Veda Vyas, Lanka Kand, Canto 3, verse no. 29, list six Vikaars; the *Varaaha Upanishad*, canto 1, verse no. 9 of the Krishna Yajur Veda tradition, and *Mudgal Upanishad*, Canto 4, verse no. 4 of Rig Veda tradition lists six *Urmis* or Vikaars; *Mandal Brahmin Upanishad* of Shukla Yajur Veda tradition, Brahmin 1, section 2, verse nos.1, lists five Vikaars.

Besides the above listing of Vikaars, the epic Ramcharit Manas penned by the renowned poet-philosopher Goswami Tulsidas also lists the Vikaars in their various combinations and manifestations—(a) The 4 Vikaars or faults as mentioned in this epic are these: (1) Baal Kand, Doha 285, Chaupai 1/2 states that the four faults are

Mada, Moha, Krodh, and Bhram. (2) Doha 43, Chaupai 3/1 says that they are Kaam, Krodh, Mada and Moha. (3) Baal Kand, Doha 112, enumerates them as Shok, Moha, Sandeha, and Bhram. (4) Baal Kand, Doha 128 says that they are Moha, Matsarya, Mada, and Maan. (5) Aranya Kand, Doha 43 lists these four faults as Kaam, Krodh, Lobh and Mada. (6) Aranya Kand Doha 44, Chaupai 2/1 enumerates the four faults as follows--Kaam, Krodh, Mada and Matsarya.

(b) The 3 Vikaars or faults according to *Ram Charit Manas*, Aranya Kand, Doha 38/A, are the following—Kaam, Krodh and Lobh

(c) The 2 Vikaars or faults according to *Ram Charit Manas*, Aranya Kand, Doha 43, Chaupai 5/1—Kaam and Krodh.

(d) The 1 Vikaar or fault or shortcoming or imperfection which is regarded as the greatest fault however is ‘Moha’ (ignorance-induced delusions and its attendant attractions towards this world and its charms, leading to attachments, infatuations and a sense of belonging to it). This Moha is compared to the dark night in *Ram Charit Manas*, Baal Kand, Doha 116, Chaupai 3/1, and Aranya Kand, Doha 93, Chaupai 1/2. Moha is like a moral disease that afflict all creatures and eat them up like cancer—Uttar Kand, Doha 121, Chaupai 15/1; Moha makes everyone blind—Uttar Kand, Doha 70, Chaupai 4/1.]

25. A man who thinks himself to be perfect and well learned is often observed to be seeing and trying to find faults with others, always pointing out their shortcomings or errors, and lamenting their presence in the other person. Only if such a learned man could divert his tendency and ability of seeing everything so closely and minutely and in great detail, attempting to analyse them and be perfect to the core, to his own self, and attempt to find who he actually is, or what his true form and nature is, or what are the hindrances that have prevented him from achieving perfection and realising the true goal of life which would give him freedom from all fetters that have been shackling his soul to this world of transmigration—then there is nothing in this world which can tie him down and prevent his liberation and deliverance. [That is, instead of finding faults with others, a wise and enlightened man should attempt to see his own faults which have not given him the peace of mind that he so much seeks but which eludes him—as is evident from the fact that he gets agitated when he sees that there is some fault in the other person. He must realise that he has not learnt to be detached, dispassionate and neutral in the first place because he is getting unnecessarily perturbed or annoyed at things that should not bother him at all, and therefore he is not perfect himself. So why should he be pricking holes in others?] (25).

26. Oh great sage (Ribhu)! A person who is not aware of the fundamental principles of Atma but still seeks emancipation and salvation by attempting to obtain it through superficial means such as by obtaining various Siddhis (expertise in mystical powers obtained as a reward of Yoga), by spending huge amounts of money (such as giving large donations and alms, doing huge expensive fire sacrifices and other religious rituals and ceremonies etc.), by Mantra (mystical formulas consisting of letters or words that are chanted or repeated silently and are said to empower the patron with great spiritual and temporal powers), by numerous actions and deeds (going on pilgrimage, doing penance and austerity, observing religious vows and sacraments etc.), by waiting for an opportune time and circumstance (such as an auspicious moment based on lunar or solar calendar, or for the malignant stars and planets to become benevolent, or for old age when he plans to do all the righteous deeds at once to wash off his lifetime of sins, or to wait for the time when he would go to the forest to do Tapa and observe Sanyas, etc.), or by other means (such as employing priests

and faith healers to do the task for them). How incredulous and ridiculous is it? [Refer also to Canto 2, verse no. 74 in this context.] (26).

27. Such attempts (as enumerated in verse no. 26) are not made by those who are self-realised and well-versed with the true concept of Atma, for they think of nothing else but the Atma. Such a man is fully contented and satisfied. He is fulfilled and does not run behind Avidya (false or erroneous knowledge about something being true whereas in fact it is actually false). That is, they do not pursue other methods to obtain liberation and deliverance for themselves (as enumerated in verse no. 26) except to research their own Atma, for the 'truth' and the path of spiritual liberation and deliverance is hidden inside their own self, and it is not to be found externally anywhere (27).

28. The concept that 'this world is there', or 'this world exists' is called Avidya. [Therefore, those people who are convinced that there is something real called 'world' are regarded as being mired in Avidya, or have the predominance of Avidya in them. Such people forget that this is not the truth; they perhaps are not even aware that this is not the truth. This living in a fool's paradise is a characteristic feature of Avidya. Refer Canto 2, verse no. 73 also.]

A self-realised person who has knowledge of the fundamental principles of Atma knows that everything other than the Atma is false. [That is, he knows that this world is non-existent because it is an imagination of the mind, and the fact that anything that is imaginary cannot be true. The only entity that is true is the Atma, first because it is consciousness personified, and second because it has the grand characteristics of being eternal and infinite which are the hallmarks of 'Truth'. This world lacks both.]

How can such a wise and realised man drown in the ocean-like world created out of ignorance? How can he even imagine taking a dip in this imaginary contraption? (28).

29. All the means listed in verse no. 26—such as material wealth, Mantras, deeds and actions, time and circumstances, and all other tricks—can at best provide great mystical powers, or bestow honour, glory, majesty and fame. But it must be clearly understood that they do not aid in the attainment of any spiritual benefits or help one to obtain liberation and deliverance from his worldly shackles. They cannot help him to reach the citadel of spiritual attainment and obtain the supreme stature of being one with the absolute transcendental divinity known as supreme Brahm (29).

30. When all the worldly desires and aspirations are eliminated, and instead of it the only eclectic reward sought is the realisation of the (blissful, eternal, sublime, all-pervading, supreme and transcendental conscious entity known as the truthful) Atma—for such a wise and erudite man who seeks this high knowledge there is no cause for desiring attainment of any Siddhis (mystical and other powers and their accompanying authority). So he cannot as someone who is foolish or stupid in such a case. [That is, only foolish people who do not understand that vital effort, time and energy should not be wasted on worldly pursuits or acquiring powers or authority that cannot permanently liberate and deliver their souls indulge in so many practices as mentioned in verse no. 26. On the contrary, wise people concentrate their energy and attention on self-realisation and finding the path that can lead them to the ultimate Truth of existence by finding which all falsehoods would be automatically eliminated

(like the instance when darkness is automatically vanquished when light is shone). They would rather seek the ‘truth’ about themselves, their pure conscious Atma, and then endeavour to merge it with the cosmic, universal ‘truth’ known as the supreme Consciousness or the cosmic Atma or Brahm so as to break the chain of birth and death to which they are bound in this mortal world. This achievement gives them spiritual eternity, contentedness and happiness along with an infinite sense of peace and bliss.] (30).

Canto 4

[The following two Cantos, 4 and 5, are a conversation between sages Ribhu who has been taught by Lord Varaaha, and sage Nidagh who comes to him with his metaphysical questions seeking the great sage’s answers for them.]

1.1. Sage Nidagh approached the great sage Ribhu¹ and humbly asked him what were the signs of being ‘Jivan Mukta’²—i.e. being spiritually liberated and delivered even while the person is alive and has a gross body which goes about its normal duties in this world? (1.1).

[Note--¹Sage *Ribhu* and *Nidagh*—Sage Ribhu is said to be one of the several mind-born sons of the creator Brahma. With this gene running in his blood, he was by nature wise, enlightened and self-realised, but in order to conform to established traditions he took initiation from his elder brother Sanatkumar who was himself one of the mind-born sons of Brahma. Ribhu was renunciation personified, was unpretentious and free from all shortcomings and blemishes that tainted others in Brahma’s creation. His only attire was his own skin, and he lived in a thatched hut.

It is believed that his first disciple was sage Nidagh who was the son of the great sage Pulastya. It so happened that once Ribhu, during his wanderings, came to the hermitage of Nidagh and saw that he was studying and chanting the hymns of the Vedas. Ribhu felt very pitiful for him and advised him that if one did not the essence of what the Vedas preach and did not come to know the Absolute and the Truth and become self-realised then all this study is an exercise in futility. Thereafter Nidagh accepted his discipleship and learned the intricacies of the knowledge of the Atma and Brahm.

Under the instructions of his Guru Ribhu, Nidagh accepted the life of a householder, married and established his hermitage on the banks of river Devika. After a long time, Ribhu remembered his disciple and wished to see him, and thus came to his hermitage. Nidagh could not recognize him, though he welcomed the guest with the greatest of respect and fed him. After meals, Nidagh asked Ribhu whether he was satisfied with the meal, who he was, where did he come from, and where he was going.

Then Ribhu preached him—‘Oh son! I am not the body or the Pran (life forces livening inside the body) that gets fed or feels quenched of hunger or thirst. The ‘self’ or the Atma is as eternal, infinite, all-pervading and omnipresent as the sky, so there is no question of it coming from anywhere and going anywhere. All these aspects of creation—to be satisfied or not, to come and go—are related to the ever-changing ‘untruth’, so do not repose any trust and faith on such things that are transient, unsteady and fickle. Don’t be wasting your precious life and time in delusions, hallucinating and swinging between this and that. Instead, become uniform and steady on the Truth which is unchallengeable, unequivocal and irrefutable. Concentrate upon your Atma, the pure ‘conscious self’.’ Nidagh recognized his Guru and fell on his august feet in surrender and overwhelmed with gratitude.

After another long spell of time, the Guru once again decided to visit his disciple. When Ribhu reached the hermitage he found there was a great procession passing on the road and Nidagh was waiting patiently to let the procession pass so that he can cross the road. On enquiry he told Ribhu—who he could again not recognize—that the king of Virpur was passing through. Ribhu wished to rekindle the fire of enlightenment in his disciple, so asked him—‘Say, who is that king in this melee?’ Ribhu replied that he was sitting on the biggest elephant. Ribhu asked him to point out some characteristic feature so that he can distinguish between the king and the elephant from a distance. At this seemingly impertinent question, Nidagh pushed Ribhu down and mounted on his back, saying—‘Now, I am the king and you are that elephant’. The wise teacher was unperturbed, and asked to point out the difference between them—i.e. how has he become a king, and how come the man he is riding upon has become an elephant. Shocked beyond belief, Nidagh suddenly realised that the man was no one else but his revered Guru Ribhu. He fell at the enlightened teacher’s feet and asked forgiveness. Merciful and kind as the Ribhu was, he not only pardoned his disciple but preached him the fact that the external body is not the true identity of the creature, and that to recognize someone based on this physical gross feature is the most ignorant and stupid thing to do, something not expected from a so-called learned man of the Vedas. So, finally Nidagh realised the futility of studying the Vedas without understanding the principle enshrined in their tenets. Thereafter, Nidagh finally found his spiritual liberation and deliverance, and though he lived in this world he lived as a ‘Jivan Mukta’—i.e. a person who is freed from the fetters of the world and the body in spite of living in this world and having a physical body but is totally detached and unconcerned about them. When the proper time comes, such persons find ‘Videha Mukti’—i.e. they shed their mortal body even without being aware of it being shed, and merge their ‘self’ with the supreme Self, the cosmic Consciousness known as Brahm, never to take birth again. This is because at the instant enlightenment dawns upon them, they stop being associated with any of the deeds done by the body, and remain absolutely neutral. Therefore no consequences accumulate for them, and they do not have to take a re-birth to go through the process of either enjoying or suffering these consequences.

Coming back to the story of Ribhu, when this news reached Sanatkumar, the Guru of Ribhu, he was extremely pleased and impressed, and to commemorate this occasion and to immortalize this unique virtue of forgiveness, he added the first letter ‘Ksha’ (pronounced as a combined utterance of the letter ‘Ka’ and ‘Cha’) of the word ‘Kshamaa’ meaning ‘forgiveness’ in the Sanskrit language, to Ribhu’s name. Thus, henceforth Ribhu came to be known as ‘Ribhuksha’ (Ribhu + Ksha). Since Ribhuksha was ever in a blissful mood, the word of bliss and ecstasy, viz. ‘Anand’ was appended to his name, and it finally became ‘Ribhukshaanand’ (Ribhu + Ksha + Anand).

The great metaphysical preaching of sage Ribhu for the benefit of Nidagh appears in Tejobindu Upanishad, Cantos 5-6 of the Krishna Yajur Veda tradition, and in Maho-panishad, Canto 5 of the Sam Veda tradition.

²Jivan Mukta is a spiritual state of enlightened existence when the Atma of the creature lives in a gross body and goes about the daily affairs of the world instead of abandoning it as done during the time of the death of the physical body. This Jivan Mukti—or freedom from all spiritual delusions and entanglements—is different from being Videha Mukti which entails total elimination of the body. The difference is obvious in the terminology itself. A person who has achieved the eclectic state of being Jivan Mukta is non-attached with the world, while he who is Videha Mukta is not attached with the body itself. A Videha Mukta person’s body may be burning or suffering from some grave disease, but he is not even aware of this suffering. The Jivan Mukta person remains totally aloof from the material aspects of the world, and since the body is an inseparable part of the process of detachment from this world, this marks the earlier stage of Videha Mukti. The latter term is also applicable to those persons who have actually left the physical body and attained emancipation and

salvation for their souls. The Jivan Mukti is a precursor for the Videha Mukti; the latter is a higher state of enlightenment as compared to the former which is the first step towards final emancipation and salvation.

The concept of Jivan Mukti has been the subject of discussion of a number of Upanishads—viz. (a) Krishna Yajur Veda tradition—Sarwasaar Upanishad, verse no. 2; Varaaha Upanishad, Canto 2, verse no. 6, 15, 42, Canto 4, verse no. 1, 21-35, 18-33, 42-43, Canto 5, verse no. 56, 59, 75-76; Yog Kundali Upanishad, Canto 1, verse no. 79-80, and Canto 3, verse no. 33; Katho-panishad, Canto 2, Valli 2, verse no. 12-13, and Canto 2, Valli 3, verse no. 4, 6-15; Akchu-panishad, Canto 2, verse no. 32-39; Tejobindu Upanishad, Canto 4, verse nos. 1-32; Brahm/Amrit Bindu Upanishad, verse no. 5; Yogshikha Upanishad, Canto 1, verse nos. 46-47, 144, 151, 161. (b) Shukla Yajur Veda tradition—Paingalo-panishad, canto 3, verse no. 5, and canto 3, verse no. 9-11; Mandal Brahmin Upanishad, 1/4/3-4; 2/3/6-7; 2/4/5-6; Adhyatma Upanishad, verse nos. 12 and 4-47; Muktika-panishad, Canto 2. (c) Atharva Veda—Ram Rahasaya Upanishad, Canto 5, verse no. 11-17; Annapurna Upanishad, canto 2.]

1.2. Ribhu replied that he would answer as requested (1.2).

1.3. People with seven types of ‘Bhumikas’¹ are deemed to be Jivan Mukta (1.3).

[Note—The word *Bhumika* refers to the stages of development of wisdom. It also means the background, characteristics, qualities, traits, attributes or virtues that helps one to become spiritually wise and enlightened. It would mean to view the pure conscious self known as the Atma against the backdrop or background of certain level of spiritual development. Bhumika is also the role certain characteristic features of this creation play in the spiritual evolvment of an aspirant. It involves inculcation of certain auspicious virtues in a man that would act as standards to determine the level of spiritual development or evolvment or enhancement he has attained. The Bhumikas would act as the gold-standard to judge a man’s stature in the sphere of spiritualism. Hence, the term Bhumika would mean certain characteristics that must be present in a person, or certain criteria against which he must be weighed if he is to be called a Jivan Mukta person, i.e. a person who has freed himself from the fetters that shackle others to this mundane life in this world.

Refer also to Canto 5, verse nos. 74-75 of the present Varaaha Upanishad. The Akchu Upanishad of Krishna Yajur Veda, Canto 2, verse nos. 27-42, describe this concept of Bhumika in the context of Yoga. This is Chapter 23 of this volume.]

1.4. The first Bhumika is to have ‘Shubhecha’—i.e. to have auspicious, righteous, holy and noble desires, wishes, expectations, hopes and aspirations. [Refer also to verse nos. 1.41 and 3 of the present Canto 4.] (1.4).

1.5. The second Bhumika is ‘Vichaarna’—i.e. to consider, ponder and contemplate. [Refer also to verse nos. 1.42 and 4 of the present Canto 4.] (1.5).

1.6. The third Bhumika is ‘Tanumanusi’—i.e. to think deeply, have deep insight and penetrating foresight; to have a sharp and analytical mind that can view things clinically and be able to analytically and surgically dissect them to come to the truth, to be able to analyse things in the correct perspective, to be able to use wisdom, intelligence and analytical abilities of the mind judiciously to deduce the truth and reality of things correctly and consequentially arrive at the correct conclusion. [Refer also to verse nos. 1.14 and 5 of the present Canto 4.] (1.6).

1.7 The fourth Bhumika is ‘Satwa’ or ‘Satya’—i.e. to be able to distinguish between the truth and non-truth, to be able to separate the half truth from the half false, to be

able to distinguish between the half truth and the full truth, or to be able to discriminate between the apparent truth and the absolute truth. It is to think of that entity which has a truthful and real existence, and discard that which is not so. [Refer also to verse nos. 2 and 6 of the present Canto 4.] (1.7).

1.8. The fifth Bhumika is 'Anaasakta'—i.e. the ability to be sincerely free from all attachments, attractions, infatuations and entanglements of all kinds; to remain exemplarily detached, dispassionate and indifferent towards everything and everyone in this world. [Refer also to verse nos. 2 and 7 of the present Canto 4.] (1.8).

1.9. The sixth Bhumika is 'Padaartha Bhavana'—i.e. to having absolutely no concern about material things; to remain oblivious of even the existence of any material things in this world which are not true and do not have any spiritual value in them; giving no thought to anything or substance in this creation except the Absolute Truth personified as the supreme transcendental Brahm who is the Ishwar or the Lord of creation, and seeing this Lord in everything in existence. It also entails never to think that this thing is good and that is bad, this is obtainable and that is not, this is beneficial and that is not, because the same ubiquitous and universal Brahm uniformly pervades in all the things of this creation. [Refer also to verse nos. 8-9 of the present Canto 4.] (1.9).

1.10. The seventh Bhumika is 'Turiya'—i.e. to live perpetually in a blissful state of consciousness that transcends the third stage of Sushupta which is the deep sleep state of this consciousness. [Refer also to verse nos. 2 and 10 of the present Canto 4.] (1.10).

1.11. This seventh Bhumika is akin to the stage of meditation when the ascetic hears the cosmic ethereal sound called Pranav or OM resonating in his entire being. [The vibrations from this cosmic sound help to massage his nerves so as to make him experience an extreme sense of ecstasy which gives him a lot of spiritual thrill, peace and bliss which cannot be measured.]

This ethereal sound of cosmic Pranav or OM has four Bhumikas or components represented by the letters A, U and M followed by the Chandra Bindu (the dot-and-crescent-moon placed on a letter to produce the nasal sound resembling the hum of the bumble bee) (1.11).

[Note—The concept of OM and Naad: Refer also to Canto 5, verse nos. 69-70 of the present Varaaha Upanishad.]

1.12. These subtle components of OM are equivalent to the different states of existence of creation, such as the gross, the subtle and the causal, followed by the 'seed' that is pure consciousness honourably ensconced in the causal body, being the 'cause' that gives life and meaning to the entire setup. [These four states of existence are further defined in the following verses.] (1.12).

1.13. The four components are also equivalents of the four states of existence of the consciousness—viz. Jagrat (waking), Swapna (dreaming), Sushupta (deep sleep), and Turiya (post Sushupta) (1.13).

1.14. Each of the four components of Pranav (here a synonym of the supreme transcendental invisible cosmic entity known as Brahm) can be said to exist in these four states of consciousness.

Hence, the first component of Pranav represented by the letter 'A' has four symbolic states of existence—viz. the first state is the 'Sthul' or the Jagrat (waking) state of consciousness, and is gross in nature (because only a gross body wakes up and interacts with this world which is itself gross and material in nature). This state of existence is called the 'Vishwa' or the world at large (1.14).

1.15. The second state of this 'A' is the 'Sukshma' or the Swapna (dreaming) state of consciousness, and is subtle in nature (because the sub-conscious mind and the intellect are the only active components in this stage as the gross body is inactive). This state is called 'Taijas' or the state of subtle existence when the creature dreams (1.15).

1.16. The third state of this 'A' is the 'Beej' or the Sushupta (deep sleep) state of consciousness, and is causal in nature (because it is the causative state from which the rest of the states originate; it is so-called because it harbours the Atma, the consciousness that is the basic cause and reason for this existence). This state is called 'Pragya' or the state in which the hidden knowledge, wisdom and enlightenment so crucial for the creation to come into being, sustain itself and finally find its auspicious end lives¹ (1.16).

[Note—¹To be 'Pragya' is a virtuous characteristic of the Principal known as the Atma. Another characteristic of the Atma is to be a 'Shakshi' or be a mere neutral witness to all that is happening around it in this world and whatever the body does in with its three component parts—viz. the gross, the subtle and the causal. The characteristic of the Atma as a Shakshi is described below in verse no. 1.17.]

1.17. The fourth component of 'A' is its 'Saakshi' form, i.e. the state of existence of the Principal entity known as the Atma when it neutrally observes all that is happening around it without getting emotionally involved in it. This eclectic principle of non-involvement that the Atma follows is equivalent to and known as the fourth state of existence called Turiya (because it is a perpetually blissful state that has transcended the Sushupta state of consciousness). [When a man is not involved emotionally and internally in the affairs of the world, when he remains neutral and has developed a profound degree of equanimity of disposition, he is ever peaceful and rested, remaining unruffled and unmoved by all the upheavals and turmoil that surround the wise and enlightened man in this world. He remains calm and poised inspite of being physically present in the world surrounded by its miseries and pains because they do not affect him. In this state of Turiya, nothing matters to the Atma; nothing rubs against it so much as to bother it, or either grasp its attention or divert it from its present state of remaining in a perpetual state of blissful existence.] (1.17).

1.18. [The same four states as were applied to the first component 'A' are now envisioned in the second component of OM, viz. 'U' as follows—]

The second component of Pranav represented by the letter 'U' has four symbolic states of existence—viz. the first state is the 'Sthul' or the Jagrat (waking) state of consciousness, and is gross in nature (because only a gross body wakes up and interacts with this world which is itself gross and material in nature). This state of existence is called the 'Vishwa' or the world at large (1.18).

1.19. The second state of this 'U' is the 'Sukshma' or the Swapna (dreaming) state of consciousness, and is subtle in nature (because the sub-conscious mind and the intellect are the only active components in this stage as the gross body is inactive). This state is called 'Taijas' or the state of subtle existence when the creature dreams (1.19).

1.20. The third state of this 'U' is the 'Beej' or the Sushupta (deep sleep) state of consciousness, and is causal in nature (because it is the causative state from which the rest of the states originate; it is so-called because it harbours the Atma, the consciousness that is the basic cause and reason for this existence). This state is called 'Pragya' or the state in which the hidden knowledge, wisdom and enlightenment so crucial for the creation to come into being, sustain itself and finally find its auspicious end lives (1.20).

1.21. The fourth component of 'U' is its 'Saakshi' form, i.e. the state of existence of the Principal entity known as the Atma when it neutrally observes all that is happening around it without getting emotionally involved in it. This eclectic principle of non-involvement that the Atma follows is equivalent to and known as the fourth state of existence called Turiya (because it is a perpetually blissful state that has transcended the Sushupta state of consciousness). [When a man is not involved emotionally and internally in the affairs of the world, when he remains neutral and has developed a profound degree of equanimity of disposition, he is ever peaceful and rested, remaining unruffled and unmoved by all the upheavals and turmoil that surround the wise and enlightened man in this world. He remains calm and poised inspite of being physically present in the world surrounded by its miseries and pains because they do not affect him. In this state of Turiya, nothing matters to the Atma; nothing rubs against it so much as to bother it, or either grasp its attention or divert it from its present state of remaining in a perpetual state of blissful existence.] (1.21).

1.22. [The same four states as were applied to the second component 'U' are now envisioned in the third component of OM, viz. 'M' as follows—]

The third component of Pranav represented by the letter 'M' has four symbolic states of existence—viz. the first state is the 'Sthul' or the Jagrat (waking) state of consciousness, and is gross in nature (because only a gross body wakes up and interacts with this world which is itself gross and material in nature). This state of existence is called the 'Vishwa' or the world at large (1.22).

1.23. The second state of this 'M' is the 'Sukshma' or the Swapna (dreaming) state of consciousness, and is subtle in nature (because the sub-conscious mind and the intellect are the only active components in this stage as the gross body is inactive). This state is called 'Taijas' or the state of subtle existence when the creature dreams (1.23).

1.24. The third state of this 'M' is the 'Beej' or the Sushupta (deep sleep) state of consciousness, and is causal in nature (because it is the causative state from which the rest of the states originate; it is so-called because it harbours the Atma, the consciousness that is the basic cause and reason for this existence). This state is called 'Pragya' or the state in which the hidden knowledge, wisdom and enlightenment so

crucial for the creation to come into being, sustain itself and finally find its auspicious end lives (1.24).

1.25. The fourth component of 'M' is its 'Saakshi' form, i.e. the state of existence of the Principal entity known as the Atma when it neutrally observes all that is happening around it without getting emotionally involved in it. This eclectic principle of non-involvement that the Atma follows is equivalent to and known as the fourth state of existence called Turiya (because it is a perpetually blissful state that has transcended the Sushupta state of consciousness). [When a man is not involved emotionally and internally in the affairs of the world, when he remains neutral and has developed a profound degree of equanimity of disposition, he is ever peaceful and rested, remaining unruffled and unmoved by all the upheavals and turmoil that surround the wise and enlightened man in this world. He remains calm and poised in spite of being physically present in the world surrounded by its miseries and pains because they do not affect him. In this state of Turiya, nothing matters to the Atma; nothing rubs against it so much as to bother it, or either grasp its attention or divert it from its present state of remaining in a perpetual state of blissful existence.] (1.25).

1.26. [The same four states as were applied to the third component 'M' are now envisioned in the fourth component of OM, viz. 'Ardha Matra', the half-syllable represented by the Chandra Bindu as follows—]

The fourth component of Pranav represented by the 'Ardha Matra' or half-syllable called the Chandra Bindu has four symbolic states of existence—viz. the first state is the 'Sthul' or the Jagrat (waking) state of consciousness, and is gross in nature (because only a gross body wakes up and interacts with this world which is itself gross and material in nature). This state of existence is called the 'Vishwa' or the world at large (1.26).

1.27. The second state of this 'Ardha Matra' is the 'Sukshma' or the Swapna (dreaming) state of consciousness, and is subtle in nature (because the sub-conscious mind and the intellect are the only active components in this stage as the gross body is inactive). This state is called 'Taijas' or the state of subtle existence when the creature dreams (1.27).

1.28. The third state of this 'Ardha Matra' is the 'Beej' or the Sushupta (deep sleep) state of consciousness, and is causal in nature (because it is the causative state from which the rest of the states originate; it is so-called because it harbours the Atma, the consciousness that is the basic cause and reason for this existence). This state is called 'Pragya' or the state in which the hidden knowledge, wisdom and enlightenment so crucial for the creation to come into being, sustain itself and finally find its auspicious end lives (1.28).

1.29. The fourth component of 'Ardha Matra' is its 'Saakshi' form, i.e. the state of existence of the Principal entity known as the Atma when it neutrally observes all that is happening around it without getting emotionally involved in it. This eclectic principle of non-involvement that the Atma follows is equivalent to and known as the fourth state of existence called Turiya (because it is a perpetually blissful state that has transcended the Sushupta state of consciousness). [When a man is not involved emotionally and internally in the affairs of the world, when he remains neutral and has developed a profound degree of equanimity of disposition, he is ever peaceful and

rested, remaining unruffled and unmoved by all the upheavals and turmoil that surround the wise and enlightened man in this world. He remains calm and poised inspite of being physically present in the world surrounded by its miseries and pains because they do not affect him. In this state of Turiya, nothing matters to the Atma; nothing rubs against it so much as to bother it, or either grasp its attention or divert it from its present state of remaining in a perpetual state of blissful existence.] (1.29).

1.30. The fourth aspect of existence called the Turiya state of the first component 'A', i.e. the Jagrat (waking) state of the creature when he is deemed to be in a virtual Turiya state, pertains to the first, second and third Bhumikas. [That is, when the creature is in the waking state of existence in this world, his Turiya state of consciousness would deem to be when he observes the three qualities of Shubecha, Vichaarna and Tanumanusi as described in verse nos. 1.4--1.6.] (1.30).

1.31. The fourth aspect of existence called the Turiya state of the second component 'U', i.e. the Sukshma (subtle or dreaming) state of the creature when he is deemed to be in a virtual Turiya state, pertains to the fourth Bhumika. [That is, when the creature is in the state of existence when his sub-conscious mind is fully though his external body is inactive, his Turiya state of consciousness would deem to be when he observes the fourth quality of Satwa as described in verse no. 1.7.] (1.31).

1.32. The fourth aspect of existence called the Turiya state of the third component 'M', i.e. the Beej or causal state of the creature when he is deemed to be in a virtual Turiya state, pertains to the fifth Bhumika. [That is, when the creature is in the causal state of existence in this world, his Turiya state of consciousness would deem to be when he observes the fifth quality of Asanskat as described in verse nos. 1.8.] (1.32).

1.33. The fourth aspect of existence called the Turiya state of the fourth component called the Ardha Matra (Chandra Bindu), i.e. the pure and undiluted Turiya state of the creature when he is deemed to be in a perpetual state of bliss and peace obtained during this most exalted state of consciousness, pertains to the sixth Bhumika. [That is, when the creature is in the post-causal state of existence in this world, i.e. when he is perpetually enjoying the eternal feeling of spiritual, contentedness, bliss and happiness that comes in the fourth state of consciousness called the Turiya state, he would deem to be observing the sixth quality of Padaartha Bhavana as described in verse no. 1.9.] (1.33).

1.34. The state of existence of the consciousness which is beyond the Turiya state, or which transcends the Turiya state, i.e. the 'Turiyaatit' state, stands for the seventh Bhumika. [This is the quality of pure and unadulterated Turiya when the cosmic reverberation of OM is heard and enjoyed by the spiritual aspirant, an unmatched spiritual experience which gives him extreme sense of bliss and ecstasy that is perpetual and never ending.] (1.34).

1.35. An ascetic who lives a life characterised by the predominance of the first three forms of Bhumikas (verse no. 1.4—1.6) is said to be a 'Mumuksha', i.e. one who desires to be liberated and delivered (1.35).

1.36. [Verse no. 1.36—1.39 describe the four levels or categories of ‘Brahm Vettas’—i.e. the hierarchy of those who are said to be experts in the principles of Brahm.]

An ascetic who lives a life characterised by the predominance of the fourth form of Bhumika (verse no. 1.7) is said to be a ‘Brahm Vetta’, i.e. one who is deemed to be well-versed in the esoteric knowledge pertaining to the supreme transcendental Brahm (1.36).

1.37. An ascetic who lives a life characterised by the predominance of the fifth form of Bhumika (verse no. 1.8) is said to be an exalted and honoured one who is given greater respect than ordinary Brahm Vettas, i.e. those who are experts in the knowledge and principles pertaining to Brahm (1.37).

1.38. An ascetic who lives a life characterised by the predominance of the sixth form of Bhumika (verse no. 1.9) is said to be senior than the second type of Brahm Vettas, and are more exalted and honourable in the hierarchy of Brahm Vettas, i.e. he is senior and more respected in the hierarchy of Brahm Vettas (1.38).

1.39. Finally, an ascetic who lives a life characterised by the predominance of the seventh form of Bhumika (verse no. 1.10) is said to be the most exalted and most honoured amongst all the Brahm Vettas. He is the senior-most amongst them all (1.39).

1.40. In this regard there is the following Shloka (verse of the scriptures) which states as follows—(1.40).

1.41. The first Bhumika is ‘Subha Iccha’ which pertains to auspicious thoughts. It is the foundation for Gyan, or truthful knowledge, erudition and wisdom. [That is, only when he has auspicious thoughts emerging in his mind can he expect to acquire knowledge of the Divine and Truth. Otherwise, he would be more contented with the illusionary charms of the world and remain submerged in self gratification. Refer also to verse nos. 1.4 and 3 of the present Canto 4.] (1.41).

1.42. The second Bhumika is ‘Vichaarna’ which is to seriously think, consider, ponder and contemplate upon something. [Refer verse nos. 1.5 and 4 of the present Canto 4.]

The third Bhumika is ‘Tanumansi’ which is to think deeply, have deep insight and foresight; to have a sharp and analytical mind that can view things clinically and surgically dissect them to come to the truth, to be able to analyse things in the correct perspective, to be able to use wisdom, intelligence and analytical abilities of the mind judiciously to deduce the truth and reality of things correctly and consequentially arrive at the correct conclusion. [Refer verse nos. 1.6 and 5 of the present Canto 4.] (1.42).

2. The fourth Bhumika is Satya, and it is to think of that entity which is has a truthful and real existence, and discard that which is not so. It also refers to the ability to distinguish between the truth and non-truth, or to be able to discriminate between the apparent truth and the absolute truth. [Refer verse nos. 1.7 and 6 of the present Canto 4.]

The fifth Bhumika is ‘Anaasakta’, and it refers to the ability to be sincerely free from all attachments, attractions, infatuations and entanglements of all kinds; to remain exemplarily detached, dispassionate and indifferent towards everything and everyone in this world. [Refer verse nos. 1.8 and 7 of the present Canto 4.]

The sixth Bhumika is ‘Padaartha Bhavana’, and it refers to having absolutely no concern about material things; to remain oblivious of even the existence of any material things in this world which are not true and do not have any spiritual value in them; giving no thought to anything or substance in this creation except the supreme transcendental Brahm known as the Ishwar or the Lord of this creation, and seeing the Lord in everything in existence. It also entails never to think that this thing is good and that is bad, this is obtainable and that is not, this is beneficial and that is not, because the same ubiquitous and universal Brahm uniformly pervades in all the things of this creation. [Refer verse nos. 1.9 and 8-9 of the present Canto 4.]

And finally, the seventh Bhumika is ‘Turiya’, and it refers to live perpetually in a blissful state of consciousness that transcends the third stage of Sushupta which is the deep sleep state of consciousness. [Refer verse nos. 1.10 and 10 of the present Canto 4.] (refer verse no. 1.10) (2).

3. [Here the first Bhumika is being elaborated upon.] Am I a stupid person to remain dumb, inert and inane, having no wisdom and intelligence worth the name? Only those who are well-versed in the principle doctrine and the essential philosophy of the scriptures would know my detached and dispassionate bearing. In fact, this is a prelude to my taking the vows of true Sanyas (a life of total detachment from this material world and its sense objects). This inclination that one has to totally renounce everything artificial and non-truth in creation or existence, and instead concentrate one’s energy and attention on the Absolute Truth that is not the subject of debate or further research as it is the ultimate state of consciousness, is called ‘Subhecha’ by those who are expert in the tenets of the scriptures (3).

[Note—This verse can be read in another way also as follows—“I am not a dud or blockhead or a lifeless entity that has no Icha or desires, wants and aspirations. It is not that; I am a living being like the rest, and therefore I too have Icha. The only difference between me and the rest of the less wise ones is that I have auspicious and noble Icha, I have ‘Shubh Icha’ that is desirable and expected from a spiritual aspirant. For instance, I would not hanker for worldly things for enjoyment and gratification of the sense organs of the body, but would rather endeavour to learn about the truth in these things and the real benefit they give to me and the way they affect my long-term welfare. I do all that is required to be done in this world, but I do not get emotionally involved in them and neither do I get upset by their consequences. I acquire material things but internally I remain only a mute spectator to these things and remain totally detached from them and dispassionate towards them. I have renounced this world internally and in the true sense without pretending to do so externally but remaining hooked to it at the mental plane; I remain indifferent to them. Externally my gross body is involved in all sorts of worldly deeds, but internally I am, i.e. ‘my Atma’ is not at all involved in them. This in fact is the true definition and intent of the term Sanyas—which literally means renunciation, detachment, indifference, dispassion and non-involvement. I have forsaken all pretensions. The only thing I wish to remain involved in is the search for the Truth and Reality that is unadulterated and absolute. Refer verse nos. 1.4 and 1.41 of this Canto 4.]

4. The second Bhumika is being explained here. A man is inspired to think, behave and conduct himself in an auspicious, righteous and noble manner when he has

diligently studied the scriptures, kept company of holy and pious men, and practiced Vairagya (non-attachment and renunciation) previously. The natural inclination of auspiciousness, righteousness and nobility that he has developed as a result of this previous study, company or practice is called 'Vichaarna' (4).

[Note—When he studies anything he would ponder into its meaning and implications. New things would come to his knowledge and he would apply his new found knowledge in his day to day life and find that what he had been thinking till now as true is actually false and misleading. Similarly, when he sees the way a holy man lives, when he observes the practical application of the philosophy and tenets of the scriptures being applied in practice in the life of this holy man along with the benefits that are too obvious to be overlooked, and when he hears him speak words of profound wisdom based on his practical experience, these wise words remove any doubts that still might linger on in his mind. In fact, when he observes the life of a self-realised man, he sees the profound spiritual Truth as enunciated by the Upanishads in action. Then he decides to renounce all falsehood himself and apply the teachings of the scriptures and what he has seen first hand in the life of the saintly man in his own life by adopting the life of Sanyas. It is then that he witnesses and experiences the reward first hand and becomes fully convinced of their veracity and authenticity. He is forced to think, ponder and contemplate upon what is correct, true and real, what is auspicious, righteous and noble, and he thereby ignores the opposite. Refer verse nos. 1.5 and 1.42 also.]

5. With the help and constant practice of the first two Bhumikas, i.e. Shubecha and Vichaarana, one develops detachment from and non-attractions towards the sense objects related to the organs of perceptions of the body. Their charm and enticements become weakened and gradually subside. [That is, for example, charming sights of the material world no longer seem attractive to him and he does not yearn to see them or acquire them. Tasty things no longer titillate his taste buds and he no longer desires to eat delicious food to satisfy his tongue. Pleasant sounds no longer appeal to his ears and he does not want to hear even the sweet words of his dear one. The nose does not wish to smell fragrances and perfumes, and the skin no longer yearns to touch delicate, soft, sensual and soothing things.]

This state when things related to the gross body lose their relevance and the mind is detached from them is called the third Bhumika known as 'Tanummansi'. [Refer also to verse nos. 1.6 and 1.42 of this Canto 4.] (5).

6. With diligent practice of the first three Bhumika, the spiritual aspirant gets firmer in his renunciation, and his degree of detachment and disassociation with everything enhances further. When his sub-conscious mind and intellect are steady and unwavering in this way of life, all agitations and restlessness cease, and the aspirant is able to experience the presence of profound calmness, serenity and peace emanating from the pure consciousness called the Atma. This makes him stable and established in the 'truth' (because truth is stable, unwavering and a bestower of peace and calmness). This is called the fourth Bhumika known as 'Satya'¹ (6).

[Note—¹In other words, after going through and successfully passing the first three stages of spiritual practice, the aspirant has finally discovered the 'truth'. He has finally woken up to the fact that what was apparent as truth in this gross existential world of material sense objects was in actuality the so-called 'non-truth' because it was the creation of the mind in the first place and also because it was mortal, perishable and transient. So when he has come to realise the true essence of existence in the way of consciousness, he understands what is meant by 'truth' that is real—i.e. something that is of eternal value, something that is imperishable, immutable and

permanent. He discovers that this 'consciousness' is his own Atma, the 'self'. Thus, he concludes that his 'self' is the real spiritual truth in this existential world which is otherwise pregnant with non-truth except for this one truth known as the consciousness or Atma. He has uncovered the Absolute Truth. Refer also to verse nos. 1.7, 2 and 13 of this Canto 4.]

7. The painstaking pursuit of the first four stages of spiritual practice results in flower of the fifth stage of Bhumika called 'Anaasakti' to bloom. This is total and complete un-attachment which becomes an inborn trait inherent to the spiritual aspirant. With the discovery of the 'absolute truth' or 'Satya' as narrated above, his sense of detachment, dispassion, indifference and renunciation towards everything that is not the truth but illusory becomes steady, robust and firm (7).

[Note—He no longer would have to make efforts to remain detached or dispassionate or non-involved. These would come naturally to him and become his natural behaviour. Now, he would not be attracted by the sense objects of the world or have any desire to gratify his sense organs even if he wants to do them. Such profound degree of 'Anaasakti' or renunciation and non-attachment is the culmination of the practice of the first four types of virtues as narrated in previous verses. Refer also to verse nos. 1.8 and 2 of this Canto 4.]

8-9. Not paying any attention to anything, whether external or internal (i.e. whether pertaining to the external gross visible world which is seen, heard, smelt, tasted or felt, or to the subtle invisible world of the mind and intellect such as the one seen in one's dream), by assiduously following the principles of the first five Bhumikas, by focusing one's attention on researching about one's own Atma [8], as well as by observing the success of those who have practiced this procedure or principle in their own lives, and by concluding that this is indeed a fact by having unwavering faith in this 'truth' for a long period of time—this is called the sixth Bhumika known as 'Padaartha Bhavana'¹ [9]. (8-9).

[Note—¹That is, one is firmly convinced that there is no thing or object that has a real name and form. The only thing that is true has neither a name nor a form, and it is the Absolute entity known as the Atma, the pure consciousness. This eclectic state of existence is a natural extension of the 5th stage. The stage when a person develops 'Anaasakti' of the profoundest degree as described in verse nos. 1.8, 2 and 7 above, it is natural that he would not have anything to do with the material sense objects of the world. He would search for the 'truth' in anything that comes his way. He would not be misled by the exteriors, he would not go after the gross external form of anything, but see the hidden factor of life representing the supreme transcendental Brahman that is hidden behind this exterior. The word 'Padaartha' means a thing, but it does not refer to the exterior grossness of the material thing. Instead it refers to the essence, pith and substance that is of any value—i.e. the 'truth'—in the given entity. This is the best form of Padaartha Bhavana. Refer also to verse nos. 1.9 and 2 of this Canto 4.]

10. Constant and regular practice of the sixth Bhumika for a very long time results in complete vanishing of all sorts of erroneous ideas about the presence of objects having distinct and separate existence from the Atma. That is, the notion of 'duality, distinction, segregation, differentiation or separation' is removed. By diligently practicing and being firmly convinced of the authenticity of this eclectic and most evolved philosophy of metaphysics, the doctrine of non-duality known as Advaita Vedanta, one becomes firmly established in his own Atma as the only truth and reality. [Thus he attains steadiness and eternity that are the hallmarks of the Atma; he

obtains perpetual peace and a steady blissful state of existence.] This is called the seventh Bhumika known as 'Turiya' and is the transcendental state of existence of the consciousness known as the 'self'. [Refer also to verse nos. 1.10 and 2 of this Canto 4.] (10).

11. The first three Bhumikas, i.e. Shubhecha, Vichaarana and Tanumanasi (verse no. 3-5), are related to the waking state of the consciousness when the creature is awake to the presence of the expressed or manifested world. He is able to first see things in their physical form, and then attempts to see, analyse and deduce the difference between two situations and things. He is given a choice of deciding what is true and what is not. It is his intelligent mind that helps him in this decision (11).

12. When one is firmly established in the concept of Advaitya or non-duality, then everything that appears to have a dual existence or which give an illusion of 'either or' (i.e. when a man is not certain which of the two things seen is the real and which is not real) simply vanish. Those who are wise, erudite and self-realised see this material world just like a man sees a dream, i.e. illusory but still appearing to be true only as long as it lasts. This is equivalent to the 2nd state of 'Swapna' or dreaming. [Hence, this world lacks all substance and pith just like the hollowness and unreality of the dream—it is here now and gone the next moment.]

This eclectic and refined view of the world is developed only by the Turiya state of the mind—i.e. the state when the mind and intellect become totally oblivious of the existence of the world and its enticing charms, and sees only the universal presence of one, immutable and indivisible Truth as pervading everywhere in existence. [This does not mean that he would treat even the gross as the truth simply because it appears to be tangible and verifiable as perceived by the sense organs of perception. This is because these organs are themselves gross in nature, and so are incompetent and incapable to judge something that is extremely subtle and sublime. Refer also to verse nos. 17-20 of this Canto 4 which elaborate further on this highly evolved state of existence of the consciousness.] (12).

13. Oh Nidagh! Just like the clouds dissipate and vanish with the onset of the winter season, remove all doubts and confusions, and be established in the Truth which is only and always 'one'. Therefore, forget about the notion of falsehood and be firmly established in the Truth that 'my only form is the non-dual Atma, and the rest is non-existent'. This is the fourth Bhumika called 'Satya'. [Refer verse no. 6 also.] (13).

14. The fifth Bhumika relates to the state called Sushupta (i.e. the deep sleep state of consciousness). When the spiritual aspirant reaches this eclectic state of consciousness, he becomes silent and calmed down. No trace of restlessness caused by factionalism or the sense of dualism that were the characteristics of the earlier two stages of waking and dreaming now remain to disturb the peaceful demeanours and poise of his inner self that is his 'true self' known as the Atma. The only state now is the 'Advaitya' or non-dual state (14).

[Note—During the waking stage a man was in direct touch of the mischief-creating world which left him perturbed by its complexities and confusions. These physical interactions with the world involving the gross body are replaced by sub-conscious interactions in the world created in the dream, but the mind remains busy, involved and therefore equally agitated in both the cases. But this situation vanishes in the deep sleep state when the mind too sleeps and goes into hibernation. Then the man finds real rest, peace and tranquility. This state is the 'truthful state' of the Atma when

there are no confusion and perplexity created by the numerous pulls and tugs of this world. There is no occasion for getting torn between what is true and what is not; there is a state of complete and wholesome peace and tranquility.]

15. When a person has turned his attention inwards, when he is focused on his inner self and has turned away from the external world, always meditating and contemplating on his pure conscious Atma, then all his mental and physical tendencies and natural inclinations to be outwardly mobile and be attracted by the external world and its multifarious material charms, to be extrovert and get attracted by and attached to the material sense objects of this world, subsides and he calms down. The resultant effect is that he behaves like a drowsy man who is tired and weary. He is not interested in anything related to the external material world, so though he would do his deeds and duties assigned to him by fate, he would be doing them without any interest and enthusiasm; he would be detached, dispassionate and indifferent in his approach; he would do the deeds just because he has to do them and not because he has any interest in doing them or expects any rewards and benefits from these deeds. He would be mentally indifferent towards and disinterested in both the deeds as well as their results, and therefore not able to concentrate on and be enthusiastic about doing external deeds (15).

16. When one has been practicing these six noble and auspicious virtues of spiritual upliftment, called the six Bhumikas (as narrated above), he finally reaches the seventh stage or Bhumika wherein all his Vasanas (worldly ambitions, passions, yearnings, desires, lust and infatuations) are totally eliminated. It is a state when he has developed extreme detachment and dispassion towards everything in the world that is gross, material and not related to the spiritual Truth. When this stage is reached, his behaviour and demeanour are like a man in the Sushupta state, or the state of consciousness called the deep sleep¹ (16).

[Note--¹It is known that some people sleep-walk, and during their sleep-walking phase they are known to perform even impossible tasks, but they are totally unaware of what they are doing. This example would help us to understand how what is being narrated in these verses can actually happen. There are numerous instances when it is observed that a man does his duties in the world with a high degree of detachment. People call such a man careless and lacking ambition. If it's a mental disease then of course it is not spiritualism; it would need medical attention. One must not confuse spiritual behaviour with a medical case. What is being talked about in the Upanishads do not relate to a mentally problematic patient but to a highly evolved spiritual man who has risen above the mundane and has attained a sublime state of existence. His external behaviour might be odd, irrational and unconventional, but it is not a mental sickness but a result of his high level of non-involvement and detachment with the actions of the gross physical body which is distinct from his 'self'. He is unconcerned with the results of the deeds done by the body on the one hand, and on the other hand he is perpetually submerged in meditation and contemplation which diverts his mind from the external world of artificially and towards the world of sublimity and subtlety.]

17. In this transcendental state of existence, there is no notion of either truth or false. There is no entity as 'I or me' here, nor is there a lack of it. [That is, it is a state of complete and wholesome neutrality. It is a spiritually sublime state of existence. It is like the state called 'non-being' or 'non-existence' as experienced by astronauts in the void of deep space where there is no gravity and hence a sense of total weightlessness and a sense of expansion are experienced.]

The Mana (mind) stays here in a weakened, withered and deflated state; it becomes inactive, inert and dormant; it becomes defunct for all practical purposes.

When the ascetic firmly cultivates the notion of Advaitya, or non-duality, in its entirety (i.e. when he is firmly convinced of the unequivocal truth of this eclectic philosophy and adopts its doctrines in totality), then he becomes very fearless. [There is no longer somebody else in existence from whom he has to fear, and he has no fear from death either because he would have realised by now that what dies is the gross perishable body and not his soul which is ethereal, sublime, uniform, universal, infinite, immortal, imperishable and eternal.] (17).

18. He is as empty and void (of any feelings, sensations, emotions, sentiments, concepts, notions, beliefs and faiths), both externally as well as internally, like an empty clay pitcher. [The sky or space present inside the body of the pitcher is separated from its principal form outside just by the boundary created by the physical body of the pitcher. When this pitcher is broken, the two forms of sky or space merge into one another even without mentioning of this mixing—it is obvious and natural; nothing to the contrary can happen. Similarly, when such a man dies, he simply sheds the pitcher-like shell of his gross body so that the vital winds called Pran that are present inside simply coalesce with and vanish into the air element present outside the body without even one noticing it. Refer verse no. 50 of Canto 2 also.]

Likewise, he who is full (contented and fulfilled) from the inside is full also from the outside (i.e. he would not want anything from the material world as he has no more desires and wants left unfulfilled). This is akin to the case when a water-filled pitcher is placed in the ocean—there is water inside and water outside, not even a drop enters the pitcher nor a drop spills out of it (18).

19. Oh Nidagh! Become one who has a high degree of equanimity and neutrality, one who longs for none and abhors none, one who accepts nothing (or need not accept anything because he wants nothing as he is not short of anything, and nothing exists for him in the first place) nor abandons anything (or needs to discard anything because he has nothing with him in the first place).

In this way, after having got rid of all fanciful notions and imaginary ideas relating to the external gross world as well as the internal subtle world, you should meditate and contemplate upon, and be firmly established in the ‘truth’ of what is left behind after eliminating all that is non-truth, or that which remains after eliminating everything imaginary and fanciful. You would discover then that it is the Atma—the universal, uniform, pure and truthful consciousness and your ‘self’—that you would be focusing upon¹ (19).

[Note—¹When a spiritual aspirant meditates upon the Atma, he discovers that it is the ‘truth’ that he has all along been searching for during his spiritual quest. The Atma is pure consciousness and it is completely different and separate from both the gross body as well as the gross world. This Atma is also not the mind-intellect complex because the latter is directly related to and dependent upon the gross body. So when the aspirant is advised to meditate and contemplate, he is asked to concentrate upon the Atma and not on the body or the mind. The body and the mind are instruments that he uses in reaching his goal of liberation and deliverance, but they are not the subject matter of his research for the ‘truth’.]

20. Shed the concept that there is a triad consisting of a seer, an object that is seen, and the process of seeing itself. [When you have developed a high degree of sense of non-duality, when you have cultivated a high level of equanimity, detachment and

dispassion from everything and everyone, when you would want and need nothing and see the same universality everywhere, when 'this' would be as good as 'that' for you, there would cease to be any need for you to get attracted to anything charming in the outside world which would be more charming than the subtle world harbouring the Atma. Therefore, there would be no 'seer', nothing to be 'seen' and hence no need to engage in the process of 'seeing'—the three worlds merge into a single point.]

You should dump them along with all related Vasanas (desires and wishes; passions and yearnings). [You should inculcate the habit of naturally having no desire to see anything, rather than suppressing these desires. When you would realise the truth of the fact that everything that a man wants to see in the world because they attract his attention and appeal to his senses are actually worthless, false, imaginary, entrapping like a bird-catcher's snare, and a giver of countless agonies in the long run, you would naturally develop loathing for them and drop them like hot potatoes.]

So, you should employ the first type of Bhumika (Shubecha) to concentrate and research upon your Atma, the pure consciousness and your true 'self'. That is, you should cultivate auspicious and noble desires and wishes while you have to live in this world during your waking state of consciousness. So, instead of seeing the attractions of the external world, seeking pleasure from such sights, and then allowing yourself to get hooked to them, yearn for them and spend your entire life running behind this mirage, you would rather do better and show maturity of wisdom if you divert your mind and intellect to see what the truth is by inculcating deep insight into the world of 'truth and reality' consisting of the Atma which is not only your pure and true 'self' but also the universal and uniform cosmic Consciousness known as Brahm (20).

[Note—The state of existence reached now as described in verse nos. 17-20 is synonymous with the Turiya state which is the highly evolved spiritual state of sublime existence of the consciousness.]

21. When a person develops a uniform and universal view of this world, when he sees a immutable and indivisible oneness in everything in this world, i.e. when he has a maturity of vision and sees non-duality everywhere, he would see this world to be as uniform, universally one, indivisible and immutable as the vast and fathomless sky stretching to infinity¹.

When he is able to cultivate this grand vision of the world, he is deemed to have achieved 'Jivan Mukti'—i.e. spiritual liberation and deliverance even while he lives and interacts with the world². [This is because now he would not be deluded and trapped by the false charms of the world and remain aloof from it. He would not be shackled to the material world and deluded by its astounding magical allurements that are nevertheless artificial, and a man who has no shackle tied around his ankles or a girdle locked around his neck is indeed a free man.] (21).

[Note--¹The *sky* seems to have myriad of colours in all possible shades and hues, appears to be tainted or corrupted by countless things floating inside it, and assumes numerous shapes, sizes and forms according to the shape and size and form of an empty container or vessel—but fundamentally all these characters and definitions attributed to the sky are extraneous to it because the sky element remains one, immutable, incorruptible, uniform and universal entity. Likewise, a wise and enlightened man sees the myriad colours and forms of this world as a diversion that distracts the mind from its basic character of being an illusion. He is not swept off his foot by this illusive charm and remains firmly grouted to the ground of truth. He sees one 'truth' in the ever-changing nature of the world, and this truth is that whatever is seen in this material world is gross and lacking any reality and substance. In other

words, what is visibly seen is an illusion like the appearance of water in a desert mirage or the appearance of a silver lining in the inside of a glistening oyster shell. A wise man realises that since the 'truth' always remains one and unchanging, and since the world is always and constantly changing, it cannot be the 'truth' he is seeking. It is such a great paradox that what he actually sees is false, and what he does not see is true. It is then that he endeavours to find out about that entity which remains uniform and unchanging, and therefore is the 'real and irrefutable truth'. He discovers it to be the consciousness in the form of the Atma.

²This state of exalted existence when a man has discovered the truth while still living in this world surrounded by all the falsehoods typical of it is tantamount to his obtaining the state of spiritual liberation called Jivan Mukti. He has obtained freedom from the fetters of ignorance and delusions that had kept him shackled to this world and its material charms down the ages. He was unaware that the body which indulged in this world is not his true self, and this wrong perception of his 'self' had landed him in the quagmire of births and deaths. Now that he has discovered the truth about himself as being the Atma and not the body, he no longer has the grossness associated with the body, and likewise he no longer is accused for the doings of the body. Such a man is indeed Mukta or freed even while he lives in a gross body and interacts with the world. It must be remembered here that the term 'man' is being applied to his 'self' or the Atma, and not the gross body in which this Atma lives.]

22. A wise and enlightened man who remains completely unruffled and calm under opposing circumstances of fortunes or misfortunes, adversities or privileges, whose mind retains its poise, its composure, its ability to think rationally, analytically and intelligently as its shining glory even under extreme duress and baffling circumstances when it is subjected to the greatest of strain, and who neither feels unhappy nor happy under any circumstance—verily, such a man is deemed to be 'Jivan Mukta'. He is a person who has found liberation and deliverance even while he is alive and has a gross body that interacts with this external material world¹ (22).

[Note--¹As long as a man is alive he would be under a continuous bombardment of impulses from this world. This situation is like the earth being continuously bombarded by space debris while it moves around the sun; but the earth bears them with stoic indifference and burns these debris in the outer layers of its atmosphere even before they can come anywhere near the surface to cause any physical disturbance and harm. Likewise, a wise man should remain unmoved by the ever-changing stimuli that he receives from the world, and bear them with stoic calmness, with utmost stoutness and forbearance. This would ensure his peace of mind and heart. Such a man is freed from the constant irritation caused by a girdle tied around one's neck and its psychological affect that he is a slave and not a free man. With the mind freed from agitations and constant restlessness by remaining involved in this ever-changing world, it would be able to think and decide in a cool, systematic, analytical, rational and intelligent way, the virtue which is its crowing glory and unique ability. It would help the man to see the 'truth' in a dispassionate and clinical way even when he is seemingly surrounded by unending sufferings, or to realise that the pleasures and comforts that he is indulging into now are pith-less, transient and short-lived, and there is no with and sense in getting engrossed in them. He would be better off if he endeavours to seek comfort in the 'truth' because this would be permanent and robust.]

23. A person who remains awake even during the deep sleep state called Sushupta and who has no separate state of wakefulness is said to be Jivan Mukta. That is, a man who remains totally oblivious of his surroundings, who remains in a perpetual state of bliss and contentedness, not wanting or desiring anything like a man in deep sleep,

and whose mind and intellect too go into hibernation just like it does during the deep sleep state even though the man is wide awake and going about his work in this physical world—verily, such a man is deemed to be Jivan Mukta¹.

Such a person's knowledge of the world is devoid of any forms of Vasanas² (23).

[Note—¹The mind is the central medium through which the Atma, which is the 'true self' of the person, receives any input from the external world because it is the mind that is the coordinating center that not only receives all the perceptions gathered by the organs of perceptions of the body but also filters them and separates one from the other to order the organs of action to respond and the intellect to analyse and decide what is important and what is to be chucked off. If there was no mind, the Atma would not be able to receive a single input from the world, and this fact is proved when the man is fast asleep, i.e. he is in the Sushupta state of existence when the mind is defunct. In this state, the Atma is not able to know anything happening in this world. But this level of awareness is related to the gross physical world of material sense objects, and not to the subtle plane in which the consciousness exists. Hence, when a wise man has reached a state of perpetual wakefulness when his consciousness does not 'sleep' even when ordinary men are said to be fast asleep or are in a Sushupta state of deep sleep, such a man is said to be Jivan Mukta. For him, the mind has no role to play for the simple reason that the mind is related to the body as it is considered to be the subtle organ of the gross body, and also because the mind has two levels of existences—one when it is active and alert, and second when it is not active and gone into hibernation as in the case of deep sleep. On the contrary, the consciousness is always alert, active, agile, awake and aware; it never goes to sleep. This is proved by the fact that even during the Sushupta state of sleep when the mind is said to be defunct, the vital life forces and consciousness continues to flow unabated in the body, preventing it from dying. A man whose mind has gone astray, a man who is insane or one who is suffering from some serious disease of the brain, or one who is suffering from paralysis or any other illness that is directly related to the mind and the organs of perception, even this man is alive and not considered to be dead. What has kept him alive if the organs of perceptions and the central all-important authority that controls this world, i.e. the mind, have become defunct? The answer is 'the Atma' which is the spark of consciousness that injects life in the gross body and enables the mind to think and exhibit its stupendous powers, the consciousness that flows in the body to keep it alive. Thus we see that this verse alludes to this consciousness when it says that a man is awake even during the deep sleep of Sushupta. The consciousness never sleeps; it is ever awake. This term 'awake' is a metaphoric way of saying that the consciousness is wise, erudite and enlightened. A person who is aware of this fact is said to be Jivan Mukta as his concept of being awake and sleeping changes.

²Since his mind is defunct, the man is not registering any sort of charming impulse originating from this material world, and therefore he would not harbour any desire to obtain the object from which this alluring signal emanates or have access to it. It is the mind that first receives any input from the external world of sense objects, decides that this is charming and therefore worth acquiring or paying attention to, and then gets into the process of devising means and methods to acquire it by hook or crook or to constantly be involved in its thoughts. But in the case of the Jivan Mukta person, this situation does not arise and he is at peace with himself because his mind does not have any kind of Vasanas—attractions, desires, yearnings, passions, wishes or aspirations—relating to anything of this material world.

The concept of Vasanas has been elaborately described in note of verse no. 70 of Canto 2 of this Upanishad. Refer also to verse nos. 16 and 20 of the present Canto 4.]

24. Such a wise and enlightened man goes about the daily chores of life in this world in a normal way so much so that he may even exhibit such traits as showing Raag and Dwesh (i.e. either having attractions for anything, or having aversions for it), but such traits are only superficially present in him, for internally he is not at all affected or tainted or influenced or moved or bothered by them in the least. His internal being is as untainted, as unruffled, as undivided, as uniform, as uncorrupted, as unconcerned and as un-torn as the sky which always remains uncorrupted, taintless, steady, uniform, universal, immutable and indivisible inspite of numerous things of uncountable variations impregnating it and attempting to tarnish its basically immaculate and immutable character or attempting to disrupt its uniformity, immutability and indivisible nature¹. Such a person is deemed to be 'Jivan Mukta' (24).

[Note—¹The sky has such grand and majestic attributes as being vast, measureless, uniform, immutable, spotless, clean, colourless, calm, all-pervading, all-encompassing etc. The sky is the measurement of Brahm in the sense that if it was ever possible to measure the length, breadth and depth of the sky, it would then have been possible to measure Brahm. But that is not at all the case. The calmness of the higher reaches of the sky is experienced by Para gliders and can even be witnessed on top of mountains which are high above the ground and located somewhere in the space around the earth, symbolised by the sky, where there is an eerie silence. The sky has no colours of its own; whatever colours that we see are actually the scattered sunlight.

Everything that exists does so in any one of these spaces. Every nook and corner where there is no solid or liquid is filled with space or 'Akash', which is a synonym of sky. It is omnipresent, all-pervading and all-encompassing. That is, these three forms of the skies, viz. the outer, the inner and that which is present inside the heart, are all the same; there is no distinction or demarcation or boundary or fundamental difference between any two skies. The apparent boundary or limitation imposed on the sky by the physical body or the membrane of the heart is only deceptive in nature. Once a person dies, for example, his body perishes, and the space present inside the heart merges indistinguishably with the space present inside the body when the body is cremated or decays when buried, and they together merge with the vast space present outside the body.

The 'sky', which was originally conceived as something that was 'void' or 'nothing', gets filled with 'air', simply because void can't exist, and the creation which came into being in this void needed some base for its origin and coming into being. The molecules or atoms of air are in a state of continuous agitation and flux; they collide with each other, they form a chain of molecules which give rise to different layers or strata of air which extend from the surface of this earth to the stratosphere. This continuous turmoil produces 'sound'. Various physical and chemical processes come into play, producing gases of varying density and characteristic features. Air has particles of dust and different gases, which produce the perception of touch. Friction of the various molecules present in the air produces static electricity which is observed as a scintillating display of atmospheric discharge of electrically charged particles in the sky often observed at the poles. This sparkle of static electric discharge is synonymous with 'fire'. Perhaps the Upanishadic sage got this brilliant idea when he observed a meteor shower during the night. The two elementary gases hydrogen and oxygen combine to form the molecule H₂O commonly known as 'water'. With all these essential ingredients in place, the solidifying and cooling down process of nature starts its effect and produces soil and rocks which are symbolised by the 'earth' element. Then gravity and magnetic forces come into play, giving density, gravity and grossness, indicative of the grossness or heaviness of not only the earth but also of the air around it. Previously, before gravity and other forces of nature came into play, this air was subtle and very light; it spread

universally and uniformly to all the corners of the cosmos. But with the gradual formation of different celestial bodies from the primordial cosmic gases, each having its own gravity and other natural physical and chemical forces, the air was pulled or sucked in, leaving the rest of the space beyond the reach of these celestial bodies into a big void.

The sky is pregnant with a wide variety of impurities. It is full of celestial bodies besides cosmic debris. It has the burning furnace of the sun as well as the cool pitcher of nectar symbolised by the moon. The black clouds of a storm with its stabs of ferocious lightening coexist with white fluffy clouds floating lazily across the calm sky. There are birds of prey and there are harmless kites flying in it. There is the polluted haze of the city as is the pristine clear atmosphere of a village and the mountain. There is the brightness of the day and the foreboding darkness of the night. But the wonder is that none of these really affect the sky at all—it remains clear and untainted in its basic nature and form. All these things cited here are extraneous to the fundamental nature and characteristic of the sky. The sky treats all of them with the same magnanimity and kindness. Similarly, a wise man treats all the creatures with whom he has to interact in this world with the same equanimity and fortitude as the sky.

The sky has a unique quality—it harbours the entire creation in its bosom as nothing that exist lies outside the outer periphery of the sky, but still it remains completely detached from each and every thing present inside it. The sky remains unaffected, uninfluenced, unattached with and untainted by anything that it harbours or shelters. Whatever visual attributes that one sees in the sky, such as its blue or azure haze, the changing colours at different times of the day, are only optical illusions created by various factors of Nature. Even the clouds or the sun in the day time and the stars and the moon in the night do not effect the neutral nature of the sky because while the sun is there the sky appears to be bright and sunny, and when the moon rises the same sky assumes the colour of the moonlight with no indication that it was so bright earlier. The overcast sky with dark clouds becomes crystal clear when the clouds go away, and the darkness of the night sky dotted with umpteen numbers of stars can give no indication that it would be brightly lit during the day with no trace of any single star. The plumes of pungent smoke being belched into the sky by factories and fires do not effect the bland and neutral form of the sky, for the sky absorbs them all with great equanimity and fortitude without being affected by them at all.

Everything in existence needs the sky to develop and grow. The fire needs space representing the sky to burn, the air needs it to flow, the earth needs it to remain in its place and move around the sun which in turn regulates the seasons and other environmental factors, the plants need it for their growth and development as is proved by the fact that they become stunted and die in the want of space to grow and spread their branches, the creature needs it to breathe, stand and grow, and so on and so forth. The air can be sucked out from an enclosed space to create a vacuum, but the 'sky' would still be there. The world would die and go into oblivion along with all its components, including the other four elements (earth, fire, water and air) at the time of conclusion of creation, but the sky would still be there; in fact it is in the vast bottomless pit of the sky that the creation would vanish then. And when the time comes for the emergence of the new creation, it would do so in the bowl of the sky. Nothing exists beyond the sky.]

25. A person who has no trace of Ahankar¹ (ego, pride, arrogance, haughtiness and hypocrisy), and whose mind and intellect are not attached to and infatuated with anything or anybody—such people are deemed to be 'Jivan Mukta'. Whether or not they show superficial signs of having Ahankar, whether or not they appear to be attracted towards and attached with anything or anybody, they actually are not. The

superficial appearance of having Ahankar of any kind is very misleading about their authentic internal nature which is totally pure and cleansed of this taint of character known as Ahankar (25).

[Note—¹*Ahankar* has been described in the context of the Antahakaran (the inner self of the creature) as being one of its main components in Shaarirak Upanishad of Krishna Yajur Veda, verse no. 4; Paingalo Upanishad of Shukla Yajur Veda, Canto 2, verse no. 3; and Trishikhi Brahmin Upanishad of Shukla Yajur Veda, Canto 1, verse no. 6.

Paingalo-panishad of Shukla Yajur Veda tradition, in its Canto 1, verse 6 describes the concept of Ahankar in the context of the genesis of creation, and how it was able to influence even the supreme Brahm, in his grosser cosmic manifestation of Lord Vishnu, to get involved in the creation of this delusory world.

How Ahankar affects the creature's nature and temperament has been succinctly described in Niralamb Upanishad, verse nos. 11-12, 20. How it affects the path of spiritual liberation and deliverance of the creature, and why should it be controlled has been explained in Yogshikha Upanishad of Krishna Yajur Veda, Canto 1, verse nos. 34-37, 150.

How the Mana (mind) creates the notion of Ahankar has been described in Yogshikha Upanishad, Canto 6, verse no. 60.

Other references—Subalo-panishad, Canto 9, verse no. 13 of Shukla Yajur Veda.]

26. He whose presence is not the cause of any irritation for other people of this world and neither is he himself agitated by this world, he who never loses his calm and poise and remains perfectly stoic and unruffled—not feeling happy, excited or exhilarated at favourable circumstances or good fortunes, not having any kind of jealousy, malice or ill-will towards anyone, and not having any fear of any kind—verily, such a person is said to be 'Jivan Mukta' (26).

27. He who remains calm and detached from all material things and objects of sense organs in this bewitching world that surrounds him like a web or net, and who has a grand vision that everything that has an existence are meant for the consumption of the society or world at large—such a calm and selfless man is self-contented and fulfilled, not wanting to enjoy anything or hoarding them for his own consumption. So he cannot be said to be trapped in or by this web or net cast around him by the material things of this gross world. He is therefore deemed to be 'Jivan Mukta'.

In other words, a man who is of a charitable disposition and thinks that the material things of the world are meant for the society at large and not for his personal consumption and comfort—verily, such a man is deemed to be 'Jivan Mukta' (27).

[Note--Usually, when a man is surrounded by material things of comfort and pleasures he would hoard them all for his own enjoyments, for his own consumption. He would lock the grain in his warehouse even at the risk of them rotting away instead of giving them to the poor and the needy. He would build a palatial residence for himself and never bother that his own brother, let alone the rest of the family and the society at large, is living in some rundown hovel. He would eat gourmet meal and throw away the leftovers in the garbage bin without batting an eyelid for his less fortunate brethren who perhaps have slept empty-stomached in the night and had not a morsel of food for their hungry stomachs. Selfishness and greed knows no bounds. The character lauded in the verse here is just the opposite of this selfish man.]

28. Oh sage (Nidagh)! When a wise man casts off all the numerous desires and wishes that his mind and heart harbour in the normal course of life in this world, and instead

remains contented with my (Lord's) remembrance—verily, such a man is said to have obtained 'Jivan Mukti'¹ (28).

[Note--¹A man has so many desires related to the sense objects of this material world and he seeks them out with great effort. The reason for harbouring these desires and making an all-out effort to acquire them is his idea, though erroneous, that by acquiring such and such thing he would get comfort and peace. He forgets in the process that he is falling prey to such worldly enticements that would land him in grave trouble. So a wise man remains contented with whatever he has or whatever comes his way without getting undue agitated or worried for them. Here, the phrase 'remaining contented in the Lord's memory' means that he has happily decided to accept what the Lord has willed for him as his lot and destiny, without getting unduly perturbed over the matter and losing sleep. After all, wants and needs are relative things—one thing is very necessary for one man while another is at peace even without it. A non-wanting man would be extremely baffled if he is showered with goodies, as he would not know what to do with them; he would lose his peace instead of exulting at his good fortune and windfall that has come his way.]

29. A man should sincerely abandon all his imaginary ideas, his fanciful thoughts, his sentiments and notions, as well as all sorts of desires and wishes pertaining to the world that keep on endlessly arising in his mind by distancing his conscious self from them. Instead of allowing his 'self' to be distracted by these nagging diversions originating in the mind, he should rather focus his attention on the pure consciousness that resides in his own bosom. That is, a spiritual aspirant is advised to turn the effort of the mind inwards instead of allowing the mind to roam aimlessly outwards, jumping from one object to another.

By thus training his mind and adopting such an eclectic posture of evenness and equanimity he is able to overcome all dejections, dismay and depressions, or all sorts of fears, perplexities and consternations that come in the wake of these imaginations, ideas, thoughts, sentiments, notions and desires relating to the world.

As a result, he finds rest and peace for his 'self', for his Atma, even though he has a gross body which interacts with this gross world. Such a man is called 'Jivan Mukta' (29).

[Note—When the mind is kept agitated by allowing it to run amok and imagine whatever it wants to, then it is like a child let loose in a toy shop or a bull in a china shop. The mind would go berserk; it would conjure up a magnificent world of fanciful things and then go hammer and tong after it to obtain these fanciful things that it has imagined to be true and a provider of happiness to the creature. It is but natural that no one can ever hope to fulfill all his dreams, some would be left unrealized. Even if some success is achieved, this would impel the man to do more instead of becoming satisfied and calming himself down for the simple reason that he would have tasted blood and would wish to have more of it. The chain reaction of wants and more wants is set in motion, a development that can never give him spiritual peace. So the best way is to leash the mind and let it not have any fanciful ideas and imaginary notions. Then the mind would be tamed and learn to just accept things as and when they come, and deal with them on case to case basis without accumulating or storing anything in its memory or sub-conscious which could disturb a person's peace even after the event has passed. The state when the mind does not store anything in its memory and sub-conscious, and instead deals with things as and when they come its way, forgetting about them completely after the event has passed away, is referred to as the 'hollow state of existence when the mind lives in a virtual void' as explained in verse no. 18 with respect to the sky element.]

30. Though it is true that everything is one and non-dual, but if a man thinks, relying upon this tenet, that this visible world is also as true as his own self, then he is sadly mistaken. The reason is that this world is a result of the fanciful idea and a magnificent creation of the imaginative and creative mind, whereas the 'self' is eternal and truthful consciousness. The former is non-truth because it is based on sheer imagination, while the latter is truth because it is not based on imagination but on the reality known as consciousness that is at the very foundation of the phenomenon of existence. The 'self' or consciousness is an entity that even controls the Mana or the mind (refer verse no. 29).

Therefore, a man who never gets such funny and ridiculous ideas that he is inseparable from this gross world and is an integral part of it—such a man is deemed to be 'Jivan Mukta' (30).

31. Be steady in your convictions and firmly rooted or anchored to the fact that it is the supreme transcendental Divinity known as Brahm who has actually manifested or expressed himself in the form of whatever is seen in this world, but this Brahm is detached from it, is distinct and separate from it. It is not at all attached with anything in this creation inspite of the fact that everything is created by it, and it is all-pervading, omnipresent and ubiquitous by nature¹.

When you have cultivated this high thinking and divine views of Brahm vis-à-vis the world and your own self by being taught about it by self-realised and learned teachers and by following the directions shown by the scriptures, you should then enter this high citadel of spiritual realm and become calmed down, steady and rested. [That is, instead of wandering here and there in this world and getting confused in your search for the truth and reality, you should find peace by meditating and contemplating upon one non-dual Truth known as Brahm which resides in your own bosom as your Atma.] (31).

[Note—¹You must draw a parallel between your self and the world by comparing these two with Brahm and its creation. The latter presents a classical case of paradox—because on the one hand this world is said to be a manifestation of Brahm with the latter uniformly and universally present in the former as its integral part and the only entity that gives the creation its shape and life, but on the other hand the eternal and truthful Brahm is totally a distinct and independent entity that has got nothing to do with this perishable, transient and artificial world. Similarly, your 'true self' is the pure consciousness called the Atma and not the gross body which lives in and is a part of the world, being totally engrossed in its activities like fish is in water. This world is imagined by the mind which works under the overall aegis of the Atma for the simple reason that had there been no consciousness in the gross body, the brain would not have functioned, far less think and imagine of anything at all. It is erroneously assumed that the Atma is involved in the world created by it, for actually it is the mind that has first created and then plunged headlong into it. The Atma is neutral and dispassionate—that is why the Atma, the conscience and the pure self, can control the mind and the rest of the behaviour of the man as envisioned in verse no. 28-30. This pure conscious Atma of the individual creature is a microcosmic manifestation of the cosmic all-pervading Atma known as Brahm. The vast world is the body of Brahm much like the body of the individual creature is the body of his Atma. This is as good as saying that Brahm who had created this world is known and recognised as the world itself much like the case of the Atma representing the true 'self' of the individual creature being known and recognised by the creature's body.]

32. [And who is that Brahm; or what is the other name of Brahm? This question is answered here—]

Shiva is the eternal Guru (moral preceptor, teacher and spiritual guide); Shiva is the Vedas personified; Shiva is revealed in the form of all the Gods; Shiva is the supreme Lord. [These stanzas can be interpreted as follows—the Guru is a manifestation of Shiva; the Vedas are embodiments of Shiva; the Gods are none other than Shiva revealed in their forms. Indeed, Shiva is the supreme Lord, the Supreme Being of creation.]

Since everything is Shiva, I too am Shiva. [That is, I am an embodiment of Shiva—the truthful one, the auspicious one, the beautiful one, the wise and enlightened one, the one who is renunciation personified, the eternal and infinite one, the Supreme Being himself in my form.] (32).

[Note—Refer also to Canto 3, verse no. 6 of this Upanishad, and to Rudra Hridaya Upanishad and Skanda Upanishad of the Krishna Yajur Veda which are dedicated to this theme.

This is the great state of self-realisation when the spiritual aspirant exclaims ‘So-a-ham’, i.e. ‘that is me’. This is one of the great sayings called Mahavakyas of the Vedas.]

33. A wise and erudite Brahmin is one who researches this Shiva principle diligently and with a cool head, and once it is known to him he becomes silent and steady in it. He should not get confused and perplexed by studying numerous scriptures and commentaries on them and neither should he engage in endless debates and discussions because they only lead to more confusions than removing them (33).

[Note—It does not mean that one should not read or consult the scriptures, but the basic idea is to first decide one’s objective and then select the correct text related to the subject, and then study it thoroughly. After the required knowledge is obtained, it is a futile exercise to verify if what this scripture says is endorsed by other texts, because they are numerous versions and school of thoughts in this world, with each presenting its own take on the subject from a different angle and with a different perspective, though they all aim and intend to speak about the same universal Truth. Since the language and metaphors and symbolisms used vary from scripture to scripture, for a less wise man this can be a cause of great perplexity and confusion.]

34. Sage Shukdeo (the parrot saint and son of sage Veda Vyas) found Jivan Mukti as did sage Vamdeo. But there was a subtle difference between the two types of Muktis. Those wise people who follow the path shown by sage Shukdeo find the ultimate liberation and deliverance for themselves in such a way that they do not have to come back into this world again, i.e. they obtain final emancipation and salvation. [Refer verse no. 36, 38 of Canto 4 also.] (34).

35. On the other hand, those who follow the example set by sage Vamdeo repeatedly die and take birth in this world. This cycle would continue for them till the time they find the Truth by practicing Yoga in relation to the profound philosophy known as Sankhya Shastra¹, understanding its principle tenets and basic philosophy, besides painstakingly adhering to the theory of Karma (doing deeds correctly, with the proper perspective and wisdom, so that no consequence accrue which would create a baggage that is carried over to the next birth as destiny that forces the creature to enter a fresh cycle of birth and death)². It is then only that they can get Mukti. [Refer also to verse nos. 36, 39-42 of this Canto 4.] (35).

[Note--¹Sankhya Philosophy or *Sankhya Shastra* and its accompanying philosophy of *Sankhya Yoga* have been elaborately described in Chapter this Upanishad as a note of verse no. 55 of Canto 2.

²The theory of *Karma* or doing deeds correctly and with the correct perspective--*Karma Yoga* or the Yoga philosophy based on doing deeds and taking actions is intricately linked to the philosophy 'Kriya Shakti'. *Kriya Shakti* refers to the power of the gross physical body to act as per wishes of the mind and intellect. It is the Kriya Shakti which enables the supreme Authority to carry out its wishes through the organs of the body by taking various actions and doing different deeds. It is the ability of the body to actually do the deeds or take the actions and bring them to fruition. It also represents the ability to enjoy the results of doing such deeds and actions taken by the creature. The word also refers to being active and enterprising and the opposite of being lethargic and indolent. It is the actual ability to carry out his plans to their successful completion, i.e. to do deeds, to take actions and enter into enterprise, because simply sitting and procrastinating endlessly wouldn't give success unless there is assiduous activity and diligent effort, no matter how wise a man is and how determined he might be. The body is prompted into taking action by the desires and aspirations originating in the mind and intellect complex. If these desires are world-centric, then our actions and deeds would be also world-centric and so would be the result. This is because every activity gathers its quality from the texture of the desire that has prompted a particular action or deed. So, when the desire is to enjoy the outside world and its sense objects, the deeds and actions become entrapping and the cause of all world related miseries. On the other hand, if the desires are auspicious and noble, the same deed and action would become an instrument for spiritual upliftment as well as liberation and deliverance. In this context, the term *Karma Yoga* would be to coordinate the effort of the body and the mind not towards fulfilling worldly aspirations that would be ensnaring and enslaving in the long run but to divert them towards the divine goal of spiritual liberation and deliverance. And the tool in this endeavour would be to have auspicious, noble and righteous desires, aspirations and wishes, collectively called the different Vasanas or Ichaas inherent in a man, instead of the worldly ones. Once the desires are purified and chastened, the activities and deeds to fulfill or accomplish those Vasanas or Ichaas are purified and chastened proportionately. At its height, the total renunciation of desires for enjoying anything related to the external world of sense organs and their respective objects is called 'Vairagya'. This Kriya Shakti is more developed in those people who have a predominance of the Raja Guna or the second category of three basic qualities that decide the habits, temperaments and nature of any man. The Raja Guna makes a man more inclined towards enjoying the sense objects of the world and remain engrossed in the activities related to the gross world.

Karma Yoga expounds on the importance of doing deeds and taking actions, but with a different attitude. It stresses that we must not get 'involved or attached' to those deeds or action in as much as we shouldn't be bothered about the rewards or punishments incumbent on such deeds or actions. We must do them dispassionately and with detachment. The action or deed should be treated as one's offering to the God as well as an offering to the sacred fire sacrifice. This will ensure that the actions or deeds are not unrighteousness, corrupt or evil. On the contrary, whatever is done in which a person's subtle sub-conscious says is not the correct thing to do will be deemed to be unrighteous, unethical and unlawful, and therefore cannot be an offering to either the God or the sacred fire sacrifice.

Refer also to Canto 2, verse no. 48 of this Upanishad which deals with the concept of Karma Yog and how one can become free from the fetters created by 'deeds'. Other references are Niralambo-panishad of Shukla Yajur Veda, in its verse no. 11-12; Trishikhi Brahmin Upanishad of Shukla Yajur Veda tradition, in its Canto 2, verse nos. 23-26; Mandal Brahmin Upanishad of Shukla Yajur Veda, 2/4/2-3; Adhyatma Upanishad of Shukla Yajur Veda tradition, verse nos. 49-60; and Chandogya Upanishad, Canto 7, section 21.]

36. The two sages Shukdeo and Vamdeo represent two types of creatures created by the God. Shukdeo represents those who are like the birds, while Vamdeo represents those who are like the ant (36).

[Note—Refer verse nos. 38-42 of this Canto 4 which explains why and how the bird and the ant differ vis-à-vis the Mukti.

The bird's chick breaks free from the shell of the egg, hops around for some time and then flies off to some unknown destination, while the ant is always tethered to the ground. The bird represents that living being who takes a birth and uses this opportunity to lift himself from the present situation and reach for higher, sublime goals in life symbolised by the 'flying away of the bird'. For the rest, the ant is an example; they remain bound to this gross world and prefer to be attached to it. The bird flies in the sky and has the privilege of viewing the world from a wide angle and from a distance, meaning a creature is wise if he can acquire a broad perspective of the world and see it with a broad vision like a bird sees this world from high up in the sky. He remains aloof and detached from the world like the bird flying in the sky maintains a clear distance from the ground and has no bother of whatever is happening on it. On the contrary, the ant is bound to the ground, is moribund and is directly affected by its surroundings much like a man engrossed in the material world, who is directly affected by all the happenings around him, and for whom the world is the end.

The bird lives a lonely life, has no permanent companion, and once it flies off its nest when grown up, it rarely comes back to its parents again unlike the ant which lives in a society and spends its entire life serving the colony to which it belongs. Similarly, a wise and enlightened man lives a lonely life and remains detached from the rest of his companions as well as the household and the world like the bird. On the other hand, an ant is known to endlessly strive to forage for food to feed itself and others in the colony like a worldly man who spends his life time serving himself and his dependents.

But it is possible for the two types of men to get Mukti or liberation and deliverance from this world. The Mukti for the man who detaches himself from the world and moves ahead in his spiritual path alone like a lonely bird flying in the sky is obvious, but even a man who works like a slave ant is also entitled for Mukti if he inculcates the grand virtue of doing deeds without any expectations of personal rewards or benefits from them. The ant does remain engrossed in its endless pursuit for food, running to and fro from its dwelling to the food, symbolising the oscillation that the man is subjected to in the form of numerous lives and deaths as well as the chain of deeds and their consequences.

The metaphor of the bird is used to emphasise the fact the facts of life where the creature is born surrounded by a shell of worldly Vasanas and Vrittis, i.e. worldly passions and tendencies, along with numerous other factors brought forward from his previous life. While inside this shell and surrounded by it, the creature feels suffocated and is not aware of what lies beyond it. But when he breaks free from this shell, he discovers there vast infinite sky and wishes to fly to his freedom. This is a metaphoric way of saying that the wise creature would free himself from the fetters of ignorance and delusions that shackle his Atma to this limiting gross world and its illusionary charms which are however perishable and transient, and instead endeavour to lift himself and obtain spiritual liberation and deliverance from the horrors and torments associated with this mortal life. This spiritual liberation from the bondage of the world even while remaining in it and being active in it is called Jivan Mukti, and it is symbolised by the flying away of the bird into the deep space of the sky to its freedom. A spiritually liberated man feels as free and unfettered as the bird.

The creature who is engrossed in this physical world acts like the ant, but if he works selflessly, he is entitled for Mukti because doing deeds and not getting involved in them is also a path of spiritual liberation and deliverance. This is because

if a man is not involved in deeds, he would not be accumulating any rewards or results, and therefore he would not have to take a birth again to suffer the consequences of these results. Besides this point, he should develop the grand philosophical view point that this world is a manifestation of Brahm, the supreme transcendental Consciousness, and with this view his involvement with the world assumes a divine connotation. He no longer remains close to a world which is gross and perishable, a world that is deluding and entangling, but near to his Lord, serving him by each of his actions and deeds, and being in close proximity of the Divinity. Thus, such a man who is like an ant too deserves Mukti; he too becomes Jivan Mukta.

The subtle *difference* between these two types of Muktis is the fact that the one which is like the bird is more advanced and helps one to reach one's destination without much hindrance as the bird can fly to its destination with virtually no obstacles to block its path. On the other hand, the other path which is compared to the ant is more cumbersome and more dependent upon the physical circumstances that an aspirant has to face for the simple reason that the ant is bound to the gross earth (world) as compared to the bird which takes the more subtle path of the sky, a path which is ethereal and free from worldly gross hindrances. Therefore, the ant's path becomes more difficult and tedious as compared to that of the bird.]

37. The great sayings which are universal truths called the 'Mahavakyas'¹ as pronounced by the creator Brahma should always be kept in mind and continuously meditated and pondered upon even while one studies the tenets of Sankhya Shastra, Yoga and Samadhi. [This ensures that the main target of all spiritual practices—which is to establish oneness of the individual creature's Atma or soul with the cosmic Atma or the Consciousness and Truth known as Brahm—is not lost in the winding alleys of scriptures and the catacomb of their numerous interpretations. That is like not losing sight of the tree while roaming in the dense forest!]

Understanding the real meaning and spiritual import of the great sayings called the Mahavakyas incorporated in the Vedas by the creator who had created the Vedas themselves is the prime aim of all spiritual practices such as the study of the philosophy of Sankhya Shastra, Yoga and Samadhi. If this objective is not fulfilled then the entire exercise goes in vain (36).

[Note—¹The *Mahavakyas* are briefly the great universal sayings, declarations, commandments, tenets, or the axioms and maxims of the Vedas which are absolute truths and sum up the essence of their teachings with the reference to the Supreme Being known as Brahm and his counterpart the Atma or soul, which is pure consciousness residing in the bosom of the living being. They are as follows—(i) 'Brahm Is Consciousness' (Pragnanam Brahm) appears in Aiteriya Upanishad of the Rig Veda. It means that Atma/consciousness, which gives life to the material layers consisting of the five sheaths of the creature, is the same as the Supreme Reality/Truth behind the entire universe/creation called by the name of Brahm; (ii) 'That Thou Art' (Tat Twam Asi) is found in the Chandogya Upanishad of the Sam Veda. It means that the infinite, all-pervading, omniscient Supreme Truth/Reality is the consciousness or pure self in you. It is also called a statement of advice to the seekers in as much as it contains advice addressed to the seeker that the supreme reality is the self within him; (iii) 'This Self Is Brahm' (Ayam Atma Brahm) is found in the Mandukya Upanishad in the Atharva Veda. It means that the Atma which is self illuminated and the Supreme Reality/Truth are one and the same (i.e. identical); (iv) I Am Brahm (Aham Brahm Asmi) is found in the Brihadaranyak Upanishad of the Yajur Veda. It proclaims that the conscious principle/element in an individual is nothing other than the total consciousness. This is the statement made by the seeker after attaining self realisation.

There are a number of other Upanishads that describe these great sayings of the Vedas, called the Mahavakyas. Some of them are the following:--

(a) According to Paingalo-panishad, 3/2 of the Shukla Yajur Veda, they are the following—(a) ‘Tattwamasi’—that essence or Tattva is you; (b) ‘Twam-Tadasi’—you are that; (c) ‘Twam-Brahmasi’—thou art Brahm; and (d) ‘Aham-Brahmasi’—I am Brahm.

According to Mandal Brahmino-panishad, of the Shukla Yajur Veda, they are the following—(a) ‘That is me’, or ‘that is I’ is mentioned in Brahmin 2, section 2, verse no. 5; (b) ‘I am Tej or I am energy personified’, ‘I am Pragya or personified knowledge’, ‘I am one and immutable’, ‘I am pure and non-dual Brahm’—these are mentioned in Brahmin 2, section 4, verse no. 4; (c) ‘I am the eternal and immaculate Parmatma’, ‘I am that essence’, ‘you are me’, ‘I am you’ are mentioned in Brahmin 3, section 1, verse no. 6; (d) ‘I am Brahm’ appears in Brahmin 3, section 2, verse no. 1; and finally (e) ‘You are me’ appears in Brahmin 3, section 2, verse no. 2.

According to Shuka Rahasayo-panishad, 22 of Krishna Yajur Veda, they are the following—(1) ‘OM Pragyanam Brahm’. [OM salutations! The truthful and pristine pure knowledge which is all-inclusive, most sublime and eclectic in nature is Brahm personified.] (2) ‘OM Aham Brahmasmi’. [OM salutations! Indeed, I am Brahm.] (3) ‘OM Tattwamasi’. [OM salutations! That Brahm is you; or that art thou.] (4) ‘OM Ayamatra Brahm’. [OM salutations! This Atma, the pure conscious soul or ‘self’ of the creature, is Brahm.]

According to Kaivalyo-panishad, verse no. 16 of the Krishna Yajur Veda tradition, the Mahavakya is ‘That Brahm is you; you are it’. Verse no. 17-23 of this Upanishad also affirms that the truly realised person is one who sees ‘his own self in every aspect of this creation’ simply because the entire creation is nothing but a revelation of one single immutable and truthful entity known as Brahm.

Other Upanishads that highlight the fundamental tenets of the Vedas are Atmabodho-panishad of Rig Veda; Sarwasaaro-panishad, verse no. 12-14 of Krishna Yajur Veda tradition; and Atmo-panishad of Atharva Veda amongst others.]

38. When the spiritual aspirant has realised the divinity and glory of his true self by putting into practice the teachings of the great Mahavakyas as done during the practice of Samadhi (the perpetual state of meditation when the practitioner is focused on his Atma or pure consciousness to the exclusion of everything else), he is said to follow the path shown by sage Shukdeo—i.e. he is able to fly like a parrot (Shuk) in the endless sky which presents no physical hurdles in his spiritual path.

They leave this gross physical world and fly off into the vast realm of the fathomless Truth metaphorically represented by the sky without facing any kind of hurdles, and reach their spiritual destination of attaining the supreme citadel called ‘Param Pada’, the stature of being Absolute and inseparably one with the cosmic Consciousness known as the supreme transcendental Brahm (38).

[Note—Refer verse no. 34 and 36 of this Canto 4 also.]

39. If one wishes to attain various mystical powers called Siddhis such as Anima etc.¹ which would give him worldly fame, glory, acclaim and honour, he would endeavour to achieve these Siddhis by following various denominations or forms of Yoga such as Yam, Niyam etc.², including the severest forms called Hath Yoga³ which entails difficult postures called Mudras, Aasans and Bandhas which are specialised Yoga techniques that have great potential power to definitely bestow the practitioner with the mystical prowess he seeks.

But all these paths are ridden with numerous hurdles besides being very risky and dangerous. Should something go wrong, they prove fatal as well. Again, they can

give worldly acclaim and glory but do not liberate the soul and deliver it from the trap from which it should have sought liberation and deliverance. [The acquisition of Siddhis is bonus that comes without asking to those who practice Yoga. These Siddhis would bestow supernatural powers to the practitioner of Yoga. This in its wake would lead to his acquiring great name and fame. People from far and wide would come to him seeking his intervention to help them out of their worldly problems. He would be literally mobbed daily by people seeking his help. The honour and laurels heaped upon him would go into his head and he would be driven far off from the main objective for which Yoga is prescribed in the scriptures in the first place—which is to bring about a ‘union’ (Yoga) between the individual soul and the universal cosmic Soul. Here, such people are said to be the followers of Vamdeo because they believe in obtaining Mukti through making diligent and hard efforts symbolised by their doing Yoga which is rigorous and involves painstaking efforts over a long period of time. Yoga is fraught with a lot of danger and hurdle as compared to the path of finding Mukti through the pursuance of the path of Gyan or acquisition of knowledge and enlightenment based on meditation and contemplation, study of the scriptures and pondering deeply upon their doctrines and other such methods that do not require rigid exercises and hard labour as required by Yoga. Refer verse nos. 35-36 of this Canto 4.] (39).

[Note—¹There are eight *Siddhis* as follows-- (i) ‘Anima’ means the power to become microscopic or so minute that one becomes invisible to the naked eye; (ii) ‘Mahima’ is to have majesty, glory and fame; to be honoured and acknowledged for one’s achievements, knowledge and skills; (iii) ‘Garima’ is to have weight, stature, dignity, decorum, gravity and significance, (iv) ‘Laghima’ is to have simplicity and humility; (v) ‘Praapti’ is to be able to attain or obtain anything wished or desired; (vi) ‘Prakramya’ is to have valour, ardour, strength, powers, prowess, potential and punch leading to triumph, glory and majesty; (vii) ‘Ishwatwa’ is to be able to have lordship or sway over others; and (viii) ‘Vashitwa’ is to be able to control and subdue others.

²The eight-fold path of Yoga are the following—According to Patanjali who is considered to be the greatest exponent of Yoga, the latter consists of 8-fold path. These are briefly the following—(1) ‘Yam’ or self restraint of the senses; (2) ‘Niyam’ or observance of certain sacrosanct rules; (3) ‘Aasan’ or postures for meditation; (4) ‘Pranayam’ or breath control exercises for purification of the body and mind; (5) ‘Pratyahar’ or withdrawal of the mind and its control; (6) ‘Dharna’ or having a firm conviction, faith and belief on the sanctity and truthfulness of the chosen path; (7) ‘Dhyan’ or contemplation and concentration of the faculties of the mind and intellect, such as visualizing the presence of the supreme Brahm in the point of the forehead between the two eyebrows; and (8) ‘Samadhi’ or a perpetual trance-like state in which the aspirant loses all awareness of the external world and even himself, and remains perpetually in meditation. These eight fold path of Yoga have been listed in *Varaaha Upanishad*, canto 5, verse no. 12—12 ½ and *Yogtattva Upanishad*, verse no. 24-25 of the Krishna Yajur Veda tradition, as well as in *Trishikhi Brahmin Upanishad*, Canto 2, verse no. 28-34, and *Mandal Brahmin Upanishad*, Canto 1, verse nos. 2-10 of Shukla Yajur Veda tradition.

The first five steps of Yoga, i.e. Yam, Niyam, Aasan, Pranayam and Pratyahara are considered external processes or ‘Bahiranga Yoga’, while the last three, i.e. Dharna, Dhyan and Samadhi are called the internal processes or ‘Antanranga Yoga’. Patanjali says in his 12th maxim of the first chapter of *Yog Sutra* that success in Yoga can be achieved by a coordination of practice and detachment. While ‘practice’ obviously implies the observation of rules and steps of Yoga as defined in Yoga treatises, ‘detachment’ means the consciousness that has given up desires for objects either seen or heard of. This detachment should be comprehensive in the sense that

the practitioner of Yoga should also be indifferent towards the three Gunas or qualities of Sata, Raja and Tama that dominate all behavioral patterns in this world.

These eight steps of Yoga designed by Patanjali are meant to guide the spiritual aspirant gradually and in a systematic manner to progress higher in his spiritual endeavours and ultimately achieve the supreme state of eternal blissfulness that comes with inner awakening and experiencing the divine source of light and enlightenment that resides in one's own bosom.

The first two steps, i.e. Yam or abstentions, and Niyam or observances, result in calmness of body and mind which are essentials in success in any enterprise. This preliminary moral training provides the aspirant with the solid ground which helps avoid future digressions from the main path of Yoga. The third step, i.e. Aasan or various sitting postures, helps one to exercise control over the physical body. The fourth step, i.e. Pranayam or breath control, helps to harness the stupendous energy of the different vital winds present inside the body and divert their inherent powers for the spiritual as well as physical benefit of the aspirant's mind-body complex. The fourth step, i.e. Pratayahar or control over the sense organs, helps him to detach himself from the external objects of this distracting world and focus all his attention inwards. These first five steps of Yoga, i.e. Yam, Niyam, Aasan, Pranayam and Pratayahara are considered external processes or 'Bahiranga Yoga'.

Next comes the internal processes or 'Antanranga Yoga' which consists of the last three steps. Thus, sixth step, i.e. Dharna or fixed attention, helps to rivet or fasten the mind to one object which is the aim of Yoga. Constant practice of this sixth step called Dharna leads to the seventh step called Dhyan or continuous meditation and contemplation, without any break. The culmination of all these seven steps is the last stage or the eighth step called Samadhi or the trance-like transcendental state of deep absorption of the mind. The difference between Dharna and Dhyan is that the former is a temporary fixation of the mind while the latter is a higher state of fixation of concentration of the mind where it is not disturbed by any other thoughts. To draw an analogy to explain the relation between Dharna and Dhyan we may cite the instance of water and oil or any other viscous fluid such as honey or jelly. Drops of water dripping from a tap are like Dharna, while the continuous and interrupted flow of oil is like Dhyan.

Patanjali has defined Samadhi as the eclectic and mystical state of the mind when it is full of the revelation of the object concentrated upon, a state in which the aspirant loses awareness of all external as well as internal existence. He even forgets about himself.

It should be noted here that the second last step (Dhyan) which leads to Samadhi is a 'reflective knowledge', i.e. it consists of three elements of knowledge. These are—the 'Dhyata' or the awareness of the person who concentrates, the 'Dhyan' or the process of concentrating, and 'Dhyeya' or the object concentrated or meditated upon. It is like saying 'I am meditating on such and such object'. When these distinctions are removed, then it is the state of Samadhi.

The main thrust of Yoga is not mere arrest of the mind or mere physical exercises, but train the aspirant to realise his true self and its divine nature by rigorously following certain well defined and tested techniques.

Amongst the Upanishads that describe this concept are the Mandal Brahmin Upanishad of the Shukla Yajur Veda tradition, Brahmin (canto) 1, section 1, verse nos. 3-11; the Tejobindu Upanishad, Canto 1, verse nos. 15-42 of Krishna Yajur Veda; the Trishikhi Brahmin Upanishad of Shukla Yajur Veda, in its Canto 2, verse nos. 28-34.

³Hath Yoga--The *Hath Yoga* is the Yoga that teaches how to bring about the union of Pran (the breath, the vital wind that resides in the upper part of the body) and the Apaana (the wind that moves down in the body and helps in digestion and excretion, the vital wind that lives in the lower part of the body) by means of strict following of the eight fold path of Yoga such as observance of Yam, Niyam, Aasan,

Pranayam, Pratyahar, Dharna, concentration and visualization of the presence of the Supreme Being in the point of the forehead where the root of the nose meets the middle of the eyebrows, and Samadhi. It teaches the practical aspects of spiritual Yoga. It teaches the practical aspects of spiritual Yoga and includes various exercises—Bandhs, Aasans, Mudras and Pranyam.

The Yogshikha Upanishad, Canto 1, verse no. 133-134 is very explicit in this.]

40. When a spiritual aspirant engages himself in doing various spiritual practices such as Yoga in its entirety (refer verse no. 39) and is not successful in fully accomplishing the desired results, he takes a new birth in a higher rung of the cycle of birth and death than his previous birth. [This new birth in a better position than the past life is due to the good effects of the auspicious efforts that he had made in the previous life.]

Then as a result of his brought-over ‘Vasanas’ or internal desires, passions, aspirations and yearnings which mould his present life’s temperaments and nature, called his ‘Praarabdha’, he carries forward his unfinished task of the past life. That is, he engages himself in doing more Yoga¹. This cycle continues (40).

[Note—¹The word Yoga here would mean continuous effort in a particular direction with a particular aim in mind so as to enable the practitioner to achieve success in obtaining his desired objective.]

41. Just like a large black ant repeatedly does something to finally achieve success in its enterprise¹, such a spiritual aspirant would finally achieve success if he diligently sticks to his practice and schedule over a long chain of birth and death. He would finally achieve success in obtaining the supreme transcendental state of being one with the Absolute, of reaching the ultimate state of being one with the supreme transcendental Truth and Reality of creation, of being one with the cosmic Consciousness known as Brahm (41).

[Note—¹The large black ant attempts to climb a wall or some other steep incline or vertical surface, and repeatedly falls down. But he does not abandon his attempts and finally succeeds in this enterprise. Another instance is when it carries a grain in its mouth to store it in its hole and comes back for another grain. Over a long period of time, the ant would be successful in sweeping clean the floor where the grain was spread and transfer it to some other place of its choice. Similarly, a steadfast and diligent spiritual aspirant who is determined to achieve success in his spiritual path would ultimately achieve his objective like the instance of the ant, but it would be over numerous births.

Refer also to verse nos. 35-36 in this context.]

42. Both these paths (exemplified by sage Shukdeo or the parrot, and Vamdeo or the ant—refer verse no. 34-41) pave the way for Brahm-realisation, and bestow auspiciousness and all round welfare to the practitioner.

One path symbolised by sage Shukdeo (the parrot) is a straight forward path which creates no hurdles and goes straight to the desired destination of obtaining Mukti, or liberation and deliverance for the aspirant’s soul. This enables the practitioner to reach the supreme stature of the Absolute directly without having to follow a round about meandering route.

On the other hand, the second path exemplified by sage Vamdeo (the ant) follows a circuitous path to Mukti. A practitioner of this path would have to oscillate between numerous births before obtaining his objective of getting liberation and deliverance from the cycle of birth and death. It is step-by-step path ridden with pitfalls and hurdles, and so proportionately risky¹.

A person who has cultivated a high level of equanimity and a sense of non-duality, where is the question of his having any kind of Moha (attraction, longing, desire and infatuation) or Shoka (agony of separation and all sorts of distresses and pains associated when one thinks in terms of himself being different from the others)²? (42).

[Note—¹Refer verse no. 36 of this Canto 4 and its accompanying note on this subject.

The parrot or any other bird for that matter flies in the sky which has no physical hurdles, and so after having left its pervious perch it can go straight to its new destination unhindered and without facing any physical obstacle. On the other hand, the poor ant has to face an uphill task to reach its destinations because of the limitations imposed upon it by its contact with the earth and the numerous obstacles that come in the way which would compel us to make a detour and take a circuitous route to the destination. The steep angle of the incline which the ant wishes to climb to reach its destination would force it fall again and again, but its resilience pays in the end and it manages to go to the top.

Likewise, a man who follows the path of Gyan (i.e. the path of wisdom, erudition and enlightenment) by study of the scriptures and keeping company of the learned ones acquires truthful knowledge of what the ultimate destination of his soul is, and then applies his intelligence and wisdom to diligently follow this path and concentrate upon the objective to head straight to his destination of obtaining Mukti. He would not be distracted by what is happening down under in this humdrum mundane life just like the parrot is unbothered by what is happening on the surface of the earth during its flight.

On the other hand, a man who thinks that he would use his manly powers and strength of his body and mind to reach the destination like an emperor conquering his enemy by use of force faces an uphill task like the ant. The path of Yoga and all other paths except the path of Gyan are like going through a meandering and unknown forest-path full of unforeseen problems and difficult hurdles. Indeed they would take the man to his desired destination in due course, but only if he is careful enough to avoid the uncountable pitfalls and temptations. First and foremost pitfall is his success in attaining the various Siddhis which are mystical supernatural powers that come automatically with success in Yoga practice just like a medicine automatically alleviating pain by suppressing the feeling of pain notwithstanding the fact that the underlying cause of the pain is still there. This Siddhis fill the man with pride of achievement, and it is the beginning of his downfall.

Then there is the hurdle of successfully going through the actual rigours of Yoga which entail stiff and very difficult exercises which if not handled carefully are more prone to be detrimental to his spiritual elevation and even prove physically fatal. Besides these, there are numerous other hurdles or pitfalls of Yoga as described in the *Yog Kundalini Upanishad* of Krishna Yajur Veda tradition which is Chapter 27 of this volume, in its Canto 1, verse nos. 56-57, 58-61 and 71.

A stone tied to a string would oscillate to and fro like a pendulum, but with each swing it loses some of its energy and the span of the arc go on reducing proportionately with each swing till the time the pendulum completely stops to sway. Similarly, if a diligent practitioner of Yoga sticks to his practice, he might not succeed in the near future, but his perseverance bears fruit in the long run and he ultimately obtains liberation and deliverance, or Mukti, for his soul. This analogy can be extended to include not only one birth but more than one if he does not succeed in the first attempt. The good effects of the spiritual exercises done in one given birth would be carried to an aspirant's new birth, and he would be motivated by them as well as his intense desire to find Mukti which together ensure that continues on his spiritually auspicious path even during this new life. Every time, his credit balance of good deeds would continue to increase and his bad deeds would continue to get reduced, and by and by only the credit remains. When this happens, he would have

found freedom from the slavery of bad deeds which had forced his soul to be tied to this world of miseries and delusions. He would now find his final freedom. This explains why such a man is compared with the ant which never gives up and continues with its efforts to climb the wall inspite of falling repeatedly, and is finally able to climb it. This state gives the aspirant rest and peace that he had been so assiduously seeking over many births and even during the span of his current life.

Continuous practice of the various techniques of Yoga enables him to reach the state of utter calmness and tranquility, the state called Samadhi. This state marks an important milestone in the spiritual enlightenment of the aspirant. When this state is reached, no external influences of the world would disturb the internal poise and calmness of the person. Earlier, verse nos. 8-9 of Canto 1 of this Upanishad lists the numerous hurdles—both the gross and the subtle—that the spiritual aspirant faces.

²When one thinks that the peace, happiness and comfort obtained by things of this world are greater than the one his consciousness can provide to him, he gets attracted to this world and its material objects. So in the eventuality when he has developed the sense of non-duality, that there is no difference between this world outside and the world inside his own being, and consequentially the peace and happiness that the external world provides after such difficulty is easily and comfortably available to him when he seeks them from his inner self, he is deemed to have become Jivan Mukta and self-realised. This erases the cause of having Moha or attractions, attachments and desires for the world and its material objects.

Similarly, when there is no one else except one's own 'self' in the form of the Atma which is a universal and all-pervading entity, the concept of separation or union lose their locus standi. Hence, there would be no cause of agonies when one is separated from one's dear ones or even when deprived of any object. Likewise, there would be no joy of union because there has been no separation.]

43. A person who is absolutely focused on his target pays no heed to anything else till he has reached the target. Similarly, a man who is focused on Brahm realisation and self realisation, who is determined to experience the pure consciousness first hand, who has a firm resolve to attain liberation and deliverance from this world and its cycle of birth and death, who is determined to obtain emancipation and salvation for his soul, would be so involved in his spiritual pursuit that he would see nothing but Brahm or the pure conscious Atma everywhere. His determination and focusing on the goal has a profound psychological impact upon him. It completely overwhelms his being.

Such a person is said to be freed from all sins and their consequences. [He is not involved in anything related to the gross world. A man is convicted of any crime only if his involvement is proved, and 'involvement' happens only when the man thinks that 'he' is the doer of a particular deed or has some motivation to commit the crime. In the present case, the spiritual aspirant neither regards himself as the doer of deeds nor has he any motivation for any deeds done by the gross body. His mind and intellect that actually makes a man aware of his surroundings are focused elsewhere, and he is honestly completely oblivious of what his body is doing or not doing. So there is obviously no ground for any sins to happen as far as 'he' is concerned, and consequentially no ground for being convicted for them.] (43).

44. For such an exalted and self-realised person, every creature appears to be a manifestation of Brahm, whether that creature is sky bound such as the parrot or earth bound such as the ant.

Such an enlightened ascetic and spiritual aspirant is freed from all sins, even those that have accumulated over numerous past lives of his (44).

Canto 5

[This Canto is dedicated to the practice of Yoga.]

1. After the above discussion, sage Nidagh requested sage Ribhu—‘Oh Lord! Please preach for me the full process of Yoga in detail’.

Ribhu accepted to do so. He began his discourse—‘This body is made up of five elements that form five sheaths or Mandals (which are also known as Koshas). Out of the five elements, the earth forms the grossest, the more firm, thick and harder parts of this body (such as the bones, muscles and skin). [There are five Koshas or sheaths that surround the Atma in the gross body—the food sheath called the Anna Maye Kosh, the wind sheath called the Pran Maye Kosh, the mental sheath called the Gyan Maye Kosh, the intellect sheath called the Vigyan Maye Kosh, and the bliss sheath enclosing the Atma called the Anand Maye Kosh.]

The water element forms the fluid parts (such as the blood, lymph and mucous etc.) present in the body (1).

2. The fire element is in the form of light, heat and energy; it gives energy, vitality, strength and stamina to the body. [The light inherent in the fire element enables the body to see things; the heat of the fire keeps the body warm; and its energy and vitality keeps the body energized, vigorous and active.]

The air element is always on the move, and therefore it not only enables the body to be active but also controls all its movements and functions. [The other name of the air or wind element is Pran, and the latter is synonymous with life and vitality. It is the Pran that keeps the body alive; it is the Pran that controls all its internal functions as well as the working of the external organs of perception and action.]

The sky element is omnipresent, all-encompassing and all-pervading; it fills the entire space between the organs, tissues and cells of the body. [Like the external sky which harbours the entire creation in its bosom and acts as an invisible buffer that protects the countless entities embedded in the sky from colliding with each other, all the internal organs, tissues and cells of the body are kept in their place by the cushioning effect of the subtle sky inside the body between them. Just like nothing exists that is not within the perimeter wall of the sky, no unit of the body exists that is not surrounded by this subtle sky element, or which is not embedded in it.]

A person who wishes to proceed on the path of Yoga must be well conversant with them (2).

3. A man breathes twenty one thousand six hundred times during the course of a day consisting of a day and a night (3).

4. When the air element (as vital winds called the various Prans) present in the gross body is weakened, the eyes become distorted (and this effects the vision of the person).

When the water element present inside the body is weakened, the hairs begin to grey (4).

5. When the fire element (called the ‘Tej’—literally something that is radiant, splendorous, dazzling, glorious, powerful, potent, effective, quick and energetic) present inside the body is weakened, hunger is lessened.

When the air element present inside the body is weakened, the body’s naturally fine and attractive looks such as the radiance and the glow of the skin as well as the alertness and agility of other external organs begin to fade away. The tautness of the muscles and robust structure of the body is affected when the water element gets feeble, and the texture of the body shows signs of dehydration and deflation. In such cases, there is a high probability of the body shaking involuntarily because the structural features become weak and lose their rigidity and tensile strength.

The only element left unaffected is the sky element, but it is not possible for the body to survive simply on this element. [The sky is without attributes, infinite and structure-less. If the body is supposed to be made up entirely of the sky element, then it would expand infinitely and lose all its recognizable features by which it is known.] (5).

6. In this way, when the gross physical body decays and is ultimately shed, the living entity present inside it, the conscious ‘self’, leaves it and flies off just like a huge bird abandoning a decayed and fallen tree and flying off far away from it in the infinite sky (6).

7. This is called the Uddiyan Bandha¹. [An entity that is bound or tied to something would fly off somewhere when it is freed like the bird leaving a cage. In the present case, the cage is the gross body and the freed bird is the conscious ‘self’ or the Atma of the creature which finds liberation when the body dies.]

Hence, a shackled creature (i.e. the conscious ‘self’) runs away at the time of death of the gross physical body just like a lion which has been able to free itself from the cage (7).

[Note—¹Refer verse no. 44 of Canto 5 below.]

8. Even as it is not possible to catch a lion once it has been freed, a creature who has found freedom from the body once cannot be shackled again.

When the fire element is activated in the bag-like abdomen, one feels great pain in the stomach. [This has reference to the pangs of hunger and the cramp-like feeling in the intestines if one has not eaten for a long time and has to do some activity on an empty stomach.] (8).

9. One should not practice Yoga when one is very hungry (i.e. on an empty stomach) as well as when the urinary bladders are full and require urgent evacuation. [One should not suppress hunger and urine to do Yoga. Since Yoga entails rigorous exercises and needs a lot of energy and stamina, the stomach must not be empty as it might cause abdominal cramps and other problems. Similarly, a full bladder is always harmful because Yoga is a prolonged exercise and retaining urine for long times is very harmful for the body. Besides this, the pressures created while doing various Aasans and Mudras, or sitting postures and positioning of the body while doing Yoga, would exert excessive pressure on the urinary organs, and the accumulated urine might spurt out involuntarily which is not a good thing to happen even under ordinary situations.]

A Yoga practitioner should eat light and nutritious meals spread over many sittings (instead of gorging like a hungry elephant at one go). This self-restriction is for his good (9).

10. The various aspects or types of Yoga practices, such as Mantra, Laya and Hath Yoga, should be done gradually, starting on a soft and easy note and progressing slowly to the medium level to finally reach the higher level of Yoga which is very rigorous and painstaking.

These three types of Yoga, viz. Mantra, Laya and Hath¹, are successful only when coordinated with the eight fold path of Yoga known as 'Ashtaang Yoga' (10).

[Note—¹(a) The *Mantra Yoga* refers to practicing Yoga through Mantra. It is that Yoga in which constant repetition of Mantras steadies the mind. The Mantra of the chosen deity is used as the standard common denominator and as medium to focus the mind and attention while practicing the eight-fold path of Yoga as prescribed by Patanjali, the greatest exponent of Yoga philosophy. This Yoga is called Astaanga Yoga, the Yoga with eight branches or organs.

According to Vaayaviya Sanhita, there are five kinds of Yoga, and Mantra Yoga is the first amongst them. As stated above, it is that Yoga in which constant repetition of Mantras steadies the mind. When this is associated with Pranayam or breath control, it is called 'Sparsha Yoga'. This develops into a higher state called 'Bhaava Yoga' when the repetition of Mantra stops automatically and involuntarily, leaving only the feeling of tender devotion and spiritual ecstasy in its wake inspite on one living in this world. When one rises higher in this practice, the world completely disappears and there is no feeling whatsoever, a sort of 'neutrality' or 'zero' effect is obtained. This is called 'Abhaava Yoga'. At the last stage of spiritual evolution, the union with Shiva, the ultimate Truth and the embodiment of Yoga, is obtained. This state or stage is called 'Maha Yoga'.

The use of various Mantras as tools to aid in meditation is called Mantra Yoga. Some of the eclectic Mantras used for this purpose are the following:--

(a) OM = This is the quintessential and evergreen spiritual which is regarded as the universal Mantra for the purpose of Yoga, meditation and contemplation. This has been described in detail in Varaaha Upanishad, Canto 4, verse nos. 1.11-2, and Canto 5, verse nos. 69-72; Dhyan Bindu Upanishad, verse nos. 9-17; Amrit Naad Upanishad, verse no. 24; Kshuriko-panishad, verse nos. 2-5; Yog Tattva Upanishad, verse no. 19, 21-22, 63, 136-139; Shwetashwatar Upanishad, Canto 1, verse no. 14; Yogchudamani Upanishad, verse nos. 71, 86, 101-104.

(b) So-a-Ham = This Mantra has been described in a number of Upanishads—viz. (i) Sam Veda = Yogchudani Upanishad, verse no. 83. (ii) Krishna Yajur Veda = Brahm Vidya Upanishad, verse no. 34, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-133; Panch Brahm Upanishad, verse no. 28; Varaaha Upanishad, Canto 2, verse no. 17, Canto 4, verse nos. 1.11-2, Canto 5, verse nos. 69-72.

(c) Mantra for Khechhari Mudra which is used for the purpose of meditating upon the sky element = Yoga Kundali Upanishad, Canto 2, verse no. 16-23, and Canto 3, verse no. 1.

(d) The Melan Mantra which establishes a union between the individual soul and the cosmic Soul = Yoga Kundali Upanishad, Canto 3, verse no. 1.

(e) The Hans Mantra = Hanso-panishad, verse no. 5-15, Dhyan Bindu Upanishad, verse nos. 59-63, and Yogchudamani Upanishad, verse nos. 31-35, 82-83, 93.

(b) *Laya Yoga*—Technically, the *Laya Yoga* has two meanings. One with a purely metaphysical dimension is the dissolution of the Chitta or the sub-conscious mind and its various faculties so much so that the practitioner remembers the supreme Lord even while going about his daily life and its chores simply because his mind is completely dissolved in the remembrance of the Supreme Being and it is the physical

gross body that does the various deeds associated with the world, resulting in the person remaining absolutely oblivious of what he has done or whatever is happening around him.

Persistent and consistent practice of Hath Yoga results in Laya Yoga, i.e. it helps in the merger of the individual soul of the creature, called the Jiva, with the supreme Soul of creation known as Brahm; it helps to bring about oneness between them. The Chitta (the sub-conscious mind and its power to think, remember and act as a referral bank of the intellect) dissolves in the Atma, and the vital winds in the body lose their inherent restlessness and become calm and quietened.

This has been asserted in verse no. 23 of Yogtattva Upanishad, and verse nos. 135-137 of Canto 1 of Yogshikha Upanishad of Krishna Yajur Veda tradition.

(c) The *Hath Yoga* is the Yoga that teaches how to bring about the union of Pran (the breath, the vital wind that resides in the upper part of the body) and the Apaana (the wind that moves down in the body and helps in digestion and excretion, the vital wind that lives in the lower part of the body) by means of strict following of the eight fold path of Yoga such as observance of Yam, Niyam, Aasan, Pranayam, Pratyahar, Dharna, concentration and visualization of the presence of the Supreme Being in the point of the forehead where the root of the nose meets the middle of the eyebrows, and Samadhi. It teaches the practical aspects of spiritual Yoga. It teaches the practical aspects of spiritual Yoga and includes various exercises—Bandhs, Aasans, Mudras and Pranyam.

Refer *Yogshikha Upanishad*, Canto 1, verse nos. 133-134.]

11-11 ½. Now the spiritual practices that make up the eight-fold path of Yoga, called 'Ashtaanga Yoga', are being listed. They are Yam, Niyam, Aasan, Pranayam, Pratyahar [11], Dharna, Dyan and Samadhi [11 ½] (11-11 ½).

[Note—The 8 *Paths of Yoga*—See note of verse no. 39, Canto 4 of this Upanishad.]

12--12½. The Yam is of ten types. They are the following—Ahinsa (non-violence), Satya (truthfulness), Asteya (non-theft), Brahmacharya (self-restraint over the sense organs and observing celibacy and rigid discipline), Daya (mercy and compassion) [12], Kshamaa (forgiveness), Dhriti (to accept; to keep; to establish; to support; to be firm; to have courage and fortitude; to be steadfast in one's resolve; to be contented and satisfied; to be happy and cheerful under all circumstances), Mit Ahaar (eating in moderation and with restraint), Shauch (to remain pure and clean, both externally as well as internally), and Cheti (to remain alert and vigilant towards one responsibilities; to be conscientious; to be mindful of the voice of the conscience) [12½]. (12-12½).

13-14. The ten Niyams are the following—Tapa (austerity, penance, sufferance for some noble cause), Santosh (exemplary contentedness and satisfaction), Aastikta (to have faith, conviction and belief; to be a believer as opposed to being a heretic, an atheist and non-believer), Daan (charity, donation and alms; magnanimity and broad heartedness that comes with being compassionate, kind and merciful), Ishwar Pooja (worship of the Supreme Being) [13], Siddhanta Srawan (to hear the various principles, tenets or doctrines of the scriptures being taught and discussed by learned people), Lajja (to feel ashamed of doing anything ignoble, unrighteous and inauspicious), Mati (having a correct and fine tuned mind and intellect), Japa (repetition of holy Mantras and constant remembrance of divine principles learnt so that they are not forgotten), and Vrat (strict adherence to vows and principles of auspiciousness, righteousness, nobility, propriety and probity as enunciated in the

scriptures; fasting, abstinence and self-control also come under this category because they entail strict determination to observe vows) [14]. (13-14).

15-16. Oh great sage (Nidagh)! Now I shall tell you about the eleven different Aasans (sitting postures of Yoga) that have been lauded by those who are experts in Yoga. They are the following—Chakra¹, Padmasan, Kurma, Mayur, Kukut, Viraasan, Swastik, Bhadrasan, Singhasan, Muktaasan, and Gomukh Aasan² (15-16).

[Note—¹The *Chakra Aasan* is described in verse no. 17 below.

²The various other Aasans mentioned in this verse are being briefly described now.

(a) Padmasan—To sit cross-legged so that the upper part of the feet (i.e. the opposite side of the sole) along with the toes of one leg is placed on the thigh of the opposite leg (i.e. left toes on the right thigh, and right toes on the left thigh), is called *Padmasan* (literally to sit in a lotus posture). [The soles would be pointing outwards while resting on the thighs and the body would be held erect—i.e. the spine, neck and head would be in a straight line. The hands, with palms facing upwards and resting one on the top of the other, are placed on the folded legs in front of and below the navel. The chin is drawn in and held tightly near the base of the Adam's apple at the pit of the throat. This sitting posture is said to dispel/ameliorate all diseases and counter or antidote all poisons. That is, this sitting posture is very beneficial for the body] (Refer Trishikhi Brahmin Upanishad, 2/30).

(b) Kurma Aasan—In *Kurmasan* (literally to sit like a tortoise), the two shoulders are virtually tied or clasped by the hands (whereas in *Kukutta Asan* the hands were thrust through closed or folded legs). [To do this Kurma Asan, the legs are stretched out but slightly bent at the knee, the hand is passed under the leg of the respective side and then bent upwards from elbow joint to be taken towards the shoulder of the same side. The other hand is similarly brought out from under the leg of that side and taken to the corresponding shoulder of that side. The neck is bent forward towards the ground sufficiently enough to enable the two hands to grasp each other behind the nape of the neck. In this position, the back would be bent forward to be almost horizontal to the ground, the legs outstretched, chin almost touching the ground in front, and the hands clasped behind the neck. Seen from the front, this posture resembles a tortoise, and hence the name] (Refer Trishikhi Brahmin Upanishad, 2/42).

(c) Mayur Aasan—A *Mayurasan* or *Mayur Asan* (literally, to sit like a peacock) entails putting the palms flat on the ground, pressing the elbows against the abdomen on either side of the navel, and then balancing the body in a horizontal plane with the hands and open palms resting flat on the ground to act as pedestals (47). In this posture, the head and the legs are turned upwards and away from the ground. This posture resembles the outline features of a peacock. [This 'Mayurasan' has the potential to destroy all sins.] (Refer Trishikhi Brahmin Upanishad, 2/47-52).

(d) Kukut Aasan—A *Kukutta Asan* (literally, to sit like a cock) is when, after sitting in a normal Padmasan posture (as described in verse no. 39), both the hands are passed under the legs through the gap between the calf and the thigh of the respective side, the palms are spread out on the ground and the body is lifted up (levitated) on the straightened hands with the open palms and its fingers acting as pedestals on which the body appears to be mounted. (Refer Trishikhi Brahmin Upanishad, 2/41).

(e) Virasan— To sit steady and erect with the legs bent inwards from the knee so that the lower part of the leg (i.e. the shin bone and calf) is tucked under the thigh of the same leg, and the buttocks rest on the upturned feet placed horizontally against the ground under them, with the soles of the feet pointing backwards and outwards—this sitting posture is known as *Virasan*, or the way a warrior should sit.

[There is a variation of this posture in which both the legs are not folded in; only the right leg is closed in, while the left leg is bent at approximate 90° at the knee and its

sole lies flat on the ground. The body is thus supported by one leg fully bent at the knee and one leg at 90° at the knee.] (Refer Trishikhi Brahmin Upanishad, 2/37).

(f) Swastik Aasan—The sitting posture called *Swastik Aasan* is one in which a person sits cheerfully in an erect position, with the sole of one foot lying against the center of the thigh of the opposite leg. (Refer Trishikhi Brahmin Upanishad, 2/35).

(g) Bhadrasan—A *Bhadrasan or Bhadra Aasan* (literally, to sit like a gentleman) is to sit in an erect posture by placing the two ankle joints under the buttocks on either side of the suture, i.e. the junction point of the testicles and the anus such that they (the two ankle joints) touch each other, and then using the hands to firmly clasp the soles of the feet of the respective side from the rear side of the buttock (i.e. left foot by the left hand and the right foot by the right hand). [This posture can neutralise the ill effects of all diseases which cause the production of toxins in the body or which are caused by administration of poisons or other toxins in the body; it helps to get rid of diseases as well.] (Refer Trishikhi Brahmin Upanishad, 2/45).

(h) Singhasan—A *Singhasan or Singh Aasan* (literally, to sit like a lion) is to sit in a posture so that the 'siwani', or the fold of skin between the anus and the genitals, called the suture, is pressed by the ankle bones of the opposite side, and the body is lowered on the legs which are bent or folded in from the knees, while the hands are stretched out and the open palms placed on the bent knee of the same side so that the fingers stretch out like a palm-fan with the open palm resting on the bent knee joint. [Usually in this posture, the mouth is wide open and the tongue protrudes out, while the eyes glare at some point in the distance or at the tip of the nose. This is how a lion sits. This posture makes the body resemble a sitting lion. This is a posture adored by ascetics (Yogis) and it is dedicated to the memory of Lord Narsingh, the half man and half lion incarnation of Lord Vishnu to liberate his great child devotee Prahalad from the torments inflicted upon him by his own demon father. Amongst the benefits of this Aasan is that it clears the voice and removes foul breath.] (Refer Trishikhi Brahmin Upanishad, 2/44).

(i) Muktaasan—A *Muktasan or Mukta Aasan* (literally, the posture that gives liberation and deliverance) is when the ankle bones of one side of the body are placed under the buttock of the opposite side of the suture joint. The foot is either held at right angles to the ground with its sole pointing outward and the toe pointing inwards, such that the body is held erect on the toes of the legs which would now act as pedestals.

There is a variation of this Aasan. In this, the foot is not held at right angles to the ground but upturned and placed flat on it under the buttocks so that the sole points upwards from behind the buttocks, and the body rests on the legs bent tightly inwards and tucked under the buttocks. In this sitting position, the heels would be pressing against the buttocks from below on either side of the suture. (Refer Trishikhi Brahmin Upanishad, 2/46).

(j) Gomukh Aasan—To sit steady and erect so that the legs are bent inwards at the knees and the left ankle bones are placed to the right side of the spine while the right ankle bones are to the left side, is called *Gomukh Aasan* because this is how a cow sits. [The body is held erect. The left hand is taken to the back and it hooks itself to the right hand which has been brought to the back by lifting it and crossing it over the right shoulder. The fingers of both the hands are bent inwards towards the palms, and then they hook each other behind the middle of the spine.] (Refer Trishikhi Brahmin Upanishad, 2/36).]

17. The simplest 'Chakra Aasan' (literally to adopt the posture resembling a wheel) is briefly being described here. The left thigh is placed on the right knee with the left leg bent inwards towards the right buttocks. Similarly, the right thigh is placed on the left knee and the leg bent inwards towards the left buttock. [This ensures that the part of the body below the pelvis assumes a circular shape with the legs bent at the knee and

folded in unlike the usual shape of the body wherein the legs protrude out from the lower abdomen lick two sticks.] Then the upper part of the body is held perpendicular to this wheel-like shape assumed by the legs. [The entire shape would resemble a wheel with an axle.] (17).

18. [Now the process of Pranayam or breath control exercise is described in brief.]

The practitioner should first do Purak (inhalation of breath and filling the abdomen with it), followed by Kumbhak (withholding of the breath) and finally Rechak (exhalation of breath slowly). This three-step cycle should be repeated often.

The vital winds called Pran (which symbolise the vital life-infusing and life-sustaining forces in the body which are synonymous with life and without which the body would not survive even for a moment) move through the body and are distributed in it by means of channels called the Naadis (tubular ducts in the body; the nerves and veins) (18).

19-20. The body of all living beings (humans) measure approximately ninety six finger-widths in length. The central point of the body is said to the point which is two finger-widths above the anus and the testicles. [That is, it is the apex of an equilateral triangle with the anus and the testicles marking its two lower points, and the symbolic central point of the body representing its apex point.

At a distance of approximately half a finger length above the genital is the cluster of Naadis called the 'Kanda'. [The word literally means a tuberous root. This is a clutch of Naadis in the pelvis region below the navel and above the genitals.] (19-20).

21. This Kanda has a dimension measuring four finger-widths in height and a similar diameter. It has a rounded shape like that of an egg. [Hence, it is like a cylinder that is wide at its upper end and tapers at the lower end, almost resembling a dwarfish carrot or radish; or it is like an onion or garlic or turnip.]

It is surrounded by flesh, rectum, bones (of the pelvis region) and blood (21).

22. The Naadi Chakra (the wheel-like structure where all the Naadis have their central origin) is located in this region. This Chakra is like a circular saw with an edge that has twelve serrations. This Naadi Chakra is said to the center which bears the body, which supports the body. [The reason is that if the nerves fail, the entire body's normal functioning fails. Such a body is a burden on its own self though it may be technically alive.]

The Kundalini (the coiled subtle energy center of the body) is also located here (22).

23. [The various important Naadis are being narrated now. These Naadis have been described in other Upanishads also, e.g. Yoshikha Upanishad, Jabal Darshan and Yogchudamani.]

The Sushumna Naadi covers the opening of the Brahm Randhra. (This is a slit-like opening from where the subtle energy of the body enters the spinal cord and moves upwards.) The other two Naadis that accompany Sushumna Naadis are called Alambusa and Kuhu (23).

24. Beyond (after) this Anant (Sushumna) Naadi are present the pair of Naadis called Varuna and Yashaswani. To the right of this Anant (Sushumna) Naadi is present the Pingla Naadi (24).

25. Beyond (after) it (Pingla) are present the two Naadis called Pusha and Payaswani. Behind the Sushumna is located the Saraswati Naadi (25).

26. Beyond (after) it (Saraswati) are located the two Naadis called Shankhini and Gandhari. To the left of the Sushumna Naadi is located the Ida Naadi (26).

27. Beyond (after) it (Ida) are located the Hastijivaha and Vishwodari Naadis. These Naadis are present in a circle like the spokes of a wheel (27).

28. These twelve Naadis bear the twelve vital winds¹. [That is, the twelve vital life-sustaining airs of the body move through these channels of the body to support the entire body and give it its conscious sensation of life and vitality.]

These Naadis are of different colours² just like tubes that are wrapped by coverings of varying colours to distinguish them one from the other. [The colours are probably due to the presence of one dominant wind flowing thorough a particular Naadi. These Naadis are not hollow tubes but are filled with body fluids which help carry impulses from one corner of the body to another. These fluids have varying density, viscosity and colour. Since the Naadis are transparent in nature, the colour of fluid content is seen through their walls, lending them their characteristic colours. It is like having a complex electric gadget with wires of different colours and thickness to distinguish one from the other and mark their separate functions so that there is no confusion between any two of them.] (28).

[Note—¹The vital winds are the following—According to Subalo-panishad, Canto 9, verse no. 1-14 of the Shukla Yajur Veda tradition, there are fourteen vital winds present in the body. It lists their functions as follows—(1) Pran—this controls eyes and the faculty of sight (verse 1); (2) Apaana—this controls ears and the faculty of hearing (verse 2); (3) Vyan—this controls nose and the faculty of smell (verse 3); (4) Udaana—this controls the tongue and the faculty of taste (verse 4); (5) Samaana—this controls the skin and the faculty of touch (verse 5); (6) Vairambha—this controls speech (verse 6); (7) Mukhya—this controls the hands (verse 7); (8) Antarayama—this controls the legs (verse 8); (9) Prabhanjan—this controls the anus (verse 9); (10) Kurma—this controls the genitals (verse 10); (11) Shyen—this controls the Mana or the thoughts and emotions (verse 11); (12) Krishna—this controls the discrimination, intellect and wisdom (verse 12); (13) Shwet—this controls Ahankar or the notion of ego, pride, arrogance, vanity etc. (verse 13); (14) Naaga—this controls the 'Chitta' or the faculty of concentration, memory, sub-conscious, reasoning (verse 14).

According to other Upanishads such as Trishikhi Brahmin Upanishad, Canto 2, verse nos. 77-87 of Shukla Yajur Veda tradition, there are ten Prans, viz. Pran, Apaana, Samaana, Udaana, Vyan, Nag, Kurma, Krikar, Devdutta and Dhananjay. So, it is hard to say which two Prans has this present Upanishad of ours has avoided in the absence of any specific names. Perhaps the remaining two winds flow thorough the two Naadis mentioned below in verse no. 29.

²Colour of the vital winds—The DhyanaBindu Upanishad, verse nos. 95-99 of the Krishna Yajur Veda tradition not only describes the 'colours' of the five principle winds but also their 'Beej Mantras'.]

29. In the area of the navel, there is whirling subtle energy center called the 'Nabhi Chakra'. [Nabhi = navel; Chakra = wheel.] The two glorious Naadis called the Naad-dhara and the Jwalanti are located here. [Refer verse no. 22 of Canto 5.]

The Naad-dhara¹ is kept active because of the cosmic vibration called Naad resonating through it. The Jwalanti², as the name suggests, is radiant and splendorous with the cosmic energy flowing through it. [It is believed that this Nabhi Chakra is a symbolic center of the cosmic Sun in the body, and its energy flows through this Naadi.] (29).

[Note—¹The Naad is the cosmic sound that is created by the background vibrations in the cosmic ether that generate energy which powers the dynamo of creation. The word Dhara means a continuous stream, an unbroken flow like that created when oil flows on a smooth surface. Hence, the composite phrase 'Naad Dhara' would mean the Naadi in which vital life forces continue to ceaselessly pulsate throughout the life of an individual. This vibration caused by this pulsation is like the somber humming sound heard when one stands under high-tension overhead electric cables. This vibration keeps the generator of the body running; it provides the subtle spark of life to it and the energy that would keep the body up and going. By corollary, if this Naad Dhara stops, life comes to an end inside the body of the creature. This Naad Dhara can be practically heard by anyone by sitting in a quiet place and closing the ears with the finger or thumb. A distant roar is heard, and it reminds one of the roar of the distant ocean, or the humming of the overhead wire cited above.

²The word 'Jwalanti' literally means one that is live, hot and burning, one that is lighted, radiant and energetic. It reminds one of the sun which is a live example of something that fits the bill of being a Jwalanti. So we observe here that the kinetic energy of the Naad Dhara has transformed into the heat, light and energy represented by warmth, stamina, strength and vitality symbolised by the Jwalanti.

Thus, while the Naadi which carries the Naad Dhara is central to the existence of life inside the body and keeps its dynamo running, the actual energy generated by it is carried to other parts of the body by the Naadi called Jwalanti much like the cables that carry the electric generated by the power station to the electric grid and keep our homes lighted.]

30. The other two glorious Naadis present here are Para-randhra and Sushumna. All these four Naadis (Naad-dhara, Jwalanti, Para-randhra and Sushumna) are radiant and glorious like gems. All of them are blocked at their lower end by the mouth of the Kundalini (30).

[Note—Following the two primary Naadis described in verse no. 29, two more important Naadis emerges from this point of the body—one that goes to the top of the head till it reaches the Brahm Randhra, the hair-like slit on the cranium, and the other that goes down. The first Naadi is called the 'Para Randhra' and the other is called 'Sushumna'. These Naadis are called 'gems' in a metaphoric sense to indicate their indispensability and importance in the hierarchy or network of Naadis—they are the most precious amongst all the Naadis present in the body. This is because notwithstanding their importance vis-à-vis Yoga and spiritual practices, they represent the central nervous system, and without them the body would be as good as dead.]

31. In this way, those who are wise and erudite understand about the importance and significance of the Naadis and the vital winds or airs flowing thorough them. They bear the more important ten vital winds or airs¹ in them (31).

[Note—¹The ten more important vital winds or airs in the body are mentioned in other Upanishads such as Trishikhi Brahmin Upanishad, Canto 2, verse nos. 77-87 of

Shukla Yajur Veda tradition. These are the following—Pran, Apaana, Samaana, Udaana, Vyan, Nag, Kurma, Krikar, Devdutta and Dhananjay.]

32. For meditation, the spiritual practitioner should sit calmly without moving in an erect position with the spine, neck and head in a straight line. He should concentrate upon the Turiya state of existence, which is the Absolute state when nothing else except the supreme consciousness prevails everywhere. This meditation is done by concentrating the external vision on the tip of the nose and the internal vision at a point in the core of the heart where the conscious Atma is said to have its subtle presence (32).

33. One should visualize that drops of Amrit (the eternal elixir of spiritual bliss and ecstasy) is dripping on this point in the heart as well as the tip of the nose.

Simultaneously the anus is closed by restricting the rectal muscles and the Apaana wind is pulled upwards. [Normally this wind has a tendency of escaping down through the anus, so when the anus is closed it is natural that this wind would try to move upwards when the pressure in the lower intestines build up. This is the Bandha Mudra.] (33).

34. This Apaana wind is pulled up silently with the help of Pranav or OM. [This refers to concentration of the mind and gathering all the strength of the body while holding breath and humming the ethereal Mantra OM which helps in controlling the breath and providing sufficient energy and concentration to the practitioner that enables him to actually pull up the Apaana wind by diverting all the stamina and energy present in the body to achieve success in this difficult task. It is a difficult proposition because the Apaana wind has a natural tendency of moving down and not up, so to pull it upwards against the forces of gravity and laws of nature is not an easy thing to accomplish.]

The vital energy, vigour, strength and stamina of the body are compositely represented by the 'Sri Beej' which is the symbolic Mantra for Shakti or the dynamic energy and vitality present in the body. [This 'Sri Beej Mantra' is like the various symbols used in science or mathematics to denote certain entities for the purpose of representation.]

These two, the OM and the Sri Beej, are both employed for the purpose of lifting the Apaana wind. [While the Mantra OM helps in controlling the breath and concentrating the mind on Yoga, the Sri Beej Mantra provides the required dynamism, energy, strength and stamina to sustain the painstaking efforts of Yoga and help the practitioner to reach the end successfully. While the Mantra OM helps to create an upward pull during the three phases of Rechak, Purak and Khumbak done during Yoga, the Sri Beej stokes the fire in the lower half of the body, thereby heating it and infusing it with energy that helps to push the Apaana wind upwards. The combined affect of pulling and pushing done by the OM and the Sri Beej result in the Apaana wind becoming upwardly mobile.]

Then he should concentrate his attention on the spot where the Amrit (the elixir of bliss and ecstasy) and the Sri Beej (the source of the dynamic energy) are located (34).

35. When he has tasted the nectar of Amrit (i.e. when a person has experienced the bliss and ecstasy attending self-realisation) he becomes so engrossed in it that he is not aware how time flies. Anything upon which a man puts his mind and heart is

easily obtainable. [This is because he would be very sincere in making an all out effort to achieve his dream object for which his heart longs and which his mind has told him is very beneficial for him. The chances of getting success in any enterprise rise dramatically if one is mentally and emotionally involved in it.] (35).

36. Just as it is impossible for fire to live in water, it is also impossible to be certain about anything in this world. Nothing said about this world can be said with firm conviction and faith that it is a reality and truth; nothing in this world is definitive, certain and convincing (36).

37. When the vital airs in the body are restricted and focused on the oven-like core of the body present in its center (i.e. the Nabhi Chakra and the Kanda area—refer verse nos. 19-22 of Canto 5), they help to stoke the latent fire element representing the inherent dynamic energy, vigour, stamina, strength and vitality present in the body which has become dormant and weak over time.

This fire would heat up the body and dry up the excess of water element inside it, and the result is that the body becomes strong, robust, sturdy and one with a high tensile strength (as if it was made of steel)¹ (37).

[Note--¹This can be understood if we take the example of a tree. A green log of wood does not have the same strength as dry wood; no one makes furniture of green wood. Green, tender branches of trees can easily be bent, scrapped, cut and felled, but dry and seasoned hard wood requires a lot of effort and labour to even make an incision on its hardened bark. An ordinary kitchen knife is able to cut open tender vegetables, but hard wood makes a man sweat while using a saw or an axe to cut it. Even chopping of dry trees is harder as compared to a green tree. River bridges and beams of houses are made of completely seasoned and dried wood simply because of its durability and strength. Similarly, a body which is lean but muscular is surely much stronger as compared to one which is flabby and puffed up due to accumulation of water in the tissues. Accumulation of excess of fluids in the body creates medical problems such as oedema, pleurisy, dropsy, diarrhea etc.]

38. When the anus and genital openings are closed by constricting them, the Apan wind is made to rise up and mix with the Samaan wind (38).

39. The practitioner should focus his attention on the Atma (pure conscious 'self') and its stupendous glories and potentials. He should simultaneously meditate upon or focus his attention on the nectar-like Amrit that drips and spreads out from it, overwhelming him and filling him with extreme sense of bliss and ecstasy. [That is, he should meditate upon the Atma which is a fount of elixir that provides spiritual bliss and happiness upon its realisation. This sensation of bliss and its attendant ecstasy is very uplifting for the person experiencing it; it overflows all over him, drenching him and soaking him from all sides. It gives him a feeling of expansion; he no longer feels restricted to and by his gross physical body but expands to cover all available subtle space. This sensation is aided when, as he progresses in his spiritual practice, he hears the cosmic sound called Naad reverberating through his entire being. He then feels very light and all-pervading as if he has dissolved himself in the sky element to hear the sound of Naad in a stereophonic way.]

He should commence his Yoga practice with diligence and vigour from this central doorway. [That is, he should start Yoga exercises by first practicing the closing of the anus and genitals to control the vital winds from escaping, or from

pushing stool, urine or sperms out of the body due to the build-up of internal pressure that is usual during advanced stages of Yoga.] (39).

40. The Pran wind and Apaana winds are allowed to mix, and then the practitioner should visualize that his vital winds are moving upwards. This is considered the best form of Yoga and shows the light of success in the path of Yoga (40).

[Note—The Pran wind flows in the upper part of the body and it is usually defined as breath, while the Apaana wind dwells in the lower part of the body and is known as flatus.]

41. Even as a broken bridge interferes with the smooth flow of water of a river, a wise and erudite spiritual seeker should treat the gross body as an impediment in his spiritual success. [The body would create numerous hurdles, such as for example the body would resist hardships, it would squirm at the thought of sufferance, penance or austerity, it would rather pamper itself than sacrifice something so that others can benefit from it, it would prefer gratification of its sense organs over renunciation and detachment, it would need food to eat and drink to quench its thirst and find hard to desist from them, it would prefer rest and comfort instead of painstaking labour, it would want a reward for any effort made by it and would balk at even the thought of doing anything for free as a means of social service or what is called ‘selfless service’. Refer also to verse no. 9 of Canto 1.] (41).

42. Similarly, the various Naadis are likened to snares that tie a creature down. [This metaphor is very apt because the Naadis—the nerves and veins—are indeed like ropes or strings with which one is tied to a pole. The pole here would be the physical gross body because these Naadis are responsible for sustaining and protecting the body. The nerves keep the body alive with sensation of life, and the veins circulate blood and nutrition throughout the body. Besides this, the vital winds that sustain the body and responsible for all its activities also move along these Naadis—refer verse no. 28. So the Naadi is like a fetter that ties down the Pran of the creature or the vital life forces representing his Atma to this gross body.]

When the creature remains tied by these Naadis to the gross body, he would have to appease the various Gods who preside over the different organs of the body and keep them in good humour (so that they do not become malignant and unnecessarily torment the creature by creating various diseases etc.) (42).

43. Suppose four paths converge at a point. A wise man would first decide which path is the best one that would take him to his desired destination and give him the desired result, and then he would close the rest of the paths or forget about them to avoid confusion (43).

44. When the anus and genitals are closed, and the flow of the vital winds in the Naadis is controlled, the Udaan wind in association with the Pran wind pulls up all other winds in the upper direction. This is Uddiyan Bandha. [Refer verse nos. 6-7 of this Canto 5.] (44).

45. Since the closure of the anus and the genitals or urinary organs help to close all outlets of the body through which the Pran or the other vital winds could escape when pressure is exerted on them while doing Pranayam, it is called ‘Samput Bandha’ or comprehensive closing of the subtle apertures of the body. This is also called ‘Mool

Bandha' because the Mool Kand is located in this area, and also because it is the area that acts as the foundation that supports the rest of the body. [It is a most vital and sensitive area of the body. One can imagine what would happen to the body if the stool and urine are suppressed or the fate of creation if the genital organs become impotent.]

This is the way how the three classical Bandhas of Yoga are achieved. [Refer also to verse no. 68 of Canto 5.] (45).

46. One should practice Yoga of controlling the vital winds continuously day and night just like the wheel of day and night turns continuously without pause or break (46).

47. Constant practice ensures that the process of controlling the vital winds becomes an easy and normal affair as if it was a routine matter of daily life. The benefits are obvious—the latent fire energy, heat, stamina and vitality of the body gradually begin to increase, and this result in a better cooking in the intestines of the food eaten by the creature, which in turn improves digestion so that whatever is eaten becomes more beneficial for the body (47).

48. When the food eaten is properly digested, the body is supplied with more vital nutrients and this improves the basic health and vitality of the body. This manifests in the form of an overall improvement of health and increased stamina, energy, strength, resilience, vitality and vigour of the body (48).

49. When the body's inherent elements get a boost, when the basic nutritional requirements of the body are properly taken care of, the brain functions at the peak of its capacity. This helps a man to gradually acquire more knowledge and skills (both pertaining to the gross world and to the spiritual world).

With acquisition of true knowledge and wisdom, his sins and their consequences begin to ebb and die out in a phased manner¹ (49).

[Note—¹A well-nourished body harbours a healthy and alert brain which is needed to study, understand and analyse intelligently what is being studied, and remember what has been studied for application in practice. A malnourished body would not be able to sustain mental labour, and fatigue would soon set in. With increase in the level of alertness of the mind and its accompanying virtues of wisdom, erudition and knowledge, with the ability to concentrate his attention and study the scriptures, understand their profound tenets and interpret them in an intelligent and correct manner would a man become aware of what is deemed to be auspicious and righteous, and what is not. It is only then that a wise man can make a choice between the good and the bad. Once he decides the auspicious path, he would diligently follow it, getting rid of his baggage of sins. A healthy body harbours a healthy mind, and they are pre-requisites for a man being able to overcome sins or follow the auspicious and righteous path shown by the scriptures. For instance, a hungry man would not have any second thought on stealing food, and a man in dire needs for the basic essentials of life would not have any compunction about acquiring them by any odd means available to him, even though he might be aware of the improper way he has to acquire them, in order to survive in this harsh and uncompromising world. But if the stomach is full and a man's basic needs are met, there would be no reason or need for him to commit sins and do anything that is not right.]

50. The Mooladhar Chakra is triangular in shape and is located between the anus and the genital organ. The supreme Shiva in the subtle form of a 'Bindu' (drop or point

source of cosmic dynamic energy represented by the sperm and the vital energy restricted in the Kundalini) is located here. It is from here that he shines and illuminates the surroundings. [Refer verse no. 53 of Canto 5 also.] (50).

51. It is here that the coiled dynamic energy center of the body called the Kundalini is located. It is here that the vital winds accumulate (upon putting pressure on the Mool Kand) and the subtle fire energy of the body is ignited or enhanced (51).

[Note—Refer also to Yogshikha Upanishad, 1/168, 2/6 and 6/3 in this context.]

52. It is from here or due to the activation of the Kundalini's subtle energy that the Bindu¹ develops and the cosmic Naad² is enhanced.

The practitioner also hears the subtle sound of breath coming in and going out of the nostrils, the sound that resembles the nasal sounds made by silently hissing the two letters 'Ha' and 'Sa' of the Sanskrit alphabet. The combined effect of continuously hearing these two sounds in a cyclic manner as the practitioner exhales and inhales breath is the formation of the word 'Hans' which means 'a divine Swan'. [In other words, by continuously practicing Yoga, a stage is reached when the spiritual aspirant realises that he has obtained an exalted spiritual stature and has been successful in his endeavour of doing Yoga. This achievement is indicated by the fact that his sub-conscious mind hums and constantly reminds him that he is as pure and holy as the Swan—the 'Hans'. This word is also used as a Mantra. Refer Hansopanishad, verse no. 5-15, Dhyan Bindu Upanishad, verse nos. 59-63, and Yogchudamani Upanishad, verse nos. 31-35, 82-83, 93.]³

From this arises the Mana (i.e. the desire and inclination of the mind to enjoy the bliss and ecstasy that comes with experiencing the pure conscious 'self' or Atma, in all its glory and magnificence, during meditation) (52).

[Note—¹The word *Bindu* literally means a drop of some liquid, for instance a drop of nectar. At an advanced stage of Yoga when the practitioner is able to activate the Kundalini, control his vital winds and successfully implement other aids of Yoga such as correctly and persistently doing various Aasans, Mudras and Bandhas for a prolonged period, he would automatically experience rewards inherent to the practice of Yoga. Therefore, he would experience extreme bliss and ecstasy that would appear to drip upon his inner self and overwhelm him. His mind and heart would be submerged in enjoying this nectar that would drip drop by drop like honey effusing from a ripe and full honeycomb. This concept of Bindu in association with Naad has been used to name a special Upanishad called the 'Naad Bindu' Upanishad. Other Upanishads also deal with this subject, e.g. Dhyan Bindu, Amrit Bindu and Amrit Naad Upanishads etc.

²At the same time as experiencing this dripping of nectar of extreme bliss and ecstasy, the Yoga practitioner would also hear the Naad which is a subtle roar of the vibration present in the cosmic ether that is now reverberating in his entire inner being. This happens because the body has the subtle sky element present inside it as much as the presence of this element outside of it. This Naad resembles a roar of the ocean, or the rumbling of clouds, or a train trundling away in a distance. In fact, Naad more closely resembles the roar of a fiercely burning fire—which is symbolic of the fact that the subtle fire element which was hitherto dormant and only smoldering inside the body of the practitioner has now been kindled and activated by the practice of Yoga and its attendant activation of the Kundalini by stoking it with the powerful vital winds such as Pran, Apaana, Samaana, Vyan and Udaan. Thus, the cosmic dynamic energy that is inherently present in the body of all living beings, but unfortunately had become dormant and inactive, is now re-ignited into its finest form.

The Naad is therefore the sound of the raging fire element present inside the body. So when a practitioner of Yoga hears the Naad he feels certain that his Kundalini as well as the latent energy of his body has been activated and the internal fire is burning vigorously. Refer Naad Bindu Upanishad, verse no. 33-36, Mandal Brahmin Upanishad, 2/2/2, and Hanso-panishad, verse no. 16.

³Traditionally, Swan is regarded as a holy and pure bird. It is said to pick up pearls from amongst an array of gems and jewels, and drink milk while leaving aside water and other additives that have been added to adulterate the milk. Its high position in the hierarchy of evolution, especially that aspect which relates to wisdom, erudition and skills, is proved by the fact that it is the mount of Goddess Saraswati, the goddess of wisdom, erudition, skills and knowledge. So, when a practitioner of Yoga has reached the stage when he begins to hear Naad and his breath humming silently the word 'Hans' as it comes in and goes out of the body during normal course of routing breathing as well as during the actual time when Yoga is being done, i.e. during the Rechak and Purak phases of Pranayam respectively, he would understand that he is successful in his endeavour.]

53. There are said to be six subtle energy centers in the body called the 'Chakra', such as the Mooladhar Chakra¹. [They are called Chakra because they resemble a swirling wheel of energy, much like the whirl-wind. Refer also to verse no. 50 of this Canto 5.]

The area between the throat and the cranium is called the 'Shambhav' or the abode of Lord Shiva. [That is, it is this area of the body where auspicious wisdom, knowledge and enlightenment along with intellectual skills and erudition have their seat, all of which are symbolic of Shiva, the Supreme Brahm personified.]² (53).

[Note—¹The word *Chakra* refers to the subtle energy centers present inside the body. According to Yoga texts, when the vital energy trapped in these Chakras are activated, a person acquires immense potentials, including spiritual and mystical powers. They have been elaborately described in Upanishads dealing with Yoga and mystical forms of ritualistic worship involving meditative practices in order to enable to practitioner acquire astounding mystical and supernatural powers.

The main six Chakras are the six main subtle energy centers of the body which act as power houses which supply energy for the various functions of the body. They are the following—(1) The 'Mooladhar Chakra' is located between genitals and anus in the area called the perineum. It is the site of the symbolic Shiva Lingam (Yogshikha Upanishad, Canto 1, verse no. 168) and the route through which the Apaana wind finds its entrance in the Kundalini (Yogshikha Upanishad, Canto 2, verse no. 13). It is also here that the ascetic hears the Naad. It is said to be a symbol of Shakti or the dynamic powers of Shiva principle (Yogshikha Upanishad, Canto 2, verse no. 8, 11-12 and Canto 3, verse no. 2). (2) The 'Swadhisthan Chakra' is located in the region of the groins of males and the Bhug area of females. It has a 5-headed male phallus like a sprouting seed and its counterpart in the female is the clitoris. (3) The 'Manipur Chakra' is located in the navel area, is shaped like a gem and is surrounded by the network of Naadis (nerves) called solar plexus. It is also the site of the Sun energy. (4) The 'Anahat Chakra' is located in the chest between the heart and lung area and it is shaped like a swan looking downwards. It is also assumed to be like an 8-petal lotus facing down. It is also called the Hridaya Chakra because of its close proximity to the heart and close association with it as the Atma or pure consciousness resides in the subtle space of the heart. (5) The 'Vishuddha Chakra/Kanth Chakra' is located in the pit of the throat. To the left of it passes the Eda nerve representing the moon, to its right goes the Pingla nerve representing the sun, and in the center is the Sushumna nerve through which the Kundalini energy rises up from the base of the spine to the skull. (6) The 'Agya Chakra or Bhru Chakra' is located between the eyebrows and root of the nose. It is also called the third eye of enlightenment and wisdom. It represents the 'Mahat' (that which

transcends the elements) and its Beej (i.e. its root syllable) is the Sanskrit monosyllabic word OM.

²Earlier, verse no. 50 of Canto 5 has stated that Shiva is established in the Mooladhar Chakra where the genitals are located. This form of Shiva represents the cosmic Shakti principle or the dynamic powers of the Supreme Being that is responsible for creating this world. That is why sexual method is the mainstay for propagation of creation, and the organs that help in this divine mandate are called the abode of Shiva. The present verse refers to that aspect of Brahm, the Supreme Being, which is related to the divine virtues of purity of thought and wisdom, the possession of the eclectic virtues of erudition, sagacity, knowledge and enlightenment. A man is honoured and remembered not for his sexual activity but for the level of wisdom, erudition, wisdom, intelligence and knowledge that he has, for even animals can reproduce and indulge in the sex act. Such a man would have natural and in-built scrupulous that would prevent him from doing anything that is not auspicious and righteous. This would set him apart from those who are pervert and sinful. The virtues mentioned above are the functions of the mind and not the gross body, so a man who has a well-developed mind and intellect as his advisor is deemed to be a wise man as compared to one who is driven by the impulses of the gross sense organs of his gross body. Hence, the area of the body where these auspicious and holy virtues have their origin and abode, i.e. the head, is said to be the abode of Shiva—the auspicious, the divine, the holy and truthful One.]

54. The Naadis have their base or foundation in the Kanda or Pinda (literally a ‘ball or egg like structure). [Refer verse nos. 20-22.]

These Naadis are the base for the various Prans or vital winds that sustain and protect the body. [This is because if these Naadis do not carry consciousness or life-impulses to all corners of the body, the latter would die. The Pran is a word used to indicate ‘life’ and not death. Therefore, as long as a creature is alive, it is deemed that the Naadis have Pran flowing and pulsating in them. Refer also to verse no. 28 and 31.]

These Prans are the basis of life in all Jivas or living beings. [Pran is a synonym for the wind or air element that helps sustain life on earth. No living being would survive if there was no air on earth.]

And the Jiva is the abode for the Hans, i.e. the pure consciousness known as the immaculate and wise Atma that resides in the body of the living being called the Jiva. [The Atma is the true self of the creature, and the body is merely its habitat.] (54).

55. This Hans (the Atma; the pure consciousness) is the divine and sublime entity which provides the ‘Shakti’, the dynamic force, the basic energy, the vitality, the strength and the vigour that sustains and protects the entire edifice of this creation consisting of both the animate and the inanimate world. [Here the animate world refers to the creatures that have mobility, i.e. members of the entire zoological kingdom, and inanimate world is the immobile forms of life such as trees and other members of the plant kingdom.]

An ascetic should have no doubts and be free from all confusions and consternations in this regard. [This way he would be able to concentrate upon meditation and contemplation.] He should be cheerful, and practice Pranayam (breath control exercises) carefully and diligently (55).

56. An ascetic is regarded as expert, wise and erudite if he is able to focus his mind and concentrate his attention on researching the essential principle of creation, the

supreme Absolute, inspite of being physically tied by the three types of fetters. [The gross body of the ascetic in which his 'self' lives is the *first fetter*; the external world and its numerous demands is the *second fetter*; and the baggage of past deeds and their consequences is the *third fetter*. An ascetic who remains internally detached from all these, who is unconcerned by the constant nagging and irritations created by these three fetters, who just neglects them and instead concentrates the energy and abilities of his mind and intellect to find out the ultimate spiritual goal of life and find ways to reach it, who aims his gun at the target without being disturbed by extraneous factors and does not allow these three factors to divert him from his objective, who enjoys the bliss of self-realisation inspite of living in a gross body and an equally gross world with the burden of past deeds and their consequences weighing down heavily on his shoulders—only such an ascetic is regarded as the correct candidate for Mukti—spiritual liberation and deliverance, spiritual emancipation and salvation.] (56).

57. He should symbolically catch hold of the three factors (as mentioned in verse no. 56) that are acting as fetters for his soul and churning it endlessly for many generations by doing the Purak phase of Pranayam. Then they should be held captive during the Kumbhak phase, and finally eliminated by the Rechak phase. [The Purak phase involves inhaling breath—a metaphoric way of saying that he brings the fetters closer to him and catches hold of them. The Kumbhak phase is holding the breath inside the body—a symbolic way of saying that the three factors are held under strict control as one keeps a prisoner in control. Then the Rechak phase entails exhalation which symbolises the exiling of these enemies of the soul.]

He should fix his attention on the target which is paramount for him. That is, he should fix his mind on the realisation of the supreme Brahm and on obtaining permanent freedom for his 'self' (57).

58. [Now a metaphysical meaning is given to the three phases of Pranayam.]

All the external sense objects of this material world are equivalent to the Rechak (exhalation; elimination) phase of Pranayam—i.e. they are better shunned and done away with; they ought to be eliminated as waste product that would poison the 'self' if retained.

Acceptance of knowledge and wisdom contained in the scriptures is equivalent to the Purak (inhalation) phase of Pranayam—because they are like whiff of fresh breath which injects life in the form of wisdom, erudition and enlightenment in the otherwise gross life of a creature bound by ignorance and delusions. This knowledge and wisdom lights up the inner self of the creature and rejuvenates the spirit.

The Khumbhak (holding of breath inside the body between the Purak and Rechak) is equivalent to meditating and contemplating upon the pure consciousness residing inside one's own bosom as one's Atma or 'self'. This is done by deep pondering and contemplation upon the teachings of the scriptures and understanding their esoteric meaning. Since Kumbhak refers to the holding of breath inside the body, this phase symbolically would refer to the aspirant not only studying the scriptures but permanently inculcating the auspicious virtues they teach in his own life (58).

59. A man who has experienced this 'truth' (i.e. the supreme consciousness residing in his bosom as his Atma, and the supreme Consciousness that prevails uniformly in this creation at the cosmic level) and firmly convinced in it is said to be liberated, delivered and emancipated. There is no doubt about it.

This realisation is symbolically achieved during the Kumbhak phase (59).

[Note—The Kumbhak phase is when the body is full of air held inside. This is a metaphoric way of saying that when the ascetic experiences the presence of super conscious Atma inside his being, he is completely fulfilled and overwhelmed with this experience so much so that nothing else can enter his mind anymore. He is soaked and completely drenched with the effusing sense of beatitude and felicity that accompanies self and Brahm realisation. Kumbhak phase is preceded by the Purak and followed by the Rechak. But in order to fill any pitcher it has first to be emptied, so for all practical purposed, the Rechak phase is done first, followed by the Purak which culminates in the Kumbhak phase.

So, in order to achieve truthful form of self and Brahm realisation, a spiritual aspirant should first purge all his spiritual impurities and corruptions from his inner self; he should eliminate all delusions and it's after effects from his mental horizon; he should determine that he has got nothing to do with this artificial world and its material sense objects. This symbolises the Rechak phase of Pranayam.

Having thus emptied his inner self, he is now ready to accept knowledge and wisdom pertaining to the Truth for which he had set out in his spiritual journey in the first place. This is achieved by a thorough study of the scriptures, deeply pondering upon their teachings, and discussing their profound doctrines with those who are expert in them and themselves self-realised. This is equivalent to the Purak phase of Pranayam because it helps one to imbibe knowledge and fill one's self with auspicious, righteous and noble thoughts and ideas that are cumulatively rejuvenating for the spirit.

Then comes the Kumbhak phase which stands for actually retaining these grand virtues in one's inner self, thereby undergoing complete overhaul and re-moulding of the self from one that was tainted by worldly delusions to one who is as fresh and fragrant as a newly blossomed flower.]

60. [The following verse nos. 60-64 describe the physical exercise of Yoga and its utility to conquer the various 'Peeths' or the symbolic abodes where the different Gods who represent different forces of Nature reside in the body of the practitioner. This is a metaphoric way of saying that a successful practitioner of Yoga acquires such mystical powers and superior authority that he can not only command even the Gods but becomes superior to them. Since the Gods represent the various forces of Nature, such an aspirant is able to overcome all the hurdles created by these forces in his spiritual progress and attainment of self and Brahm realisation which are the ultimate aim of doing Yoga.]

While doing Kumbhak the practitioner of Yoga should visualize that the body is indeed like a 'Kumbh'—a hollow pitcher. Like one fills a pitcher with water or air, he should fill his inner-self with the Shiva Tattva, i.e. with the auspicious Principal and the supreme Absolute in creation that is known as Brahm or Shiva, the principle of truthfulness, auspiciousness, righteousness, eternity, imperishability and beauty.

Then, in this context, the Rechak would be to open the mouth of this pitcher represented by the throat. That is, after the phase of Kumbhak is over, the Rechak phase is done by exhaling breath through the opening of the throat, which is in the nostril (60).

61. After filling the inside of the body with air through Purak and Kumbhak phases, the practitioner of Yoga should sit calmly in a erect posture with his legs and hands remaining steady and unmoving; he should not be fidgety and restless (61).

62. He should pierce or rupture or open the four 'Peeths'¹ by doing the three steps of Pranayam (Purak, Kumbhak and Rechak). [When Pranayam is practiced properly, the practitioner gathers sufficient strength and energy that he is able to un-clog the previously blocked glands and other knot-like structures in the body which hinder the proper flow of vital forces of life, such as the vital winds and the stimuli of consciousness, throughout the body. This is akin to clogged drains, blocked pipes, chocked chimney or stuffed ventilators in a house; they need to be cleansed thoroughly and de-clogged to maintain proper flow of water and air in the house.]

Then the vital winds of the body should be made to enter the 'gate leading to the Maha Meru'. [The Meru is the mythological mountain where the Gods have their abode. This refers to the head where the supreme Shiva is said to have his abode—refer verse no. 53. The gates which have to be opened so that the Meru can be reached refer to the four Peeths mentioned herein above. By opening them through the practice of Yoga, the ascetic is able to witness the divine Shiva first hand.] (62).

[Note—¹Yogshikha Upanishad, Canto 1, verse no. 169-175 describes the location of the *four Peeths*. (i) The first Peeth is called the 'Kaam Roop Peeth' (verse no. 169-171). (ii) The second Peeth is called the 'Purna Giri Peeth' (verse no. 172-173). (iii) The third Peeth is called the 'Jalandhar Peeth' (verse no. 174). (iv) The fourth Peeth is called the 'Uddyan or Uddiyan Peeth' (verse no. 175).

This Upanishad is Chapter 21 of this volume.]

63. When the two doors are closed (i.e. when the nostrils in the upper part of the body and the anus in the lower part are closed during Pranayam) the vital winds or airs present inside the body are naturally made to swirl inside and subtly shake and vibrate the blocked knots and channels in the body. [That is, all the clogged nerves, veins, arteries, glands and other tissues are shaken and vibrated subtly to shed off their lethargy and indolence, and instead get activated, revitalized and rejuvenated.]

When this trapped wind force of life meets the other cosmic forces present inside the body, such as the subtle energy of the sun, the moon and the fire symbolically present in the navel, the heart and the throat regions respectively, the practitioner begins to experience the presence of Amrit, the symbolic elixir that provides extreme bliss and ecstasy, inside his own body in the form of the thrill and exhilaration that comes with realisation of the pure consciousness called the Atma. [When the grossness and rigidity of the body are eliminated, it becomes light and relaxed. Only such a body is able to enjoy anything. A man who is physically exhausted and weary will not enjoy even the choicest of food and drink. Even his favourite music would seem to create a headache to him. Everything is enjoyed by the body when it is rested and relaxed.] (63).

64. The Gods move in the Meru, and this movement of the divine Gods is revealed as life throbbing and pulsating in the spinal cord or the vertebral column which supports life in the body.

[The vital forces of Nature, the sensations and impulses that govern all activities of the body and its various organs, as well as the movement of the all-important consciousness that controls the very being of all living beings that have a body, moves along the nerves that form the spinal cord which passes through the vertebral column (the back bone). In other words, the spinal cord throbs and pulsates with life to symbolise the movement of these Gods inside the body. The Gods are the personification of the various auspicious forces of Nature that reside inside the body and control all its functions because the body is a microcosm of the creation. Therefore to say that the Gods move along the path of the spinal cord represented by

the Sushumna Naadi to reach the top of the head where the Mt. Meru is located, an aphorism for the location of the brain which is the center of the mind and the intellect is to metaphorically say that the sensations and impulses from various corners of the body travel along the nerves and reach the command and control center of the body located in the brain which is situated in the head. The instructions of the brain are then taken back to the different parts of the body through the same channel. This to and fro movement of the vital forces of life and consciousness inside the body which keep it alive and active is symbolised by the movement of the Gods inside the body. If the Gods represent the forces of Nature in a personified form, then obviously the authority that controls these forces would be the Lord of all Gods, and it is the Shiva located in the head. This Shiva thus personifies the stupendous abilities of the mind-intellect to think, contemplate and analyse, to discriminate between the good and the bad, and to instruct the creature to act auspiciously, righteously, nobly, properly and judiciously with probity and propriety.]

In its attempt to reach the head (during the process of Pranayam etc.) the Vayu (vital winds) successively overcome various hurdles that come in its way by piercing through them. The first to be ruptured or overcome is the Brahm Granthi¹. [It is a common observation that air can enter an enclosure through the minutest of slit through which even water cannot perhaps seep in. In the present context it refers to the entry of the trapped vital winds—which are put under great pressure because of the closure of the external openings of the body, such as the anus, mouth and the nostrils, as done during various Bandhas and Pranayam—into the vertebral column and their subsequent massaging of the nerves that pass through this column. This subtle massaging by the warm air titillates the nerves and rejuvenates them. On the one hand it gives the practitioner a sense of great thrill, and on the other hand it revives even the defunct nerves.] (64).

[Note—¹The word *Granthi* literally means node, a nodule or module or knot or a wart-like or a gland-like structure. It has various connotations depending upon the context in which the word is used. For instance, it might symbolically mean the different gates in a strong fort which must be overcome or broken before one enters the fort or overruns it as done during war times.

From anatomical point of view, the Granthis refer to the ganglions that help to coordinate the different nerves just like major junction boxes in the network of electric wires in a building. The word Granthi also refers to the glands that control all the major functions of the body, including those of the nerves and veins. Just like a knot that helps to tie something, these Granthis of the body bind the subtle energy present inside the body and prevent it from being dissipated or going to waste; it helps to preserve energy and stops it from being released if not wanted. If we treat them as representing the ganglions then it means that by the process of Yoga in which the subtle energy of the Kundalini is released in the spinal cord, or the Sushumna Naadi to be precise, these hitherto clogged and inactive ganglions are reactivated and they begin to function in prime shape. If we consider them as glands then it would mean that the functioning of these glands is restored by the process of Yoga, and this in turn helps the body to work properly.

The Granthi symbolises the center of power and authority because it is the nodal point from where all the authority needed for governance of the body spread out. It is also like the seat of power and authority of a king, much like the strong fortress from where he rules over the kingdom. They represent the nodal points in the body where the Trinity Gods, i.e. Brahma the creator, Vishnu the sustainer and protector, and Shiva or Rudra the concluder, have their symbolic residence, and it is from here they control the functioning of the body of the individual as well as everything that he thinks and does. If the individual is regarded as the microcosm of the entire creation,

then the Atma would be the supreme Brahm, and the various patron deities of the organs would be the different Gods of creation. The Brahm Vidya Upanishad of Krishna Yajur Veda, verse nos. 70-71 describes the three main Granthis where these three Gods have their symbolic abodes in the body of the individual creature—viz. Brahm Granthi, Vishnu Granthi, and Rudra Granthi. They have also been described in Krishna Yajur Veda's Yogshikha Upanishad, Canto 1, verse nos. 86-89, and Yog Kundalini Upanishad, Canto 1, verse nos. 67-68, 85-86.

These Granthis can be also regarded as aphorisms for the numerous spiritual hurdles faced by a spiritual aspirant in his spiritual journey. The three Granthis are like the three forts that have to be overcome before the final victory over the citadel. If the body is considered as a metaphoric prison for the Atma of the aspirant, then rupturing of the various Granthis is like his breaking free from its walls and finally escaping to the world outside to gain freedom by rupturing the Brahm Randhra located on the top of the head in the final stages of Yoga.

The location of the Granthis is very significant in this context. Let us have a look at this aspect and see why these have been considered as formidable fortresses in this discussion.

The first Granthi known as the 'Brahm Granthi' is located in the region where the sexual organs are located. The very fact that Brahm in his manifestation as Brahma the creator is responsible for creating this world, the Granthi is so named after him because the sexual organs are responsible for creation. Overcoming this Granthi is tantamount to control over one's sexual urges which is a very formidable task under normal circumstances. Control of sexual instincts requires a lot of self-control, and once this is successfully achieved the person retains his internal energy that is otherwise wasted in sexual indulgences. The power to create new life by the sexual process makes a man equivalent to Brahma the cosmic creator and the first of the Trinity Gods.

The second Granthi is known as 'Vishnu Granthi' and is located in the region of the subtle heart. Lord Vishnu is responsible for sustenance and taking care of the creation with care and love. The heart is associated with the virtues of emotions and sentiments as well as of love, compassion, kindness and graciousness as well as longing and desires. This Granthi symbolises the natural characteristics of the heart. It stands for worldly involvement and attachment with the numerous charming material sense objects of the world. It is the heart that makes a man emotionally and sentimentally involved and attached with the world. The obstacle of the heart is so formidable that more often than not the heart prevails over the sane advice given to the creature by his mind not to pursue certain things, and this overbearing nature of the heart only lands him in immense troubles. To overcome the natural impulses of the heart and bring it under control is tantamount to piercing of the second Granthi. Involvement with the world and its affairs is symbolised by the word Vishnu who is the second of the Trinity Gods.

Finally, the third Granthi is called the 'Rudra Granthi' as it is located in the head where the brain symbolising the mind and intellect with their formidable abilities is located. It is called 'Rudra' because when a man is unable to satisfy his urges and cannot obtain his desired objects, if his ego and pride are hurt, if he fails in any of his endeavours, if he finds that his compatriots succeed in anything in which he has failed, it is natural that he becomes angry, vengeful, wrathful and fretful. In other words, he displays the virtues of being 'Rudra' personified. It is an equally daunting task to control one's anger and its accompanying wrathfulness. Once an aspirant is able to control his anger along with the control of the other two natural urges, he becomes a truly self-controlled and realised soul. Display of the virtues of Rudra makes a man equivalent to Lord Shiva, another name of Rudra, who is the third of the Trinity Gods.

According to Tantra literature, there are three Granthis—viz. Brahm Granthi, Vishnu Granthi and Rudra Granthi. They obstruct the upwards movement of the

energy or power of the Kundalini. Each of the six Chakras (whirling energy centers of the body) has two Granthis on either side.

The Brahm Granthi is situated between the Muladhar Chakra and Swadisthan Chakra. The Vishnu Granthi is situated between Manipur and Ahahat Chakras. The Rudra Granthi is located between Vishuddha Chakra and Agya (Gyan) Chakra. The energy or cosmic divine powers of the Kundalini has to pierce through these three knots before it can reach the Sahasraara Chakra at the top of the head.

The Yog Kundalini Upanishad, Canto 1, verse no. 67-74 and Yogshikha Upanishad, verse nos. 86-89 describe how the energy of the activated Kundalini passes through these Granthis to reach the top of the head and provide the practitioner of Yoga the exhilaration, ecstasy and bliss of experiencing the consciousness in its divine form.

According to the metaphysical interpretation of this term, the various Granthis are like the knots present in the heart that shackle the Atma and prevent its liberation and deliverance. These Granthis stand in the way of a man obtaining freedom from his fetters and keep him tied to this world. Once he is able to rupture them, he finds liberation even while he is still alive in this world. This fact has been clearly emphasized in Katho-panishad, Canto 2, Valli 3, verse no. 15 of Krishna Yajur Veda tradition.

The term is used in Yoga philosophy—that relies on numerous physical exercises to enable a practitioner to liberate himself and his soul from the fetters that tie it down to this body and achieve deliverance as well as to harness the stupendous cosmic dynamic energy that lies trapped and hidden inside his own body—to indicate the various hurdles that come in the way of obtaining success in this spiritual endeavour. Refer Yog Kundalini Upanishad, Canto 1, verse no. 67-68, 85-86, and Yogshikha Upanishad, Canto 1, verse nos. 86-87, 89.]

65. After first piercing through the Brahm Granthi, the vital airs break through the second and third Granthis called the Vishnu Granthi and the Rudra Granthi in succession (65).

[Note—The Vishnu Granthi and the Rudra Granthi have been described in not to verse no. 64 above.]

66. Once the Rudra Granthi is pierced, the next hurdle to be overcome in the spiritual path is Moha Granthi (the numerous attachments to and infatuation with the sense objects of the material world, longing for them and having a strong desire to acquire them and enjoy them—which together act like formidable spiritual blocks or knots or hurdles that need be dismantled or overcome before a spiritual aspirant can actually claim true freedom from the fetters of this world).

This Moha Granthi is such a hard nut to crack that it is made possible to do so only by the good influences of auspicious deeds and thoughts brought forward from one's past, as well as by the grace of an enlightened Guru (moral preceptor, guide and teacher) (66).

[Note—The negative virtues of having 'Moha'—i.e. possessing a sense of attachment with anything, having longing for it, being infatuated with it. Usually, this term Moha is applied in relation to the material sense objects of the world, but it also relates to one's attachment with the body, with other people around him, as well as to acquire name, fame and wealth. Moha also means delusions and it's attending horrible spiritual consequences. Moha acts like a veil that obscures the truth from being viewed by the man. It leads him to commit errors and sins inadvertently because he is not even aware that he is acting wrongly. His mind is biased, deluded and corrupted. Moha is therefore like a formidable Granthi or knot because it is hard to crack like a nut.]

67. Only those ascetics who diligently practice the principles of Yoga are easily able to break these Granthis or knots which are like spiritual hurdles for a man.

There are three main Naadis, viz. the Ida, the Pingla and the Sushumna. The latter is located between the first two. These three Naadis are employed simultaneously to attain success in Yoga practices. Their coordinated effort is needed to successfully break this above mentioned Granthis. [The reason is that the process of Pranayam entails inhaling and exhaling breath in a controlled manner through the left and the right nostrils represented by the Ida and the Pingla Naadis respectively. The Sushumna Naadi is the path through which the Apaana wind and the subtle energy of the Kundalini rise up the spinal cord to reach the forehead, and finally the top of the head. The entire process of Yoga involves a number of complicated Asanas, Bandhas and Mudras besides Pranayam. All these individual exercises are to be coordinated properly like a symphony orchestra being played in order to enable the practitioner experience the bliss and ecstasy for which Yoga is so famous. On successful completion of Yoga, an ascetic can hear the Naad (cosmic vibrations) and taste the Bindu (drop) of Amrit (elixir of beatitude and felicity) that fills his entire being with extreme ecstasy and unbound bliss.] (67).

68. The various 'Mudras'¹ (bodily postures) of Yoga that help in practicing the different 'Bandhas'² (closures of the apertures of the body) are able to divert the vital winds of the body towards the head. Their gradual practice done patiently, diligently, silently (without any show, pretensions and advertisement) is potent enough to destroy all the sins of the practitioner.

[Since these Mudras and Bandhas are very difficult to practice, it is advisable for a beginner as well as for an ordinary practitioner to practice them in moderation. There are dangerous, and if not handled properly or done with proper care can be fatal or gravely injurious to the ascetic.]

However, if one has developed sufficient expertise and confidence to do them for a prolonged period of time and in a more robust form, it is then certain that these Mudras and Bandhas do have the potential and the power to provide Moksha (emancipation and salvation) to the practitioner. [Whereas when practiced at a lower level they can provide the benefit of freedom from sins, when they are practiced in their higher level they can reward the ascetic with complete liberation and deliverance altogether. Thus it is to be observed that Yoga presents a comprehensive solution to all the worldly problems of the ascetic.] (68).

[Note--¹The word *Mudra* means 'bodily postures taken during meditative or Yoga sessions'. These are the following—'Yoni' (योनि), 'Beej' (बीज), 'Khechari' (खेचरी), 'Mahankush' (महानकुश), 'Mahonmadini' (महोनमादिनी), 'Sarwawashankari' (सर्ववशंकरी), 'Sarwakarshini' (सर्वकर्षिणी), 'Sarwavidravini' (सर्वविद्राविणी), 'Sarwa Sankshovini' (सर्वसंक्षोभिणी).

The Vijay Tantra explains the esoteric meaning of Mudra thus—'the company of the good leads to liberation and evil company to bondages; closure of evil company is termed as Mudra'.

The Mudra is a special body posture and positioning of its various external organs such as the hands, legs, head, etc. along with the various modes in which the mouth, tongue, eyes etc. are held. These Mudras form an integral part of formal forms of ritualistic worship involving Tantras (charm instruments) as well as during Japa (repetition of Mantras). These Mudras are said to harness the latent subtle and divine energy inherently present in the body of the worshipper and harmonize it with the

cosmic energy of the deity being worshipped in order to bring about an integration between them and enabling the practitioner to become one with the deity.

The Mandal Brahmin Upanishad of Shukla Yajur Veda tradition, 1/3/5; and 2/1/5, 8 describe some of the Mudras and their benefits. They have been also listed in Yogtattva Upanishad of Krishna Yajur Veda in its verse nos. 26-27. The Yog Kundalini Upanishad of the Krishna Yajur Veda describes the Khechhari Mudra in great detail in its Canto 2 which is dedicated entirely to it.

²According to Yoga Kundalini Upanishad, Canto 1, verse no. 41 of Krishna Yajur Veda tradition says that there are three main types of Bandhas—Mool Bandha, Uddiyan Bandha and Jalandhar Bandha. The word *Bandha* literally means ‘the closing of the subtle apertures of the body through which the Pran or the vital winds could escape when pressure is exerted on them while doing Pranayam’. Thereafter, verse nos. 42-52 describe these Bandhas in the context of arousing the latent energy of the Kundalini and helping it rise up in the Sushumna Naadi which ultimately lead the practitioner of Yoga to experience the bliss of consciousness realisation.

Refer also to Canto 5, verse nos. 6-7, 44-45 of this Varaaha Upanishad which says that the Bandhas are the following—Uddiyan Bandha, Samput Bandha and Mool Bandha.]

69. The ascetic should practice to pronounce the syllables of the ethereal Mantra OM consisting of the three alphabets (A, U and M) for a protracted time in such a way that there is no pause, gap or break between pronouncing any two letters of OM, or between pronouncing two OM's one after another, just like the way oil flows in a continuous and unbroken stream on a flat and smooth surface.

This causes a resonance of the ethereal sound of Naad in the head which resembles the reverberating sound of a heavy gong hitting a huge brass bell (69).

[Note—Refer Canto 4, verse nos. 1.11-2 of this Upanishad.]

70. This practice of hearing the Naad and pronouncing of OM helps the spiritual aspirant to get acquainted with and have an easy access to the cosmic Divinity known as Pranav or Brahm which is otherwise not known and not accessible as it is formless, unqualified, invisible, beyond the reach of gross organs of perception, and has no attributes whatsoever. This experience provides him with a sense of extreme ecstasy and contentedness at having had a contact or communion with this entity that is divine and cosmic.

The three letters of OM, viz. A, U and M are metaphors for the three stages of Brahm realisation. The first letter ‘A’ stands for the awareness and the first sign of the presence of Pranav or Brahm in the form of cosmic vibrations heard as Naad and conceptualized in the form of the eclectic word OM. This is what those who are experts in the chief doctrines of Vedas assert.

The protracted or prolonged sound of the second letter, the vowel ‘U’, is symbolic of the Bindu or the ‘dot’ which is placed on the top of the first vowel ‘A’ to produce its nasal sound. [That is, the letter ‘A’ with a dot on the top would sound as ‘rum’ or ‘come’ or ‘sum’. Sometimes it is also pronounced as ‘rung’, or ‘clung’. If this combination is pronounced for a protracted time, it would have a resonating affect.]

The concluding letter is the third one, viz. ‘M’, which is indicative of final rest when the ascetic has managed to take his Pran (vital winds) to the Brahm Randhra (the slit-like opening on the top of the skull) from where it finally escapes out of the body to provide final liberation and deliverance to the ascetic. After pronouncing ‘M’ the Mantra ends and the mouth is closed. This is also a metaphoric way of saying that the ascetic has found his final rest and ultimate peace.

When this Mantra called OM begins to resonate in all the twelve Naadis (listed in verse nos. 23-28), it is greatly enhanced because of the presence of the twelve vital winds in them as well. [Refer Canto 5, verse no. 28, 32-34 in this context. The enhancement is made possible because the vibrations created by the humming or chanting of OM produce strong currents in the vital winds already present in the twelve important Naadis which result in a dramatic increase of the decibel level in which the cosmic Naad is heard. By and by the sound completely overwhelms the ascetic to such an extent that he hears nothing else except the sound of the Naad.]

When this stage is reached, it is said that the ascetic has gained full benefit of the Mantra and has consequentially gained the mystical powers that accompany such accomplishment. Now, he can use this Mantra to successfully finish any task he wants to do (70).

71-72. This Mantra of Pranav or Brahm, viz. OM, is potent enough to eliminate all spiritual obstacles.

There are four Bhumikas (stages of development of spiritual wisdom as described in detail in Canto 4)—viz. (i) ‘Aarambha’—the beginning or initiation when one decides that he would find true wisdom and the correct path that would provide him with final emancipation and salvation; (ii) ‘Ghat’—the acceptance and the subsequent filling of the inner self with noble thoughts and wisdom, becoming stable, calm, quiet, unmoving and unruffled like the air present inside an empty pitcher; (iii) ‘Parichaya’—introduction to, becoming aware of and getting acquainted with the cosmic Divinity that is present inside one’s inner-self as the all-powerful consciousness known as the Atma; introduction to and acquaintance with the highly evolved and developed path of erudition, enlightenment and wisdom that enables an aspirant to become aware of his pure conscious self and the fact that this ‘self’ of his is the same as the cosmic ‘Self’ of creation that is known as the all-pervading and almighty Consciousness that universally resides in the bosom of all living beings as their ‘self’, and that this is the only spiritual Truth in this existence [71], and (iv) ‘Nishpati’—completion or consummation of this process which implies the hearing of the cosmic Naad and tasting of the elixir of eternal bliss and ecstasy, known as Amrit, that comes with self-realisation and Brahm-realisation, and reaching the final frontier of spiritual practice which culminates in obtaining liberation and deliverance of the soul, the final emancipation and salvation whereby the individual soul merges with the supreme Soul of the cosmos, never to take birth again. This is the ultimate goal which any wise and enlightened spiritual aspirant would yearn for, would strive for, would aspire for and endeavour to attain.

Now each of these four stages is being elaborated upon. The ‘beginning or initiation’ is when the spiritual aspirant abandons all his involvement with the external world and its activities that have three causes¹ for coming into being [72]. (71-72).

[Note—¹The *three causes* that on the one hand result in the creation of the world and on the other hand can find a solution for this malady itself are the following—(i) Upaadaan—the word means ‘acceptance, acquisition, knowledge; restraining of the sense organs; a material from which something is prepared, the ingredient’. All these connotations can be applied here. For instance, the man first acquires the knowledge of this external material world and all its sense objects, and then accepts its existence as a matter of fact. Since the existence of this world is based on belief and information, and since this world can be accepted only through the medium of the sense organs of the body, it can be eliminated by the same means. That is, elimination of the deluding and artificial world can be achieved only by acquisition of correct knowledge and beliefs along with practicing restriction of the sense organs. These

organs are responsible for the man becoming aware of the existence of the world and its most alluring charms, no matter how illusionary or transient or painful they are in the long run. They entangle him in their web and tie him down in a vice-like grip with false promises of happiness, pleasure and comfort. If a man falls prey to this bait, he is trapped, while if he has the right knowledge and wisdom he would see right through the trick and avert a catastrophic destiny for himself.

(ii) Asamvaachi—to attempt to unite two dissimilar things into one entity; to try in futility to bring harmony between two basically disharmonious entities. For instance, it is like trying to unite water with fire. In the present case, this would mean to imagine something to be true although it is fundamentally and irrefutably false. That is, to imagine that this world is true and that it would indeed give peace and happiness is as incredulous and ridiculous to believe as imagining that the water seen in a desert mirage would actually quench one's thirst. As is obvious here, this utterly fallacious and basically erroneous conception can be removed only by correct knowledge, wisdom and enlightenment that comes with study of the scriptures and good company of saints and other holy men.

(iii) Nimitta—the word means 'motive, cause, reason, factor etc. which is the progenitor of something or some event; something done on behalf, or on account of'. For instance, the potter is the creator of the clay pot; he is a means by which the formless clod of earth is given a definitive shape, design and size. So if there was no potter, there would be no pot with this shape or size. In the present context, the spiritual aspirant researches the cause of the coming into being of this world although it is universally accepted in the scriptures that it is false and illusionary. He wanders how this happens—one the one hand it is false, and on the other hand he can actually experience and witness the presence of the gross world first hand thereby proving that it does not exist. It is then that he begins to ponder on the great metaphysical doctrines and axiomatic maxims enshrined in the scriptures, and espoused and expounded by them repeatedly. Regular and discreet study of the scriptures with an open mind and a sincere desire to learn and benefit from their teachings helps the man to discover the hidden 'truth' that cannot be seen by the physical eye of the body. He finds that it is his imaginative mind that has visualized this world to appease the sense organs. Therefore the remedy is also in the mind itself—and it is to stop imagining and become real. The mind, the aspirant realises, has to be leashed in and channelised properly to derive real spiritual benefit from its stupendous powers that were being misused by it in pursuance of falsehood and artificiality known as the world. He discovers that what is seen, heard, felt, smelt and tasted is not always the 'real and irrefutable truth' of any thing or event. It is often misleading and far from the actual thing. For instance, the water in the mirage seen in the hot desert is very evident, but everyone knows that there is no water in it. Similarly, vested interests spread false rumors about certain things to suit their purpose, but it would be highly foolish to rely on them. When one suffers from high fever one feels extremely chilly though it may be a hot summer day with a scorching sun beating relentlessly down on earth. A sick man may not be able to relish any taste in food which might be as delicious and tasty as it can ever be for a healthy man. Artificial scents create an impression of fragrant flowers in the vicinity though there may be none nearby.]

73. Instead (of being outwardly and extrovert, instead of allowing his sense organs to run after their objects in the external world), a wise and enlightened aspirant should concentrate upon the activities that are related to the inner-self, and focus on its purification and enhancement. He should endeavour to turn the focus of his mind and intelligent inwards in researching the truth about his own 'self' and the pure cosmic Consciousness that resides in his own bosom as his Atma.

The vital winds of the body control all its functions and activities, both the external ones as well as the internal ones. Therefore it is of utmost importance to control and harness them.

[That is, all the organs and tissues function under the influence of the vital winds. If one wind fails, the relevant organ or tissue suffers and stops to function properly. In other words, the tendency of the organs of perception to be outwardly can be effectively checked if one can check the relevant vital wind. Refer Pran Agnihotra Upanishad, verse no. 11 as well as this Canto 5 of the present Varaaha Upanishad which describe how Pran is controlled. So if a person is able to check all the vital winds, he can put a tight leash on this entire body and control even the involuntary actions such as digestion and hunger, circulation of blood and breathing, passage of stool and urine, etc. The mind would be then freed from the constant bombardment of impulses that are gathered by the organs and the necessity of issuing constant guidance to them. Then the freed mind would have the time and the inclination to concentrate its energy and strength on achieving successes in higher goals of life. That is why great emphasis is laid on first controlling of the vital winds during Yoga, because without this nothing worthwhile is achievable.]

When the vital winds are controlled and put under tight leash, the spiritual aspirant is able to overcome all hurdles and become stabilized in his body (i.e. is able to overcome the natural tendency of the body to remain restless and fidgety) just like the air inside a pitcher is stable and unmoving as compared to the air present outside the pitcher¹ (73).

[Note--¹This is the *first Bhumika*. This entails turning away from being extrovert and preventing one's sense organs from being outwardly mobile, and instead become focused on the inner self. It means to control the organs of the body and the mind to get naturally attracted by the charms proffered by the material objects of the external world, and instead concentrate their combined energy on realising the stupendous potentials of the 'self' and the pure conscious Atma.

The various Bhumikas have been described in detail also in Canto 4 of the present Upanishad.]

74. Those who are experts in this spiritual field, are wise and erudite, call the stage when an aspirant is able to control his vital airs and thereby become self-controlled, self-restrained, serene, unruffled, calmed and tranquil, symbolically indicating the attainment of a high degree of stability and steadfastness which are absolute necessary pre-requisites for success in any endeavour, what to speak of spiritual endeavour which is all the more difficult and painstaking as compared to worldly successes. It indicates steadiness of purpose, calmness of demeanours, a settled mind and fully restrained organs of the body—i.e. a stage when the spiritual aspirant has been able do away with all the restlessness and the fickleness that are so typical of the mind and the body.

This is called the 'Ghat Bhumika'¹ which marks a significant progress in his quest for spiritual enhancement, and attainment of final liberation and deliverance (74).

[Note—¹The *Ghat Bhumika* has two connotations as follows. (i) When the spiritual aspirant has become steady in mind and body, he is said to have attained the exalted stage which is compared with the Kumbhak phase of Pranayam when the winds are steadily held inside the body which is completely steady, calm and unmoving with all external exit points, such as the nostrils and anus, being closed. The man then becomes focused on his inner-self in the absence of all external disturbances, instead of routinely running outwards towards the sense objects of the material world.

(ii) There is another connotation to this symbolism as indicated by the word 'Ghat' which means a pitcher or vessel. The air inside the closed confines of this Ghat is completely calm and still; it is not all affected by the strong gust of wind blowing outside the body of the Ghat. So, the Ghat Bhumika refers to the stable state of the aspirant's mind and body which is comparable to the steadiness and calmness of the air inside the pitcher as compared to the ever agile, ever mobile and ever fickle nature of the air present outside the body of the pitcher. The spiritual aspirant becomes absolutely calm and quietened as he has reached the higher stages of Yoga and has sufficiently advanced in his spiritual quest. The turmoil of the external world does not disturb him in the least. Even as the air inside the pitcher remains calm and unmoving inspite of a fierce storm raging outside the pitcher, the aspirant remains calm, serene, indifferent and in quietude inspite of the turbulent world outside. He is absolutely unruffled and exemplarily unconcerned and detached from everything.]

²The Ghat Bhumika is the *second Bhumika*.]

75. It is the Atma, the pure consciousness and the true 'self' of the ascetic, that is responsible for creation of this world through the medium of the body consisting of both the gross organs such as the organs of perceptions and organs of action, as well as the subtle organ of the mind-intellect complex. Hence, being the creator or progenitor of this creation (world), it is the Atma itself which can conclude it or bring it to an end, and no body else.

Therefore, the stage when the spiritual aspirant has realised this quintessential truth about the Atma vis-à-vis the body and the world is said to be Jivan Mukta—i.e. one who has obtained liberation and deliverance even while he is alive, has kept his gross body, and lives normally in this world. [This is because he would not be 'personally' involved with either the activities of the body or the world. The word 'personally' here would not mean his body but his Atma which would remain a mute spectator and non-involved with everything and in anything. It is like freeing oneself from the serfdom of the body as well as the world. The Atma disassociates itself from everything related to the gross and perishable body as well as the equally gross and perishable world.]¹

When this thinking and behaviour becomes natural to the aspirant, when it is not artificially done by him to gain praise and honour, when he is not acting as an imposter trying to pose as an upright, wise, self-realised and enlightened man to deceive others with ulterior motives, when he has no pretensions of being holy and pious man while slyly eyeing this world and its material objects which would be showered upon him by faithful devotees who would fall prey to his deceitful behaviour—it is then that he is said to have accomplished complete success in obtaining his spiritual objectives. He is fulfilled and complete; he has obtained the 'Nishpati Bhumika' which is the last of the four Bhumikas and the culmination of Yoga and spiritual practice². (75).

[Note—¹This awareness of the Truth is the *third Bhumika* called the 'Parichaya Bhumika'.

²This 'Nishpat Bhumika' is the *fourth Bhumika*. Refer verse no. 71-72.]

76. Thus ends this Upanishad and its profound auspicious teaching.

He who studies and implements the tenets of this Upanishad becomes as exalted, honourable and auspicious as if he was the offspring of the Fire God, i.e. he becomes as pure, potent and powerful as the fire element. He becomes as exalted, honourable and auspicious as if he was the son of the Wind God, i.e. he becomes as pure, potent and powerful as the wind element.

This Upanishad is so potent and spiritually effective that if a man studies it diligently and implements its principles in his life he is absolved of the misdeeds done under the influence of drinking wine. Similarly, he is freed from the sin of stealing gold¹.

Such a man becomes 'Jivan Mukta'—i.e. he becomes freed from the fetters that shackle him to this delusory world and the gross body even while he is alive and interacts with both the world as well as the gross body.

All that has been said and asserted in this Upanishad has been proclaimed in the Richas (hymns or Mantras) of the Vedas and affirmed by them.

The attainment of the supreme stature of liberation and deliverance is akin to attaining the divine abode of Lord Vishnu. A wise and enlightened aspirant focuses his sight on it. This supreme abode is glorious and illuminated, and it is here that all the Gods have their exalted abode as well. It is here that all the enlightened souls go to take their final rest. This is such an exalted and divine abode of Lord Vishnu as described and asserted by the Upanishads.

[This divine abode of Vishnu is actually the abode of the Viraat Purush, the macrocosmic, all-pervading and invisible form of the Supreme Being known as the transcendental Brahm. In other words, the soul of the spiritually enlightened person seeks to become one with the Viraat Purush and become uniformly dissolved like the latter in the vast fathoms of the cosmos. That is, an enlightened ascetic hopes to shed his gross body and become a universal soul that has no physical boundaries and attributes like the body. Now, he can ever remain free and unshackled.]

OM salutations! Oh Lord, protect us, give us peace and tranquility. OM (Pranav or Brahm) and Hari (Vishnu) are indeed the Absolute and the only Truth in creation. Amen! (76).

[Note—¹It must be clearly understood that this immunity from punishment is not intended to be a blanket license for breeding sins and evil. It is meant as a device for those persons who have committed sins and other spiritual errors unawares and sincerely wish to atone for their sins and misdemeanors. The scriptures provide a ray of hope to them for their redemption. It must be remembered that the main purpose of the scriptures is a man's spiritual redemption and not to gain sadistic pleasure in his sufferings. A man is liable to commit wrong in his life; after all 'to err is human' goes the saying. But a wise man would be called 'wise' if he wakes up and endeavours to redeem himself instead of allowing himself to roll in the filth which he had inadvertently stepped into. So, this Upanishad like many others shows him the path for redemption and salvation.]

Chapter 31

Kalisantaran Upanishad/Kalisantarno-panishad

This is a very short Upanishad belonging to the Krishna Yajur Veda tradition, having only three verses. It was revealed by the creator Brahma to the celestial sage Naarad.

The name of the Upanishad has three parts, viz. ‘Kali’, ‘Sant’, and ‘Tarna’. The first word ‘Kali’ refers to the present fourth era of the 4-era Hindu celestial cycle, an era considered as the most sinful and full of perversions from which a person finds great difficulty to find liberation and deliverance. The second word ‘Sant’ refers to saintly and pious people, and the third component ‘Tarna or Taran’ means to actually find liberation and deliverance or protection from some kind of spiritual snare or from a most difficult and perplexing situation. Hence, the combined word means an Upanishad which provides an easy formula by which saintly and pious persons can find emancipation and salvation as well as protection for their selves even in this difficult period of their lives.

It extols the glory of the holy and divine name of the Supreme Being called Hari, also known as Lord Narayan or Vishnu, in his two incarnations as Lord Ram and Lord Krishna. Therefore it is often referred to as *Hari Naam Upanishad*—an Upanishad which is a main proponent of the divinity and glory of the holy name of the Lord and espouses the effectiveness of it as the all-inclusive and infallible panacea for all spiritual ills faced by an aspirant desirous of Mukti (liberation and deliverance) as well as Moksha (final emancipation and salvation) during the most difficult phase of creation, i.e. the present corrupted and evil-ridden era called Kaliyug.

The Atma or pure consciousness of a living being is covered by a veil which prevents the latter from realising the former and experiencing one’s closeness with the supreme Brahm, because though the Atma is a manifested Brahm living inside the gross body of the creature it is prevented from being witnessed due the veil representing numerous worldly shortcomings, delusions and ignorance that surround it. The holy name of the Lord is the powerful implement that can cut through this veil and make the Atma and Brahm realisation possible. When this veil is removed, the splendorous illumination of the indwelling divinity known as the glorious Atma shines through like the brilliant sun breaking through the shroud of clouds.

The Upanishad prescribes the great well-known and most popular Mantra of the Lord which has sixteen words and relates to the holy names of Lord Vishnu in his two incarnations as Ram and Krishna. The Mantra ‘Hare Ram Hare Ram, Ram Ram Hare Hare; Hare Krishna Hare Krishna Krishna Krishna Hare Hare’ is set to different tunes and is sung, either alone or in groups, in a symphony called ‘Kirtan’ sung most melodiously and with great devotion by the devotees of the Lord. Its singing is heart-felt and is accompanied by various musical instruments like any rendering of classical music.

The Upanishad concludes by emphasizing the spiritual benefits that are derived by repeating the most holy and divine name of the Lord in the form of this Mantra.

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of this Shanti Paath.

1. At the end of Dwapar Yug (the 3rd era of the Hindu 4-era celestial cycle of creation and destruction), the celestial sage Narad¹ went to the great grandfather of creation known as Brahma and asked him, 'Oh Lord! Please tell me how I can hope to find emancipation and salvation for myself inspite of having to wander endlessly in this world (i.e. keep on moving endlessly in a cycle of birth and death in this mortal world) during the current era called Kaliyug?'²

Brahma replied cheerfully, 'Oh son! Today you have asked me something which is very pleasing to me (as it concerns the welfare of all my off springs—i.e. all the living beings created by me). Therefore, I shall tell you today the most secret of mysteries enshrined in the great tenets of the Vedas. [That is, I would today reveal something hitherto unknown in this creation, something which is the essence of what the Vedas and other scriptures proclaim, stress and expound so emphatically, something that shows the easy and practical method by which an aspirant can find access to the eternal fount of bliss and happiness, find access to the holy path that leads to emancipation and salvation.]

So listen carefully. You shall be able to cross this ocean-like world by merely hearing it (i.e. by becoming aware of it, because then you'll know what to do to get a convenient and easy way of finding liberation and deliverance from this mortal world consisting of an endless cycle of birth and death and its accompanying horrors, pains and miseries).

A man can vanquish and destroy all the faults and sins, all the drawbacks, flaws and imperfections associated with Kaliyug by merely pronouncing/uttering the holy, pure and divine name of the 'Adi Purush' known as Narayan² (1).

[Note—¹Narad-- The celestial sage Narad is said to be a manifestation of the Supreme Being's Mana (mind and its thoughts, intentions, hopes, desires and wishes, as well as the heart and its emotions and sentiments). The Supreme Being implements his wishes and expresses his intentions and wishes by making Narad his spokesperson. Purans list uncountable instances when Narad has approached people—both the good and righteous as well as the demonic and unrighteous ones—to tell them the path best suited to them, and the wise ones treated this advise as the Lord's wish while the unwise ones still benefited from it because Narad's intention was always to turn a living being away from his sinful ways and lead him towards the good.

Since he is a personified Mana, he is as fickle, unstable and transient as the Mana—never staying at one place for more than a fleeting moment, always roaming here and there in the entire creation, having nothing to stop his path as he could go anywhere he wished. And the remarkable thing is that he was never unwelcome anywhere—even the demons welcomed him with the same respect as did the Gods.

It is believed that he is born in each Kalpa to carry out the wishes of the Supreme Being. [1 Kalpa is equivalent to 4.32 billion human years.] He was a Gandharva (a semi-God who is a celestial musician) named Upbarhan in the previous Kalpa. He was physically very charming and an expert musician. Once he showed his amorous intentions towards Urvashi, a celestial dancer, in the presence of Brahma the creator where he was supposed to show exemplary restraint, and this overt show of lust resulted in his being cursed by Brahma that he would become fallen and take birth in the mortal world as a Shudra (a low caste). So, he was born from a maid servant of low caste working as a devoted servant of a learned Brahmin. Under the constant companion of this great Brahmin, Narad developed noble and auspicious virtues in

him even though he was a mere child of five years. He was very modest, devoted, pious, noble hearted and diligent.

Since he had the Lord's genes in him, his inclinations were more inclined towards the Spirit than the worldly charms of material sense objects which he detested from childhood. As luck would have it, once some wondering mendicants came to spend the four-month period of the rainy season in the hermitage of this Brahmin. Narad served them with great devotion. Impressed by his service and having some inner vision of his high spiritual stature and the spark of divinity that was lying hidden in him waiting for an opportune moment to leap up and shine through, they blessed him, taught him meditation and contemplation, besides initiating the child into the path of the Lord.

Thus, the dormant fire of renunciation and spiritual awareness was immediately ignited in Narad's little heart and he wished to take to Sanyas (a renunciate's life marked by constant wandering as a mendicant in search of the supreme bliss and Truth), but he did not wish to hurt his mother's emotions. But the Lord had other plans for him, and soon his wish was fulfilled when his loving mother died of snake bite while milking a cow. Instead of grieving at such a loss in human terms, the child Narad felt happy as if the last fetter was broken and he was liberated from worldly obligations.

He immediately headed north towards the mighty Himalaya Mountains to do severe Tapa (penance and austerity) to attain access to the Supreme Being. The little one walked on and on, and finally he was so tired and exhausted that when he saw a cool lake he drank water, ate fruits that he found there, and sat under the shadow of a tree and became lost in meditation. Lord Vishnu revealed himself in his four-arm form in his heart, but Narad was so thrilled and excited with this divine vision that he wished to see the Lord in practical terms with his physical eyes rather than the subtle eyes while he was in deep meditation. But as soon as he opened the eyes, the Lord vanished. Most sorry and overwhelmed with this loss, the child began to cry bitterly. Then a cosmic formless reverberating voice said—'Oh son! Your penance is accepted, and I do love you. Though I bless you with an eternal life and that your memory of me would never be erased, but you would not be able to see me with physical eyes in this world. So go back to the world and carry out my divine mandate for me. Become my messenger and go preach the path of my devotion and holy name to this world so that other unfortunate creatures also can get liberation and deliverance from the fetters in which they have bound themselves with no one to show them an easy and practical way out of their predicaments. Go and preach my message to such people in every corner of the earth; go and preach my devotion and let them have faith in my holy name. Your salvation would come naturally and automatically to you as an unasked reward.'

Narad turned back with this divine mandate of the Lord to be carried out just like the great Apostles of Lord Jesus Christ had went, on the Lord's instructions, to spread his message to the people on this earth. Henceforth, he wandered in the entire creation like a mendicant, with an Indian lute upon which he sang the Lord's glories and his divine name, spreading the divine message of the Lord's mercy, compassion, benevolence and love everywhere, attempting to turn everyone towards the Lord and away from this sinful and mortal world so that each individual creature could get his spiritual liberation and deliverance. Such are the ways of great and holy saints that instead of being selfish to seek his own liberation and deliverance from the Lord as the grant of a boon and letting the rest of the world go to hell, Narad chose to sacrifice his own life, liberation and deliverance at the altar of larger good of creation and to fulfill the wish of the Lord. Of course there is another twist to this tale—the Lord does not select everyone to carry on his own divine agenda, and a soul who the Lord designates for this purpose is indeed the most favoured and lucky one—because the Emperor chooses only those upon whom he has utmost confidence to carry out his

personal task. It is just like Jesus choosing his disciples and ordaining them the task of spreading his glorious Gospel of love and salvation.

Therefore, Narad, the apostle of the Supreme Being, is the most loved disciple of the Lord, and it is evidenced by the fact that he is the only saint who has unrestricted access to the abode of the Trinity Gods (Lord Vishnu the sustainer and protector of creation, Brahma the creator and Shiva the concluder of this creation) besides every nook and corner of creation without hindrance and even without seeking any previous permission and appointment from anyone, be it a God or a Demon or anybody else. Narad's visit was always for the host's long term good, so he was always welcome and revered.

When the time came and the age of the physical body ended, he left the mortal coil like a serpent leaves its cuticle and went to heaven to sing the Lord's holy and divine name in the presence of Brahma, the old patriarch of creation. At the end of the Kalpa, at the time of Doomsday, he merged and became one with Brahma, the creator.

When the new cycle of creation came into being, he was born again from the Mana (mind) of Brahma the creator after the Sankadi sages were born. That is why, in the present Kalpa, Narad is called the 'Manas Putra' of Brahma, i.e. the son born out of Brahma's mental powers or his wishes. With this heritage and gene running in his blood, it is natural that he is highly respected and regarded as one of the greatest devotees of Lord Vishnu who is the Supreme Being personified. It is from the navel of Lord Vishnu that Brahma, the creator of the visible world, was born atop a divine Lotus that emerged from it while he was reclining on the bed made of the coiled body of the legendary serpent named Seshnath who floated on the surface of the celestial ocean of milk called Kshirsagar.

Narad preached renunciation of this material world and an extreme sense of faith in and complete devotion for Lord Hari (Narayan, Vishnu, the Supreme Being). But this was against the process of creation, because if everyone followed the path preached by Narad and renounced the material world then the process of propagation of the world and its inhabitant creatures along with its development would come to a naught. So, when Narad preached renunciation and detachment from this material world of sense objects that was mortal, transient and never a giver of peace and happiness to the ten thousand mental sons who were created by Daksha Prajapati (the first male from whom the rest of the human race was born and who was assigned the task by Brahma to propagate creation) in order to propagate this human race, Narad obviously annoyed him. These sons were preached by Narad and they all became mendicants, renouncing their attachment with this life and all charms of the material world along with the desire to enjoy it, gratify their sense organs and remain entangled in affairs of this world. Daksha Prajapati was exasperated and he created another set of ten thousand sons. But when Narad again played spoil-sport, Daksha cursed him that Narad would have to remain on the move always and he would not be able to stay at one place for more than two 'Gharis'. [1 Ghari = 24 minutes. In practice the term means a very short period of time; a fleeting moment as small as batting an eyelid.] As a result of this curse, Narad became an ever-wandering mendicant. But this suited the divine mandate of the Lord—for now Narad was forced to keep on the move and reach newer corners of the worldly and celestial realm to preach the Lord's message amongst the mortal creatures on earth and the Gods and Spirits in the heaven.

It is believed that Narad is immortal and is symbolic of the stupendous powers of a man's mind. The mind is ever-wandering like Narad, and the subtle message in the entire lore is that one should tame this restless mind and train it to turn away from this mortal engrossing material world and instead turn towards the Lord for finding permanent liberation and deliverance from this world. A wise mind would teach (preach) the aspirant about the futility of pursuing this artificial world, and instead seek ways of finding the Truth that gives eternity and brings to an end the endless

litaney of miseries and horrors, perplexities and confusions, restlessness and agitations that are invariably associated with un-truth, delusions and ignorance.

Narad was the most erudite and scholarly devotee of the Lord. No other sage or saint could match him in his scholarly acumen and profundity of wisdom (ref. Chandogya Upanishad, Canto 7, section 1, verse no. 2). Narad is also credited with the composition of the great Sutra (formula or key) called 'Narad Bhakti Sutra' which defines the eclectic principles and characteristics of the spiritual practice called Bhakti which is to have a profound and exemplary degree of devotion for and surrender to the Supreme Being. Narad himself epitomizes Bhakti at its most refined and developed form.

²The word 'Adi' means the very ancient one who was there at the very beginning, and 'Purush' refers to the first cosmic revelation of the supreme transcendental Brahm when this creation came into being—i.e. the Viraat Purush who was the all-pervading, all-encompassing, almighty, formless and attribute-less cosmic manifestation of Brahm. In other words, the Viraat Purush was the gross body of Brahm at the macrocosmic level of creation, and it was from this Viraat Purush that the entire creation emerged. That is, this creation is a revealed aspect of the invisible Viraat Purush. Lord Narayan is another name of Vishnu who is no one else but this Viraat Purush in a more dynamic and active form. The terms Viraat Purush and Vishnu—and therefore all the names of Vishnu—are used synonymously for all practical purposes. Hence, Narayan or Vishnu is the Supreme Being himself manifested at the invisible macrocosmic level of creation. The Lord (Vishnu or Narayan) revealed himself on this earth on many occasions from time to time, but only twice in the form of a normal human being who takes a normal birth from a parent, lives as a child, grows to become an adult, marries and goes through the entire long process of life on earth, living it fruitfully till he reaches a ripe old age when its time to wind up. These two human-like forms of Narayan are Lord Ram who revealed himself in the second era called Tretayug, and Lord Krishna who came on this earth during the third era called Dwaparyug which preceded the present Kaliyug to which this Upanishad refers.]

2. The celestial sage Narad asked once again, 'Oh great grandfather! Which is that name?' So, Brahma the creator, who is also known as Hiranyagarbha¹, replied, 'It is the sixteen-word Mantra of the Lord. The Mantra is this— 'Hare Ram Hare Ram Ram Ram Hare Hare, Hare Krishna Hare Krishna Krishna Krishna Hare Hare' (हरे राम हरे राम राम हरे हरे । हरे कृष्ण हरे कृष्ण कृष्ण कृष्ण हरे हरे).

These sixteen words have the potential of destroying all the great sins of Kaliyug along with their evil effects. No other better method is available, discernible or prescribed in the four Vedas. [That is, it is the simplest and the best medicine for all the ills of Kaliyug, and it helps the creature to get easy liberation and deliverance from the myriad evils and miseries that torment him in this life.]

By invoking this sixteen-word Mantra, the creature's sixteen Kalaas², that act as sheaths which envelop the Atma or soul and act as an obstruction between the creature and the supreme Brahm, are gradually peeled off and removed. After that, the dazzling, glittering and splendorous light emanating from the supreme Brahm enlightens the entire inner-self of the creature even as the bright rays of the splendorous sun illuminates everything around in the world after the shroud of clouds is removed' (2).

[Note—¹*Hiranyagarbha* is the macrocosmic subtle body of Brahm, so called because it is akin to the cosmic golden egg lying in the womb of Brahm from which emerged the Viraat Purush, the gross body of Brahm at the macrocosmic level of creation. The word *Hiranyagarbha* has two components—'Hiranya' meaning yellow, and 'Garbha' meaning the womb. *Hiranyagarbha* was the primordial cosmic fertilised egg, deriving

its name from the fact that its yolk core was yellow and glowing with an incandescent light like the one radiating out from the splendorous Sun in the sky, called the Maartand.

There are different versions regarding this Hiranyagarbha. According to the concept of Vedanta, Brahm is the cosmic supreme and transcendental Consciousness residing in the macrocosmic causal body called the Ishwar. In this context, when Brahm decided to reveal or unfold this creation, first the causal body known as a Ishwar developed the macrocosmic subtle body called the Hiranyagarbha, and from this evolved the macrocosmic gross body of Brahm called the Viraat Purush. This is the picture at the macrocosmic level. All these three sublime bodies of Brahm at the cosmic level—viz. Ishwar, Hiranyagarbha and Viraat Purush—were invisible, subtle, unqualified, without any attributes, all-inclusive and all-pervading. It was the unrevealed form of Brahm. But that was just the beginning.

When this visible world was created, which had attributes and qualifications, the same macrocosmic units of Brahm metamorphosed themselves into their respective counterparts in the individual creature's body. Hence, Ishwar is represented by the Pragya or the individual's causal body, Hiranyagarbha is represented by the Taijas or the individual's subtle body, and the Viraat Purush is represented by the Vishwa or the individual's gross body.

These three bodies are the three states in which consciousness exists, both at the macrocosmic level as well as the microcosmic level. At the microcosmic level, the Pragya relates to the deep sleeper state of consciousness called the Sushupta state, the Taijas relates to the dreamer state of consciousness called Swapna state, and the Vishwa relates to the waking state of consciousness called Jagrat state. The three corresponding states at the macrocosmic level are the Ishwar which relates to the cosmic deep sleep state of Consciousness called cosmic Sushupta, the Hiranyagarbha which relates to the cosmic dreamer state of Consciousness called cosmic Swapna, and the Viraat Purushh which relates to the cosmic waking state of Consciousness called cosmic Jagrat.

According to Purans, the Hiranyagarbha refers to the Brahma the creator, as well as to the Viraat Purush because Brahma was born atop a lotus that emerged from the navel of Lord Vishnu who is no one else but the Viraat Purush. If the word 'Hiranyagarbha' is to indicate the cosmic egg, then it was from this egg, lodged in the womb-like navel of Vishnu, that Brahma emerged. Hence, the 'original creator' was not Brahma but the Viraat Purush as Vishnu, and therefore the latter is the Hiranyagarbha—the golden cosmic egg. So we conclude that Hiranyagarbha essentially refers to the cosmic egg from which the rest of the creation evolved. Since Brahma is said to be the great grandfather of this creation, he is aptly named Hiranyagarbha, i.e. the cosmic egg from which this visible and gross form of creation evolved.

This entire concept of Hiranyagarbha being produced from the body of the Supreme Being called Narayan or Ishwar have been elaborately dealt with in Mahopanishad, Canto 1, verse no. 8 of the Sam Veda tradition.

The Hiranyagarbha is very subtle like the mind-intellect of the creature. The mind-intellect is also called the subtle body because it is through this mind-intellect that the Atma of the individual creature creates this world by using the mind's stupendous ability to imagine, envision and conceptualise things, and then using the intellect to justify it to be true, real and logical. But this instrument of the mind-intellect is invisible, is so subtle and hidden from view that its presence is only deduced by its astounding potentials which are manifested in the form of the gross body and its own stupendous capabilities. Whatever the mind wishes to do, it gets it done by the body.

This Hiranyagarbha is like the musk present in the body of the musk deer. The deer is not able to see the musk but is nevertheless maddened by its perfume, running mad in search of the source of the perfume not knowing that it is hidden well inside

its own body. Similarly, the creature is unaware that the supreme Brahm is residing in his own bosom as the pure consciousness called the Atma while he spends his entire life searching for it everywhere in the outside world.

There is another connotation to this observation. Since the mind is the creator of the world by its power of imagination, and then sustaining or perpetuating its own creation by believing in the truthfulness and reality of the world, it is therefore the mind itself that can conclude this world. So, while it is like Brahma the creator, it is also like Vishnu the sustainer and protector, and Shiva the concluder. If the same mind can assume three roles, it is not incongruous to believe that the same Hiranyagarbha is Brahma and Vishnu simultaneously. Since Shiva is a synonym used for the supreme transcendental Brahm—because the word ‘Shiva’ stands for an entity that is truthful, beautiful, auspicious, divine and holy as affirmed by a number of Upanishads of the Krishna Yajur Veda tradition that deal with the ‘Shiva Tattwa’, this Hiranyagarbha is also Shiva.

Hiranyagarbha is also called Maartanda, the Sun, because of its golden colour and brilliance like the golden yellow and brilliant disc of the sun in the sky. Like the light of the sun illuminates the world and brings everything in it to light or knowledge, the Hiranyagarbha too brings to the fore the intentions of Brahm by revealing this vast creation. The Hiranyagarbha had spread the sacred divinity, the stupendous glory, the dazzling radiance and the brilliant splendour through the length and breadth of the vast realm of the cosmos like the sun spreading its glory on the earth by way of its energy, light, heat and warmth.

The word ‘Hiranyam’ (हिरण्यं) also refers to ‘Amrit or elixir or nectar of eternity and bliss’; it also means ‘green’. That is why greenery is associated with fertility, vibrancy, life and abundance of food and plentiful vegetation. The trees are green, and their precursor, the algae and moss, were also green. Indeed the food is the elixir of life in the world—nothing can ever survive without food and water. So, ‘Hiranyagarbha’ first created these to initiate the process of creation, and then sustained them once the process got under way. The ‘Viraat Purush’ as well as the ‘Hiranyagarbha’ are both used often synonymously to indicate the macrocosmic forms of the Male aspect of creation whose female counterpart is called ‘Nature’ or Shakti. The Shakti is the dynamic aspect of Brahm’s creative powers and an effective method of displaying the Lord’s cosmic authority.

²The *sixteen Kalaas*—The sixteen Kalaas of a man represents the special qualities, art, craft, skills, expertise, attributes etc. that one must possess if he were to successfully reach his target in life. These different qualities and virtues present in a man symbolically make him perfect; they represent his various strengths and potentials, and they are said to be sixteen in number corresponding to and symbolised by the sixteen phases of the moon. Since a man is an exact replica of the ‘Viraat Purush’, who in turn is a subtle manifestation of the sublime Brahm, these sixteen qualities or attributes of a man refer to the sixteen qualities of Brahm himself that made him the Lord of creation. The presence of all these divine attributes makes a man complete and very powerful. Hence, these sixteen Kalaas represent all the magnificent good qualities that are present in this creation which enable a man to overcome all adversities, hurdles and ill circumstances. Since Brahm is the creature’s only sincere well wisher and succour in times of distress and dismay, and since Brahm possesses all the exemplary qualities grouped under the single word Kalaa, a man who is blessed with them is regarded as being equivalent to Brahm. Or in other words, he personifies Brahm with all his dignified virtues that are needed by a man to complete and get across the cycle of birth and death without hurdles.

These sixteen Kalaas of creation that are present in a man refer to the sixteen elements or primary components that form the basis of a man’s very existence and his nature and temperament. These are the fundamental building blocks of his subtle and gross body, its characteristic qualities as well as the world surrounding him and how the man lives in and interacts with it.

The sixteen Kalaas are following—(i) Shraddha (faith, believe, conviction, reverence, respect, devotion), (ii) Pran (life; the very essence of creation; the vibrations of life; the rhythm and essential functions pertaining to life), (iii) Akash (the all-pervading, all-encompassing sky or space element), (iv) Vayu (wind, air element), (v) Tej (energy, splendour, radiance, glory, might, majesty and fire element), (vi) Apaha (water element which is the all-important ingredient for life), (vii) 'Prithivi' (earth element which is the base or foundation for all mortal creation), (viii) Indriya (the organs of the body, both the organs of perception as well as of action), (ix) Mana (the mind and heart complex and their stupendous potentials), (x) Anna (food, the element without which life is simply not imaginable because it provides it with the basic nourishment and energy), (xi) Virya (semen, sperms, standing for courage, valour, potency, vitality and prowess), (xii) Tapa (austerity and penance, tolerance of hardship as a means of penitence, forbearance as well as carrying out strict religious vows in order to purify one's self) (xiii) Mantra (the key or formula to achieve success in any enterprise; it also refers to the ability to give good advise, the power to contemplate and think, concentrate and focus, logically arrive at a conclusion), (xiv) Karma (taking actions and doing deeds), (xv) Loka (worldly interactions, conduct and behaviour), and (xvi) Naam (good name, fame, reputation, honour and glory).

Reference—Chandogya Upanishad, 6/7/1-6 of Sam Veda tradition.

In simple terms it means that a person's total composite personality, his characteristic attributes and individuality, his vitality and stamina, his prowess, powers and strength, his drive and vigour et al can be divided into sixteen parts.

When this Upanishad describes them as impediments in realising the glory of the 'self' it implies that although all these sixteen qualities are related to achieving glory and majesty in the world, they have nothing to do with 'self-realisation' and 'Brahm-realisation' which is possible only by abandoning everything related to this world as well as the body both in its gross part and its subtle part.]

3. The celestial sage Narad asked Brahma once again, 'Oh Lord! What is the proper system or method to be followed for doing Japa (constant repetition) with this divine Mantra?'

Brahma replied, 'There is no prescribed method or any set of rigid rules to be followed for doing Japa with this Mantra. Whether one is formally purified or not (i.e. whether the Japa is done after due observance of formal purification rites such as bathing etc. or not), a person who constantly, consistently and persistently repeats this holy and divine Mantra with faith, devotion and conviction can easily get all the four types of 'Muktis' (i.e. liberation, deliverance, emancipation and salvation) that are available to a spiritual aspirant.

These four Muktis are 'Salokya', 'Samipya', 'Sarupya' and 'Sayujya'¹.

When the seeker/aspirant has repeated this sixteen-word Mantra for 3½ crore times [1 crore = 10 million], he is deemed to be liberated or exonerated from the grave and horrible consequences of the sin of killing a Brahmin. He is also liberated/exonerated from the grave sin of killing a brave warrior or his own brother treacherously, stealing gold or other types of treasures belonging to others, being disloyal and treacherous towards his 'Pittars' (dead ancestors) and causing harm to them as well as to Gods and other fellows human beings. They are also pardoned from the generally unpardonable sin of abandoning the path of 'Dharma' (righteousness, probity, propriety, nobility and virtuousness)².

Such persons achieve liberation and deliverance from this world in the vicious and sinful era called Kaliyug, and they soon accomplish the great spiritual achievement known as 'Moksha', or emancipation and salvation of their souls.

Verily, this is what this Upanishad says; this is what it asserts'. Amen! (3).
 [Note--¹The four types of Mukhtis mentioned above are the following—(i) Salokya—to reside in the divine abode of the Lord; (ii) Samipya—to reside near the Lord; (iii) Sarupya—to obtain the divine form which is similar to that of the Lord; and (iv) Sayujya—to become one with the Lord by merging one's soul with him.

²It must be noted that when the Upanishad says that great sins would be pardoned it implies that the sinner is sincere in repenting for his misdeeds, honestly wishes to atone for his sins, and has taken the stern vow not to repeat it again at any cost. Pardoning is available only to them and not to imposters. It should be noted that the main goal of all the scriptures is to provide a means of redemption for a man who has sincerely realised his mistakes and wants to relent and mend his ways. It is for such honest persons that this pardon is sanctioned because it is only human to make a mistake if only it is not repeated and the subject is ready to undergo punishment for his misdeeds if he is given the chance of redemption. It is obvious that once a man has suffered in his ignorance of the correct path and once the correct path is made known to him, then a wise man would sacrifice everything and grasp it with both hands. It ought to be remembered here that such pardoning isn't meant for imposters and deceitful cheats who would like to invoke this Upanishad to escape punishment, just to be back to their nefarious ways once the pardoning is given.]

-----Shanti Paath-----

-----*****-----*****-----

Chapter 32

Saraswati Rahasya Upanishad/Saraswatirahasyo-panishad

This Upanishad was revealed by sage Ashwalaayan to other sages who had approached him to learn about the great mystical secrets of Goddess Saraswati, the goddess personifying all arts, sciences, crafts and skills as well as all wisdom, erudition, expertise and knowledge. Since speech is the medium by which one teaches others and is the vehicle for dissemination of wisdom, information and knowledge, Saraswati is also said to be patron goddess of speech.

This Upanishad is roughly divided into two parts—the first part is like the Mantra part of the Vedas wherein the Suktas or devotional hymns dedicated to the goddess are said (verse nos. 1-35), and the second part is like the Brahmin section of the Vedas wherein an elaboration is done of what has already been said in the Mantra part and their spiritual and other benefits are enumerated (verse nos. 36-68). The collection of Mantras is also called a Sukta.

In its Mantras and Brahmins this Upanishad essentially describes Saraswati as the dynamic force of Brahma, the creator, which helped him to unveil this multifarious world in all its dimensions. It is obvious that without the requisite knowledge nothing is possible, and hence Saraswati epitomizes all that is worth knowing and learning in this creation—and this would naturally include all the versions presented regarding the origin of creation, its sustenance and its final conclusion. Nothing in creation is beyond the scope of Saraswati, and in this context she is Brahm personified because nothing in this creation is beyond Brahm. Therefore, even as nothing remains beyond the reach of a Brahm-realised person,

nothing remains beyond the reach of those who have pleased Goddess Saraswati and not only know the esoteric metaphysical meaning of the various hymns dedicated to her but can also harness their latent dynamic powers and potentials. Such a person is indeed able to obtain liberation and deliverance from all sorts of delusions arising out of ignorance of the truth and the reality. It is a metaphoric way of saying that ‘correct knowledge and spiritual wisdom’, personified by Saraswati, is really emancipating and liberating for the creature’s soul.

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of this Shanti Paath.

1. Once upon a time, all the sages and seers went to the hermitage of the great sage Ashwalaayan and duly worshipped and honoured him.

They then requested him most humbly—‘Oh Lord! What is the way one can acquire knowledge of the fundamental principles pertaining to the supreme Absolute that can not only make one aware of it and enlightened about it but also help him in its realisation? How can one understand the esoteric and mystical meaning of the supreme Divinity that governs everything in existence and is the only essence of this creation? Please share with us the knowledge of the divine Shakti (cosmic dynamic powers of Nature) that has enabled you to become so exemplarily realised, so exalted and so highly wise and erudite.’ (1).

2. Ashwalaayan explained the essentials to these sages in the following discourse. He said—‘Oh great sages! I have attained this great stature along with profound knowledge and exemplary wisdom by honouring the great divine Goddess Saraswati¹, by praising and worshipping her through the ten Richas (hymns) of the Rig Veda along with their respective Beej Mantras. I continue to honour her with these ten hymns, repeating them on a continuous basis, and I do it with immense devotion’ (2).

[Note—¹*Saraswati*—In the form of a goddess known as Saraswati who personifies the virtues of learning, wisdom, erudition, knowledge, expertise and skills of all kinds as well as all kinds of arts, crafts and sciences and all other bodies of knowledge that exist in this creation, she appears first in the Rig Veda, 1/164/49, and subsequently in Rig Veda, 6/61/1-14, 7/95/1-2, 4-6, and 7/96/1-3. The Goddess is also honoured in other Vedas as follows—in Sam Veda, 1461, in Yajur Veda, 20/84 and 34/41, and in Atharva Veda, 6/94, 18/1/42-43. The faculty of speech called Vak has been personified as a goddess. She is related to Brihaspati, the patron God of speech and wisdom (Rig Veda, 10/71/1). She is the patron goddess of speech because all forms of knowledge need speech and the ability to express and explain things properly to be perpetrated and become useful for this creation. Suppose there was no speech, then the knowledge would not have been disseminated so widely. All the Vedas are said to be created by her; hence she is regarded as the mother of the Vedas (Gayatri Rahasyo-panishad, 4/5/9-10).

According to the Purans, she is the Shakti or dynamic power of the creator Brahma because any specialised process would require technical skills, expertise and relevant knowledge in order to complete it successfully—especially the one as technical and complicated as the one related to the creation of a vast and infinitely complex structure known as the universe that is continuously evolving and ever changing in nature, in which no two units are alike, and which has defied explanation and full understanding even at the hands of the highest of intelligent brains. No

success in any auspicious endeavour is possible without intelligence, wisdom, erudition, relevant knowledge, skills and expertise.

Since Goddess Saraswati embodies these virtues in her self, and since the Vedas are the traditional ancient repositories of all knowledge that was created by Brahma the creator, it is said that the Vedas are personified forms of Saraswati. Again, since the information contained in the timeless Vedas were passed on from generation to generation by the process of teaching and learning which entails the use of speech and skill with language, this Goddess is said to patronize these two—the faculty of speech called Vak, and skills with the language. Learning and teaching also requires intelligence and a properly functioning mind and its sub-conscious, these too were patronized by Saraswati. That is why a person who is highly learned and scholarly, who is wise, intelligent and erudite, is said to be especially blessed by Goddess Saraswati. The Vedas created by Brahma would have been useless had it not been for Saraswati that enabled these Vedas to be revealed, taught and propagated from generation to generation. Etymologically, ‘Saraswati’ represents a river, and this is how she is represented in the Rig Veda, because the word literally means ‘to flow’. This is a very apt definition for Saraswati because that knowledge which ‘flows and spreads’, which ‘grows and develops’, is good for all and it blooms, while that which is locked in books and shelves of libraries is as good as non-existent, it becomes stagnant and has no practical value and utility. Metaphorically, this ‘flow’ can also represent speech because what we speak also flows forth from our mind and tongue; that is why good orators are said to be making a flowing and flowery speech that springs out from their mouth in a natural flow much like a stream gushing out from a natural spring or flowers that blossom in the spring season on their own.

Since the light of knowledge and wisdom is the anti-thesis of the darkness created by delusions and ignorance, she is iconographically depicted clothed in spotless white—the colour of all-inclusiveness purity and irrefutable immaculacy, of absolute truth and reality, as well as of wisdom, knowledge and light that removes the various shades of darkness representing ignorance and delusions. She sits on a lotus also symbolizing purity and cleanliness.

Her mount or vehicle is the Hans, the Swan, which is itself regarded as a very wise bird. It is believed that it would pick up pearls and leave the rest of the gems aside from a collection of jewels, and drink pure milk and leave its adulterants to symbolise its ability of selecting and accepting the best of what is available. Saraswati sitting on the Hans implies that mere technical knowledge, skill and expertise alone are not enough if it is not complemented with wisdom, insight, erudition and enlightenment. This means a person on whom Saraswati is pleased would use his discretionary intellect and wisdom to select the best option available to him; he would pick out the nuggets of wisdom contained in the vast and voluminous scriptures that are of any spiritual worth for him and accept them in his daily life, leaving aside the rest. The swan moves majestically in a pond of lotus flowers, it lends glory to the pond and the flowers because it is the only living entity in the immobile surroundings. Likewise, a wise and learned man is like a gem in the society.

In mythological lore, a Peacock is also depicted as her vehicle. The peacock is said to be the most beautiful bird with its opened plume of colorful feathers—this symbolises the fact that knowledge can not only bring the best things of the world to the person who has knowledge and expertise on any subject but also to symbolise that it is a person’s degree of mental development and the level of his wisdom, knowledge, erudition and enlightenment that makes him attractive, much respected and honoured rather than the amount of physical wealth he possesses, the strength of his body or its beauty that has any real importance. The peacock in its self is not a beautiful bird; it is its colourful plume of open feathers that makes it so charming and attractive. So, mere knowledge and intelligence is not as important as their type and the use to which they are put. A man’s knowledge can be the cause of ruin and

miseries for others, while another man's knowledge can show happiness and peace to the less fortunate ones. Obviously, the latter is revered by the society and the former is loathed.

In iconographic accounts, she is shown as having four hands. The four arms are indicative of her all-inclusiveness, as they stand for the four Vedas as well as the four cardinal points of the directional compass (east, south, west and north). Further, the supreme transcendental cosmic Consciousness known as Brahm is also said to have four Pads or aspects—refer Chandogya Upanishad, Canto 4, Section 5-8 of Sam Veda tradition.

In one version, two of the hands hold a Veena (Indian lute)—one hand holding it, while the other hand strumming its string to indicate that she is eternally singing the hymns of the Vedas, deriving eternal bliss from this singing, and perpetually immersed in contemplation and meditation. The Veena, a musical instrument used to sing melodiously, indicates the ability to be sentimental and emotional on the one hand, and this involves the interaction of the heart because a good singer sings from the heart, and to be intelligent and have a sharp mind which naturally involves the mind and intellect on the other hand, because one has to be an expert in the Vedas and the languages in order to remember the complicated verses and recall them flawlessly while singing. Coordination between the heart and mind is very necessary for singing; singing is not possible if the heart and the mind are not rested, are not at peace with them selves, and not in harmony. The third hand has an Akshamala (prayer rosary). The rosary indicates that inspite of knowing everything and being Brahm personified, she remains constantly engrossed in doing Japa or repeating some divine Mantra herself to teach her followers never to abandon contemplation and meditation as well as the use of divine Mantras. The fourth holds a book symbolizing knowledge in all its forms, in its most visible and tangible form. The book indicates knowledge not only of the scriptures but of all the sciences, arts and crafts taken together.

In another version, she is depicted as holding a rosary, a goad, a loop and a book in her four hands—refer verse no. 38 of the current 'Saraswati Rahasya Upanishad'. The symbolism of the goad and the loop is obvious. They indicate the fact that when a man becomes wise he is able to rein in his sense organs by using the loop, and coax himself to follow the correct path by using the goad of wisdom, erudition, knowledge and enlightenment.

Saraswati is considered as the divine consort of Brahma, and hence represents his power of intelligence, wisdom, skill, erudition, expertise and knowledge that enabled Brahma to create the Vedas and the rest of this creation.]

3. The assembled sages asked him once again—'Oh the most exalted sage who observes the highest traditions of an auspicious way of life ('Suvrat')! By which method or means did you receive this great Mantra of Saraswati that has bestowed upon you such stupendous powers? How were you initiated into this Mantra? How did the great divine Mother Saraswati become pleased with you? Please be kind to enlighten us about it' (3).

[Note—In iconographical and mythological terms, the Maha Saraswati is the incarnation of Goddess Parvati, the divine consort of Shiva and regarded as the Mother from whom the rest of creation came into being. She is also regarded as Durga personified.]

4. [Verse nos. 4-5 describe the *first Mantra*.]

Sage Ashwalaayan answered in detail—'Oh great sages! The Rishi of this Saraswati Mantra of ten verses is no one else but me, Aswalaayan. [The Rishi is the

sage who first conceptualized this Mantra of Goddess Saraswati, tested its potential powers and then propagated it for the benefit of mankind.]

The Chanda (composition style) is Anushtup. [The Anushtup Chanda is a special poetical style of composition of hymns of the Vedas which have The *Anushtup Chanda* is a verse with 4 lines, each line having 8 letters = total 32 letters. It was first conceived by an ancient sage named Anustuv, hence it bears his name.]

The patron deity called a Devta of a Mantra is Goddess Vaageshwari in this case. [The Devta or God is the patron deity to whom the Mantra is dedicated. Usually it is the supreme transcendental Brahm to whom the Mantra is devoted. In this particular instance, the Devta is the goddess who presides over the faculty of speech, i.e. Saraswati. The word 'Vaageshwari' literally means the patron goddess of speech or Vak.]

Its Beej Mantra is 'Yadvaag'. [The Beej Mantra is the root or seed formula around which a particular Mantra is built and which gives the Mantra its basic power and mystical strength.]

Its Shakti (mystical dynamic cosmic powers) is 'Devim Vaacham' (i.e. 'the goddess says'). [That is, this Mantra gets its authority and power from the fact that it praises the great cosmic Divinity in the form of the Goddess of speech, and is a personified form of Saraswati. It is Saraswati that is speaking through the medium of words coming out of the mouth of the speaker who says words of profound wisdom. The auspicious form of speech is Saraswati personified. The Mantra is the Goddess manifested in words; it represents the dynamic powers that come with knowledge and wisdom exemplified by Goddess Saraswati. Refer verse no. 27.]

The Keelak of this Mantra is 'Prano Devi'. [That is, this Mantra is hitched to the vital forces of life represented by Pran, the vital winds, and especially breath. The Mantra empowers the Pran to become active and empowered, to possess and display its stupendous powers and majesty of the worshipped deity through its various actions and deeds. For instance, when a man speaks wisely, truthfully and energetically, it is actually the Pran revealing these glorious virtues of Goddess Saraswati. The force, power and energy of breath and other vital winds of the body which are collectively called 'Pran' are needed by a man to speak anything at all. Ordinarily, wind or air do not 'speak' in the sense that the sound produced by them cannot be easily interpreted as intelligent letters, words or sentences. So the hidden power that makes it possible for this sound to become a spoken word is known as Saraswati. The Goddess pervades in this creation in the form of Pran or vital winds that sustain and protect life in this creation by the virtue of the power of knowledge. Even as Pran exists in all individual creatures who live in this creation, the Goddess also pervades the entire creation in the form of knowledge, skills, wisdom and erudition as well as all forms of sciences, arts and crafts without which sustenance, growth and protection of life is absolutely impossible'. Refer verse no. 29.]

This Mantra is invoked and incanted with the special purpose of pleasing Goddess Vaageshwari. [This is called 'Viniyog'.]

The Anganyas is done by using the following divine names of the Goddess—Sradha, Pragyā, Medha, Dharna, Vagdevta and Mahasaraswati. [The Anganyas is reposting the stupendous divine cosmic powers of the deity being worshipped and invoked on various parts of the body so as to not only purify the body and make it a symbolic abode or seat of the invoked deity but also ensure that the worshipper is given protection of the deity and personifies all the glorious, majestic, divine and magnificent virtues exemplified by the worshipped deity.]¹ (4).

[Note--¹*Anga Nyas* and *Kar Nyas* of any Mantra using its seed or root called the 'Beej' of that Mantra are the two basic rituals of invoking the divine powers of the Mantras which are basically mystical formulas employed in religious practice, specially during occult rites and meditation of which this Khechari is a part. The word 'Kar' means hand, and 'Anga' means body, while 'Nyas' refers to an invocation, or vesting or assigning any entity with something, or entrusting an entity with some trust and responsibility; to deposit, repose, trust, pledge, entrust, to keep a thing in mind, etc. This is a ritualistic process in which certain parts of the body are touched and certain Mantras are said. It also means the purification of the individual parts of the body and the installation of the individual letter of the invoked Mantra, complete with its full potentials, at those points. Therefore, Nyas is a process of pledging utmost faith and conviction on the divine and holy Mantra's supernatural powers and potentials by invoking it and reposing it on the various locations of the body and its vital parts, such as the limbs, the abdomen and chest, the throat and forehead etc.

In the context of the Beej Mantras, it refers to invoking their divine cosmic powers and establishing them on various parts of the body, or assigning the patron Gods of these seed Mantras some specific part of the body so that they can establish themselves there.

Hence, doing Kar Nyas with the Beej Mantras would be to establish these symbolic Gods representing the cosmic, divine and mystical powers that are encrypted in the different Beej Mantras on the hand of the practitioner, while Anga Nyas would be to do the same on other parts of the body such as the chest, abdomen, shoulders, throat, forehead etc.

The locations on the body where Anga Nyas is done has great metaphysical significance. According to Ramopanishad of the Atharva Veda tradition, canto 2, verse no. 43, these ten locations are the following—Brahm-randhra (which is the hair-like slit on the top of the skull), the forehead, the central point of the eyebrows (where the symbolic third eye of wisdom is said to be located), the upper palate, the two earlobes, the heart, the navel and the two thighs = 10 sites.

Primarily there are six sites according to the same Upanishad's verse no. 23 where the primary seed or root words, called the Beej Mantras, are invoked are the following—the Brahm-randhra (top of the skull), the central point of the eyebrows, the heart, the navel, and the two thighs.

According to its verse no. 83-85, there five sites for doing Anga Nyas for a warrior. These are heart (left chest), forehead/central point of the eyebrows, the top of the head where the tuft of hair is located and which is the site of the Brahm-randhra, the body armour or shield, and the arms and armaments of the aspirant warrior. This is also followed in the worship of Shakti, the divine dynamic powers of creation, such as Durga, Parvati and Saraswati (the goddess of speech, knowledge and wisdom).

The human body is a microcosm of the cosmos, because according to the genesis of creation the Viraat Purush, the macrocosmic, all-encompassing and all-inclusive manifestation of the supreme transcendental Brahm, had metamorphosed in the shape of the human body, and therefore this body is a manifestation of the entire creation including all its Gods and all its astounding potentials.

The creation has been visualised as having three divisions which form the so-called three worlds—viz. the heavens represented by the head of the human body where the Brahm-randhra, forehead and the eyebrows are located; the terrestrial world or the earth symbolised by the heart and the navel; and the nether world by the legs and the two thighs. It must be noted that the two earlobes stand for the two extreme directions of the cosmic globe. So, when the aspirant does Anga Nyas with any Mantra on these specific points, he symbolically purifies these points on his body and empowers them with the mystical and ethereal powers of the powerful forces of Nature which these Mantras embody as mystical formulas encrypting astounding energy and forces of creation. This is a perception which implies that the ethereal and mystical powers and potentials of the Mantras representing the stupendous forces of

Nature that control creation, right from its conception to its development, growth, expansion, sustenance and conclusion, are invoked and established throughout the breadth and length of this visible creation manifested in the body of the aspirant. In other words, the aspirant hopes that he would be empowered with all the glorious virtues and auspicious powers and stupendous potentials and majestic authority vested in the Viraat Purush at the cosmic level.]

5. After having done the Anganyas, the worshipper should meditate upon Goddess Saraswati's divine form as follows—The Goddess has an auspicious and radiant complexion resembling snow, pearl, camphor and a full moon. She is a bestower of all-round auspiciousness and welfare. She is adorned by a garland of Champak flowers (flower of the tree *Michelia champacca*) which are golden-yellow in colour. Her entire body is healthy and robust, with well developed bosom¹.

I offer my sincere obeisance and greatest of respect to the Goddess (Saraswati), using both my devoted mind and faculty of speech to worship her, seeking success in all my endeavours for attaining fame, majesty, honour and acclaim. Let such a glorious and divine Mother Goddess Saraswati bless us graciously with her benevolent patronage and give protection to us from all sides (5).

[Note—¹The reference to the 'bosom' is intended to stress that as the divine cosmic Mother she nourishes the entire creation with the milk of knowledge, wisdom and erudition just like a ordinary mother would breast-feed her child. The mother produces this milk all by herself, and it is the best all-round nourishment for the child. Similarly, the divine Mother ensures that her devotees, i.e. all the creatures of this creation, do have access to the best of wisdom, erudition, sagacity and knowledge that exist in this creation. That is also why she has been depicted as being personified as the Vedas. Milk is white in colour, and the cloth that the Goddess wears are also white in colour. Refer note of verse no. 2 above.]

6. [Verse nos. 6-8 describe the *second Mantra*.]

The next (second) Mantra is 'OM Prano Devi'. [This Mantra means—OM salutations! I bow most respectfully to pay my obeisance to the divine Goddess who is a personification of the stupendous dynamic powers, the strength and the energy as well as the divinity of the supreme transcendental Brahm whose eclectic Mantra is OM. This dynamic power of Brahm has injected life into this world by way of knowledge, wisdom, erudition and all other glorious virtues that Saraswati compositely stands for. Hence, OM representing Brahm in the latter's manifestation as Saraswati personifying the eclectic virtues of knowledge, wisdom, erudition, skills and expertise which are at the core of creation, and which virtually form the 'Pran' or the essential goodness, the eclectic virtues and priceless values for which life is so much sought after and highly regarded in this creation. It ought to be noted here that Saraswati is the patron goddess of speech, the spoken word, and OM is the word manifestation of Brahm, the Supreme Being. So, in essence this Mantra pays respects to that dynamic aspect of Brahm which has revealed itself as word along with all the powers and potentials that the word has. Again, the word OM is said to encapsulate the entire gamut of creation, from its beginning through its development and growth to its conclusion, in its three syllables A, U and M. Hence, knowledge is something upon which the entire edifice of creation rests; it is something that one needs right from the instant of one's birth, throughout one's life, and till the time of one's death.]

The Rishi of the Mantra is sage Bharadwaj.

Its composition style is the Chanda called Gayatri. [The Gayatri Chanda has 24 letters and syllables in all which are divided into 3 steps or stanzas of 8 letters or syllables each. Hence the total is $3 \times 8 = 24$.]

Its Devta (the deity who is worshipped) is Saraswati.

The Beej, Shakti and Kilak of this Mantra are 'Pranav or OM'.

This Mantra is invoked for the purpose of fulfilling one's wishes. [This is because when one is successful in meditating on this Mantra he acquires such great mystical powers which are natural accoutrements to acquisition of knowledge, wisdom, erudition, sagacity and skills that there is nothing in this world that remains beyond one's reach.]

The Anganyas process is also done with the same Mantra (6).

7. Then, the worshipper should meditate and pray to Goddess Saraswati as follows—
'The cosmic, sublime, divine and subtle form of Goddess Saraswati is basically the same as the non-dual, attributeless, unqualified, all-pervading and all-encompassing form of the supreme Brahm so much extolled and praised by the Vedas. It is basically one and the same. So, though Mother Saraswati is the non-dual, immutable, indivisible and essentially 'one' Brahm personified, she has still come to be known and worshipped by various names and in different forms (by her devotees). Let such a glorious and divine Mother Goddess Saraswati bless us graciously with her benevolent patronage and give protection to us from all sides (7).

8. Goddess Saraswati who is glorified and honoured by making charities and giving of alms and donations, who is well provided for with an abundant and infinite supply food and other necessities of life, and who gives full protection, succour and solace to those who revere her, honour her and praise her—let this divine Goddess graciously bless us, her devotees, with her bountiful benevolence and infinite magnanimity, and give protect to us by way of ensuring that we have an abundance of food to sustain ourselves' (8).

[Note—The worshipper essentially requests the goddess to bless him so that he becomes wise and learned, an expert in his trade and very intelligent and erudite so that people seek him for his knowledge, wisdom and expertise. This way, he would never have to worry for food and other necessities of life.]

9. [Verse nos. 9-11 describe the *third Mantra*.]

The next (third) Mantra is 'Aa No Divaha'. [This Mantra refers to the fact that Goddess Saraswati is none else but Brahm personified in her form. Brahm is symbolised by the vast, fathomless and infinite sky and the glorious heavens where the brilliant sun and the bright moon live high above the mortal world. This 'high' and 'brilliant' are metaphors for the exalted and illuminating presence of the Goddess who is a personified form of the divine virtues of knowledge, wisdom, erudition, sagacity, enlightenment, skills, expertise etc. Her importance and all-pervasive and all-inclusive nature is symbolised by the sky and the space elements. The word 'Diva' refers to the sky, the brilliant heaven and the endless directions.]

The Rishi of the Mantra is sage Atri.

Its composition style is the Chanda called Trishtup. [The Trishtup Chanda is a verse of 4 lines in which each line has 11 letters; $11 \times 4 = 44$ letters in all.]

Its Devta (the deity who is worshipped) is Saraswati.

The Beej, Shakti and Kilak of this Mantra are the same, and it is the Sanskrit syllable 'Hrim'. This Mantra is invoked for the purpose of fulfilling one's wishes.

The Anganyas process is also done with the same Mantra (9).

10. Thereafter, the worshipper should meditate and pray to Goddess Saraswati as follows—‘All the four Vedas, their branches and sub-branches sing the glories of and honour the one non-dual immutable universal Divinity known as the supreme transcendental Brahm. The dynamic Shakti (energy, vitality, powers, strength and authority) of this Brahm has manifested as the cosmic Mother known as Goddess Saraswati. Let such a glorious and divine Mother Goddess Saraswati bless us graciously with her benevolent patronage and give protection to us from all sides (10).

11. Let the universal Mother Goddess Saraswati, who is being worshipped and invoked by us with the help of the Beej Mantra ‘Hrim’, descend from her radiant and dazzling abode in the heavens, travel past the vast banks of clouds resembling huge mountains in the sky, and come to take her honourable seat in the religious fire sacrifice being performed by us in her honour.

Let her be charmed and pleased by the hymns we are singing in her honour, and let her hear them blissfully and cheerfully.’ (11).

12. [Verse nos. 12-14 describe the *fourth Mantra*.]

The next (fourth) Mantra is ‘Paavakaa Naha’. [This Mantra refers to the fact that Goddess Saraswati is as glorious, powerful, potential and energetic as the fire element. The word ‘Paavak’ refers to the ‘fire’.]

The Rishi of the Mantra is sage Madhuchhanda.

Its composition style is the Chanda called Gayatri. [The Gayatri Chanda has 24 letters and syllables in all which are divided into 3 steps or stanzas of 8 letters or syllables each. Hence the total is $3 \times 8 = 24$.]

Its Devta (the deity who is worshipped) is Saraswati.

The Beej, Shakti and Kilak of this Mantra are the same, and it is the Sanskrit syllable ‘Srim or Sring’. This Mantra is invoked for the purpose of fulfilling one’s wishes.

The Anganyas process is also done with the same Mantra (12).

13. Thereafter, the worshipper should meditate and pray to Goddess Saraswati as follows—‘The divine goddess is always and universally present in a subtle form as the meaning and spirit (essence) of all mystical syllables, letters, words, stanzas, verses and prose (i.e. the hymns), who is beyond the definition and scope of such terms as the end or the beginning, and who possesses such eclectic and unique qualities as being eternal and infinite (i.e. the goddess who has no end and no beginning, who is infinite, eternal and imperishable because knowledge and wisdom never die and are of an infinite dimension)—let such a glorious and divine Mother Goddess Saraswati bless us graciously with her benevolent patronage and give protection to us from all sides. [Refer verse no. 32.] (13).

14. The divine Goddess, worshipped by us with the help of the Beej Mantra ‘Srim’, purifies and cleanses all her devotees and spiritual aspirants just like the fire cleanses and purifies everything put into it. She (in her manifestation as knowledge, expertise, intelligence and wisdom) makes it possible for one to acquire abundance of food and all other material benefits that can be possibly acquired by doing deeds requiring skill, knowledge, expertise and intelligence.

Let such a divine, glorious and majestic Mother Goddess Saraswati grace our fire sacrifice by her auspicious presence, and help in its fruitful completion.’ (14).

15. [Verse nos. 15-17 describe the *fifth Mantra*.]

The next (fifth) Mantra is ‘Chodyitri’. [This term ‘Chodyitri’ means an inspirer and motivator; one who propels and pushes forward. Hence, the Goddess represents the dynamic powers of Brahm to inspire and motivate everything and everyone in this creation. Hence, Saraswati is the universal inspirer and motivator of all, including the Gods representing the various virtues of creation, as well as the individual creatures and their Atma or soul.]

The Rishi of the Mantra is sage Madhuchhanda.

Its composition style is the Chanda called Gayatri. [The Gayatri Chanda has 24 letters and syllables in all which are divided into 3 steps or stanzas of 8 letters or syllables each. Hence the total is $3 \times 8 = 24$.]

Its Devta (the deity who is worshipped) is Saraswati.

The Beej, Shakti and Kilak of this Mantra are the same, and it is the Sanskrit syllable ‘Blum’. This Mantra is invoked for the purpose of fulfilling one’s wishes.

The Anganyas process is also done with the same Mantra (15).

16. Thereafter, the worshipper should meditate and pray to Goddess Saraswati as follows—‘The divine Goddess is the universal inspirer and motivator of all the Gods. [That is, she personifies the hidden powers of Brahm that reside quietly inside each living being, whether the divine Gods or the humble creature, to control all its activity.] She is a personification of the virtues and forces of Nature both at the level of the individual Atma (Adhyatma) of the creature as well as at the level of the Gods (Adhidaiva). She is always present in all living creatures as their ability to speak and express themselves. Let such a glorious and divine Mother Goddess Saraswati bless us graciously with her benevolent patronage and give protection to us from all sides (16).

17. The Goddess, worshipped by us with the help of the Beej Mantra ‘Blum’, always inspires and motivates all to speak the truth and pleasant words in a sweet voice and graceful tone. She guides wise, learned, upright and intelligent men on the path that is always correct, righteous, auspicious and noble by inspiring them to be conscientious, upright and ethical, and to be always aware of their moral duties and responsibilities.

Such a gracious and glorious Goddess Saraswati has accepted us and our endeavour in the form of the fire sacrifice.’ [This fire sacrifice is a metaphor for the auspicious and righteous deeds done by all good and noble people with good intentions. The very fact that such people do such sacrifices indicates the Goddess’s blessing and grace is upon them, for otherwise they would have been indulging in crimes and sinful activities.] (17).

18. [Verse nos. 18-20 describe the *sixth Mantra*.]

The next (sixth) Mantra is ‘Maho Arnaha’. [This term ‘Maho’ means ‘great’, while ‘Arnaha’ refers to the great ocean from which all essential material assets of the creation were produced at the time of creation by its churning by the Gods and Demons at the beginning of the creation. It indicates Lord Vishnu as well who is said to recline on the celestial python that floats on the surface of the celestial ocean of milk (the Kshir Sagar) in the heaven. The word also means the ‘teak tree’ famous for its long life and sturdiness. Hence, the Mantra refers to the fact that the Goddess is

like that vast ocean from whose bosom all the material assets needed by this creation emerged. This metaphor is most apt in the sense that ever conceivable benefit is obtainable in this world if one has the requisite knowledge, expertise, skill and intelligence. Nothing is unreachable or unattainable by knowledge and intelligence. She also stands for the 'teak tree' because knowledge and wisdom makes a man the best and the most reliable amongst all humans and creatures belonging to the zoological kingdom just like the teak tree is best amongst the members of the plant kingdom.]

The Rishi of the Mantra is sage Madhuchhanda.

Its composition style is the Chanda called Gayatri. [The Gayatri Chanda has 24 letters and syllables in all which are divided into 3 steps or stanzas of 8 letters or syllables each. Hence the total is $3 \times 8 = 24$.]

Its Devta (the deity who is worshipped) is Saraswati.

The Beej, Shakti and Kilak of this Mantra are the same, and it is the Sanskrit syllable 'Souha'. [Refer verse no. 27 also.]

This Mantra is invoked for the purpose of fulfilling one's wishes. The Anganyas process is also done with the same Mantra (18).

19. Thereafter, the worshipper should meditate and pray to Goddess Saraswati as follows—'The divine Goddess is the universal controller and regulator while living as the inner voice of conscience present in all living beings. She is established in the form of Gods Rudra and Aditya (Lord Shiva and the Sun God respectively). [That is, on the one hand she can destroy everything in the form of Rudra who is anger personified, while at the same time she sustains and protects life in the form of the Sun without which no life can be imagined on this earth. Whereas anger makes a man blind, the sun is a metaphor for light and illumination in their physical form as well as in the form of knowledge and wisdom.]

Let such a glorious and divine Mother Goddess Saraswati bless us graciously with her benevolent patronage and give protection to us from all sides.' (19).

20. It is Goddess Saraswati who has manifested herself in the form of the ever-flowing river bearing her name 'Saraswati'. [This is a very important analogy, especially in the face of the fact that this is an underground or subterranean river, for its outer visible form is not present. This is a clear indication of what is being implied here—the virtues of knowledge, wisdom, skills, intelligence, learning and enlightenment that Saraswati stands for, and the fact that she controls everything by being the inspiring and motivating force residing in the bosom of all living beings, is very clearly indicative of this underground river which is not physically seen from the surface but nevertheless is present just below the surface, eternally replenishing the underground water sources such as the springs and maintaining subterranean water level on earth. The grand virtues for which Saraswati is so much honoured and revered are the ones which make a man who possesses them equally honoured and revered in this world.]

This Mother Goddess Saraswati, in her sublime and subtle form that is all-pervading and omnipresent, kindles, inspires and motivates the creature's intellect and conscience to do what is auspicious, righteous and noble.' [That is why if we do something wrong, our conscience immediately pricks us; it is another matter that this pricking does not suit us because of our sense organs which are ever eager for self gratification, and they force us not to give any heed to morals and ethics in their selfish pursuit.] (20).

21. [Verse nos. 21-23 describe the *seventh Mantra*.]

The next (seventh) Mantra is 'Chatvaari Vaak'. [This term 'Chatvaari Vaak' refers to the faculty of speech that enables the inner feelings and thoughts to be revealed so that they become known to others. It is like fruition of the efforts made in the fire sacrifice. The word 'Chatvaari' itself refers to the fire sacrifice pit having four corners.]

The Rishi of the Mantra is sage Dirghatmaa, the son of sage Uchathya.

Its composition style is the Chanda called Trishtup. [The Trishtup Chanda is a verse of 4 lines in which each line has 11 letters; $11 \times 4 = 44$ letters in all.]

Its Devta (the deity who is worshipped) is Saraswati.

The Beej, Shakti and Kilak of this Mantra are the same, and it is the Sanskrit syllable 'Aiyang'. [Refer verse no. 33.]

This Mantra is invoked for the purpose of fulfilling one's wishes. The Anganyas process is also done with the same Mantra (21).

22. Thereafter, the worshipper should meditate and pray to Goddess Saraswati as follows—'The Goddess is revealed in various forms, but for those who have deep insight and can peer behind the external façade to see what lies behind, the Goddess in one and non-dual in all her numerous forms. In this, she is manifested Brahm, as Brahm is also revealed in the form of this myriad world of stupendous diversity but is primarily one and non-dual in the view of those who are wise, self-realised and enlightened. Refer verse no. 32.]

She is established everywhere as the only entity worth seeing, understanding and accepting. [In other words, in the confusions created by the visible diversity of this physical world, she represents the only non-dual Reality and absolute Truth which should be understood and grasped by excluding everything else.]

Let such a glorious and divine Mother Goddess Saraswati bless us with her patronage and protection from all sides.' (22).

23. The faculty of speech whose presiding deity is Goddess Saraswati, who is worshipped by the help of the Beej Mantra 'Aim', is divided by experts into four types or aspects—(1) Paraa (which refers to speaking about things which are beyond normal sight and knowledge, to speak about paranormal things that are beyond comprehension and range of perception); (2) Pashyanti (which refers to speaking about things that are visible, perceived and understandable); (3) Madhyamaa (to speak softly and mildly, to speak pleasantly and sweetly, to speak inarticulately and in a low voice that is difficult to easily comprehend); and (4) Vaikhari (to speak in a clear, loud and articulate way symbolising clarity of thought, firmness of conviction, exemplary confidence, energy and vitality—refer verse no. 29).

Those who are experts and wise know all these aspects of speech. Out of these, the first three, viz. the Paraa, Pashyanti and Madhyamaa, are established in the cave-like heart. They are not revealed to the world. [This is to indicate that unless one is articulate in his speech, unless one speaks out loud and clear what he wants to say, and unless he is honest and forthright in what he speaks, all his knowledge and whatever he wishes to say would either remain confined to the deep recesses of his cave-like heart or not fully understood and implemented. The world would not be able to see what is hidden in this dark cave of the heart unless one expresses his thoughts and emotions in clear language.]

Compared to them, the Vaikhari speech is loud and clear; it helps one to articulately say what is in his mind and heart. It is this fourth form of speech that is employed by a man to express himself (23).

24. [Verse nos. 24-26 describe the *seventh Mantra*.]

The next (seventh) Mantra is ‘Yadvaagvadanti’. [This term refers to the fact that the faculty of speech is inspired by Goddess Saraswati. What is spoken is an expression of Saraswati.]

The Rishi of the Mantra is sage Bhargava.

Its composition style is the Chanda called Trishtup. [The Trishtup Chanda is a verse of 4 lines in which each line has 11 letters; $11 \times 4 = 44$ letters in all.]

Its Devta (the deity who is worshipped) is Saraswati.

The Beej, Shakti and Kilak of this Mantra are the same, and it is the Sanskrit syllable ‘Klim’ or ‘Kling’. This Mantra is invoked for the purpose of fulfilling one’s wishes.

The Anganyas process is also done with the same Mantra (24).

25. Thereafter, the worshipper should meditate and pray to Goddess Saraswati as follows—‘Goddess Saraswati is revealed in eight forms or aspects of creation such as name, caste etc¹. But at the same time she appears as one single immutable and indivisible non-dual entity to a wise man. [In other words, though a man recognises others based on these eight known characteristic features and attributes, fundamentally all living beings are the same as the same Atma resides in all of them. Since the Goddess represents the dynamic aspects of Brahm, it follows that whatever is seen and known as ‘life’ in all its variations and forms are nothing but the same universal Principal assuming myriad forms. All human beings have the same Atma representing the Goddess present in them; what vary are the external features and characteristics, but the essence and principle remains the same. This is the magnificent spiritual wisdom of non-duality and universality that the Goddess stands for. That is why a person who has developed this eclectic vision of this creation is said to be especially blessed by Goddess Saraswati because he has acquired true spiritual knowledge that is eternal and not just a superficial one that pertains only to the mortal world of material sense objects that are perishable and lack any permanence.]

Let such a glorious and divine Mother Goddess Saraswati bless us with her patronage and protection from all sides (25).

[Note--¹The eight apparent classifications in the world by which a man is recognized are the following—his name, caste, complexion, birth or family, race, nationality, Ashram (one of the four phases in life, such as Brahmacharya, Grihastha, Vaanprastha and Sanyas), and Varna (class of society such as Brahmin, Kshatriya, Vaishya, Shudra and Nishad or Chandala).]

26. When the divine Goddess worshipped by the Beej Mantra ‘Klim’ revealed in the form of the faculty of speech and the power and strength inherent to it, the Goddess who inspires noble and auspicious emotions and thoughts, manifests her august self at the venue of the fire sacrifice, she not only provides all the Gods with extreme happiness and joy by her presence but also simultaneously removes the ignorance and delusions of those who are ignorant and deluded.

Her auspicious presence at the venue of the fire sacrifice and participation in the ceremony enables one to milk all the four directions for food and water—i.e. she

enables the performer of the fire sacrifice derive benefits from having studied the Vedas and reciting their hymns for completing the fire sacrifice systematically and according to the process laid down in the Vedas themselves. That is, he is able to recite the correct hymns, carry out the rituals properly and correctly, satisfy the Gods invited on the occasion and in general conduct the entire exercise according to set norms and traditions so that the desired rewards are obtained¹.

Now, what happens to the best elements of the Madhyamaa part of the speech? [The concept of Madhyamaa has been explained in verse no. 23.] (26).

[Note--After all, this is the purpose of a man choosing his profession and studying diligently so that he can become an expert in his field. Once he is an expert, all glories and prosperity is easily available to him. The doing of the fire sacrifice is just a metaphor for the importance of learning, acquisition of skills and knowledge, their practical application and the rewards incumbent to the entire exercise. This verse highlights the importance of Saraswati who is personified knowledge, wisdom, erudition, sagacity, skills and expertise as well as the expression of these virtues as the faculty of speech. Once a man has acquired expertise in any specialised field, he no longer would starve for food or die of thirst—i.e. he would not be lacking in wealth and necessities of life. Glory and fame would come to his doorstep if he is skilled, wise and learned. Even if he is infirm and sick and unable to do any physical activity, people from far and wide would come seeking his advice and would voluntarily take care of his needs. His knowledge and wisdom can be beneficial to others only when is able to speak and express himself clearly and understandably. So, the importance of Saraswati becomes self-evident. Refer verse no. 23, 2nd Paragraph.

When the Goddess of speech reveals her august presence in the form of proper wisdom, erudition and knowledge along with the manifestation of these virtues in the form of wise words spoken by the learned man, no auspicious things or benefits available in this world remain inaccessible for him.

The different Mantras chanted during elaborate fire sacrifices must be remembered by heart and recited orally in a melodious tune without consulting the text midway, besides the need to flawlessly complete the complicated rites involved in such rituals. This obviously needs a healthy mind and a sharp memory along with various technical skills concerning fire sacrifice rituals and the ability to sing the hymns correctly, articulately and pleasantly. All this is made possible by proper functioning of the mind-intellect and the faculty of speech, besides the committed involvement of the heart because otherwise the entire exercise would lack sincerity and devotion. The Goddess presides over these functions. The successful completion of a fire sacrifice is a metaphoric way of saying that any enterprise undertaken by a man has been successfully completed and he has got the desired results.

The offerings made to the fire sacrifice are meant for the Gods and these offerings are said to sustain them. So, once Mantras are said and offerings are made into the sacrificial fire, it is natural that the Gods would be pleased as now they are being duly fed and shown due respect.]

27. [Verse nos. 27-29 describe the *eighth Mantra*.]

The next (eighth) Mantra is 'Devim Vaacham'. [This term literally means 'the Goddess speaks'. [Refer verse no. 4.] It implies that what we speak is actually the Goddess speaking. Since the Goddess controls the mind and the intellect and the expression of their wisdom and thoughts through the faculty of speech, whatever is spoken is indeed spoken by Saraswati.]

The Rishi of the Mantra is sage Bhargava.

Its composition style is the Chanda called Trishtup. [The Trishtup Chanda is a verse of 4 lines in which each line has 11 letters; 11 x 4 = 44 letters in all.]

Its Devta (the deity who is worshipped) is Saraswati.

The Beej, Shakti and Kilak of this Mantra are the same, and it is the Sanskrit syllable 'Sauha'. [Refer verse no. 18 also.]

This Mantra is invoked for the purpose of fulfilling one's wishes. The Anganyas process is also done with the same Mantra (27).

28. Thereafter, the worshipper should meditate and pray to Goddess Saraswati as follows—'The Goddess is praised by all the Gods as well as all the creatures, both the ones who can speak (such as humans who use words to express themselves as well as animals who express themselves by merely making sounds typical to each type of animal) as well as the ones who cannot speak (such as worms and insects).

The Goddess is like a Kamdhenu cow (the cow of Gods which gives all desired things when pleased) because she gives her worshippers whatever they wish to have like the Kamdhenu cow's never-ending milk. [An ordinary cow cannot be milked endlessly and continuously, but the Kamdhenu cow would give milk as and when desired. Further, she can give anything desired; she can bestow all the material comforts and objects of the world if one asks for them from her. Likewise, nothing is unobtainable for a man upon whom Goddess Saraswati is pleased. In other words, wisdom, knowledge, erudition, sagacity, skills and expertise make every conceivable thing accessible for a man in this world. He himself may be mortal but his wise words, i.e. his 'speech' and the words that he utters, make him immortal.]

Let such a glorious and divine Mother Goddess Saraswati bless us with her patronage and protection from all sides (28).

29. The divine Gods represented by the Prans (vital wind forces in the body representing vitality, vigour, strength, stamina and vibrant form of life—refer verse no. 4) have produced the Vaikahri form of speech. [Refer verse no. 23.] That is, they have enabled one to speak coherently, articulately, in a pleasant, cohesive and enthralling manner. A robust and vigorous speech spoken with energy and vibe is indicative of the active life forces in the body. This is proved when a man is sick or mentally depressed—in such cases his speech suffers. He would not be able to speak properly; a sick man sometimes speaks in a delirious tone so much so that more often than not it becomes difficult to understand what he means. So, being able to speak with a robust voice and in an articulate and a coherent manner is a sign that the vital forces of life are in high spirits and vibrant inside the body.]

Whatever a creature speaks in any form is actually a manifestation of the Goddess's divine glory and stupendous powers (to produce 'sound' from virtually nothing). [This has a direct analogy to how the cosmic Naad was created by Brahm from virtually nothing!]

That Goddess is a bestower of all sorts of happiness and joys like the legendary Kamdhenu cow, and provides abundant food, drink, energy and strength to all. [Refer verse no. 28.]

She has manifested herself in the form of the faculty of speech and the voice. [Refer verse no. 23.]

Let that divine Goddess be pleased by our prayers and come to be graciously present in our midst in this fire sacrifice. She is respectfully invited to participate in the fire sacrifice.' (29).

30. [Verse nos. 30-32 describe the *ninth Mantra*.]

The next (ninth) Mantra is 'Ut Twaha'. [This term means 'That is you'. Here 'that' refers to the supreme transcendental Brahm, the divine entity whose stupendous

wisdom and knowledge is revealed in the form of Goddess Saraswati. Since the job of creation is a highly technical and complicated matter, it is obvious that Brahm definitely possessed this expertise and the relevant skills needed to successfully accomplish it. Saraswati is a manifestation of this unique ability of Brahm. In other words, Saraswati is an expression of Brahm; or Brahm expressed himself in the form of Saraswati. When one speaks, he must be present on the site. So a wise man sees the presence of Brahm wherever and whenever he hears some voice or sound. Conversely, if there is sound and someone speaking, it is sure that Brahm is present there. And better still, the entity that is speaking is itself Brahm personified! This holistic view of creation is the non-dual eclectic view of Vedanta, and it is being applied to Saraswati here.]

The Rishi of the Mantra is sage Brishaspati (the Guru of Gods).

Its composition style is the Chanda called Trishtup. [The Trishtup Chanda is a verse of 4 lines in which each line has 11 letters; $11 \times 4 = 44$ letters in all.]

Its Devta (the deity who is worshipped) is Saraswati.

The Beej, Shakti and Kilak of this Mantra are the same, and it is the Sanskrit syllable 'Sum' or 'Sun(g)'. This Mantra is invoked for the purpose of fulfilling one's wishes.

The Anganyas process is also done with the same Mantra (30).

31. Thereafter, the worshipper should meditate and pray to Goddess Saraswati as follows—'Enlightened and learned ascetics realise that the Goddess is a personification of the knowledge pertaining to Brahm. This entitles them to find freedom from all fetters of ignorance that have been shackling them till this realisation dawns upon them. This leads them upon the path that is auspicious and spiritually liberating. This path takes them to the stature of Absolute and wholesomeness; nothing remains to be known thereafter. The stature attained then is imperishable and immortal.

Let such a glorious and divine Mother Goddess Saraswati bless us with her patronage and protection from all sides.' (31).

32. This stupendous power of expression (possessed by Brahm and) revealed in the form of the faculty of speech and voice (that helps not only to disseminate knowledge and wisdom but also to prove the presence of Brahm everywhere (in the form of knowledge, wisdom, erudition and expertise in all the sciences, arts and crafts) is very evident all around in this creation. But many people cannot see it inspite of seeing the physical life in this world all around them. Similarly, there are many people who cannot hear Brahm speaking inspite of hearing all the sounds emanating from so many sources in this world. [That is, inspite of knowing that everything in existence is Brahm, they are so stupid that they cannot see the Supreme Being everywhere and attempt to see or find him in specifics such as shrines, idols, pilgrim sites, religious ceremonies and holy books which do not have a 'voice', which do not 'speak' a word. They hear discourses but are deaf to their meaning, so for all practical purposes they haven't heard them at all—i.e. they haven't heard Brahm speaking nor have they heard him being spoken about. They see but are blind in the sense that they treat the exterior façade as the truth without realising that the real truth is hidden behind this exterior—i.e. they are deluded into believing that what the gross organ of sight in the body, known as the eye, sees in this world is the real thing without analyzing what is seen with the eye of wisdom and intellect to arrive at the correct conclusion about the reality of what is physically observed. They read the scriptures and learn them by

heart, but this knowledge is only superficial and misleading. They visit shrines and bow before images, but cannot see or have any idea of the Divinity represented in them. If the wisdom and erudition is not there, if the light of knowledge is not bright enough to illuminate their intellect and mind, if enlightenment does not dawn upon the 'self' inspite of the sun of knowledge shining so brilliantly in front of them, then indeed the process of seeing and hearing for such ignorant men is as good as seeing anything by a blind man or hearing anything by a deaf man.]

But for some fortunate ones the Goddess of speech (i.e. Saraswati) reveals herself just like a faithful woman appears before her husband in all her vibrant beauty bedecked with ornaments and attired in her best of clothes as soon as he wishes to see her. [In other words, foolish people exploit their knowledge to accumulate worldly riches and to deceive people by pretensions of being wise and knowledgeable. Such pervert, deceitful and sinful people literally use Saraswati to gratify their selfish interests just like a lustful man would invite a beautiful woman to satisfy his carnal instincts.] (32).

33. [Verse nos. 31-35 describe the *tenth Mantra*.]

The next (tenth) Mantra is 'Ambitame'. [This term means that the Goddess is the universal cosmic Mother herself.]

The Rishi of the Mantra is sage Gritsmad.

Its composition style is the Chanda called Anushtup. [The Anushtup Chanda is a verse with 4 lines, each line having 8 letters = total 32 letters. It was first conceived by an ancient sage named Anustuv, hence it bears his name.]

Its Devta (the deity who is worshipped) is Saraswati.

The Beej, Shakti and Kilak of this Mantra are the same, and it is the Sanskrit syllable 'Aim(g)'. [Refer verse no. 21 also.]

This Mantra is invoked for the purpose of fulfilling one's wishes. The Anganyas process is also done with the same Mantra (33).

34. Thereafter, the worshipper should meditate and pray to Goddess Saraswati as follows—'Those who are wise and enlightened about the eclectic principle of Brahm dissolve the entire delusory world consisting of uncountable names and forms in the non-dual form of the divine cosmic Goddess. [Refer verse nos. 7, 22, 25.]

Having done this, i.e. having established non-duality everywhere, they then concentrate their attention on this one single form of the Divinity. [That is, once they realise that the entire world, including the various Gods and Goddesses are nothing but manifestations of the one universal Brahm that is one and non-dual, or Advaitya, in the entire creation, they do not allow themselves to be confused and deluded any longer by the concept of duality, or Dwaitya.]

Let such a glorious and divine Mother Goddess Saraswati who is no one else but the supreme transcendental Brahm in that form bless us with her patronage and protection from all sides.' (34).

35. 'Oh Mother Saraswati! You are the most exalted amongst all the Shaktis, all the rivers and all the goddesses. [The Shaktis represent the dynamic forces and energy of creation without which nothing can happen in this world. The rivers are providers of water that irrigate the earth and make it fertile so that it can produce food and foster life; rivers are the lifeline of life on this earth. Water is the elixir of life and the rivers take this elixir to distant places. The goddesses represent the dynamic half of all the gods who themselves are personifications of different forces of Nature and represent

one or the other powers of Brahm that are employed by him to carry on with the nitty-gritty of creation.]

We are feeling underprivileged and deprived. So oh mother, please bless us so that we become fulfilled and contented; make us feel privileged and fortunate.’ (35).

36. Goddess Saraswati is like a majestic Swan roaming majestically in the symbolic forest of divine lotus flowers represented by the mouth of the creator Brahma—let that divine Goddess Saraswati, who glows radiantly with an effulgence of splendour from all sides, reside in the lake represented by our Mana (thoughtful and intellectual mind as well as sentimental and emotional heart) (36).

[Note—Brahma the creator pronounced the Vedas, the repository of all knowledge that exist in this creation. Since the mouth was used by him for pronouncing not only the Vedas but even the principle Beej Mantras Bhu, Bhuvaha, Swaha and Janaha from which the rest of the creation evolved, his mouth is regarded as the habitat and playground of Saraswati who is an eternal fount of enlightenment, knowledge, skill, wisdom and erudition. The mind-intellect is obviously the seat of knowledge in the human body, but the heart has no less important role to play because if the heart is not involved in anything the man would not be sincere and steadfast in his endeavour, even in his studies and application of the knowledge that he has acquired by this study. That is why we use the phrase ‘learn by heart’ or ‘put your heart in the work you do’ instead of invoking the mind and intellect because if the heart is not involved no work would be completed fruitfully. Lotus grows in clusters in a pond, so the term ‘forest’ simply refers to a dense growth of lotus flowers, and since this particular flower is regarded as holy and auspicious the reference implies that amongst all the body of knowledge that exists in this creation the one that is spiritually enlightening and liberating is deemed to be auspicious and welcome. Knowledge is related to the gross material world that Brahma pronounced is like the dense cluster of lotus flowers living in a pond, but the one that is really holy and divine in it is the one that is good for the spiritual well being of the man; it is like the crown jewel and stands out in the lake of lotuses like the majestic Swan cited here in this verse.]

37. Oh Goddess Sharda who lives in the city of Kashmir¹! I bow before you. I pray to you daily. Please bless me with Vidya (knowledge, skills, erudition, sagacity, wisdom, expertise, aptitude and acumen) (37).

[Note—¹The word *Kashmir* is only used in a symbolic manner here as a metaphor for her abode in the brain. This is because Kashmir is a state in the northern most part of India, a metaphor for ‘top or head’. Intelligence and wisdom have their seat in the mind and the intellect which have their seat in the brain located on the top of the body. If the rest of the body is the land mass of the country, then surely the head is like Kashmir.

There is another connotation here. Kashmir is in the mighty Himalayan Mountain range, and according to mythology the abode of Gods is in the north direction in the Himalayas. So, reference to Kashmir also would suggest that proper wisdom and knowledge of Brahm in the form of manifested Saraswati is necessary before one finds his final emancipation and salvation by acquiring truthful spiritual knowledge which would be like reaching the abode of Gods. This idea is also expressed in verses nos. 31 and 34.]

38. She holds in her four arms an Aksha Sutra (the prayer rosary), Ankush (goad), Paash (snare or loop) and a book. She is adorned by a beautiful pearl necklace. Let Goddess Saraswati take up her residence in my speech and voice (38).

[Note—The symbolism of the four things held by her are—(a) The *rosary* indicates that in spite of knowing everything and being Brahm personified, she remains

constantly engrossed in doing Japa or repeating some Mantra. (b) The *goad* and *loop* indicates the fact that when a man becomes wise he is able to rein in his sense organs by using the loop, and coax himself to follow the correct path by using the goad of wisdom, erudition, knowledge and enlightenment. And (c) the *book* of course indicated knowledge in all its form, not only of the scriptures but of all the sciences, arts and crafts.]

39. The sound emanating from her throat resembles the sound of the conch. Her lips are beautifully red, and she is adorned by all types of ornaments. Such a great Goddess Saraswati is requested to come and take her seat at the tip of my tongue. [That is, let my tongue be very articulate and clear in its pronunciation. Let my speech become wise and intelligent. Let me speak pleasantly, articulately and truthfully. Let me speak words of great wisdom, erudition and enlightenment. Let me not speak anything that is not the truth, is inauspicious and sinful.] (39).

40. Goddess Saraswati is the beloved of Brahma the creator. She is an embodiment of the virtues of Shradha (firmness of faith and conviction), Dharana (firmness of belief and idea) and Medha (steadfastness of intellect, prudence, understanding and comprehension).

She makes the tongue of her devotees as her symbolic residence. [That is, a man upon whom the goddess has become pleased becomes an expert orator, very wise, highly intelligent and erudite. He is deemed to a learned man who is skilled and knowledgeable in a wide array of subjects. He is much sought after for his wisdom, erudition, sagacity, knowledge, expertise and skills. His words do not go in vain; whatever he utters are lapped up eagerly by his followers as priceless pearls of wisdom. He speaks the truth pleasantly in a sweet voice that is welcome by all.]

She blesses them with the glorious virtues of Sham, Dam etc.¹ (40).

[Note--¹These virtues are the following— (i) Sham (having self restraint and control; having peace, tranquility, serenity and quietness; being able to suppress desires, yearnings and natural instincts and impulses); Dam (tolerance, forbearance, fortitude); (iii) Upriti (renunciation, detachment, dispassion, indifference and non-involvement); (iv) Titksha (endurance, patience, fortitude, sufferance, equanimity); (v) Samadhan (solution, answer, lack of confusion or doubts, clarity of thoughts and conception); and (vi) Shraddha (having faith, belief, conviction, reverence and devotion).]

41. The Goddess's lock of hairs on the head is decorated by the crescent moon which is tucked in them like an ornament. She is like a river of nectar that can eliminate the torments arising from this world which is like a fearful ocean. I bow most reverentially to that Goddess Saraswati who is a manifestation of Bhavani (who is the divine consort of Lord Shiva, the concluder) (41).

42. Those who are desirous of achieving expertise in oratory and skills with the languages and literature, those who seek fearlessness, those who wish to enjoy the material comforts and pleasures of the objects of the sense organs available in this charming material world, and even those who wish to have liberation and deliverance from all their spiritual fetters, should devotedly worship the Goddess and offer prayers to her (42).

[Note—Acquisition of expertise and technical knowledge of the material sciences would indeed provide all the comforts and pleasures that the world has to offer. Similarly, study of the text of the scriptures and acquiring expertise in the languages would make a man respected in the society of scholars and erudite men. Worldly

fame, majesty, material prosperity, pomp and pelf would follow suit. Fear is caused by ignorance, but a man upon whom the goddess of knowledge has become pleased can no longer fear from it, besides the fact that such a man need not fear from poverty and neglect, from hunger and thirst etc. either. Money and fame would follow him wherever he goes.

At the same time, those who are wise and enlightened amongst them would understand that all the skills and knowledge that they have acquired would be futile and worthless if they are not used to gain liberation and deliverance for the soul from the cycle of birth and death in this world, and it would be tantamount to frittering away of a golden chance by pursuing worthless things of this material world that are nevertheless transient and perishable. Such men who not use their mind to acquire knowledge but to interpret this knowledge correctly are the ones who can ever hope to get emancipation and salvation by applying this knowledge in a practical way in life so that they can rise above the mundane and attain a spiritually elevated stature; they find beatitude and felicity with the aid of the knowledge and wisdom that is being misused by their less fortunate brethren who pursue this world endlessly.]

43. A devotee who worships and offers sincere prayers to her with the greatest of devotion and faith is able to witness her blessings and grace in less than six months time (43).

44. Once they are blessed by the Goddess, endless stream of prose and poetry of astounding beauty and style, composed in immaculate language and grammar, begin to spring forth from their mouth without any special effort being made for it on their part (44).

45. It is often seen that a sincere devotee-poet of Goddess Saraswati (i.e. someone who is an expert with the languages and letters; a man who has a command of the languages and their grammar, who is well read and well-versed with the vast treasury of knowledge contained in the scriptures and which is personified by Goddess Saraswati herself) is able to comprehend even complicated texts all by himself without seeking anyone else's guidance. Oh the assembled Brahmins (the learned ones)! [Refer verse no. 1.] This has been affirmed by the Goddess herself (45).

46. It is by the grace of Brahma the creator that I (sage Aashwalaayan) have acquired this eternal and truthful knowledge of the Atma (pure consciousness). This has provided me with eternal and perpetual state of Sat-Chit-Anand (i.e. I enjoy the bliss that comes with coming to know the absolute truth pertaining to the pure consciousness which removes all confusions and their attendant doubts and perplexities, and provides eternal bliss and happiness). That is, I have had the privilege and good fortune to enjoy the beatitude and felicity that comes with Brahm-realisation which naturally follows self-realisation (46).

47. The Prakriti (Nature) was created or produced by a combination of the three primary qualifications called Sata, Raja and Tama Gunas. [These are the basic qualities that determine the nature and temperament of all creatures. All living beings have them in varying proportions. The Sata is the best and most auspicious quality that makes a man spiritually inclined. The Raja makes him tend to veer towards the tendency to move towards the world with the intentions to expand and acquire fame and name. The Tama is the meanest of the three qualities which make a man mean

and of a low mentality. The personality and character of any man is decided by the ratio of these three basic qualities.]

Just like an image forming in a mirror appears to be very true, life-like and almost identical to the object of which it is a reflection (if one is unaware that what one sees in this mirror is merely an image and not the real thing), the reflection of the consciousness in the mirror of Nature appears to be identical to the original cosmic Consciousness. [The nature of a man is already said to be tainted by the three Gunas as stated above. When the consciousness is seen through this veil, it is obvious that these three Gunas would cast their affect on the real form and nature of the consciousness and it would be tainted by them. So though the primary consciousness is pristine pure, incorrupt and immaculate, its version as seen in living creatures appears to be tainted due to presence of the various Gunas that are invariably present in all living creatures as their inherent character and nature. See verse no. 48 below.] (47).

48. Since the Prakriti (Nature) consists of three Gunas, when the pure consciousness is reflected in it, the result is that the Prakriti appears to depict three versions of the same consciousness, or Prakriti begins to glow or shine with three different hues that correspond to the three basic Gunas (called Sata, Raja and Tama) that this Prakriti has as its integral part. [The Prakriti has no shine of its own but it is the consciousness that is present in a creature that makes it alive and showcase its characters much like the case of a lantern's glass chimney of a particular colour which glows and shows its colour only when the wick of the lantern is lighted inside it. The light of the lantern here is the consciousness, the coloured chimney is the Prakriti of the creature, and the lantern is the creature himself.]

You, i.e. your pure quintessential 'self' as the pure consciousness, become a Jiva (a mortal living being having a gross body and depicting a set of characteristics or attributes) because of being separated or torn away from your quintessential true form known as the Consciousness (which is always immaculate, incorrupt and pure) due to this distorted view of your 'self' when the latter is seen through the prism of the tainted Prakriti. [The pure quintessential 'self' is consciousness personified. It is marked by being eternal, immaculate and taintless. On the other hand the Jiva is mortal, perishable and tainted with numerous shortcomings. This happens because the creature sees the consciousness through the looking glass of his inherent nature which is already tainted by the three Gunas of Sata, Raja and Tama. These three Gunas do not allow anyone to see the consciousness in its true form. To do so, one would have to rise above the mundane and develop proper insight just like a microscope is needed to see things that are too small to be seen by the naked eye.] (48).

[Note—Refer verse no. 55.]

49. Prakriti (Nature) in which the dominant Guna or quality is pure Sata¹ is called the 'Maya that is predominantly auspicious'².

The pure consciousness that is reflected in this Maya (Prakriti or Nature) which is dominated by the Sata Guna is known as 'Aja' or the creator Brahma³. [And this is why Brahma is regarded as being predominantly wise, learned and enlightened about spiritual and metaphysical matters inspite of the fact that he is neck deep in the process of creation, and is enchanted so much by his own creation and its astounding beauty that he remains perpetually enthralled and so completely enamoured by it that he appears, for all practical purposes, to be deeply engrossed in this perishable and

finite world inspite of being the creator of the Vedas and their Upanishads that are the epitome of knowledge and wisdom regarding spiritualism.] (49).

[Note--¹*Sata* is the first of the three quintessential natural qualities that determine the basis nature, temperament and personality of the creature as an individual as well as the entire creation as a resultant composite affect of the characteristics of all the individual units combined together to present a whole picture. *Sata Guna* is the quality which is regarded as the best quality present in a creature and it is marked by a predominance of auspiciousness, righteousness, virtuousness and noble qualities. It is marked by such high standards of ethical existence that have, as their characteristic features, such qualities as coolness of head, peace, contentedness, humility, devotion, wisdom, mercy, compassion, creativity, selflessness, service, righteousness, virtuousness, holiness and nobility of thought and action etc. As is evident, these qualities are the best qualities that one can have in him; they have a spiritual dimension to them; they are spiritually uplifting and give a divine halo to those who practice them. This quality creates an inherent affinity in a creature towards things in life which are of high moral value and uplifting for the soul rather than things which are demoting and denigrating for the spirit.

The *Sata Guna* or quality is the veil covering the soul like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the *Satwic* desires; its removal requires the least effort. It is the foremost and the best amongst the three characteristics of a creature such as good and positive virtuous such as righteousness, creativity, noble deeds and thoughts, the positive qualities of service, benevolence, mercy, devotion, wisdom, holiness, piety etc.

²*Maya* broadly means delusions creating powers of the Supreme Being. *Maya* is the indescribable and inconceivable cosmic dynamic power that the transcendental cosmic Consciousness known as *Brahm* employs to create delusions. The basic idea here is that *Maya* is like a transparent coloured sheet which covers the supreme 'truth' in the creation. Since it is transparent, it assumes the attributes of the 'truth' that it covers, because for all practical purposes an ordinary man is unable to see that veil because of its transparency. But at the same time, being tinged by different *Gunas*, the view of the 'truth' as seen through the veil of *Maya* gets tainted or distorted proportionately.

There is a simple way of understanding what is called 'illusion and *Maya vis-à-vis* the Truth and Reality'. Let us take the instance of the lantern with the coloured glass chimney to visualise how this happens. The colour of the flame as well as the light that the lantern gives would obviously be affected by the colour of the glass chimney. At the same time, the chimney has no light of its own but when the wick is lighted the chimney begins to glow. This coloured chimney is like the veil of *Maya* surrounding the inner light of consciousness; it is the veil that hides the true colour of the consciousness and gives the latter its own hue. *Maya* has no effect upon the person who wishes to see the consciousness sans its interference just like the case when one can see the actual colour of the flame when he views it after removing the coloured glass chimney. Not only this, the colour of everything upon which this tainted light of the lantern falls would also be affected. In other words, the creature under the overriding influence of *Maya* begins to see the world with a tainted vision which is far removed from the truth.

Maya hides the truthfulness of the Truth, and instead lends its own attributes and characteristics to that Truth known as the 'Nirgun *Brahm*' by the Upanishads when the latter is observed through this veil, while at the same time the *Maya* assumes the glorious attributes of *Brahm* itself just like the case of the lantern with the coloured glass chimney cited here. So, ignorant fools think that the *Maya* is the real thing, whereas they are actually seeing the 'veiled truth' as observed through this covering of *Maya*, because the actual 'truth' is hidden from view by this transparent sheet

which has lend it its own colour and hue. As a result, that Nirgun appears to have some attributes, and it thereby becomes 'Sagun', or the one with attributes and characteristics, by the interference of Maya.

As we have seen in verse no. 47-48 above, the three Gunas of Sata, Raja and Tama are the colours present in the Prakriti that forms a veil that covers the 'truth', and that is why Maya prevents one to see and understand the 'real' nature and form of this 'truth' because of the intervention of these three tainting affects.

Brahma the creator of the visible world is also known as Hiranyagarbha, the cosmic subtle body of the supreme transcendental Consciousness known as Brahm. This Hiranyagarbha was the first step in the process of evolution of creation because it represented Brahm's auspicious desire to create; it marked the dominance of Sata Guna because the very desire to create as opposed to destroy is a good quality. When the process moved ahead, elements of grossness silently and imperceptibly crept in gradually, and the Hiranyagarbha transformed into Brahma the creator of the visible world. So while Hiranyagarbha is the finer aspect of the subtle body of Brahm, Brahma is the grosser aspect of the same subtle body at the cosmic level of creation. According to another version, Hiranyagarbha metamorphosed into the Viraat Purush, the macrocosmic gross body of Brahm, and it is from the latter that first Vishnu and then Brahma emerged. When Brahm woke up to the realities of life created by him, he was known as Vishnu, the sustainer and protector of creation. Since Brahma, the creator of the visible world, is the first auspicious step that the Supreme Being (Brahm) took in this process, he is marked by the predominance of Sata Guna. That is also why the Vedas were pronounced by Brahma himself.

Refer also to verse nos. 53-54 and their accompanying notes.]

50. The Ishwar (the Supreme Being who is the cause of the entire creation, including the Prakriti and Maya) is called 'supreme and almighty' as he possesses the authority and power to control this Maya (Prakriti or Nature) and keep it subservient to him.

The three unique characteristic qualities or virtues of this Ishwar are the following—(a) to keep Maya under control (Vashyamayattva), (b) to be non-dual and unparalleled (Eka), and (c) to be omniscient, all-knowing and all-wise (Sarvagya) (50).

51. This Ishwar (the Supreme Being) is predominantly auspicious, truthful and holy (Satwic), he is all-inclusive and all-encompassing (Samashti), and is a witness to everything in this creation (i.e. nothing is hidden from him—Sakshi). Being endowed with these unique eclectic auspicious qualities, supernatural powers and divine virtues, the Ishwar is able to create this world or decide not to do so, and even conclude what has already been created (51).

52. In this way, the pure cosmic Consciousness possessing all the eclectic and divine virtues and supernatural powers, such as being Sarvagya (omniscient, all-knowing and all-wise) etc. is called 'Ishwar¹'.

Maya has two Shaktis (dynamic powers or forces) that are employed by this Ishwar (pure consciousness) to implement its will. These are—(a) Vikshep Shakti meaning 'deflection, dissipation, confusion, perplexity, obstruction, disturbance, scattering or tossing about in uncertainty and disarray, agitation of mind and spirit, fickleness, fragmentation, fission and disharmony etc.', and (b) Aavaran Shakti meaning 'to cover in a veil, to sheath, to envelop, to wrap in a sheet, distortions, pretension, deception, deceit and something that does not allow the original thing to be seen by covering it with a thin veil that distorts its originality; a veil of ignorance

about one's true nature, identity and essential form that cloaks the Atma/soul which is pure consciousness and the true self" (52).

[Note--¹*Ishwar* is honoured by epithets which highlight some or the other of his majestic glories. Some of them, inter alia, are the following—Satya (truth), Shiva (auspicious), Sundar (beauty); Satt (eternal), Chitt (consciousness; knowledge), Anand (beatitude and felicity); Akchar (imperishable; the eternal ethereal word), Uttam (the best, the most exalted, the ultimate), Purush (the primary Male Spirit; the supreme Spirit), Parmatma (the supreme Soul of creation), Prakriti (primary Nature), Purshottam (the best Purush; the most exalted holy spirit), Pragya (knowledgeable, wise, skilled, enlightened and conscious) and Vibho (omnipresent, omniscient and omnipotent).]

53. The first forceful power of Maya called Vikshep Shakti is responsible for creation of the entire world, right from the gross body of the individual creature at the micro level of creation to the vast universe at the macro level of creation.

The second forceful power of Maya called Aavaran Shakti is responsible creating a distinction between the 'seer' (i.e. the pure conscious 'self' or the Atma) and the 'things or objects that are seen' by this seer at the micro level of creation, and between 'Brahm' (the all-pervading seer or cosmic Consciousness) and 'Srishti' (the manifested creation springing forth from this Brahm and the latter's visible revelation) at the macro level of creation. This Aavaran Shakti covers the truthfulness of 'consciousness' and makes it tainted. [Refer verse nos. 47-49.] (53).

[Note—The delusions created by Maya casts a veil around the truth so much so that the Atma, the pure consciousness and the true identity of the creature, is unable to see the 'absolute truth and reality' behind what is seen externally in the physical world. It forgets in its ignorance created by this veil of Maya that actually the external world has derived the importance and worth because of the presence of conscious life in the form of Atma in it, and the exterior façade is merely a covering that sheaths this Atma. Shorn of the Atma, the world would be as good as a dead body—say, who would like to fall in love with a dead body? A living being is dear one moment till he is alive and useful, and as soon as he is dead, he becomes useless and is disposed of immediately at the other moment. The basic unit that lends life, substance and value to everything in existence is the quintessential factor of universal consciousness that is a non-dual entity. That is, the consciousness in the creature known as the 'seer' and the other creature who is 'seen' is the same. This is the climax of enlightenment, and the absence of it is due to the covering of Aavaran which eclipses or distorts this wisdom and enlightenment. The tainted Aavaran of Maya prevents one to come to know the truth and reality, and it is the cause of all delusions that create a sense of duality and separation between things that are inherently one, immutable and inseparable. This delusion creates an impression of one entity being the 'self' and the second entity being the 'other person'. It is the cause of all strife, all bad blood, disharmony, animosity, jealousy, malice and hatred in this world; it is the prime cause of all dichotomy, confusions, perplexities and doubts.]

54. This (Maya) is the root cause of all worldly fetters that shackle a creature to this artificial material world of delusions. Under the influence of Maya, the Sakshi—the true 'self' of the creature, the pure conscious Atma that is supposed to remain a neutral witness to the happenings in the gross physical external world without actually getting involved in it—begins to see and recognise the external world that exists in the front of its eyes with its gross physical properties and outer characteristic features by employing the gross eyes of the body.

That is, the gross features of the external world are seen and believed to be the true and real form of the world under the deluding influence of Maya. In other words,

the 'Ling Deha' (gross body) of the creation is perceived as the real world instead of the pure consciousness and the 'truth' that pervades through out in it in a most subtle and hidden form (54).

[Note—Since the world is beheld by the 'self' through the tainted veil of Maya which has already influenced the mind-intellect complex through which external inputs and information are received and interpreted, the creature (i.e. the Sakshi) sees only a distorted version of the world. That is, the creature is able to see only the external features of the gross world outside. This external façade is so life-like and magical that the creature believes it to be true and real. Maya prevents the 'self' from seeing the truth; Maya prevents the creature from realising the fact that this physical gross world is unreal and untruth and simply like a mirage of the desert—un-sustainable, transient, non-attainable, illusionary and deluding. The creature is not able to perceive the concealed 'truth' of life behind this façade, the 'truth' called the Atma or consciousness representing the cosmic Absolute without which this external gross body would be of no good. This is the magical theatrical performance of the maverick Maya that it produces a scenario that is so life-like and charming that a deluded creature who was supposed to remain a 'Sakshi' or a neutral witness to the external world is swept off his feet and gets neck-deeply involved in it.

Under the tainting influence of Maya, the creature is not able to see the hidden 'real and absolute Truth' and instead begins to believe in the 'apparent truth' which is more like the water of a mirage than the water of a river or lake. Refer also to note of verse no. 49.

In other words, the 'Sakshi', i.e. the true 'self' of the creature—who is supposed to be neutral and just mutely watch the magical creation of Maya unfold in the form of this physical world which is unreal, transient and perishable without actually getting involved in it (much like a spectator watching a magic show—forgets this basic principle and is so charmed by the scene watched that he gets swept off his feet and plunges head on into this world and its activities.

The net result of the influence of Maya is that the Sakshi gets neck-deep involved in something with which it should not have been involved at all—i.e. the 'self' of the creature should have remained neutral towards the material objects of the world and getting involved in them, should have seen the underlying 'truth' in the world and not be swept off by its external charms, but unfortunately this does not happen. Under the delusory effects of Maya, this Sakshi believes that what he sees in the outside world of sense objects is the truth and reality, and therefore it is worth pursuing and obtaining. The Sakshi allows himself to be voluntarily trapped like a bird willingly getting caught in a bird-catcher's net. These facts are affirmed in verse no. 55 below.

The fact is that the world is artificial and an imaginary creation of the mind and its sub-conscious (refer Yogshika Upanishad of Krishna Yajur Veda tradition, Canto 6, verse nos. 58-61, 70), and the Atma—which is eternally wised and enlightened—is supposed to be aware of this fact and treat the artificial world as such. But unfortunately it doesn't. This is because the Atma, which is supposed to be a mere 'Sakshi' (mute, dispassionate, neutral and non-involved witness) gets deluded or misled by the veil of ignorance cast around it by Maya. Treating itself as part of the world, the Sakshi gets involved in the activities of the world. Having exceeded its brief, the Sakshi is bound to suffer from its excesses and get tied in shackles represented by various misconceptions about the reality and truth. The Sakshi remains involved in doing deeds and hopes that he would get peace and comfort from this world. This world is like a whirlpool in an ocean, it sucks the Sakshi deeper in its vortex and it remains ever trapped in the cycle of birth and death, bobbing up and down in this vast endless ocean represented by this world. After a very long time and many births, the Sakshi realises its follies and decides that enough is enough; it now endeavours to find out a way that would finally ensure that liberation and deliverance is obtained by it at any cost, and that it would not do anything which would force it

into being subjugated by Maya and recycled into the bin of birth and death once again. It then researches on the method to achieve this end, and studies the scriptures and consults wise men. It discovers that the basic cause of the entire edifice getting erected is Maya and its delusory effects. It also realises that the 'self' does nothing, and that everything is done by the 'non-self', i.e. the gross body. So, it abhors Maya and delusions created by it, deciding not to get involved in the world. Consequently, when the past baggage of deeds and their consequences are exhausted and newer ones do not accumulate, the Sakshi finally gets its treasured liberation and deliverance.]

55. When the pure consciousness is reflected in the form of Nature, it becomes the causal body of creation. That is, the world is created by the consciousness when its immaculate nature gets tainted by the three Gunas (as explained in verse no. 47-49 and 51-54 above). When this happens, the pure consciousness (which is not supposed to get involved in the world) gets involved in the world and becomes a Jiva, or a living being with a body that interacts with the gross world.

This deceptive form of the consciousness as the Jiva living and interacting with the world is actually, upon analysis, found to be an accusation on the pure nature of the immaculate conscious 'self' (which is supposed to remain merely a mute and neutral witness or 'Sakshi' of what is happening around it, and which is, left to its own, is pristine pure 'consciousness') (55).

56-57. When the covering veil of Maya is removed, the creature is clearly able to see the error and the difference between what is the 'actual truth' and the 'apparent truth'. Then the consciousness stops to have any kind of attractions for the gross material world with which it was so enamoured till now. [In the instance of the lantern cited in note of verse no. 49 above, when the tinted glass of the chimney is removed and replaced with transparent colourless glass, one can see the real colour of the flame along with the true colour of the objects that are seen with its light.]

Hence, the notion of the existence of a 'Jiva' (living being) who is separate from the 'true self' or the 'conscious Atma' vanishes. In other words, he begins to see the same Brahm everywhere, both inside his own self as the conscious Atma at the micro level of creation as well as the cosmic Consciousness that pervades everywhere in the external world at the macro level of creation. [That is, the enlightened creature henceforth begins to identify his 'self' with the sublime and subtle consciousness that is invisible, instead of with the gross body that is physically seen in this world. Similarly, he sees no difference between any two living beings because the same conscious Atma lives in both of them.]

He also realises the truth of the fact that the primarily immaculate and untainted divine entity known as Brahm had appeared to be dual in the form of the Supreme Being and the Jiva or the Supreme Being and the manifested world. When the veil of delusions and ignorance is removed, the dichotomy between Brahm and this world is eliminated, and uniformity and non-duality between Brahm and the rest of the creation becomes evident. [That is, he realises that the visible world is nothing but the same immutable, indivisible and non-dual Brahm revealed in these myriad and multifarious forms in which this vast and endless creation exists so much so that no two units in it are identical.] (56-57).

58. The fault known as 'duality' which creates an impression of existence of two distinct entities separated from one another in something which is actually one and indivisible is applicable to this artificial world and not to Brahm. [That is, only in this physical gross world do we see two different types of creatures, such as for example a

horse and a cow. In essence, what is known as the horse and a cow is the physical gross body, but the basic factor that infuses life in both of them is the ‘Pran’ and the ‘Atma’ which are the life-giving vital winds and consciousness respectively that are the same in both. The horse and the cow would both feel the same degree of pain when hurt. For that matter, a wise man realises that the pain felt by these animals would be the same which he would feel himself when similarly hurt. The gross body is perishable and changeable, but the Pran and the Atma are immutable and the same in all creatures. It is the conscious Atma that makes one feel any sort of pain instead of the body because the latter has no life of its own but depends upon the Atma to be alive; a dead body has no feeling of pain or happiness. Similarly, Brahm is only one and a non-dual, immutable and indivisible divine entity, whereas the physical forms that this Brahm takes when it revealed itself in the form of the vast creation has countless and varied forms. But a wise man sees this non-duality everywhere inspite of the visible illusion of duality.]

This creation has five quintessential components—viz. Asti (that which ‘is’), Bhaati (that which ‘appears to be’), Priya (that which is ‘dear’ and ‘gives pleasure’), Roop (that which has a physical ‘form’), and Naam (that which ‘has a name’) (58).

59. Out of these five quintessential parts of creation, the subtle components such as Asti, Bhaati and Priya are applicable to Brahm, while Roop and Naam are the two components of the visible world.

When the essentially sublime, transcendental and supreme divinity known as Brahm who is characterized by the glorious virtues of truthfulness, consciousness, beatitude and felicity assumes some kind of gross Roop (gross form having a physical dimension) and Naam (a name that is applied to the physical form), then the same Brahm becomes metamorphosed into and known as the ‘world’ (59).

60. The spiritual aspirant should remain in a state of perpetual Samadhi, both internally as well as externally. [That is, he should remain in a virtual state of meditation and be focused on the Truth and Reality at all times. The state of Samadhi is the state when the man is totally oblivious of the body and the surrounding world, and instead remains submerged in the bliss obtained by self-realisation and being in constant communion with the consciousness. Such a man would lead an ordinary life but remain completely detached at the mental and intellectual level from all things and deeds done by the body.]

The heart (representing the true ‘self’ or the consciousness known as the Atma because the latter is said to reside in the cave-like subtle sky of the heart) is involved in two types of Samadhi—(a) Savikalpa (one having more than one alternatives or versions) and (b) Nirvakalpa (that which is one of its kind and has no alternatives or versions) (60).

61-65. The Savikalpa Samadhi is of two types—(a) one Samadhi that is literally pierced or disturbed or deflected or impinged upon by the numerous attractive sights of the world that one sees due to one’s natural instincts and desires to see pleasant and endearing objects of the world that seem attractive and enticing for the senses, and (b) one Samadhi that is disturbed by various sounds and words that one hears in this world.

The disturbance, hindrance and deflections caused to Samadhi by the sights of the physical world can be overcome by meditating and contemplating thus—‘These sights of the visible and gross world that disturb Samadhi are created by the inborn

Kaam (worldly desires, passions and yearnings for the visible and gross sense objects of the world) that a creature has, whereas the Atma is pure consciousness and expected to be only a mere neutral witness to their existence, without having any desire to obtain them or getting involved with them or attracted towards them.' [When this erudition develops, the man would neglect the visible attractions of the world and remain focused on his Samadhi.]

Similarly, the disturbance caused to Samadhi by various sounds is taken care of by meditating and contemplating thus—'I do not have any company with whom to talk (i.e. I live alone in a secluded place, in absolute serenity and calmness). I am a personification of the virtues of truth, consciousness and bliss. I am self-illuminated. I am non-dual, one, unparalleled, unique, immutable and indivisible.' [That is, I am an ethereal divine entity that neither hears anything nor speaks anything.]

A spiritual aspirant who neglects the visible world and its noises, and instead remains submerged in the thoughts of the Atma, the consciousness and the truth, he is said to be in a state of 'Nirvakalpa Samadhi'. His condition is stable, steady and unwavering like the steadily burning, un-flickering and erect flame of a lighted oil lamp placed at a place where there is no movement in air whatsoever.

These are the two types Samadhis called Savikalpa and Nirvakalpa that have their seat in the heart, i.e. they are internal Samadhis and are done with the help of the inner thoughts of the ascetic.

In the same way, when a man focuses his attention on some object in the external world, his mind becomes fixed on it and he thinks of nothing else except it. This is the external state of Samadhi.

This external Samadhi again can be classified as follows—

(a) The one that depends upon the awareness of the 'seer' and the 'seen'. [For example, 'I' am or 'he' is seeing that 'animal' or 'tree'].

(b) The separation of the external gross physical form and name of each thing that is seen from its essential form or fundamental principle that is present in it, i.e. to see the same consciousness prevailing uniformly and universally in each unit of the living world. [For example, to see the same consciousness as being present in a horse and an elephant, or in a boy and a girl, is to see the fundamental principle operating in anything that has a name and form instead of seeing only its externally visible form which do not tell the real, truthful and complete story. If this is extended further to the physical world, a truly wise man would see the element 'water' in everything liquid or fluid, such as milk and fruit juice which have different names and external forms but are nevertheless 'liquid or fluid', and liquidity and fluidity cannot come without water being present in them].

(c) The uniformity and universality of vision when one sees the same cosmic consciousness in everything in the external world. In this higher state of awareness, the ascetic does not even see any external forms and knows no names except the fact that the same cosmic Consciousness or the supreme transcendental Brahm is present everywhere. In other words, in the higher stages of Samadhi the spiritual aspirant is firmly rooted in the eclectic concept of 'non-duality' which becomes a universal phenomenon for him. There is no such thing as 'that' and 'this' anymore.

(d) The last stage creates a state of existence when there are no perplexities and confusions, when there are no distractions, deflections and disturbances. It is like the state of complete shock when one becomes dumbfounded, dumbstruck, non-responsive and stunned into non-activity. [Since at a higher level of awareness and enlightenment the spiritual aspirant is able to see the universality of Brahm everywhere; since this world appears uniform to him there would be nothing that

would stand out to either attract his attention or repel it; since the same consciousness prevails in each unit of the living world there is no question of any dichotomy arising, and hence no cause of any confusion and perplexity regarding what is true and what is false. Therefore, for such a realised and enlightened aspirant, the entire creation becomes Brahm personified (61-65).

66. A wise spiritual aspirant should spend his time in practicing these six forms of Samadhis (as described in verse nos. 61-65).

When one has become wisened, enlightened and aware of the universal presence of the Truth known as Brahm everywhere, both in the external world as well as inside his own self as the Atma, an awareness which makes him freed from the fetter of ignorance that makes him proud of his body and become self-centered instead of having a universal and broad outlook and vision of this creation that is non-dual, all-inclusive and absolute—it is only then that he experiences the nectar of supreme bliss dripping from the presence of the Absolute and Truth everywhere. [That is, when the spiritual aspirant no longer thinks that he is a separate entity with a distinct body that has its independent existence in this world and the rest of the material objects of the world are meant for his consumption and use, when he stops viewing the rest of the world with self-centric eyes of selfishness, when he stops judging the usefulness or uselessness of anything in this world with selfish criterion of whether or not that thing can gratify the sense organs of the body and their natural instincts, when he does not treat anything or anybody as more or less important than his own self, when he has developed an eclectic view of the universality and uniformity of the ‘self’ and the Atma—it is only then that he is entitled to be called ‘Brahm-realised’. It is obvious that such a man would become calm, placid and tranquil like a mountain lake; he would become steady and unwavering like the flame of a lighted lamp inside a glass enclosure where there is no movement in air.] (66).

67. When a spiritual aspirant attains this high level of enlightenment of self-realisation and Brahm-realisation, when he sees the absolute, pure and flawless Brahm as being all-permeating, all-inclusive and all-encompassing, it is then that all the knots of his heart are untied, all the confusions and perplexities that keep churning his mind-intellect and heart endlessly, thereby robbing them of their inherent peace and happiness, are dispelled. [That is, all the bonds that bind a man to the artificial world and its destructive as well as ruinous charms, all the fetters that shackle him to the deluding world and compel him to remain chained to it in the hope of possessing it and enjoying it which in turn lead him to get sucked in the vortex of birth and death—all such negative and self-destructive factors are dispensed with. The spiritual aspirant feels like a bird de-caged and is able to see the broad and vast sky not from behind the bars of the cage but from the outside. This view of the sky from outside the cage is unhindered and un-tampered by the bars of the cage. The bird watches for sometime and then takes to its wings. Similarly, the spiritual aspirant frees himself from the fetters that had been shackling him till now, sees what it means to be enlightened and have a broad vision of creation, and then finds his ‘self’ spiritually liberated. He develops a spiritual perspective with a sight and vision that is as vast and holistic as the surrounding space around him].

In this eclectic and exalted state of existence, all his deeds are automatically destroyed. [This is because he would realise that the deeds are done by the body and not the ‘self’ or the Atma, thereby absolving the latter from the consequences of the former. An ordinary man does various deeds to gain something from his efforts; he

has some desires and aspirations, and makes efforts to fulfill his wishes. But an enlightened and spiritually attained man has nothing to desire; he is completely fulfilled. In other words, the need to do anything does not arise, the need to make efforts to achieve some object is not necessitated, and therefore the 'deeds' are not done. This statement that 'deeds are not done' must be understood in the correct perspective. It does not mean that the wise, self-realised and enlightened man would lie idle and waste his time sleeping—nothing is farther from the truth. What is meant here is that inspite of doing everything that comes his way with his gross physical body, an enlightened man would not get mentally and emotionally involved or attached with any of the deeds or things. His 'self', his 'spirit', would remain aloof, disinterested and detached like a neutral observer who does not participate in anything, or like a bystander lost in his thoughts watching the traffic whiz past him on a busy road without even being aware of which car or bike has gone by or even bothering to know about it.] (67).

68. A man who is firmly convinced of the eclectic truth that there is no such thing as the existence of two distinct entities called a Jiva (living being or creature) and an Ishwar (the supreme Lord; the Supreme Being)—verily, such a man is indeed spiritually liberated and delivered; he has indeed attained spiritual emancipation and salvation. There is no iota of doubt in it. This is the Upanishad; this is what it says. Amen! (68).

_____ॐ शान्तिः । शान्तिः । शान्तिः । !!!

om saha nāvavatu / saha nau bhunaktu / saha vīryaṃ karvāvahai / tējasvi
nāvadhītamastu / mā vidviṣāvahai //

om śāntiḥ! śāntiḥ!! śāntiḥ!!!

The Shanti Paath has the following meaning—‘OM salutations! Oh the supreme, absolute and transcendental Brahm! Protect both of us—the Guru (teacher) as well as the disciple—simultaneously. Give us both your patronage; protect and sustain us together; take care of our welfare and well-being. Let us gain in strength and spiritual energy together. Let the eclectic knowledge that we both acquire become glittering and splendid as well as permanent, sound and unchallengeable so that no one can supersede us in our wisdom, erudition and knowledge; let this holistic knowledge reach its natural climax without any obstacles. Let us be at peace with each other; let us not have any kind of jealousy, malice, envy, hatred etc. against each other. Oh the most majestic and almighty Lord! Let all our three so-called ‘Traitaps’ be calmed down. Let us have peace; let us have peace; let us have peace. [The so-called three ‘Traitaps’ are the torments that the creature is subjected to due to his body such as illness, old age etc.; due to other worldly creatures such as the fear from the king, thieves etc.; and due to the malignant stars and opposed Gods etc.] Let us have peace. Let us have peace. Let us have peace.’

-----*****-----

Appendix 2

Rudra Upanishad/Rudro-panishad

This is a very small Upanishad having only three verses in the form of paragraphs. It is dedicated to Lord Shiva and is closely related to Dakshin Mukhi Upanishad which is also dedicated to this deity. It says that those who remain sincerely involved in following the essential tenets of the divine Principal of creation known as Shiva, i.e. the eclectic principles of the Shiva Tattva, are truly exalted and wise ones; they are worthy to be called Brahmins. All the elements of creation, e.g. earth, water, fire, air and sky are regarded as symbols of Shiva and represent the sacred ash smeared by him on his body. In other words, since this world is formulated out of these five primary elements of creation, it follows that the whole world is a revelation of Shiva.

Shiva is synonymous with Pran; he is revealed in the form of the vital spark of life called 'Pran' that transforms a lifeless creature into a lively living being.

He is the wisest and most enlightened teacher and preacher for the entire world and had even taught Brahma, the creator of this visible world, about the basic truth of creation and its hidden realities. In fact, it was Brahma who had first worshipped Shiva in this capacity of a wise teacher and a personification of knowledge and truth as clearly mentioned in Dakshin Mukhi Upanishad which is Chapter 18 of this volume.

Shiva is revealed Brahm inasmuch as he has five forms called Panch Brahm representing the five primal manifestations of Brahm. Basically this entire creation is an expansion of this Panch Brahm, and therefore of Shiva. This is elaborately explained in Panch Brahm Upanishad which is Chapter 28 of this volume.

By adoring the grand eclectic virtues that Shiva stands for and represents, the follower too becomes one like him; he too attains the highest level of wisdom and enlightenment which paves the path for his liberation and deliverance.

1. The Brahmin who is known as 'Vishwa Maye' (i.e. an exalted and wise person of high birth who has a broad view of the world and sees the entire world as a manifestation of the Supreme Being) approaches Lord Shiva (for worship, knowledge, patronage and blessing).

That Brahmin experiences (in his own inner self, his Atma) the presence of the Lord, and honours him by the five-letter Mantra (which is 'Namo Shivaye'—meaning 'I bow before Lord Shiva').

That Brahmin is regarded as the best and most exalted who spends his time in worshipping and contemplating upon Lord Shiva. [That is, he remains submerged in meditation on the pure conscious Truth where Shiva is said to reside.]

If any Brahmin is devoid of devotion for and faith in Shiva, he would be regarded as a Chandal or Up-chandal, the lowest category of human beings.

In spite of knowing all the four Vedas, a Brahmin is called true and worthy only if he has turned inwards to worship Shiva in his own Atma; or who has turned away from all external forms of worship of Shiva, and worships the ultimate Truth in his own bosom, i.e. in his pure conscious self known as the Atma.

Even a lowly Chandal (an outcaste) who is soaked in devotion for Shiva is better than a Brahmin who is devoid of it.

A Brahmin who wears the mark of the Tripund (the horizontal lines on the forehead of all Shiva worshippers) is regarded as the best category of Brahmin.

This (i.e. the virtues enumerated in this Upanishad) is the hallmark of his being a Brahmin; this is deemed absolutely essential and necessary for him to indicate that he adores and follows the best principles.

Only those who have sincere devotion for and faith in Shiva are eligible to be called a Brahmin.

Even a Chandal who worships the Shiva Lingam (the idol representing Shiva; Shiva's symbol) is deemed to be better than a Brahmin (who has no devotion for and who does not worship the Shiva principle).

The ash received from the hands of a Chandal who has worshipped Shiva is more holy and respected than the ash of a sacrificial fire pit.

The holy ash used by devotees of Shiva is of three colours—copper (dark) coloured, white coloured and grey coloured like the colour of smoke.

For renunciate hermits and ascetics, the ash should be sanctified or pure. [That is, it ought to come directly from the sacrificial fire pit.]

For householders, the ash should be clean. [That is, it should be fine powdery in texture and should not contain coarse particles of burnt wood or charcoal etc. that would make it appear unclean.]

The renunciates and ascetics who do Tapa (severe penances and austerities) should accept any form of ash (i.e. even the coarser forms unlike the fine powdery forms acceptable by householders) as long as that sample of ash has been blessed with Shiva's divine powers and his essential principle has been established in it. They should readily wear (smear) this ash with due respect as a symbol of Shiva's presence.

This ash which is acceptable by ascetics is also acceptable to the Gods (1).

2. OM salutations! The five elements such as the fire, the wind or air, the earth, the water and the sky—all of them are personified in this ash worn by Shiva. One should wear it (i.e. smear it on his body) with this belief and faith.

Elsewhere in the scriptures it has been said that the Ishwar, the supreme Lord of creation, has his eyes in all the directions, his mouth in all directions, his hands and legs in all the directions. [In other words, all forms of individual creatures are manifestations of Ishwar; he lives in every corner of creation, and all the eyes, mouths, hands and legs that are seen all around us every moment are actually the organs of that Ishwar.]

He is the only Lord or creator who creates the earth and sky by his own hands (like the potter moulding various pots and pans of clay by his own hands).

He is worthy of being adored, revered and honoured by all.

All living beings bow before him. That is why he is recognised by the element known as Pran or life. In other words, since only living beings can recognise him, since living beings would pay their obeisance to only that entity which has 'life' in it and which is of any value for them, for they obviously wouldn't worship a dead and useless entity, it follows that Shiva principle and Pran principle are synonymous with each other.

Therefore, Shiva principle is 'Pran Linga'—Shiva has manifested himself in this world in the form of 'Pran' which is the vital spark of life present in a living being; he is Pran personified and vice versa. Shiva is recognised as the 'living' aspect of creation, the fundamental but most secret and esoteric power that keeps the world

‘alive’ in the form of the Pran—the vital winds which provide the most essential factors of life to the otherwise lifeless body of the creature in this living world. So, the latter is the ‘Pran Linga’ of Shiva—i.e. it is the gross visible manifestation of the life infusing capabilities of Shiva in the form of the vital winds called Pran.

The iconographic form of Pran Linga Shiva has a lock of matted hairs on his head and ash smeared on his body.

Shiva and Pran are synonymous with each other. The world of mobile living creatures is a manifestation of Shiva, and vice versa.

The entire living creation is a manifestation of Shiva, and Shiva embodies in his cosmic self this entire creation. They are synonymous with each other.

It is not possible for the entire living creation, which is called the Pran Linga world (so-called because it is sustained by the vital winds called Pran), to obtain mystical divine powers and purest forms of wisdom and spiritual attainment. Amongst the entire living creation, only those who are spiritually upwardly mobile are regarded as better and more competent for acquiring such exalted position. [The entire living world includes plants and lower level of animal kingdom such as insects, worms, birds, reptiles wild animals etc. It is obvious that they cannot read scriptures and do auspicious deeds to improve themselves spiritually. Plants and animals cannot worship Shiva and understand even the basics of metaphysics and spiritualism. Low rung creatures of this world are contented in feeding themselves and deriving sense gratifications. They do not think of their future. This is the exclusive privilege of the human race. So humans are deemed to be competent to obtain the Shiva Tattva. But even amongst them, all do not get this privilege because the majority of them are no less than animals in their instincts, temperaments and behaviour. It is only a few who really qualify for the exalted stature of being called wise and enlightened.]

Even amongst the humans, those who do Tapa (observe severe forms of self restraint, do penances and austerities, and generally suffer hardships as a means to cleanse themselves) are regarded as exalted. But the privileged, exalted and holy stature occupied by such people is no match when compared with those Chandals who are great devotees of Shiva. Such Chandals are deemed to be more highly placed in the spiritual hierarchy than even ascetics who spend their time in doing rigorous Tapa but do not know the real intent and purpose nor the proper path to be followed in the observance of this religious exercise because they do it just for the sake of doing it and are more often than not misguided. Therefore, they cannot access the nectar called the Shiva Tattva, the ‘Shiva principle’.

All living beings with a gross body are visible proofs of the astounding and magnificent powers of life revealed in the form of their ‘Pran’, i.e. each living creature with a gross body is Pran personified. They are ‘Pran Linga’, or Pran with a gross body. But amongst them those Chandals who devotedly worship Shiva are considered as the best form of Pran Lingas. That is, such Chandals are regarded as the most exalted humans, even surpassing the Brahmins and ascetics.

Anyone who understands this basic principle is indeed Shiva personified.

Rudra (a form of Shiva) is the only Pran Linga in this world, and there is no one else except him who has manifested himself as the living world consisting of living creatures. [This is the holistic non-dual Advaitya philosophy espoused and expounded by all the Upanishads in one voice, and in a universal and uniform manner.] (2).

3. OM salutations! The Atma (pure consciousness) is an embodiment of the (supreme transcendental) Brahm as well as of (the auspicious and truthful, the holy and divine) Shiva.

The Atma is a personification of the moral preceptor who is wise and enlightened, i.e. the Guru, as well as Shiva (the enlightened, wise, most erudite and all-knowing Lord who is the teacher and preacher for the whole world in his form as Dakshin Mukhi Shiva).

It is the moral duty of a true Guru to lend moral and advisory support to the entire world with his high level of wisdom, knowledge and erudition. He should prevent the world from sinking under the weight of sins and perversions by providing it with correct and practical guidance; it is tantamount to his bearing the world and preventing it from breaking apart or sinking into chaos. This is achieved by them by harnessing the stupendous dynamic powers that are encapsulated in the various divine Mantras by chanting them or repeating them systematically so that the powerful energy of the Mantra can actually be utilized constructively for the welfare of the entire world. This world is dependent upon such Mantras. [That is, the world needs knowledge and wise council to survive. Without knowledge and information, life on earth would be very difficult and hostile. It is the duty of Brahmins to act as wise, selfless, neutral and sincere teachers and advisors—or Gurus—to guide the people and help them fulfill their desires in a righteous manner.]

The supreme Lord's glories and magnificence, his majestic powers and authority, his astounding abilities and prowess are being expressed through these Mantras. [This is because the whole world is a manifestation of Brahm, the supreme Lord, and since the Mantras are nothing but formulas to solve various problems that occur in a person's life, they are an expression of the Lord's multidimensional ability to sustain and protect this creation.]

That Lord is the universal Guru of all of us. [Here, the 'Lord' being referred to is Shiva in his form as the moral preceptor and teacher of the entire world in his form as Dakshin Mukhi Shiva described in the Upanishad named after him.]

The truthful spiritual knowledge and divine wisdom which is imparted by Shiva in his capacity as the creation's Guru is like the food for the creature that sustains his life in this creation. This knowledge is as sublime and supreme as the supreme Brahm. [This is because without Brahm the world would not have come into being in the beginning. This has a parallel in food without which no life can be ever sustained. Food is needed to sustain physical life in creation while spiritual knowledge is needed to sustain one's spiritual life and help him in his progress to obtain his true goal in life. Therefore, food and knowledge bear close resemblance and kinship with the creature just like the supreme Brahm whose physical features are represented by this gross visible world and whose subtle features are represented by such glorious virtues as knowledge, wisdom, erudition, sagacity, enlightenment etc. While the physical features form the gross body of the creation, the subtle features are represented by the faculty of mind and intellect. The Brahm himself is represented by the Atma residing inside the body consisting of both the gross form as well as the subtle form.]

Brahm is so esoteric, mysterious and enigmatic that he can be known only by a person's own experience and not by being told or taught by others.

Lord Shiva is the universal Guru, and this form of Shiva is a subtle and sublime form. [That is, the Shiva principle is present in all wise teachers and preachers. Extended further, it implies that self-realisation or self teaching or self

awareness is also a form of Shiva because no knowledge is ever possible without Shiva being an integral part of the process.]

Shiva is an image or personification of both the aspects of the supreme transcendental Brahm—i.e. as a manifested God he has a well defined body with known attributes and character traits, and as the un-manifested sublime principle he reveals himself as the pure consciousness or the self-illuminate Atma of all living beings. He is therefore the ‘life’ of all; he is the ‘Pran’ of all.

Being an authority of such glorious magnificence and divine virtues, he is called ‘Maheshwar’, the great God. [This ‘great god’ is none other but Brahm himself. In other words, Shiva and Brahm are one and the same.]

Therefore, Shiva is the great Guru as well. [This is because the word Guru means one who removes darkness, and the Atma, being self-illuminated and a treasury of wisdom and enlightenment, would naturally remove the darkness of ignorance that had been engulfing the creature once he comes to realise the presence of the Shiva principle in his own Atma present inside his own bosom by meditating upon the Shiva Tattva, or the principle tenets of metaphysics and spiritualism that talk about the ultimate and non-dual Truth about the pure divinity known as the ‘self’ in this creation.]

Where there is a Guru there is Shiva present. [That is, a teacher is a personification of Shiva because he gives knowledge and wisdom that removes the darkness of ignorance for his disciple. Hence, a sincere and worthy Guru should be given the same degree of respect and honour that one would give Shiva.]

The great God called Maheshwar is indeed a personified form of a Guru and Shiva. [The form that combines the excellent virtues of a wise, learned and knowledgeable teacher or Guru, and the one who is truthful, auspicious, divine, holy, enlightened and dispassionate or Shiva is indeed rare to find even amongst the Gods. That is why one personifies the eclectic and glorious virtues of a Guru and Shiva is indeed eligible to be called a great God or Maheshwar.]

Applying the principle of ‘Bhramar-Keet’¹, a devotee who remains perpetually engrossed in the deep thoughts and devoted worship of Shiva not only as his chosen deity but also as his Guru, i.e. one who worships Lord Shiva as his Guru besides worshipping him as the personification of the Supreme Being, becomes, in due course of time, indistinguishable from Shiva so much so that he need not then offer separate worship to the Lord anymore. In other words, he keeps on worshipping Shiva involuntarily each moment of his conscious life so that he need not do so consciously and separately.

[¹The *Bhramar* is the wasp who catches hold of smaller insects, the *Keet*, and keeps them trapped in its comb. The incarcerated insect is subjected to constant close humming sound made by the wasp that hovers constantly around it at very close quarters. The resultant psychological effect is so profound that by and by the insect also assumes the nature of the wasp and transforms into one; the insect is brain-washed to such an extent that it thinks and imagines of nothing else but the wasp and begins to imagine itself also as a wasp. This example is cited here to explain the phenomenon how the devotees who constantly think of Shiva and keeps on repeating his Mantras becomes one like Shiva. This is because constant practice and thoughts of Shiva would have had a profound effect on his psyche, and his sub-conscious mind would think of nothing else but Shiva not only as some revered God but also as the one who imparts divine wisdom and eclectic knowledge of the fundamental Truth of creation.]

By doing 'Abhishek' of Shiva Lingam (i.e. by anointing the Shiva Lingam with milk or water as a token of honouring and paying obeisance to Lord Shiva through his symbol), all the sins and other forms of evil deeds done by the devotee are made null and void. That is, he does not have to suffer from their horrendous consequences.

By doing 'Abhishek' of the Guru (i.e. by anointing the teacher with milk or water as a token of honouring him and paying one's obeisance to him) and by sipping the water used to wash the feet of Maheshwar (Lord Shiva), one can wash off the sins of many generations.

To have love and devotion for them (i.e. by doing Abhishek of the Lord and washing his feet, by doing Abhishek of the Guru, and by worshipping them both) is tantamount to having love and devotion for Shiva. [In other words, the Guru here may be Lord Shiva himself or some other person or God, but the worshipper should think, while offering his obeisance to the Guru, that he is worshipping Shiva in the form of the Guru.]

The great satisfaction and contentedness derived by the worshipper from this form of worship is tantamount to Shiva himself deriving this satisfaction and contentedness. [This is an obvious inference from the fact that the Atma or soul or pure self of the worshipper is the actual entity which enjoys the mental satisfaction and derives pleasures from doing something noble, holy and auspicious, and this Atma is a personification of Brahm who is none other but Shiva himself. Therefore, the one who is actually enjoying the rewards of good deeds is Shiva himself.]

To live in its proximity is the most auspicious and holy deed. [When one lives close by something noble, holy and auspicious, his whole being undergoes a radical transformation, because one becomes like the company one keeps. In other words, the worshipper becomes a changed man in due course of time. He becomes as holy, noble and auspicious as Shiva.]

Elimination or destruction of all delusions and ignorance is like Shiva annihilating or concluding this material, deluding and falsehood-ridden world. [The symbolism of Shiva as the concluder of the world is very cleverly brought out here.]

A person who has inculcated this divine and eclectic knowledge is always submerged in a perpetual state of bliss and ecstasy. [This is why Lord Shiva has been depicted as always being in a state of utmost bliss and ecstasy. Once all delusions and ignorance are removed, there will be no cause for any confusions and consternations to create any kind restlessness and unhappiness. Once the light of enlightenment shines through, the darkness of ignorance and delusions will automatically vanish.]

That is why one should take the refuge and shelter of Lord Shiva. That is also why one should take the refuge and shelter of a Guru (because it is the latter who would direct the seeker towards the Truth in the form of Shiva).

This is the best and the most holy thing, or the most auspicious and righteous path to be followed (3).

Appendix 3

Vishnu Sukta

This devotional hymn is dedicated to Lord Vishnu who is the most gracious, compassionate, merciful, benevolent, magnanimous and affable sustainer, nourisher and protector of the whole creation. He is the Viraat Purush and the supreme transcendental Brahm personified. The Skanda Upanishad to which this Sukta relates is Chapter 19 of this volume, and it describes him as being synonymous with Shiva the auspicious and truthful Lord of creation, and with Brahm who is the supreme transcendental Supreme Being on the one hand, and with the Jiva, the creature in the form of his pure conscious self, on the other. This Sukta has seven verses that appear in Shukla Yajur Veda 5/15-21.

The Rishi of this Sukta (i.e. the sage who had first conceptualised it and tested its spiritual powers) was Dirghatama (literally meaning the sage who had an extremely long life). Vishnu is also known as Maha-Vishnu, the great Vishnu in line with Maha-Dev, an epithet used to describe the divinity, the majesty and greatness of Shiva. The sun in the heaven or sky, and the fire originating from the fire sacrifice done on earth are also other forms of Vishnu because they both sustain life. He is most ancient amongst Gods, and is omniscient and all-knowing. Even the creator of the visible creation, Lord Brahma, is said to have emerged from a divine lotus coming out from Vishnu's navel. Goddess Laxmi, the goddess of wealth and prosperity, is his divine consort. This is a symbolic way of saying that Vishnu is the Lord of all material wealth in this world. Wealth and material prosperity was necessary for him to sustain the creation and take care of its worldly needs. He has revealed himself in various incarnations to protect the world from the tyranny of demonic forces when their torments and the horrors that they perpetrate became intolerable.

1. The all-pervading and omnipresent Lord Vishnu bears this world. He has established the three worlds as a tripod on which the entire edifice of creation rests, and these three represents his legs. The earth is his first step, the sky is the second step, and the heaven is the third step. [That is, the mortal beings live on the earth, the mid-level spirits live in the sky, and the exalted Gods live in the heaven.]

The entire creation is embodied in the person of Vishnu. We offer our oblations to you and show our great gratitude and deepest respect for you by making this offering into the sacred fire meant for worshipping you by saying Swaha (1).

2. This earth provides staple food and all other forms of edible things besides sustaining the cow which gives wholesome nourishment in the form of milk produced by her for the all round well being of all the living creatures that inhabit the earth. [In other words, the earth ensures that all the living beings who live on it are well looked after by directly producing food to nourish them, and at the same time it has manifested itself in the body of the cow who produces milk that is a complete food for all the living beings.]

Oh Lord Vishnu! You have graciously borne and supported this fertile earth from all the sides by the virtue of your glorious rays. [Here, the reference is to the sun

in the sky whose light, heat and energy supports life on earth, as well as to the fire that is present in the earth itself and serves the same purpose.]

We offer our oblations to you and show our great gratitude and deepest respect for you by making this offering into the sacred fire meant for worshipping you by saying Swaha (2).

3. Let this auspicious deed of mine be known to the great souls who have assembled in the court of Gods. [Let them know that I too am eligible to obtain the same exalted stature as they have and am equally eligible as they to have access to heaven.]

To show support to my efforts of doing this fire sacrifice, you (Vishnu) are requested to go to the east direction and enhance its glory and magnificence. Do not defile my sacrifice or do anything to reduce or nullify its auspicious good effects. [In other words, give protection to me and my auspicious efforts. The Sun God is said to be the patron God of the east according to Brihad Aranyaka Upanishad, 3/9/20-24. The sun rises in the east, so this verse implies that when one worships the rising sun, one is actually worshipping Lord Vishnu, welcoming the Lord as a herald of new life and honouring him as a harbinger of growth and development. So Lord Vishnu is requested to light up the world till the time the fire sacrifice is not completed. It also means that let the sun shine brightly over the land and reward the efforts of doing the fire sacrifice by giving sufficient light energy and heat to this earth so that it can sustain a healthy and vibrant life, a life that is always fresh as the morning sun and which continues to grow and develop in majesty and magnificence as time passes much like the progress of the sun in the sky.]

Let the Goddesses manifested as cows live in their cow-sheds. [The cows are regarded as personifications of divine Goddesses who live in the heaven. So, one prays to Lord Vishnu to ensure that these divine forces of creation live in his own cow-shed in the form of cows. The cows are expected to be healthy so that they can give abundant milk to sustain healthy creatures on this earth.]

Let us and all our dependants have prosperity and material well being till we live on the earth. [Let us not suffer from poverty and wants.]

Be benevolent and merciful on your subjects and off springs (i.e. on the creatures of this creation).

Always remain present in this comfortable and pleasant place (earth). [That is, do not abandon us and remain with us as our care taker and protector.] (3).

4. That supreme all-pervading Lord Vishnu who has created this earth along with the other units of creation such as the sky and the heavens, who is revered and adored in the entire world and occupies the highest glorious position in it—say, which of his magnificent glories can be narrated. [That is, it is practically impossible to describe the glories of the almighty and supreme Lord of creation.] (4).

5. Oh Vishnu! Let this world enjoy the fruit of your magnanimous grace; let this world be filled with all joys and happiness that come with your divine grace. Be certain to provide this world (i.e. its inhabitant creatures) with all essential things and materials produced by earth, and all the divine things produced by the sky. [The material things produced by the earth are food, minerals, metals, gems and other forms of wealth etc, while the divine things produced by the sky refer to rains and sunlight.]

Oh the Lord who resides in the inner self of living beings as their Atma, the pure conscious soul, is omniscient and all-knowing! Oh Vishnu who liberally gives

away all sorts of comforts and happiness by both his hands! We worship you and express our greatest of reverence for you (5).

6. Oh Lord Vishnu! You are all-pervading and omnipresent. You roam freely and fearlessly like a ferocious lion does in the high mountains. Your matchless valour and bravery makes you worthy of praise. All the creatures that exist in this creation do so in the three places where the all-pervading and omnipresent Lord Vishnu lives (i.e. Lord Vishnu is present in all the three worlds that have come into existence, and these worlds are the mortal world called the earth, the nether worlds where fallen creatures live, and the heavens where the Gods and high spirits live) (6).

7. The divine light (representing the brilliant glory, the stupendous majesty, the astounding mystical powers, the divine authority, the unmatched fame and glorious magnificence) of the all-pervading and omnipresent Lord Vishnu is continuously spreading uniformly throughout this world. It is due to Lord Vishnu that this world is established (i.e. it is due to him that this world has come into being in the first place), it is due to him that it has spread (i.e. it is due to him that it has found sustenance, nourishment and development), and it is he who pervades in every bit of what exists.

Oh Lord who has created this world, who has established this world! We pay our deepest of regards to you; we pay our sincere respects to you.

Appendix 4

Narayan Sukta

This devotional hymn extols the magnificent divine glories of Narayan, the Supreme Being. Its Rishi (the sage who first conceptualised and preached it) is Narayan (Lord Vishnu the care take of the entire creation). Its Devta (the patron God or the deity worshipped through the hymn) is Aditya Purush (i.e. the cosmic divine male aspect of creation, the Viraat Purush, manifested in all his splendorous and dazzling glory as the Sun God). And the poetical style used in its composition, called the Chanda, is Trishtup.

It is relevant to the Narayan Upanishad which is Chapter 7 of this volume. It has six verses that appear as the concluding verses of the Purush Sukta that appears in the Shukla Yajur Veda, hence sometimes also called the 'Uttar Narayan Sukta'.

It basically describes succinctly the greatness of the primary Lord of creation, the genesis of creation, and the moral duties of a righteous person. Since it is addressed to the chief God called Narayan, it is natural that all other Gods become submissive to the person who uses this Sukta to pray to the Supreme Being known as Narayan.

1. In order to create the earth and other units of this world, he (the Supreme Being) willingly and magnanimously transformed himself into water and other necessary ingredients of creation. Then he uniformly spread everywhere. [That is, all the basic elements of creation were uniformly dissolved in this primordial cosmic fluid.]

The Sun emerged (in all its splendid glory and majestic splendour) as a vivid manifestation of this primary Purush (the Supreme Being). That is why the Sun is the chief God and occupies the highest importance for all human kind. [That is, when the sun appeared on the horizon of this water, it looked that the Supreme Being is coming out of the sea¹. It is the chief God because no life would have been possible if there was no sun shining in the dark and forebodingly chilling night that preceded this creation. The sun provided the necessary heat, light and energy that made it possible for water to become warm and helps to spring forth the latent life forms hidden in its bosom. The plants needed sunlight to carry on photosynthesis for their survival, the warmth of the sun created an atmosphere conducive to creation of fungus and algae and other life forms depending on humidity and heat, the sun produced the season and rains, and it was generally regarded as the first manifestation of the Supreme Being from the point of view of human beings who offered their worship to the sun as a means of worshipping the visible image of the otherwise invisible Supreme Being. The scene that is visualised here is of a brilliant disc of the sun rising from the surface of the vast ocean that covered the earth at the beginning of life on the planet.] (1).

[Note—¹The *Holy Bible* has an identical depiction of the first few steps of creation in the first book of Moses called the *Genesis* in its Chapter 1, verse nos. 1-31, and Chapter 2, verse nos. 1-7. The relevant part is quoted here as follows—

“Chapter 1:--1: In the beginning God created the heaven and the earth.

2: And the earth was without form, and void; and darkness was upon the face of the deep. And the Spirit of God moved upon the face of the waters.

3: And God said, Let there be light: and there was light.
4: And God saw the light, that it was good: and God divided the light from the darkness.
5: And God called the light Day, and the darkness he called Night. And the evening and the morning were the first day.
6: And God said, Let there be a firmament in the midst of the waters, and let it divide the waters from the waters.
7: And God made the firmament, and divided the waters which were under the firmament from the waters which were above the firmament: and it was so.
8: And God called the firmament Heaven. And the evening and the morning were the second day.
9: And God said, Let the waters under the heaven be gathered together unto one place, and let the dry land appear: and it was so.
10: And God called the dry land Earth; and the gathering together of the waters called he Seas: and God saw that it was good.
11: And God said, Let the earth bring forth grass, the herb yielding seed, and the fruit tree yielding fruit after his kind, whose seed is in itself, upon the earth: and it was so.
12: And the earth brought forth grass, and herb yielding seed after his kind, and the tree yielding fruit, whose seed was in itself, after his kind: and God saw that it was good.
13: And the evening and the morning were the third day.
14: And God said, Let there be lights in the firmament of the heaven to divide the day from the night; and let them be for signs, and for seasons, and for days, and years:
15: And let them be for lights in the firmament of the heaven to give light upon the earth: and it was so.
16: And God made two great lights; the greater light to rule the day, and the lesser light to rule the night: he made the stars also.
17: And God set them in the firmament of the heaven to give light upon the earth,
18: And to rule over the day and over the night, and to divide the light from the darkness: and God saw that it was good.
19: And the evening and the morning were the fourth day.
20: And God said, Let the waters bring forth abundantly the moving creature that hath life, and fowl that may fly above the earth in the open firmament of heaven.
21: And God created great whales, and every living creature that moveth, which the waters brought forth abundantly, after their kind, and every winged fowl after his kind: and God saw that it was good.
22: And God blessed them, saying, Be fruitful, and multiply, and fill the waters in the seas, and let fowl multiply in the earth.
23: And the evening and the morning were the fifth day.
24: And God said, Let the earth bring forth the living creature after his kind, cattle, and creeping thing, and beast of the earth after his kind: and it was so.
25: And God made the beast of the earth after his kind, and cattle after their kind, and every thing that creepeth upon the earth after his kind: and God saw that it was good.
26: And God said, Let us make man in our image, after our likeness: and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing that creepeth upon the earth.
27: So God created man in his own image, in the image of God created he him; male and female created he them.
28: And God blessed them, and God said unto them, Be fruitful, and multiply, and replenish the earth, and subdue it: and have dominion over the fish of the sea, and over the fowl of the air, and over every living thing that moveth upon the earth.
29: And God said, Behold, I have given you every herb bearing seed, which is upon the face of all the earth, and every tree, in the which is the fruit of a tree yielding seed; to you it shall be for meat.

30: And to every beast of the earth, and to every fowl of the air, and to every thing that creepeth upon the earth, wherein there is life, I have given every green herb for meat: and it was so.

31: And God saw every thing that he had made, and, behold, it was very good. And the evening and the morning were the sixth day.

“Chapter 2:--1: Thus the heavens and the earth were finished, and all the host of them.

2: And on the seventh day God ended his work which he had made; and he rested on the seventh day from all his work which he had made.

3: And God blessed the seventh day, and sanctified it: because that in it he had rested from all his work which God created and made.

4: These are the generations of the heavens and of the earth when they were created, in the day that the Lord God made the earth and the heavens,

5: And every plant of the field before it was in the earth, and every herb of the field before it grew: for the Lord God had not caused it to rain upon the earth, and there was not a man to till the ground.

6: But there went up a mist from the earth, and watered the whole face of the ground.

7: And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul.”]

2. I know that excellent Purush (the Supreme Being) in his splendorous form of the radiant sun which symbolises the fact that he (the Supreme Being) is beyond the reach of the darkness of ignorance. By merely knowing who he is one can overcome death. [This is because ‘death’ is a metaphor for darkness and ignorance. Once the light of wisdom and enlightenment shines on the horizon of the man’s intellect, these symbols of death are eradicated, which means that he has obtained a symbolic victory over death.]

There is no other way out for those seeking shelter (from the fear of death) (2).

3. That Prajapati (the Lord of creation who looks after his creation like a loving father) is present in the inner self of all the creatures (as their Atma). Although he has no birth, he reveals himself as all the creatures of creation. Only those who have total self control are able to witness his presence. All the creatures are part of his vast and cosmic form; nothing in existence is outside of him (3).

4. I bow most reverentially to that glorious and splendorous divine entity known as Brahm who shines in the form of the Sun for the benefit of Gods, who helps the Gods in doing their duties, and is the one who precedes all the Gods as the primary elements themselves (from which not only the Gods but the rest of the creation also came into being) (4).

5. Honouring that supreme Brahm and placing him before themselves in the divine hierarchy of Gods, they declared—‘Those Brahmins who would recognise you with these eclectic qualities and divine virtues, we the Gods would be under his command’ (5).

6. Prosperity, glories and majesty as well as beauty and charm that mark this creation are your symbolic consorts (i.e. they are the other half of your divine personality).

The day and the night are your two flanks. The countless stars are your countless forms. The heavens and the earth are two main places where you are to be found.

When one wishes to have a desire and ambition, let him have the desire for the world beyond the present. [In other words, let us see beyond our restricted viewing window and look at the vast and colourful world in the yonder. Let us open up our minds and hearts and rise up to go beyond constricted views and selfish vision of the world. Let our thoughts and intellect have a broad perspective of the world and let us be ready to listen to other's point of view, and accept it. Let us be broad minded and open hearted. Let us acquire newer forms of knowledge and access more information to broaden our horizon of knowledge and wisdom. Let us transform ourselves from our present hovel-like existence and dream like an emperor, because only when we dream big and high can we hope to ever actually fulfill our dreams.]

Let me become a man of the global world and have a global vision of life (instead of being selfish and self-centered) (6).

Appendix 5

Krishi Sukta

The Krishi Sukta is the 17th Sukta (prayer / hymn) of the third Canto of Atharva Veda. It praises agriculture, for it is an endeavour to produce the all-important food which not only supports life in the mortal world but even the Gods depend on it by way of food offerings made to them during fire sacrifices, and the spirits of dead ancestors too who find their sustenance from the food offerings made to them by their descendents.

The Rishi (chief sage or seer who first conceptualised it) is Vishwamitra. Its Devta (deity) is Sita (the divine consort of Lord Ram). It has been lauded as the endeavour that enhances all round welfare and good fortune. It is one of the best forms of human enterprise and the most important one at that. The life on this planet is sustained and fostered due to this effort of agriculture. Favourable season, good soil, hard labour—these are some of the most important necessities of agriculture. The sage requests the Rain God, Indra, to irrigate the land, and the Sun God, Surya, to protect it with his powerful light. It outlines the process of cultivation and harvesting.

1. Those wise ones who believe in divine powers represented by or personified in the form of Gods plough their fields diligently and painstakingly while deriving great joy and happiness by this arduous toil. It gives them an all round welfare, comfort and pleasure in great abundance. They keep the yoke aside at the end of the day's toil (so that the ox can rest) (1).
2. The ploughman should prepare the yoke and attach it properly to the plough and then till the land. Prepare the land properly and sow the seeds. This would result in a good crop and a robust harvest, which in turn would produce food (when cooked) (2).
3. The plough should have a strong iron ploughshare/blade, a comfortable wooden handle for the purpose of easy holding of the implement when moving the plough on rough ground. This plough (should be duly respected because it) provides the cow and the bull, the sheep and the goat, the horse and the mare, the wife and the son with excellent healthy food in the form of green grass and fresh fodder as well as cereals, pulses and other eatables respectively, which makes them all contented, happy, healthy and robust (3).
4. Let Indra (the Rain God) irrigate the land which has been tilled and made ready by the plough for sowing. Let Surya (the Sun God) who is the sustainer, nourisher and protector of crop protect it with his rays of light. Let this earth give us crop full of life, strength, energy, vitality and vigour on a perennial basis (4).
5. Let the beautiful ploughshare/blade dig properly in the earth and make perfect furrows while the farmer (the ploughman) moves behind it. Let Vayu (the Wind God) and Surya (the Sun God) who are pleased by the offerings made to them by us during

the fire sacrifice bless us with excellent herbs with potent medicinal properties that are produced by this effort of agriculture (5).

6. Let the ox live happily, contentedly and comfortably. Let every man be happy, contented and cheerful. Let excellent cultivation be done and excellent harvest be produced by moving the plough willingly, cheerfully and gladly. Let the tying ropes be tied in the proper way. The whip should be raised only when absolutely necessary and according to the needs of the hour.

[That is, though it is inevitable to use the whip on the animal, but only as an exception. This implies that the ox and other farm animals should not be treated cruelly; they should be shown great mercy and compassion. It is on them that the life of a farmer depends.] (6).

7. The Surya and Vayu are requested to accept my fire sacrifice and the offerings made in it, and irrigate the land with the water in the sky—let there be abundant rain from the clouds (7).

8. We adore and give the greatest of respect to earth because it provides us with all auspiciousness, great opportunities, all round welfare and good fortunes as well as all sorts of comforts and pleasures. Let this earth bless us with excellent crop on a perpetual basis (8).

9. When the earth is irrigated by us with due honour by the offerings of clarified butter and honey, and when the patron deities of water (Indra), wind (Vayu) and other Gods are favourably inclined and benevolent, it is then that the earth gives us excellent crop of paddy and other cereals as well as succulent fruits as a reward (9).

Appendix 6

References to Books that explain various Concepts & Terms appearing in the main text of the Upanishads

My esteemed reader is informed here that the different metaphysical and spiritual concepts that are an integral part of the Upanishads, and need more elaboration, analysis and a detailed explanation, have been published by this author (Ajai Kumar Chhawchharia) as independent Books. Their titles and links are mentioned below. Those readers who may like to have a further reading on the topics and subjects related to concepts of metaphysics, theology and spiritualism as envisioned in the Upanishads may download these Books from the following two websites:

- (i) Internet Archive.org: https://archive.org/details/@ajai_kumar_chhawchharia
- (ii) www.tulsidas-ram-books.weebly.com

Title of relevant Books as referred to herein above:

- (1) Title : 'Brahm' in the eyes of the Upanishads

Page URL :-

- (i) <https://archive.org/details/6-brahm-in-the-eyes-of-the-upanishads>
- (ii) tulsidas-ram-books.weebly.com/uploads/2/1/7/4/21746472/brahm_in_the_eyes_of_the_upanishads.pdf

- (2) Title : SANYAS with Vairagya Shatakam of Bhartrihari

Page URL :-

- (i) <https://archive.org/details/9-sanyas-with-vairagya-shatkam-of-bhartihari>
- (ii) tulsidas-ram-books.weebly.com/uploads/2/1/7/4/21746472/sanyas-with_vairagya_shatkam_of_bhartihari.pdf

- (3) Title : Tattvas (elements) and Gunas (qualities): According to the Upanishads

Page URL :-

- (i) <https://archive.org/details/11-tattvas-gunas-according-to-upanishads>
- (ii) tulsidas-ram-books.weebly.com/uploads/2/1/7/4/21746472/tattvas_and_gunas_of_creation_according_to_upanishads.pdf

- (4) Title : 'Maya' The Whirlpool of Delusions in Creation As elucidated in the 'Upanishads' & 'Ram Charit Manas'

Page URL :-

(6) Goodreads:

https://www.goodreads.com/author/show/991710.Ajai_Kumar_Chhawchharia

There are countless books based on Indian scriptures and their spiritual, metaphysical and theological principles written in English by Ajai Kumar Chhawchharia with a missionary zeal as his humble service to his beloved Lord Sri Ram.

These books are a 'book lover's dream come true' and stand out heads-over-shoulders in the realm of metaphysical, philosophical, devotional, spiritual and classical literature of India. Such as for example, there are Goswami Tulsidas' myriad works with Sri Ram as the central theme which are glittering like gems, poetically told, stupendous in beauty, marvelously narrated and contain a treasury of fathomless wisdom and deep insight into spiritualism, metaphysics and philosophy. Then there is

Veda Vyas' glorious narration of the epic story of Sri Ram in Adhyatma Ramayan and Devi Puran Maha Bhagwat Ramayan. The Upanishads represent the epitome of Indian philosophical, metaphysical and spiritual treatises— the marvellous highest pinnacle that human thought can possibly reach. They are acclaimed the world over as highly evolved and intellectually enlightening books. The Vedas, on the other hand, are believed to be revealed books. The two form the two legs of Hinduism.

The author has presented a simple, day to day bilingual version (Hindi and English) of these stupendous texts. A huge array of information on Sri Ram and Hanuman culled from the Vedas, Upanishads, Purans, and myriad other sources have been systematically presented by the author in lucid, florid, easy flowing, vibrant and captivating English language— useful to a layman, a devotee, curious people, research scholars, casual as well as serious readers, plain book lovers or connoisseurs of classical literature. A must read for everyone.

All the books have original text with line-to-line easy flowing English version with necessary explanatory notes, appendices, etc.

The list of books are as follows:

Detailed English versions with commentary on Books of 'Goswami Tulsidas':

- * Vairagya Sandipani of Goswami Tulsidas.
- * Vinai Patrika of Goswami Tulsidas.
- * Geetawali of Goswami Tulsidas.
- * Kavitaawali of Goswami Tulsidas.
- * Dohawali of Goswami Tulsidas.
- * Janki Mangal of Goswami Tulsidas.
- * Ram Lala Nahachu of Goswami Tulsidas
- * Parvati Mangal of Goswami Tulsidas.
- * Barvai Ramayan of Goswami Tulsidas.
- * Ram Charit Manas, Baal Kand (Canto 1) [The other 6 Cantos, i.e. Ayodhya Kand, Aranya Kand, Kishkindha Kand, Sundar Kand, Lanka Kand, and Uttar Kand, are in the process of writing, and would be made available, one by one, as soon as they are ready for publication.]

Detailed English Books based on original texts of Goswami Tulsidas, with extensive commentary:

- * Story of Ravana and the Epic War of Lanka Told in Slow Motion: in 2 Volumes (5Parts)
- * 'Sundar Kand' of Ram Charit Manas
- * The Kaagbhhusund Ramayan or The Aadi Ramayan
- * The Divine Story of Lord Shiva's marriage with Parvati (based on Ram Charit Manas, Parvati Mangal & Vinai Patrika)
- * Lord Ram's marriage with Sita (based on Ram Charit Manas).
- * Ram Geeta: The Gospel of Lord Ram.
- * A Divine Biography of Lord Ram & Glory of Lord's Holy Name.

Other Books on the theme of Lord Ram:

- * Glory of Lord Ram's Holy Name, Sacred Mantras, Stotras & Hymns
- * Anthology of Sacred Hymns, Stotras & Mantras of Lord Ram.
- * Upanishads dedicated to Lord Ram & their Philosophy.
- * Saint Surdas' "Ram Charitawali".

- * The Chariot of God—Dharma Rath.
- * Bhakti—Devotion for Lord God.
- * Saints and Non-Saints, Their Character and Comparison.
- * ‘Ram Charit Manas’ (the holy lake containing the ambrosia in the form of the divine story describing the deeds and acts of Lord Ram who was an incarnation of the Supreme Being upon earth) by Goswami Tulsidas—full text with English introduction.
- * Life sketch of Goswami Tulsidas.

The Trilogy of Books on the epic known as the ‘Ramayan’:

- * English rendering of Adbhut Ramayan by sage Valmiki.
- * English rendering of Adhyatma Ramayan by sage Veda Vyas.
- * English rendering of Devi Puran’s Ramayan by sage Veda Vyas.

English Books dedicated to Lord Shiva:

- * Book 1= Marriage of Lord Shiva with Parvati
- * Book 2= Sacred Hymns of Lord Shiva.
- * Book 3= Lord Shiva—His legend, Upanishads, Puran, Hymns & Parvati Mangal.

A Book in English dedicated to Lord Hanuman:

- * The Legendary Glory of Hanuman.

English Books explaining various spiritual and metaphysical concepts based on the Upanishads:

- * Chakras and Naadis in the human body.
- * Metaphysical & Spiritual Concepts of the Upanishads Explained
- * Concepts of Mantra, Japa, Tantra and Yantra According to the Upanishads
- * A True Guru (The Qualities, Importance and Need of a True Teacher, Preceptor, Guide and Advisor).
- * Maya: The Whirlpool of Delusions in Creation.
- * The Triumvirate of Creation: According to the Upanishads.
- * The ‘Pentagon of Creation’—The Panch Tattvas, Panch Bhuts, Panch Prans & Panch Koshas.
- * Revelation of Creation as envisioned in the Upanishads.
- * YOGA—Its Practice & Philosophy according to the Upanishads.
- * Who is a Guru?
- * The 24 Avtaars (incarnations) of Lord Vishnu.
- * The Viraat Purush—the cosmic, all-embracing form of the Supreme Being: as conceived in the Upanishads, Adhyatma Ramayan of Veda Vyas, and Ram Charit Manas of Goswami Tulsidas.
- * OM and NAAD: the cosmic revelation of Super Consciousness extensively explained and compiled from the Upanishads.
- * Vaak (spoken word), Akshar (alphabet) & Sristi (creation).
- * The concept of ‘Kalaa’.
- * ‘Brahm’ in the eyes of the Upanishads.
- * ‘Sanyas’ with ‘Vairagya Shatkam’ of Bhartihari.
- * The ‘Mahavakyas’ (Great Sayings) of the Upanishads.
- * The ‘Tattwas’ (elements) and the Gunas (qualities) According to the Upanishads.
- * The Fundamental Elements and Character Traits of Creation as Enunciated in the Upanishads {available only on www.draft2digital.com }

* The Metaphor of the Hansa in the Upanishads: The symbolism of a Grand Swan used to explain the wisdom of spiritual and metaphysical principles by the Upanishads.

Other English Books on Hinduism and its Spiritual Philosophy (by Ajai kumar Chhawchharia):

- * Bhakti Sutra Mala
- * Shandilya Bhakti Sutra
- * Narad Bhakti Sutra
- * 'Vairagya Shatkam' of king-sage Bhartrihari.
- * The great ancient sages, seers, saints and enlightened kings of India.
- * The great sages, seers, saints and enlightened kings of ancient India {available only on www.draft2digital.com }
- * 'Arunachal Pancharatna & Rudra Ashtak'. {In English, co-produced by Rev. Janardan Kalianand-Swami of USA and Ajai Kumar Chhawchharia. }

***Detailed English renderings, with explanatory notes and commentaries of the 108 Upanishads classified according to the Vedic tradition.**

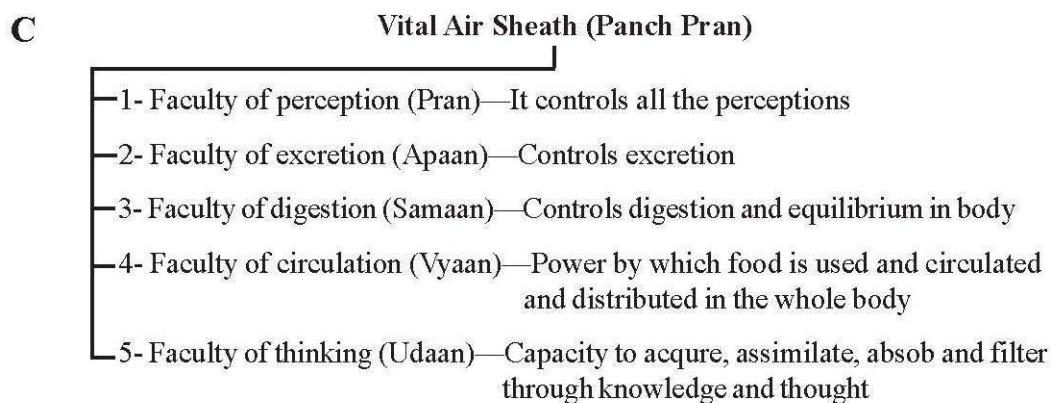

Vol. 1=Rig Veda Upanishads; Vol. 2= Sam Veda Upanishads; Vol. 3= Shukla Yajur Veda Upanishads; Vol. 4= Krishna Yajur Veda Upanishads; Vol. 5= Atharva Veda Upanishads;

NOTE: A full-blown English rendering of Tulsidas' epic 'Ram Charit Manas' is under preparation. It will be a unique Book and an elaborate one, as it would run into many thousands of pages that would endeavour to explain each single verse of Ram Charit Manas in detail from different perspectives, with the aid of explanatory notes and references.

Diagrams/Sketches explaining certain concepts of the Upanishads

Diagram of various sheaths and three bodies of the creature

The 5 Sheaths and Atma

Merging of Microcosmic Soul with Macrocosmic Soul

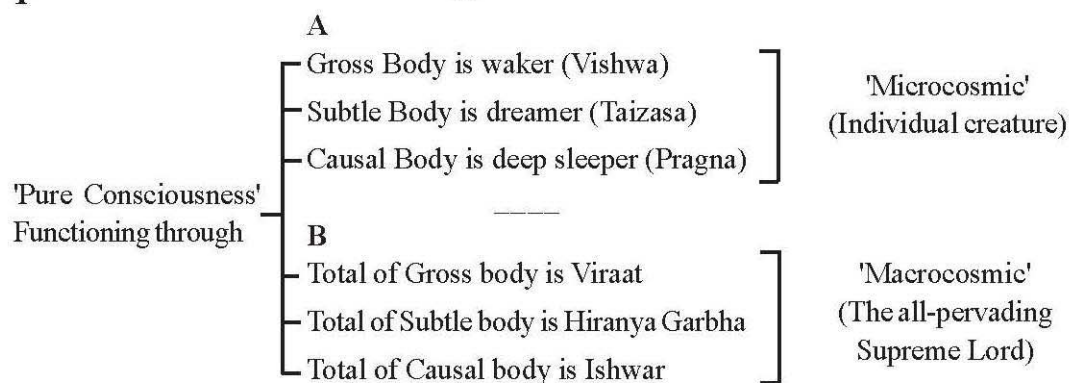

Figure shows how Atma merges with Parmatma by controlling Vasanas or Vrittis

1 **Functioning of Pure Consciousness**

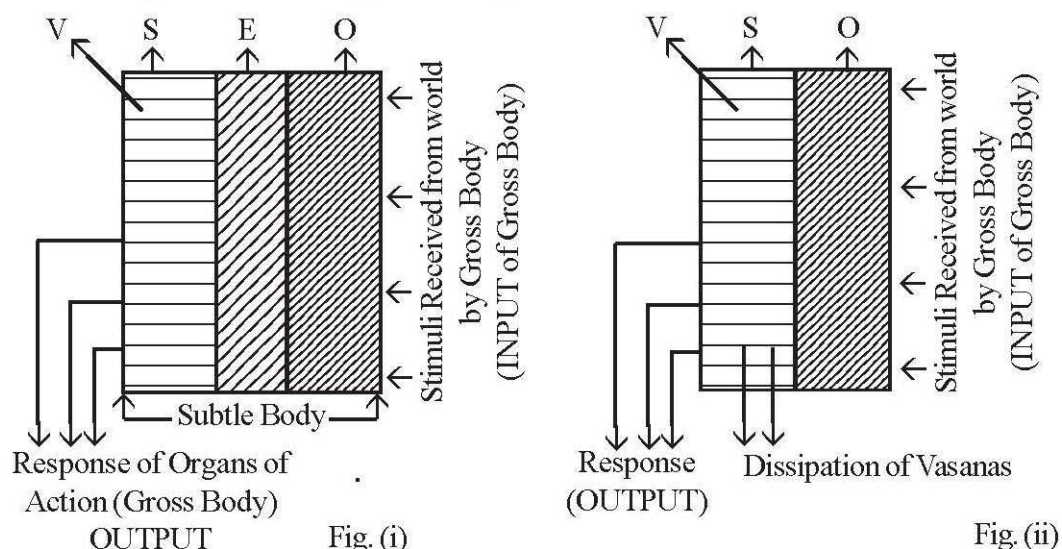

2 **Diagram depicting how Microcosm merges with Macrocosm**

Key— VT = Viraat (Cosmic waker); VA = Vishwa (Waker); P = Pragna (Deep sleeper); T = Taijasa (Dreamer); H = Hiranya Garbha (Cosmic dreamer); I = Ishwar (Cosmic deep sleeper); X = Inherent tendency or demarcation line representing 'perceiver-feeler-thinker-doer'; Atma = Microcosmic pure self of individual; Brahm = Macrocosmic Soul of the universe; MAC = Macrocosm; MIC = Microcosm;

Diagram showing how Ego and desires effect the Mind

Key— S = Subjective Subtle Body (Intellect); O = Objective Subtle Body (Mind);
V = Vasanas (Inherent Tendencies or Inclinations); E = Ego/Desires

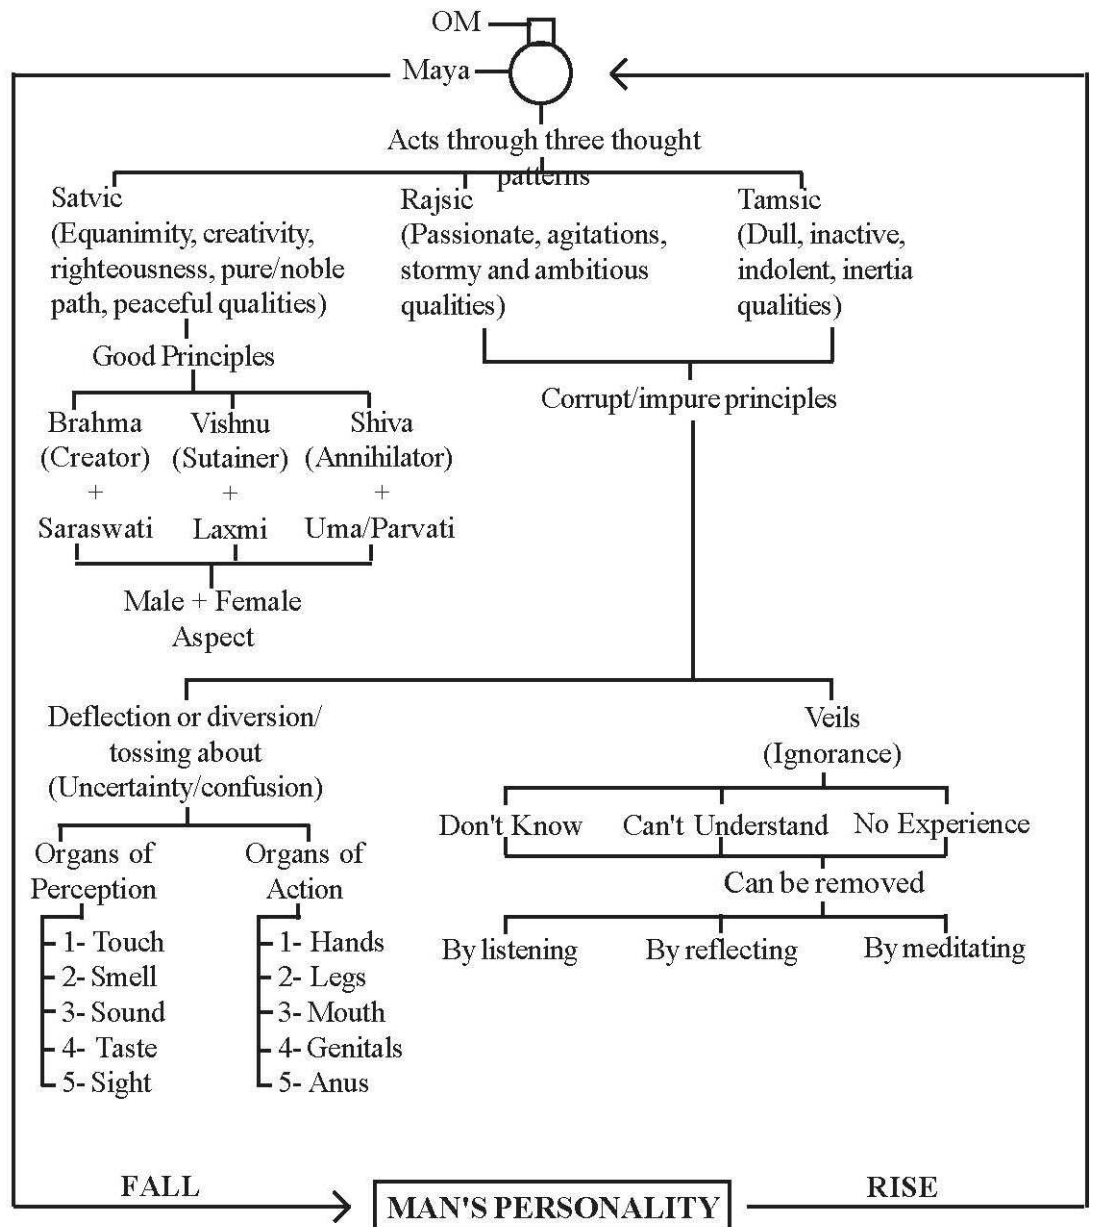

Explanation :- The stimuli received by the objective mind is passed to the subjective mind (intellect) through the constant interference of ego (Ahankar). Hence, while taking a decision, the intellect (Buddhi = बुद्धि) is influenced by the intervening ego (refer figure no. 1)

When ego is removed, there is direct coordination between the mind and the intellect and the former receives proper guidance from the latter. When actions are performed without interference by ego, no fresh Vasanas are deposited in the intellect. Those already present gradually dissipate away. In due course of time, the intellect is freed of all the Vasanas as well (refer figure no. 2).

This helps in purging of all the impurities associated with the soul and enveloping it like a layer or veil. When the veil is removed, the magnificence and brilliance of pure consciousness illuminates the creature.

As is clear from the above diagram, when the ego and desire—which form the basic ingredients of the inherent tendencies of a creature—are dissipated by industrious effort, the pure Atma residing in the 3rd sheath (the causal body) of the creature can directly interact with the Intellect (the subjective subtle body) of the creature. This intellect is not now subject to any interference from Vasanas (fig. ii), and can act independently. The actions become pure, uncorrupted and scrupulous. The emphasis here is to put the intellect directly under the command of the Atma/soul without the interference of Vasanas, ego, desires and other inherent tendencies or inclinations that mire the soul as a result of (a) its past deeds and their results and (b) unfulfilled desires.

PERSONALITY OF MAN

**Diagram showing the predominance of the five elements
and their patron Gods in the Body**

(refer verse nos. 4-6, Canto 8, Jabaldarshano-panishad)

**Diagram showing the predominance of the five elements
and their shape and colour in the Body**

(refer verse nos. 2/135-141 Trishikhi Brahmano-panishad)

Diagram of Creation of the World from Viraat Purush
(Adhyatma Ramayan—Uttar Kand, Canto 2, verse nos.63-69)

Diagram of Creation of the World from Viraat Purush

The Viraat Purush

(Adhyatma Ramayan—Aranya Kand, Canto 9, verse nos. 36-45)

Note :-(a) Eyes (Sun) = (i) Glances—Creation; (ii) Blink—Night; (iii) Open—Day
 (b) Body Hairs = Trees, Medicinal herbs, Creepers
 (d) Enlightenment/Wisdom/Knowledge = Glory, Fame, Renown

Chakras/subtle energy centers in the body

(Based on Saubhagya Laxmi Upanishad of Rig Veda, Canto 3)

Fig (1)

Naadis: Nerves in the body

(Based on Jabal Darshan Upanishad of Sam Veda, Canto 4, verse 13-17)
